A change in ceramics and possibly the introduction of new livestock (sheep or goats, if they were not already present in the later Middle Neolithic) mark the beginning of the Late Neolithic at about 6200 B.P. (Wendorf and Schild 1980; Wendorf et al. 1984). The new pottery tradition is characterized by burnished or polished surfaces and occasional simple painted decorations. These features seem to appear in the desert slightly earlier than in the valley, but this is probably a consequence of our limited knowledge of the Nilotic Neolithic. The appearance of the Neolithic along the Nile is one of the least studied and poorest documented periods of Egyptian prehistory. Only from the Faiyum is there any good archaeological information (Caton-Thompson and Gardner 1934; Wendorf and Schild 1976), and that area may have been exploited by groups who also made use of the desert.

The Faiyum is a large depression 30 km W of the Nile, which was filled by Nile water during the seasonal floods, forming a high lake (until controlled by the civil engineering projects of the pharaohs). From about 8000 to 7500 B.P., the lake shore was occupied by small groups of fishers, whose sites lack pottery, cereals, and domestic animals (Wendorf and Schild 1976). However, sites dating between 6400 and 6000 B.P. (the next period for which evidence is available) contain large, crudely made, undecorated, fiber-tempered pottery vessels and a few small, finely made vessels with polished surfaces and sand temper. Wheat and barley were both known, as well as domestic cattle and sheep or goats. The

settlements included large, slab-lined storage pits, some of them still filled with grain, even in the 20th century (Caton-Thompson and Gardner 1934). The numerous fish remains indicate that fishing remained an important activity.

In the Sand Sea far to the W, sites have been found of about this age which contain pottery and stone artifacts similar to those of the Faiyum (R. Kuper, personal communication, 1984). These similarities suggest the possibility that the Faiyum Neolithic and the Sand Sea Neolithic may be part of the same settlement system, which would have involved seasonal occupation of the Faiyum after the late summer flood to fish and to plant wheat and barley, and a westward migration into the desert with the herds. Such a pattern could explain why Faiyum Neolithic pottery has never been found in the Nile Valley.

We cannot yet determine whether the Nilotic Neolithic appeared because of the stimulus, or even immigration, of Neolithic desert groups to the valley, or because of stimulus (or migration) from the S Levant. We do know, however, that the modern aridification of the W Desert began about 5400 B.P.—corresponding to a historical date of 4320–4240 B.C.—at about the same time as the predynastic began in the Nile Valley. It seems very likely, although it cannot yet be demonstrated, that at least some of the stimulus for the predynastic can be attributed to the movement of desert populations into the Nile.

NEOLITHIC TO DYNASTY 1

Although often characterized as "prehistoric" or "predynastic" (Weeks 1985), the period that immediately preceded the 1st Dyn. witnessed the emergence of writing and pharaonic rule in Egypt, and thus would be better thought of as "protoliterate" or "protohistorical."

———

A. Early Neolithic Prelude

The earliest evidence for Neolithic settlement near the Nile occurs in poor and dispersed sites or site-complexes without durable structures or deep deposits, which lack the transitions and detailed interconnections that make later sequences cohesive historical units. Although regionally distinctive features suggest that groups occupied areas as spheres of activity for long periods, important features of pottery, implements, and a rich rock art which emphasized cattle can be traced across the Sahara, indicating widespread relationships (Håland 1987: fig. 3; Striedter 1984). This era of changing climate in northeastern Africa produced widely varying opportunities for human existence in any small area, but always allowed some kind of habitation in the region. By obstructing movement, the desert increasingly encouraged regional cultures (Eiwanger 1987: 83).

B. Emergence of Regional Cultures

In the sixth and fifth millennia B.C., human occupation shifted from the drying desert toward its southern and northern margins, the Nile, and the oases. Areas occupied included the mountainous desert east of the Nile, savanna lands east of the Nile in the south, Kordofan and Darfur to the southwest, the western oases, and the Nile Valley. Here, an annual inundation removed surface salts, leaving a layer of new silt, naturally fertilizing and irrigating the land well enough to support a limited population (Krzyzaniak 1977: 25–27, 55; Butzer 1976: 18–20).

1. Stone Tools and Interrelations. Regional cultures are present in the Nile Valley from the Middle Neolithic to the Egyptian 1st Dyn. (see discussion in *LÄ* 6: 1069–76). See Fig. EGY.02. Despite their differences, these cultures shared such developments as trends in stone tool making. From Sudan to

northern Egypt, the earliest Neolithic industries were blade industries. Thereafter, a bifacial core industry predominated until the Maadi and Naqada cultures of Egypt revived blade technique (Eiwanger 1983: 63–67). Mutual contacts and those with Asia correlate the cultures, but chronology in real time remains approximate, despite the application of radiometric techniques (Kantor fc.). The earliest phases in northern Egypt shared significant features with the pottery Neolithic of Palestine, but these contacts were severed (Eiwanger 1983) until the Chalcolithic period, when they again became important.

2. Egypt and the Middle Nile. The three major regional cultures in the northern Nile Valley were centered in northern Egypt, Upper (or southern) Egypt, and Lower Nubia, respectively. Far to the south, The Sudanese-Saharan tradition appears in small settlements supported mainly by hunting, fishing, and gathering, notably at Khartoum. Later, people also raised cattle and crops (Håland 1987: 51–56, 59–62). Distant contacts are illustrated by the widespread adoption of a special form of harpoon in Africa and Palestine (Håland 1987: fig. 3). In the Khartoum Neolithic phase contemporary with the Naqada period of Upper Egypt, a major center comparable in size to the great sites of Upper Egypt was established at Taragma near Meroe, a concentration previously unsuspected in the region (Reinold 1987: 17–43).

C. Cultures of Northern Egypt

From the western delta to south of the Fayum, the cultures of northern Egypt occur largely in single sites or restricted areas, rather than extensive "horizons." The emergence of distinct cultural traditions in northern Egypt has often been connected to the later canonical division between Upper and Lower Egypt (*LÄ* 1: 1148–49), although these early cultures were actually located in large part south of the Delta in areas assigned to Upper Egypt. In order of appearance, the site phases are Merimda (early and main) at the western edge of the delta; Fayum A; sites near the northern shore of Lake Qarun; el-Omari and Maadi just south of modern Cairo; and possibly Buto, in the northwest delta.

1. Domestic Economy. The domestic economies of northern Egypt were substantially supported by agriculture which concentrated on the cultivation of cereals. Animals such as sheep, goats, cattle, and dogs were kept; fish and a wide range of animals were taken. Even hippopotamus bones occur in the settlements (Hayes 1965: 93, 112). Hunting this dangerous animal requires the coordinated tactics of bands or crews (but see Eiwanger 1988: 44).

2. Structures and Settlements. Like earlier *playa* settlements, most habitations were light, irregular or oval structures made of posts and reeds, sometimes plastered with mud. Many had hearths and circular storage pits nearby, some of which were lined with baskets or mud. At Maadi, some light structures were rectangular. The settlements had no regular plan, but part of a ditch and palisade were found at Maadi, in addition to large communal storage areas. Merimda contained a number of oval structures about two meters long, built of mud or mud slabs with floors below ground level. Sometimes a small jar would be imbedded in the floor near one end of the oval, and a stick or hippopotamus tibia would be plastered against the wall near the opposite end (Hayes 1965: 105). The buildings, some arranged as though on a lane (Hayes 1965: 105), were built only in restricted areas, probably for a special purpose (Eiwanger 1982: 68). They may be related to structures at Maadi that were sunk into the ground over two meters and approached by steps. One very large (10 × 6 × 2 m) and elaborate brick-lined sunken structure had a special entry and a niche. It was found with a cemetery and large deposits of fish and pottery vessels, many containing grain. These structures at Merimda and Maadi, especially the large building, may represent a tradition of religious architecture (Anonymous 1986).

3. Religious Practice. Other evidence of religious practice includes burials, deposits, and possibly structural features. Early Merimda contained a small cemetery of contracted burials, mostly placed with the heads south, on the right side. Later, burials in the Merimda levels were oriented irregularly (Eiwanger 1982: fig. 1; Hayes 1965: 112–13). In the el-Omari and Maadi phases, burials were made in cemeteries, some of them very large. Grave goods were deposited with later burials, and some later graves have simple dolmen-like superstructures. Even some goats were buried at Heliopolis with grave goods (Debono and Mortenson 1988: 39, 46–48). Female figurines and an egg-shaped terra-cotta head from Merimda are not readily connected to known traditions, but a deposit with axes and a hippopotamus

figurine (Eiwanger 1982: 76–80; 1988: 46) and the hippopotamus tibia used as steps may be forerunners of Egyptian magical practices.

4. Manufactured Goods. The handmade pottery of earliest Merimda was relatively fine, but apart from some stands, the mostly ovoid shapes were simpler than later pottery. Many vessels were pattern burnished with a pebble. Some vessels have a band of incised herringbone decoration, a feature that occurs both in Palestine and elsewhere in northern Africa (Eiwanger 1984: 61). The pottery of later Merimda was coarser, with vegetable temper. Shapes remained simple, but knobs and lugs were sometimes applied (Hayes 1965: 106–7; Eiwanger 1979: 28–38, 56; 1988: 15–33, pls. 1–32). Most vessels were burnished, with a dark surface color. This simple pottery continued at Maadi. Only a few pieces were decorated in red paint on a light ground, and the finer red and black burnished vessels were accompanied by much coarse dark pottery, and some very large storage jars (Ibrahim and Seeher 1987: pls. 27, 2 and 28, 2). In other industries, the stone vessels of Maadi were more elaborate than those found at Merimda (Hayes 1965: 126). Copper was also worked at Maadi from imported ores.

5. Trade. Trade and contacts expanded greatly between the time of Merimda and Maadi, but imports from the East primarily consisted of raw materials such as copper ore and asphalt, or oils; most objects were made locally or regionally, although wavy-handled jars were imported from southwest Asia and some vessels and other objects were imported or imitated from Upper Egypt (Kaiser 1985: 70; Ibrahim and Seeher 1984; von der Way 1987: 242–47, 256–57).

6. End of Northern Egypt. Maadi ended early in the second phase (II) of Upper Egypt's Naqada culture (Fig. EGY.02; Kaiser 1985: fig. 10). The settlement seems to have been finally destroyed by fire (Hayes 1965: 123). Maadi was the last of Lower Egypt's cultures in the area, although Buto in the Delta—where a settlement with a cemetery has recently been found—may continue (von der Way 1986; 1987: 242–47, including Naqada II pottery; Kaiser 1985: fig. 10).

7. Summary. In northern Egypt, a large number of small, shifting villages probably sustained a few more permanent large settlements (Eiwanger 1987: fig. 9). Consolidated in the area of Helwan and Maadi, these centers transcended the shifting earlier habitations without eliminating cultural variations (Kaiser 1985: 67), a contrast with the more uniform Naqada culture of Upper Egypt.

D. Cultures of Upper Egypt

Largely known through burials, the stream of culture in Upper Egypt is uninterrupted from the Tasian to the First Dynasty. The Naqada culture—divided into I (Amratian), II (Gerzean), and III—consists of broadly distributed cultural horizons most readily identified by their pottery (Kaiser 1957; for a different view, see Kantor fc.).

1. Tasian. The Tasian culture of Middle Egypt was found in few graves, but the burial arrangements and objects deposited were distinctive (Brunton 1937: 25–33), especially a narrow black pottery beaker with a flared rim and white-filled incised geometric decoration. The typical ordinary Tasian bowl or jar was burnished with a rippled effect in shallow grooves or facets.

2. Badarian. The culture identified at el-Badari and other sites in Middle Egypt is typified by red- or black-topped pottery combed and burnished to make a diagonally rippled surface. Other objects, decorated ivory combs and spoons, stone vessels, slate palettes, carved amulets, figurines, and vessels, were often elaborate versions of Tasian prototypes and many were developed still further in the Naqada I phase (Brunton and Caton-Thompson 1928; Krzyzaniak 1977: 68–84).

3. Succession of Tasian, Badarian, and Naqada I. The relations between Tasian, Badarian, and the succeeding Amratian or Naqada I are problematic; some have considered them partly or even entirely contemporary, although they are found in close proximity. Since the differences between objects are those usually encountered in successive phases in Egypt, the later reappearance of Tasian features such as the flared beaker—which had persisted in Nubia and Sudan—was probably due to reintroduction (Kaiser 1985: 81, fig. 8; but see Reinold 1987: fig. 4, ER, for persisting beakers).

4. Naqada Culture. The Naqada culture leads directly into the 1st Dyn. In the Naqada I, this culture extended from Middle Egypt to northern Lower Nubia. In Naqada II, it expanded into the delta, while a separate culture, known as the A-Group, occupied Lower Nubia (Kaiser 1956: fig. 5; 1957: 74). During

Naqada III, official art appears in a refined and elaborate form in the well-known carved slate palettes and ivories. The later part of the period is sometimes referred to as Dyn. 0 because the names of pharaonic rulers not attested in the later king lists occur (Kaiser and Dreyer 1982: 260–69).

a. Manufactured Goods. The shapes of most Naqada I pottery vessels were different from Badarian, and burnished surfaces were no longer rippled; but continuity can be traced in such features as white-painted designs inside bowls derived from patterns incised in Badarian bowls. This Naqada I painted pottery became elaborate and included complex representations. Increased technical competence in other crafts is apparent in the presence of copper tools, glazed steatite, and high-quality linen textiles. Other objects, especially ivories, further developed Badarian types. In Naqada II, black-topped and red-polished pottery was first augmented, then replaced by buff or hard pink vessels fired in a closed kiln, and sometimes decorated with red paint in a new style. In Naqada III, only the pink-buff pottery was left among the Egyptian vessels (Kaiser 1957: 72–73; Kroeper and Wildung 1985: 69–72). Painting became less common, done in a third style related to formal art on the ivories and palettes. Stone vessels became truly elaborate and these and other industries develop without interruption (Petrie 1920: 34–36; Krzyzaniak 1977: 140–56), possibly already organized along lines familiar from later representations.

b. Domestic Economy. The domestic economy of Upper Egypt was agricultural, based on the cultivation of grains and raising livestock. By late Naqada III, even the date palm was cultivated. However, permanent agriculture and settlement in Upper Egypt's narrow valley was only possible where irregularities in the location, timing, and even height of the inundation could be sufficiently controlled to ensure reliable yields in the same location year after year. The foundation of Egyptian agriculture, the simple, flexible, and relatively reliable basin irrigation system, achieved control using crescentic canals to take water from the high river, direct it onto a series of basin fields, and then drain it back into the river downstream. Even a rudimentary basin system is a large-scale enterprise requiring a considerable effort made yearly by organized troops of workers. Thus, a large resident population in Upper Egypt and control of the inundation are mutually implied, but control was never complete enough to prevent progressive or catastrophic failures (Butzer 1976: 51–56).

c. Settlements and Construction. The known habitations, mostly located at the desert edge, were probably peripheral and do not fairly represent the original settlements. Most major permanent settlements were probably located on modest eminences in the floodplain or on the riverbanks; they are now largely destroyed or deeply buried. A reconstruction of Upper Egypt depends on inference from scattered and fragmentary physical remains such as the village at Hemamiyya (Brunton and Caton-Thompson 1928: 69–74), representations, and cemeteries.

The earliest long-lasting sites are found in Middle Egypt, but great sites began in the Naqada I southern Upper Egypt. From south to north, these include the cemeteries and town of Hierakonpolis (Fairservis, Weeks, and Hoffman 1971: 29–37; *LÄ* 2: 1182–86), the large structures and cemeteries of Naqada (Petrie and Quibell 1896; *LÄ* 4: 344–47), evidence for a temple at Coptos (Petrie 1896: 5–9), and the cemeteries of Abadiya-Hu, or Diospolis Parva (Kaiser 1957: 73–74). Population was not just scattered in villages, but also concentrated in such major centers. The consolidated towns dominated almost crescentic areas of arable land sharply constricted at either end where the river approaches the desert to define a virtually natural basin irrigation complex. The Scorpion Macehead of Naqada III may actually depict part of such a complex (Krzyzaniak 1977: fig. 3; Butzer 1976: 20–21).

As in the north, dwellings in Upper Egypt were at first simple circular or oval shelters of posts and reeds with some substantial circular mud-ring foundations; enclosures of grass or matting were also used (Brunton and Caton-Thompson 1928: 47, 82). Some shelters were rectangular (Hoffman 1980). In Naqada II, an important rectangular tomb was lined with mudbrick and painted, and a model probably represents a rectangular brick house (Baumgartel 1960: pl. XII, 3). A terra-cotta model of Naqada I–II date and representational evidence from Naqada III indicate that large oval fortifications with bastions were erected of a type later depicted enclosing the names of known towns, using brick for at least part of the structure (Baumgartel 1960: pl. XII, 1–2; Petrie 1953, pls. F: 19 [Libyan Booty Palette], F: 17–18

[Bull Palette], and K [Narmer Palette]). A sinuous, curved wall with a bastion of this general kind surrounded the compact town of Elephantine by the end of the 2d Dyn. (Kaiser et al. 1987: figs. 5–6).

d. Trade. Trade for products such as malachite (and copper?) and vessels of oil from the east, and resins from the south, was already important in the Naqada Period. Its organization is not easy to reconstruct, but groups of cache pits found from the northern delta to Nubia and small short-term settlements in northern Sinai indicate that it was at least partly handled by small parties or teams (Oren 1973). Naqada III sealings from Ein Besor in Palestine may derive from official trade (Williams 1986: 175). Many large pottery vessels that may have contained agricultural products were taken to Nubia, probably in cargo boats. Naqada II–III rock drawings in the Eastern Desert indicate that expeditions already obtained products such as gold, slate or schist, and alabaster.

E. A-Group in Nubia and Upper Egypt

Through trade, the growing prosperity of Naqada-period Upper Egypt played a vital role in the expansion of the A-Group culture of Lower Nubia and southernmost Upper Egypt. Although the two cultures differed somewhat, A-Group pottery was related to both older Tasian-like ceramics and the preceding Abkan of Lower Nubia (Nordstrom 1972: 21–22, 28–29), while A-Group and Egyptian art shared important formal features (Williams 1986: 138–59, 167–71). Although the settlements were badly preserved and cemeteries were of modest size, one site at Afya contained substantial rectangular buildings with apsidal ends, and fields of cache pits at Khor Daud near Nubia's gold-mining region were larger than most in Egypt (Nordstrom 1972: 20–21; Williams 1986, table 6 and 16–18). The domestic economy may have been simple, but trade was so important that Egyptian vessels were placed even in poor burials and A-Group vessels appear in Egypt (Nordstrom 1972: 26; Kroeper and Wildung 1985: 73). Sudanese features also appear. Later tombs contained evidence of differences in wealth comparable to Upper Egypt and early Naqada III attests a rich cemetery of great tombs at Qustul near the modern Sudanese border more important than any in contemporary Egypt. This cemetery contained representational evidence linking it to pharaonic rulers (Williams 1986: 163–83).

F. Emergence of Pharaonic Egypt

The origin of Egypt's all-pervading pharaonic culture is the major problem in the era before the 1st Dyn. Although scholars do not now generally believe that pharaonic Egypt was essentially the creation of a "dynastic race" from the northeast, or that the Delta was largely responsible for high culture (Kantor fc.; Krzyzaniak 1977: 14–18), contacts with Mesopotamia are based more firmly on the striking similarity of elements that occur in both countries. These include important artistic motifs, such as a bark approaching a paneled or niched building, intertwined serpents, and paired monsters with long, intertwined necks, as well as cylinder seals and niched brick architecture (Helck 1987: 134–37, Kantor fc.). Even the development of writing may have been accelerated by Mesopotamian contacts (Kantor fc.). Most of these features appear early in Upper Egypt, but Mesopotamian relations remain an important consideration.

1. Ruler, Writing, and Cults. Pharaonic images always depicted or indicated the ruler and the gods in a manner that supported universal order. Certain signs, images, and conventional activities can be traced in progressively earlier representations as early as Naqada I. Standards of known deities appear in the art of Naqada I and II. A pharaonic sacrificial procession appears on monuments of Naqada III, on a painted textile from Gebelein of Naqada I, and in a large wall painting in a tomb dating to the middle of Naqada II at Hierakonpolis that is an organized pharaonic composition (Williams and Logan 1987: 253–57). In Naqada III, pharaonic images on ceremonial stone and ivory carvings can be linked with other representations to show that the art of the period was completely pharaonic (Williams 1988). It concentrated on the figure of the pharaoh and his ceremonial activities and often included or reflected political conflict (Kaiser 1964: 89–92). The compositions have brief but definite inscriptions that label persons, objects, possibly situations, and name rulers, such as Narmer and Scorpion, whose monumental carved stone palette and macehead were found at Hierakonpolis. Cults already included the monumental gigantism characteristic of later ages. Stone colossi found at Coptos in the pose of Min were inscribed by Narmer and display the emblem of the god (Anonymous 1988: 41–42).

2. Succession of Rulers. Important lists such as the Turin Papyrus and the Palermo Stone, as well as later mythological texts and the 3d-century historian Manetho, record dynasties and rulers for this early period, but a relationship to actual persons and events is difficult to establish (Helck 1987: 81–114). Archaeological evidence must be used to help reconstruct political geography in Naqada II–III. The large painted tomb of a ruler at Hierakonpolis of mid-Naqada II and comparable tombs at Naqada and Abadiya indicate that Upper Egypt was consolidating into regional sovereignties (Kaiser and Dreyer 1982: 242–45). At the end of Naqada II, these large tombs in different locations were replaced by a unique series of even larger tombs and complexes whose designs lead in a direct, possibly dynastic, succession from Naqada III into the 1st Dyn. At Abydos, double-shaft tombs of three predecessors of the 1st Dyn. were found: Iry-Hor (Ra), Ka (Sekhen), and Narmer. A still earlier tomb at Hierakonpolis, a long trench with a side chamber, may be assigned to Scorpion. Qustul's great trench and side-chamber tombs may fill the hiatus between Scorpion and the latest rulers of Naqada II to complete a series that led to the 1st Dyn. (Williams 1986: 177).

G. Consolidation of Egypt.

In early Naqada II, the northern Nile Valley was divided among northern Egyptian cultures, the Naqada culture, and the A-Group. By mid–Naqada II, Naqada culture cemeteries appeared in the delta, indicating that control of the southern delta and the entire valley had passed to the south. By Naqada III, the vast cemeteries at Tarkhan and Tura indicate that the Naqada culture now had regional centers in an area that had been the core of northern Egypt. The geographical completion of ancient Egypt, if not its unity, had essentially been accomplished, for records of conflict parallel the consolidation of regional centers. At the same time, trade with Asia and Sudan expanded, leaving northern Sinai dotted and A-Group Nubia lined with sites. The culmination of the consolidation is reflected in monuments at Abydos in Dyn. 0, followed by great but secondary funerary monuments at Saqqara and elsewhere in the 1st Dyn. At this time, the overland routes across Sinai became inactive and Lower Nubia was largely abandoned. Having developed in contact with so many peoples, Egypt began her 1st Dyn. as a solitary eminence in northeastern Africa.

EARLY DYNASTIC—1ST INTERMEDIATE PERIOD

(DYN. 1–11)

———

A. Unification of Egypt
B. Early Dynastic (or Archaic) Period
C. Old Kingdom Period
D. First Intermediate Period

———

A. Unification of Egypt

During the last centuries of the 4th millennium, a long-term process of political and cultural coalescence resulted in an Egyptian state encompassing much of the Nile Delta (Lower Egypt) and the valley proper, almost as far S as Aswan (Upper Egypt). Later Egyptian tradition, however, held that an Upper Egyptian ruler named Meni (Gk Menes) had conquered Lower Egypt. This unification became for the Egyptians not only the beginning point of their history, but an enduring emblem of the congruence of the social and political order with the cosmic (Eg *ma'at*), embodied in the divine monarch. Menes—perhaps the King

Narmer whose palette appears to lay claim to sovereignty over both parts of the country—stood as the founder and first ruler of a unified Egypt. A new administrative center, later Memphis, was attributed to him. The accession year of each succeeding ruler was designated "the (year of the) Unification of Upper and Lower Egypt." Throughout its long history, even under foreign domination, Egypt was understood to be a condominium of two originally discrete political entities.

While this is certainly too simple, idealized, and constructed a notion of how unity came about or of the political situation in Egypt prior to unification—evidence for a preunification delta monarchy, for example, is not strong—the controlling idea that eventually emerged from this picture of the founding was that the unity of the Two Lands (i.e., Egypt) equalled "order," stability, prosperity, etc., while disunity meant "chaos." The monarch's role—both as king of Upper and Lower Egypt (Eg *nisu-bity*) and as the embodiment of the patron goddesses (Eg *nebty*) of the two sections of the country—was to ensure the former and suppress the latter. Rebellion against the king, therefore, became not merely a political act, but resistance to the divine order of the world as well.

Despite late predynastic cultural and technological influence from SW Asia, Egypt did not develop the pattern of urbanism (with its particular sort of localism) that had emerged earlier there. The establishment of an effective centralized state in Egypt likely limited the potential of larger towns to become cities in the Mesopotamian sense, because the monarchy, with its control over economic and political priorities and decision making, became the focus of social and economic life. Nevertheless, local centers of economic, judicial, and cultic responsibilities retained an underlying importance: whenever, in later eras, the central royal government disappeared or was, for one reason or another, ineffectual and unable to enforce its will much beyond the royal palace complex district, these local centers and their leaders provided the essential stability and continuity in daily life. Egyptian history is thus best understood as an equilibrium between the ideologically preferred centralized monarchy and the decentralizing tendencies of local power foci.

B. Early Dynastic (or Archaic) Period.

The two primary developments during the Early Dynastic (ED) period (Dyn. 1–2; late 4th–early 3d millennia B.C.) were the country-wide articulation and acceptance of the ideology of the divine monarchy and the development of an administrative hierarchy that effectuated the king's wishes. The king's verbal command *(hu)* gave form to his divine perceptions *(sia)*, always within the constraints of *ma'at*. The ruler's titulary expressed his relationship to the gods, his own divine attributes, and his essential unifying and ordering role. As the bodily manifestation of the god Horus, he was the living expression of royal legitimacy and succession. The elaboration of the size and design of the royal tombs, surrounded by the burials of relatives, officials, and retainers—some perhaps killed and buried at the time of the king's death (Dyn. 1)—and the 2d Dyn. decision to abandon the older royal cemetery at Abydos (Upper Egypt) to make the Memphite necropolis at Saqqara the preferred royal burial site, focused attention on the monarch, both in this life and in the next. From a very early date, kings fortunate enough to rule for an extended period of time celebrated the *sed* festival, a rite of royal death and rebirth designed to renew the king's divine powers and, by extension, the stability and prosperity of the entire country.

The bureaucracy, dominated until late in the 4th Dyn. by the king's male relatives and headed by the vizier (or chief minister), organized the land-holding elites to manage the royal economy (the palace, royal estates, tax collection, economic redistribution, etc.). They also utilized a growing and increasingly indispensable scribal corps and the social and political aspects of monarchy: the king's cultic activities, the biennial tour of the country, the judicial apparatus, the royal construction administration, the military (a corvée, rather than a standing army), and the maintenance of records (including annual Nile heights). The evolving class structure included newly important artisans, service personnel and retainers, a small group of professionals, and the peasantry.

Foreign trade in the ED period was conducted under royal aegis. From SW Asia, principally exploiting surplus grain production, precious and semiprecious materials, and some manufactures, Egypt obtained such materials as construction-quality wood, obsidian, lapis lazuli, turquoise, and copper. Dyn. 1 Egyptian pottery has been found in S Palestine, and EB II ware from Syria-Palestine is known from Egypt. A portion of the proceeds was subsequently redistributed to cultic and private loci in the form of royal

patronage. An inscription of King Den (Dyn. 1) near the 2d Cataract attests to early royal trade interests in Nubia to the S.

The king's role in the support and construction of cult temples together with the demands of the new ruling elites resulted in a number of basic artistic innovations, building on both foreign influences and native trends. These formed the foundations of subsequent Egyptian art and architecture. It is in this period that major advances were made in the design and construction of tombs and in the use of stone for building.

During the 2d Dyn., a still poorly understood, but temporary, alteration of the divine symbols of kingship took place. Whether the episode reflects a change of royal family, civil strife, or some ideological shift is not clear, but, by the end of the dynasty, little trace of that change remained; its last king's name (Khasekhemwy) stresses the harmony of once disparate elements. The burials of royal officials, retainers, and relatives cluster around the burials of the monarchs, signifying their continued dependence on and service to the king in the next world. Uncertainties submerged and the divine monarchy institutionalized, the formative period was now essentially over; an age of unparalleled royal power began.

C. Old Kingdom Period

The chief index of royal power in the Old Kingdom (OK; Dyn. 3–8; ca. 2700–2130 B.C.) was the king's ability to command and organize the country's human and material resources. The most visible manifestation of his godhead and authority was monumental architecture. Little remains of the royal temples for the cults of the various divinities (notably Ptah of Memphis and Re of Heliopolis), but not so with the massive monuments devoted to the burials and funerary cults of the kings (Edwards 1985). Beginning with the Step Pyramid complex of King Djoser (Dyn. 3) at Saqqara and reaching a dramatic high point with the 4th Dyn. pyramids of Snefru at Dahshur and the Giza pyramids of Kings Khufu (Gk Cheops), Khafre (Gk Chephren), and Menkaure (Gk Mycerinus), vast amounts of labor, building materials, food, etc. were marshaled for the construction of the pyramid-tomb and its attendant temples and subsidiary structures, an "eternal" palace complex designed to meet the needs of a ruler who, after bodily death, would take his place among the gods of heaven and earth, meriting ritual and sacrifice from succeeding generations. The king's association with the solar deity Re emerged quite early, and the pyramid is, in part at least, related to the deceased monarch's ascendance to the heavens to accompany Re as he circumnavigated the world. From the middle of the 4th Dyn., the king's throne name was most commonly compounded with the name of Re. During the 5th Dyn., when the solar aspects of kingship were stressed, the title "son of Re" came to precede the name the ruler had been given at birth. Likewise, during the first 75 years or so of Dyn. 5, some of the smaller resources available for pyramid building were reallocated to the building of solar temples in the W desert not far from the royal pyramids, forming a part of the mortuary complexes. By the end of the dynasty, the rulers had reverted to the single pyramid complex, but the linkage between the Osirian and solar aspects of the monarchy was now mirrored in the so-called Pyramid Texts (Faulkner 1967) inscribed on the walls of the chambers of pyramids from King Wenis (Unas), the last king of the 5th Dyn., through the end of the Old Kingdom. These dual aspects of the monarchy remained central to the ideology of kingship throughout the remainder of pharaonic history: the identification of the deceased king with Osiris stressed his continuity with his royal predecessors (as well as his divine role in the afterlife), while his association with Re (as his bodily son) emphasized the monarch's role in the present (prosperity, order, etc.) and the future (i.e., the continuity of the cosmic and social orders). The tombs of the officials created a life-after-death made brilliantly concrete with scenes of the daily life familiar to the elite.

To build these complexes, a bureaucratic apparatus grew (Strudwick 1985). The administrative responsibilities of such officials as the "Overseer of All the Works of the King" included the design, the work organization, and the overseeing of these projects at every stage. Slaves played a very minor role in the work force; labor conscripted from among dependent farmers with less to occupy them during the inundation season comprised the bulk of the labor force. Devotion to the god-king no doubt shaped some worker attitudes and willingness to work, but economic incentives were probably also a factor.

Pyramid, solar, and cult temple establishments served essential economic roles. Corvée laborers received food and clothing rations. More far-reaching, perhaps, was the economic impact of the perpetual endowments, sometimes called "pious foundations" (Kemp 1983), which provided the economic wherewithal for the maintenance of the various cults (the architectural necessities, the priestly and support staff, offerings, etc.) in the form of agricultural estates whose proceeds were assigned to the temples. Since the number of professional priests was small during the OK, many priestly responsibilities were performed by members of the landholding and administrative classes on an assigned periodic basis. In exchange for services rendered, these individuals were assigned income from one or more of these estates. They, in turn, could reassign a portion of such income to individuals who would then perform the required services. A considerable segment of Egyptian society derived some portion—all in some cases—of their income from institutional sources. Not all land was held under such usufructual arrangements; a significant segment of the Egyptian upper classes owned land outright, as part of their patrimony. In advance of death, such OK personages wrote mortuary contracts in which they assigned some of their estate income to individuals (relatives, friends, etc.) who would, in exchange, serve as mortuary priests for the cult of the deceased. These royal and private endowments formed an interlocking network of economic distribution. The system, however, lacked long-term stability: although it promised individuals a continuing postmortem food supply, there was no assurance that the agreement would be maintained over the course of generations. By the late OK, a number of mortuary endowments—notably those for temples—were exempted from taxes and labor corvée, thus limiting the economic resources available to the monarchy, causing some loss of royal power and influence (*AEL* 1: 28; Hayes 1946).

The kings of the 4th Dyn., having experienced some conflict within the royal family over the succession to the throne, began the process of relocating control of the main bureaucratic departments into the hands of upper-class families. In theory, such individuals, owing their new eminence and power to the king's favor, would be assiduous and loyal in the king's service. The premise was largely correct for most of the OK period and was strengthened by the institution of a ranking hierarchy among the royal officials. This process may have contributed to a weakening of the monarchy, especially with the growth, at least as early as the 5th Dyn., of an hereditary factor in office-holding. The officials in the central administrative offices in the capital appear to have remained loyal to royal position and prerogative right to the end, although, during the 6th Dyn., many provincial officials were building their tombs in their home districts. It is likewise clear that the king came to play a smaller personal role in what went on outside Memphis, despite the continuance of the periodic processions to the S. Decision making with respect to major economic, construction, and judicial policies would be made at the central administration, but the daily work in all these areas was performed at the local level, where the personal power and prestige of officials likely counted for a great deal, especially whenever lower Nile inundations (5th–6th Dyn.) led to some serious food shortages. These men no doubt acquired more and more confidence in their abilities and a concomitant sense of independence, but they certainly made no show of the latter that might overtly oppose royal dictates. It is conceivable that very long reigns, such as those of Pepi I and Pepi II of the 6th Dyn., would have, at least in their later stages (and during the long minority of Pepi II), required greater reliance on officialdom. It is clear, however, that the kings neither completely isolated themselves in the royal residence nor felt great mistrust of the greater provincial magnates. Merenre I made the tour as far as Aswan, and Pepi I appointed the provincial official Djau to be his vizier (chief minister).

Foreign relations during the OK period centered on either trade or defense. The periodic incursions of the Libyans were met with force. In the S, trade for good wood, oils, incense, animal pelts, etc. took center stage (Kemp 1983). King Huni (Dyn. 3) extended the S boundary to Aswan and built a fortress there. The 4th Dyn. king Snefru campaigned in Lower Nubia (Aswan to the 2d Cataract), adversely affecting that region for generations; captives and cattle were brought back to Egypt. From the late 4th Dyn. until the mid-5th, an Egyptian copper smeltery was in operation at the 2d Cataract, and thereafter Egyptian officials conducted trade missions further S, employing force if need be. The Aswan official Harkhuf made at least three trips (each lasting 7–8 months) to the S during the reigns of Merenre and Pepi II (*AEL* 1: 23ff.). During this period, a new, more dynamic people (C-Group) entered Lower Nubia;

Harkhuf's mercenaries ensured his safe passage, but at least one other Egyptian expedition leader was murdered in the S. Occasional trade with the distant land of Punt was carried on in the 5th Dyn. In SW Asia, beginning in the ED period, the lure of copper and turquoise in Sinai, as well as the products and manpower of Palestine, led to Egyptian royal trade missions and, not infrequently, military forays. The 6th Dyn. official Weni (*AEL* 1: 18ff.) reports five expeditions into S Palestine, using Egyptian forces augmented by Libyan and Nubian mercenaries (Redford 1986).

The end of the OK came as a result of a number of factors: economic decline due to Nile problems and the decline of foreign trade; the reassertion of local authority as the central administration became moribund; and perhaps the lengthy reign of Pepi II and related problems of succession.

D. First Intermediate Period

While it suited the propaganda of the early 12th Dyn. kings (*AEL* 1: 139ff.; 149ff.) to portray the 1st Intermediate period (Dyn. 9–11; ca. 2130–1940 B.C.) as an age of anarchy during which the lack of a strong central government allowed the release of disruptive social forces, it is more likely that after the confusion of the largely ephemeral Dyns. 7 and 8—a mere 25 years at most—generalized disorder was episodic rather than typical. The emergence of such regional power centers as Herakleopolis (Dyns. 9–10) near the Fayum and Thebes in Upper Egypt (Dyn. 11) yielded considerable stability. Territorial conflicts or attempts to unify the country were the principal causes of conflict. The local officials dealt with the problems of food supply, legal affairs, and the suppression of criminal behavior (*AEL* 1: 88ff.). The problems against which the Herakleopolitan King Merikare is warned (*AEL* 1: 97ff.) are those of a ruler of a small state, trying to build and maintain the network of loyalty and obligation necessary to attain permanent (even expanded) power. On the whole, the inscriptions of officials, independent landowners (James 1962), and some literary texts (*AEL* 1: 169ff) generally project a picture of stability. The campaigns to reunify Egypt, perhaps begun by Wahankh Intef II of Thebes and brought to a successful conclusion by his grandson, Nebhepetre Mentuhotep II, no doubt were attended by bloodshed and disruption, but even these were periodic, not constant. Localism was a powerful force that Mentuhotep sought to overcome by recourse to both force and diplomacy; his success was due to his own personal qualities of leadership and did not outlast his reign. That fact, coupled with the certainty that the 12th Dyn. rulers took more than a century and a half to subordinate localism completely, shows how far the balance of power had shifted toward localism after the OK period.

A. Dynasty 11

1. Activities. With his victory over the northern Heracleopolitan kingdom (ca. 2040 B.C.), the Theban Nebhepetre Mentuhotep II brought about the end of the civil war that raged during the First Intermediate Period. This victory inaugurated the period known as the Middle Kingdom (MK) by establishing the 11th Dyn. with Mentuhotep as sole ruler of Egypt. After a few military campaigns against remaining dissidents, the king was able to turn his attention to peacetime activities. Large building projects, such as his funerary monument at Deir el-Bahri and numerous expeditions sent to mines and quarries, show a confident administration in control of the country's resources—one that could muster and support large contingents of men and with the bureaucracy necessary to oversee the logistical requirements of such undertakings. Trade routes were also reopened, implying that the central authorities commanded the roads and outlying areas, and could once again assume the protection of the population.

2. Inscriptions of Officials. Indicative of the new age are the inscriptions left by its officials. The expedition leaders of the past had been content with terse phrases recording the purpose of their missions, along with their names and titles, attributing whatever success they had achieved to the goodwill of the king. The 11th Dyn. functionaries, however, added autobiographical information which proclaimed their success to future generations. A new era had dawned upon Egypt, with the officials refusing the role of unacknowledged functionaries.

Two other kings named Mentuhotep closed off the 11th Dyn. with successful reigns; they sent large expeditions to the quarries of the Wadi Hammamat and the Wadi el Hudi, and even to far-off Punt. But suddenly, and without any records to illuminate the period for the historian, the 11th Dyn. disappeared. In its place a new family—the 12th Dyn. (1990–1786 B.C.)—sat on the throne, with King Sehetepibre Amenemhet I as its ruler. This would be a pivotal dynasty for Egyptian history, a time of great prosperity, witnessing the flowering of literature. Its rulers would live on in the Egyptians' consciousness in the later legends involving kings Sesostris (Senwosret) and Lamarres (Amenemhet III).

B. Dynasty 12

1. Origins. Little is known of the origins of the 12th Dyn. A literary source states that its founders were southerners, and it is tempting to speculate that this Amenemhet was the vizier of the same name under the last king of the 11th Dyn. The new dynasty faced a number of problems, chief of which was the legitimacy of its claim to the throne. The population surely felt no loyalty to these upstarts and had to be convinced that the new rulers were in fact the true heirs to the throne of Egypt. How the 12th Dyn. accomplished this constitutes one of the major achievements of this vigorous family and assured them a place among the great rulers of ancient Egypt.

2. Initial Policies. Quickly realizing that it would have been politically unsound to ignore his Theban predecessors, Amenemhet I erected monuments that associated him with the 11th Dyn. Other monuments were commissioned which claimed direct descent from the Old Kingdom (OK) families; thus the new ruler established himself as a true heir to the throne in the minds of his contemporaries. Nevertheless, political intrigue was not quenched, for the king's long reign ultimately ended in assassination.

Another major decision of the new dynasty was the choice of a capital city. A need must have been felt to move away from Thebes, where the ghosts of the previous dynasty still lingered. The new site chosen

was named (in Egyptian) *Itj-tawy* (meaning "[Amenemhet-is]-The-one-who-has-taken-possession-of-the-Two-Lands"). Little is known of this city, including its exact location. A later text states that it lay somewhere between Memphis and Meydum. Since the early 12th Dyn. rulers built their pyramids near the modern village of Lisht, it is quite likely that the capital city was situated nearby. The move to the Memphite area may also have been motivated by a need to be associated with the past glories of the OK. In the collective memories of the Egyptian people, Memphis must still have been the capital city par excellence; by building a royal residence in that general area, the 12th Dyn. sought legitimacy by close association with a traditional seat of power. Another more pragmatic reason for the move may have been a desire to be closer to the northwest border of Egypt, where Libyan tribes threatened invasion.

Another way in which the 12th Dyn. furthered its claims to the throne was through the subtle use of literature as political propaganda. The *Prophecy of Neferti* (see Lichtheim *AEL* 1: 139–45) recounted how an OK sage had long ago foretold the advent of the new dynasty. If this were the case, who could now deny its existence? In the *Instructions of Amenemhet* (*AEL* 1: 135–39), the assassinated Amenemhet I advised his son Senwosret (Sesostris) I to trust no one around him, something which must not have escaped the guilty courtiers' attention. The beautiful and moving passage describing the death of Amenemhet I may have been included to win sympathy for the young king for the harsh reprisals which no doubt followed the assassination.

The classic *Story of Sinuhe* (*AEL* 1: 222–35) is another example of such propaganda. Although the tale appears to be a simple affair filled with heroes and villains, and wise old chieftains and fair maidens, long hymns of praise for Senwosret I make the story an effective tool in enhancing the crown's reputation. Also useful to the royal house was the so-called *Satire on Trades* (*AEL* 1: 184–92), in which various trades are unfavorably compared to the comfortable life of a scribe. The purpose behind this particular tradition may well have been that the 12th Dyn. needed new recruits for a burgeoning bureaucracy, since the scribal profession had fallen out of favor during the troubled times of the 1st Intermediate Period.

Starting with Amenemhet I and Senwosret I, the institution of coregency was also used to ensure smooth transitions of power. In practice, the younger king assumed the more strenuous activities, such as military campaigns, while the senior partner remained in the palace and handled the affairs of state. This system worked remarkably well for the 12th Dyn., as son succeeded father for two hundred years without interruption.

3. Dealings with Provincial Rulers. Despite their sound political maneuvering, the 12th Dyn. kings still had to contend with formidable provincial rulers who held sway over particular domains in Egypt. The independence which the latter had acquired during the 1st Intermediate Period could not be disregarded, and once again the Palace showed remarkable political acumen in dealing with them.

The Crown's basic policy was a compromise between controlling the nomarchs, their territories, and their revenues, while, at the same time, acknowledging the rights of these long-standing families who boasted impressive pedigrees. The nomarchs were allowed to have their own courts, maintain a small standing army, erect buildings in their domains, and even record the dates of events according to their own tenures of office. They were allowed to collect their own revenues and were even given the liberty to lower taxes after bad harvests. Nevertheless, the king reserved the right to approve the appointment of a new nomarch, at which time the province's boundaries were also resurveyed. In addition, the nomarch had to render a yearly account of his holdings to the Palace, and was responsible for supplying the labor force for royal enterprises such as building projects or quarrying expeditions. Thus, the policy of the royal family toward the provincial rulers was a constant give and take where the claims of the nomarchs were respected yet the absolute rights of kingship were still acknowledged.

The almost total disappearance of the nomarchs' tombs by the reign of Senwosret III (1878–1843 B.C.) has led to the belief that the power of these individuals was curbed under this king, and that the country was reorganized under a centralized bureaucracy. Although this belief has been challenged recently, the disappearance of these old provincial families cannot be ignored; nor can the creation at this time of new administrative titles based on a division of the country into three major provinces, each administered from the capital city.

4. Foreign Policy. Caution must also be exercised when examining the foreign policy of the 12th Dyn. Although an aggressive frontier policy had been demonstrated by the earliest Egyptian kings, the 12th Dyn. rulers seemed more concerned with maintaining their borders and keeping foreigners out of Egypt than with establishing a presence outside. The Execration Texts, nevertheless, have been cited as evidence for an MK empire. Written on clay figurines in the shapes of bound prisoners or on pottery bowls, these texts list the names of various local rulers and localities in Syria-Palestine, Libya, and Nubia, followed by ritualistic curses directed against these rulers. Although they show an astounding ability on the part of Egypt to collect intelligence about its neighbors, the purely ritualistic nature of the texts does not permit us to determine the 12th Dyn.'s foreign policy from them alone. See also EXECRATION AND EXECRATION TEXTS.

Close scrutiny of the existing archeological material has shown that what used to be regarded as proof of a 12th Dyn. empire in the MB Syro-Palestinian area was nothing more than evidence for strong trading ties between Egypt and the Levant. To the Egyptians, the most important of these trading partners was the seaport of Byblos, which furnished Egypt with coniferous woods and resin. The Egyptian influence there was great enough that by the close of the MK, the Byblite princes had become quite slavish in their imitation of Egyptian customs. The same degree of contact existed in the Aegean: although Middle Minoan objects have been found in Egypt and Egyptian material in Crete, the uncertain context of many of these finds cannot argue for anything more than contact of a mercantile nature.

The situation was markedly different with Egypt's southern neighbors. In the 11th Dyn., Mentuhotep II had begun the reconquest of Lower Nubia against the local C-Group population, whose culture spanned the period between the late OK and the early New Kingdom (NK) with occupational sites south of the Second Cataract. The 12th Dyn. kings continued this policy and eventually annexed the whole of Lower Nubia, where they built a series of forts between the First and Second Cataracts. These forts were built in two main stages. The earliest ones served as metal-working centers or trading posts to control river traffic. The second group was built by Senwosret III around his newly acquired frontier at the Second Cataract, at the border of modern-day Sudan. This group served to remind the population of the king's intention to let no one pass through the cataract at Semna unless a business transaction was to be conducted at the major trading center of Mirgissa, north of Semna. Although Senwosret III's boundary stelae show an expected aggressive tone against the native population, other texts from the period imply that the Egyptians were actually more concerned with profits from the river trade and the local gold mines than with military conquest for its own sake.

With a full Egyptian dependency to the south and a strong centralized government—and thus the resources of the entire country at his disposal—Senwosret III's son Amenemhet III (1842–1797 B.C.) was free to concentrate on domestic matters. He continued his predecessors' work of reclaiming land in the Fayum, where he built his second pyramid at the site of Hawara. Attached to this monument was his Mortuary Temple, which became famous in the Classical period as the Egyptian Labyrinth.

C. Dynasty 13

The end of the 12th Dyn. brought no immediate change in Egypt's fortunes. Although the succeeding period is obscured by a lack of sources, it seems clear that the 13th Dyn. (ca. 1786–1633 B.C.) originally ruled from the Memphite area. Many of its kings ruled only briefly and may have been under the influence of a few powerful viziers, but the principle of a single central government continued to be respected for a time. The last kings of the 13th Dyn., however, lost control of Lower Egypt and probably retreated upriver to Thebes, where a new capital was established.

D. Second Intermediate Period

1. Rival Dynasties. The weakening of the 13th Dyn. begins what is known as the Second Intermediate Period. By this time, the country had become fragmented. A number of rulers vied for hegemony over limited areas, and rival dynasties were established concurrently. The names given to these dynasties by the classical historian Manetho do not necessarily reflect a chronological sequence. In Thebes, the 13th Dyn. was succeeded by the 17th (ca. 1650–1567 B.C.). In the Delta, certain rulers designated themselves

as kings and set up short-lived dynasties; these correspond to Manetho's 14th (ca. 1786–1603 B.C.) and 16th Dyn. (ca. 1684–1567 B.C.).

2. Hyksos Invasion. The most significant of these contemporaneous rulers were the so-called Hyksos, Manetho's 15th Dyn. (ca. 1674–1567 B.C.). See also HYKSOS. There has long been a debate regarding the arrival of the Hyksos in Egypt. Documents that show large numbers of Semites in Egypt in the late Middle Kingdom have been used to prove a slow infiltration into the country, with these Semites somehow acting as a fifth column for the advancing Hyksos. However, Manetho's dating of the Hyksos attack to the reign of a King Tutimaios—probably one of the two Egyptian kings named Dudumose—argues for a sudden invasion, since it is unlikely that the Egyptians' collective historical memory would have fixed a slow infiltration to a specific reign.

The archeologists' spade has provided evidence for both theories. Excavations at modern Tell ed-Dab‹a (Manetho's Avaris and the site of the Hyksos capital) have shown that Northwest Semitic peoples did migrate and settle in the area, bringing MB II Syro-Palestinian culture with them. A destruction level between the late MK and the Hyksos strata implies more than just peaceful infiltration.

Once in Avaris, the Hyksos prospered and, utilizing their own Palestinian models, ruled as overlords over Egyptian vassals. This occupation was a watershed in Egyptian history, for up to that point, the Egyptians, despite periods of internal political chaos, had been free from invasion. For generations the Egyptians would be haunted by the specter of foreign domination. Thus, when the 17th Dyn. rulers revolted against their Hyksos overlords and surged northward in victory, they would rightly be regarded as liberators by the grateful Egyptians. The liberation of Egypt under kings Kamose and Ahmose ushered in a new era, the New Kingdom.

A. Chronology

Absolute dates within this period (ca. 1570–1070 B.C.E. = New Kingdom [NK]) revolve around the disputed accession years of two kings: Thutmose III (Dynasty XVIII) and Ramesses II (Dynasty XIX).

Recent scholarship has reached consensus on 1279 B.C.E. for the beginning of Ramesses II's reign, but the debate regarding Thutmose III's accession year—variously placed at 1504, 1490, and 1479 B.C.E.—continues (e.g., Parker 1957; Hayes and Rowton *CAH³* 1/1: 173–239; Hornung 1964; Krauss 1978). The chronology followed in this article adheres to the highest date for Thutmose III, i.e., 1504 (Wente and Van Siclen 1976), but readers should be aware that a reasonable case can be made for the lower options as well (e.g., Kitchen 1987). The gaps in the historical record preclude all certainty. For example, since exact lengths of reign are unknown except in a few cases (Thutmose III, Hatshepsut, Amenhotep III [?], Amenhotep IV/Akhenaten, Tutankhamun, Ramesses II, Sety II, Siptah, and Ramesses III), shifts amounting to one year or more are possible in the NK for all reigns, except for those of Thutmose III and Ramesses II, both of which are fixed points in any chronological scheme. Given the uncertainties that still prevail before Ramesses II (see Hornung 1979; Krauss 1985; Kitchen 1987), it should be noted that dates provided in this article for kings prior to Amenhotep III could be lowered in some cases by more than a quarter of a century.

B. Early 18th Dynasty

The expulsion of the Asiatic "Hyksos," who had dominated Egypt since ca. 1650 B.C.E., is the event that demarcated the beginning of the NK in Egyptian tradition. Freedom from Hyksos suzerainty and the reunification of Egypt were finally achieved in the reign of Ahmose I (ca. 1570–1546). Ahmose thus achieved the somewhat artificial distinction of founding a new dynasty, called the Eighteenth by the 3d cent. B.C.E. historian Manetho (Waddell 1940: 100–47; cf. Redford 1986: 18–64, 242–47), even though Ahmose was a direct descendant of the late 17th Dyn. kings who had begun the Theban rebellion (Hayes *CAH³* 2/1: 64–74; James *CAH³* 2/1: 289–96). Ahmose I's struggle and his final success were achieved on two fronts. In the north, he drove the last of the Hyksos into Asia and crushed their Egyptian supporters (Vandersleyen 1971: 17–48, 75–88). The struggle was carried onto Asiatic territory, notably with the siege of the city of Sharuhen (Vandersleyen 1971: 89–129), but the further extent of his northern wars is uncertain (e.g., Weinstein 1981: 1–10). As a necessary counterpart to the struggle with the Asiatics, Ahmose I also continued the war begun by his predecessor, Kamose (ca. 1573–1571), against the Hyksos' southern ally, the kingdom of Kush (Smith 1976: 80–85; Vandersleyen 1971: 49–74). By the reign of Thutmose I (ca. 1524–1518), the Egyptians had more than tripled their domains in Nubia. This unprecedented extension of Egypt's southern possessions was accompanied by an equally novel imperial system. Nubia was placed under a viceroy, the "King's Son of Kush," and was directly governed by a hierarchy of Egyptian officials in collaboration with native Nubian princes (Adams 1977: 217–45; O'Connor *AESH*, 252–70). Egypt thus secured the rich mineral deposits of Nubia, including the renowned "gold of Kush," and also controlled the trade routes that brought southern African products to northern markets (Hayes *CAH³* 2/1: 329–33, 346–53). This political arrangement endured until the end of the NK, and the effects of the Nubians' adoption of their rulers' culture lasted long after that.

The peril to Egypt's northern frontier was not exorcised, however, by the Hyksos' defeat. Sparsity of textual documentation prevents any but the most speculative discussion of the players in this drama and their actions (Drower *CAH³* 2/2: 415–36; Helck 1971: 107–19). It is clear, however, that the pharaohs were occasionally compelled to lead their armies far beyond their borders during the half-century that followed Ahmose I's reunification of Egypt. Military exercises such as the campaign of Thutmose I up to the banks of the Euphrates River, together with the wars that secured Egypt's hold on Nubia, helped to forge the military facets of the king's institutional identity. There is little evidence, however, that these activities in western Asia were as yet motivated by the imperialist spirit so apparent in Egypt's policy toward the south (Redford 1979). An empire was no doubt easier to impose in Nubia than in the culturally more diverse and politically complex environment of Syria-Palestine, where the Egyptians already faced a potential rival in the kingdom of Mitanni (Frandsen 1979; Kemp 1978). It appears, however, that while the Pharaohs were resolute in the face of provocation, they were not prepared at this point to commit themselves to much more than a defensive posture toward western Asia.

At home, Ahmose I and his son Amenhotep I (ca. 1551–1524) took in hand the reorganization of Egypt after nearly two centuries of disunity (James *CAH³* 2/1: 299–312). Internal affairs were managed by one

or two viziers (one for Upper and Lower Egypt respectively, a division of office attested by the reign of Thutmose III and intermittently thereafter). The viziers exercised regular supervision over the treasury, supply, judiciary, and police departments. They also appear to have ranked over the chief commanders of the army and the high priests of the various gods in Egypt, although their real power in these areas was frequently overshadowed by others, not least by the king himself. Although tenure in office was under the king's control, the patrimonial tendency ingrained in Egyptian society encouraged the growth of whole "dynasties" of entrenched officeholders, whose power endured so long as they remained in favor (Hayes *CAH³* 2/1: 323–29, 353–401; *AESH,* 204–18). While the effects of such social inertia were not always beneficial, the government thus constituted proved sufficiently stable to weather many disturbances in the centuries to come.

The first major crisis was dynastic, involving tensions within the royal family, which festered over the next three generations (Hayes *CAH³* 2/1: 315–22). For lack of a male heir, Amenhotep I went outside the immediate royal family and appointed Thutmose I as his successor. The latter's paternity is unknown, and his claim to the throne seems to have been secured by his marriage to a daughter of Amenhotep I and his chief queen, herself a full member of the royal family on both sides. Over the next two generations, this pattern persisted. Thutmose I's chief queen passed her Ahmoside lineage on to her daughter, Hatshepsut, who wed her half-brother, Thutmose II (ca. 1518–1504); and the issue of this union, another daughter, was married to *her* half-brother (and cousin), Thutmose III (1504–1450). As the last descendants of Ahmose I, these women continued to hold the office of chief queen at the expense of the nonroyal women who bore the king's sons.

While the preeminence of the Ahmoside females has suggested that the kingship was transmitted matrilineally in the earlier 18th Dyn. (Redford 1967: 65–76), it may reflect little more than the value that the pharaohs then placed on their connection with the dynasty's founding family. In any case, the implied conflict between the claims of the Ahmoside branch, by now exclusively female, and the king's supremacy (regardless of lineage) was not to be resolved quietly. When Thutmose II died prematurely, leaving the baby Thutmose III as his heir, Hatshepsut assumed the regency for the young king. Her eventual assumption of the kingship itself (in 1498?) carried to a logical extreme the pretensions of the Ahmoside branch of the royal family. Although Hatshepsut did not dethrone her nephew, she asserted a claim to royal power equal to his and, as senior coregent, took precedence over him in contemporary monuments (Redford 1967: 50–87; Murnane 1977: 32–44). The joint reign of Hatshepsut and the young Thutmose III was outwardly prosperous, punctuated by the execution of great building projects (e.g., the queen's mortuary temple, today called Deir el-Bahari) and expeditions to the land of Punt on the eastern coast of the Sudan (Hayes *CAH³* 2/1: 329–33; Kitchen 1971). An ingenious hypothesis, which interprets an inscription from this time (Gardiner 1946) as referring to the tidal wave that followed the volcanic eruption on the Greek island of Thera and connects this phenomenon with circumstances surrounding the Israelite exodus from Egypt (Shanks 1981; 1982), has not gained general acceptance (e.g., Oren 1981).

Hatshepsut's death (1483?) ended her coregency with Thutmose III; and when her daughter also died, apparently childless, the original branch of the 18th Dyn. died with her. While the dispute between the two sides of the royal family was practically resolved in the Thutmosides' favor, the issue of legitimacy continued to rankle. In spite of all the glory he won through his later achievements, Thutmose III felt compelled to secure his claim to the throne by systematically dishonoring Hatshepsut's memory (Edgerton 1933; Nims 1966). Thutmose III's later queens, and those of his successors, enjoyed a largely ceremonial status that did not permit them to challenge the king's right to determine the royal succession, as the females of the Ahmoside line had at least implicitly managed to do.

C. Formation of the Empire in Western Asia

The resolution of the dynastic crisis in Egypt coincided with the rise of a fresh challenge from western Asia. During the last years of Hatshepsut's reign, the king of Kadesh had succeeded in forging an alliance with over three hundred Syro-Palestinian principalities. This was a development that the Egyptians, from their experience of the Hyksos invasion, could only regard with apprehension. In his first and most celebrated campaign (1483), Thutmose III surprised the confederate princes at Megiddo and, after a

seven-month siege, was able to dictate terms (Faulkner 1942; Helck 1971: 118–36). The fate of the vanquished princes, however, was unexpectedly mild: tribute and an oath of loyalty to the pharaoh were all that was required in most cases. These provisions marked a departure in Egypt's relations with her Asiatic neighbors: reciprocal obligations between vassal and overlord were now extended more widely and systematically than ever before, and the Egyptians were committed to a consistent pattern of involvement in Syria and Palestine (Drower *CAH³* 2/2: 444–59).

The stability that Thutmose III sought through this farsighted policy was not, however, to be won quickly. Continued resistance from major states such as Kadesh and Tunip encouraged other cities to rebel and eventually triggered the direct involvement of Mitanni, the rival superpower in the north. The ensuing struggle, prolonged over the next three generations, demonstrated the futility of the major powers' efforts to prevail over one another. Having secured the Syro-Palestinian coastline, as well as the interior of Palestine, Thutmose III next carried the war deep into enemy territory. In 1473 he equaled Thutmose I's earlier feat of campaigning on the River Euphrates, thus demonstrating Mitanni's vulnerability on her own borders (Faulkner 1946). This lesson was driven home repeatedly in Thutmose III's later years, which witnessed numerous incursions into the Mitannian vassals' territories. The Mitannians countered by inciting rebellions within Egypt's sphere of influence, precipitating fresh campaigns by Amenhotep II (ca. 1453–1419) and Thutmose IV (ca. 1419–1386). By the close of the 15th cent., competition between the superpowers had become a vicious circle that benefited neither one. The time had now come for Egypt and Mitanni to stabilize their respective spheres of influence in the Middle East (Drower *CAH³* 2/2: 459–67; Redford 1979; Spalinger 1983).

Peace between Egypt and Mitanni was celebrated by the first of several "diplomatic marriages" when Thutmose IV married a daughter of the Mitannian king Artatama. This marriage tie between the royal families, maintained over the next two generations in Egypt (Schulman 1979), symbolized the peace that, with the two empires' rapprochement, now extended from the Nile to the Euphrates. Cordial relations between Egypt and Mitanni removed barriers to trade between their territories and helped to expand commercial and diplomatic contacts with other regions, notably Cyprus, Hatti, Assyria, and Babylon. Peace between the superpowers also helped suppress, even if it did not eliminate, rivalries and occasional lawlessness among their vassals. The two empires met in southern Syria. On the coast, the Egyptians were supreme, for their sphere of influence ran north into Amurru (northern Lebanon). Mitannian access to the coast was through the territory of Ugarit, which was friendly to both powers. Inland, the border lay north of the city of Kadesh, an Egyptian vassal. A measure of insight into the vassal states' relations with their suzerains and with one another can be gleaned from the diplomatic correspondence on cuneiform tablets recovered from the Egyptian site of El-Amarna (Drower *CAH³* 2/2: 467–93; Albright *CAH³* 2/2: 98–116; Liverani 1979). The beneficial effects of peace can be observed in the Nile Valley under Amenhotep III (ca. 1386–1349), whose reign has become identified with the splendor of imperial Egypt in the period just preceding the foreign and domestic crises which arose in the reign of his son (Hayes *CAH³* 2/1: 338–46).

D. Amarna Period

Amenhotep IV (Akhenaten) is one of the best known, yet among the most mysterious, of the pharaohs. A younger son of Amenhotep III, he became crown prince on the premature death of an elder brother. Suggestions that he spent the greater part of his reign as his father's coregent (Aldred 1968: 100–32) are now generally disbelieved (Redford 1967: 88–169; Murnane 1977: 123–69, 231–33). Although many of the changes he introduced can be traced to artistic, linguistic, and religious trends of earlier periods, the contemporary significance of these innovations are still debated (e.g., Aldred 1968: 163–96; Redford 1984: 157–81). Similarly, while the objects and practical effects of Amenhotep IV's program are fairly clear, a great deal of uncertainty still clouds his motives and the antecedents of his reforms.

Amenhotep IV's new program began to manifest itself soon after his accession (ca. 1350?). An obliquely expressed disdain for traditional cults (Redford 1981) was accompanied by unequivocal signs of favor to a form of the sun god who was manifest in the solar disk, the "Aten." Although the disk itself was an accepted religious symbol, the king gave it new attributes and a cult that the established priesthoods were forced to accept. Temples to the Aten, hastily built and decorated in a new style that self-consciously

broke with the artistic tradition of previous reigns, sprang up throughout the Nile Valley. The new cult was particularly favored at Thebes (Redford 1984: 57–142), the bailiwick of the most conspicuous of the old deities whom Amenhotep IV wished to supplant, "Amun-Re King of the Gods." Favored since the beginning of the 18th Dyn. as the ruling god of the family's Theban hometown, Amun and his clergy had acquired property and privileges far beyond those awarded to other institutions. The danger presumably lay in the possibility that this power might someday erode the king's exclusive authority (Kees 1953: 10–84; Hayes *CAH³* 2/1: 323–29). While the precise nature of the challenge, if such it was, remains obscure, it is clear that the pharaoh had set himself on a course that would only be to the established cults' disadvantage.

By the fifth year of Amenhotep IV's reign, even the pretense of dispassion toward the old gods (Redford 1963) had been replaced by a widening alienation from their clergy. The king now changed his name to Akhenaten (meaning, perhaps, "One who is effective on behalf of the Aten"). At the same time, he established a new cult center for his god in Middle Egypt, at a site hitherto devoid of cultic associations, which he called Akhet-Aten ("the Horizon of the Sun Disk"), today known as El-Amarna (Murnane 1984; Kemp *LÄ* 6: 309–19). See also AMARNA, TELL EL-. The resources of the state were thrown into the construction of the new royal residence city, which was further magnified at Amun's expense when Akhenaten decreed that he and his family should be buried there instead of in the traditional royal cemetery of West Thebes (Redford 1984: 142–53). The snubbing of the old gods eventually turned to outright persecution when Akhenaten closed their temples and ordered that the images of most divinities be destroyed (Aldred 1968: 191–96). It was plain that the stability of Akhenaten's new order would have to depend on the force of his will, and not on any long-standing institutional bases.

Much has been written on the doctrinal foundations of Akhenaten's creed. The identification of his god with the royal interest has even led to a charge of atheism (Redford 1984: 157–81, 232–35); but the prevailing tendency has been to debate the extent to which Akhenaten was or was not a monotheist. A strict monotheism can be excluded, for the divinity of the Aten in the sky was shared on earth by the king and, very probably, by his chief queen, Nefertiti (Wilson 1973). On the other hand, one of the salient characteristics of Akhenaten's "heresy" is that it sharply restricted the traditional embodiments of divinity, even in the cult of the sun god (Assmann 1972; *LÄ* 1: 526–40). The king's iconoclasm, moreover, extended beyond the destruction of individual divine images, attacking even the word "gods" in earlier hieroglyphic inscriptions (Hornung 1982: 244–50). Akhenaten may not have breached the traditional Egyptian henotheism, but he certainly stretched its limits to an ultimately unacceptable degree.

In the end, Akhenaten's reforms could not outlive their creator. The religion of the Aten found no effective champions at his death, which left Egypt wracked by troubles abroad and instability within the royal family. The accession of Akhenaten's son-in-law Tutankhamun (ca. 1334–1325) brought with it the restoration of the orthodox cults, and a measure of calm was thus restored. Akhenaten and his immediate successors were tarred with the same brush, however, and all were eventually consigned to the official oblivion that Akhenaten initially planned for Egypt's ancient gods (Alfred *CAH³* 2/2: 63–81; Redford 1984: 222–31).

Alongside the internal upheavals of Akhenaten's reign, Egypt faced nothing less than a fundamental change in the balance of power in the Middle East. The superpowers' *entente cordiale* was already under strain when the renascent kingdom of Hatti began to challenge the Mitannians in the north. When the Hittite king Shuppiluliuma drove the pharaoh's father-in-law, Tushratta of Mitanni, from his capital and took over most of his vassals in Syria, the Mitannians suffered a mortal blow. Egyptian interests were directly affected, moreover, when the Hittites took over the city-state of Kadesh, an Egyptian vassal, and then refused to give it up. There followed a prolonged period of cold war, during which both Egypt and Hatti were hostage to each other's indecisiveness and to the machinations of their Syrian vassals. A serious effort to resolve the superpowers' dispute ended badly when a Hittite prince sent to marry Tutankhamun's widow (ca. 1324) died on his way to Egypt. The active hostilities which followed only confirmed the dispiriting trend of foreign affairs under the Amarna pharaohs. Egyptian military failures

and the preponderant Hittite power in northern Syria eventually forced the kingdom of Amurru to join Kadesh as a Hittite vassal, pushing the border of Egypt's empire still further south. Affairs on the frontier would continue to sour relations between Egypt and Hatti over the next three generations (Goetze *CAH³* 2/2: 1–20, 117–29; Murnane 1979).

E. Dynasty 19

When a series of premature deaths wiped out a royal family already discredited by association with the Amarna heresy, the way lay open for a competent strongman to rule in its place. This was Horemheb (ca. 1321–1293), a general of humble birth who had risen to a position of preeminent authority in the years following Akhenaten's death. His coronation by oracular decree (Gardiner 1953) inaugurated a long reign whose solid orthodoxy did much to repair the social ravages the Amarna period had left in its wake (Aldred *CAH³* 2/2: 71–77). Horemheb's failure to produce an heir, however, compelled him to appoint as his successor a trusted associate who, as Ramesses I (ca. 1293–1291), founded the 19th Dyn. (Kitchen 1982: 9–20).

The unresolved quarrel between Egypt and Hatti was reopened by Ramesses' son Sety I (ca. 1291–1279), who won back for Egypt the border territories of Kadesh and Amurru. The Hittites' failure under Sety, however, would be redeemed with interest in the early reign of his son, Ramesses II (1279–1212). When Kadesh once more defected to the Hittites, Ramesses marched north in 1274 and, believing reports that the Hittite King Muwatalli was still far away, pitched camp on the western side of Kadesh. Muwatalli's army was hiding behind the city, however, and in a fierce attack it cut the Egyptian column in two, nearly destroying the king and his forces. Ramesses II's gallantry on the field and the timely arrival of relief troops averted this disaster; and after another day of inconclusive fighting, Muwatalli allowed the Egyptians to leave the field of battle (Kitchen 1982: 43–64; Schulman 1962; 1981). This orderly retreat masked a calamitous defeat for Egypt, however, as the Hittites reconquered Amurru and swept down into southern Syria, which Egypt had held since the middle of the 18th Dyn. Although this territory was recovered, the ensuing struggle between the two empires soon degenerated into an unproductive stalemate (Kitchen 1982: 64–72). Mutual exhaustion, the Hittites' inability to cope with Egyptian intrigues, the rising power of Assyria, and (perhaps) concern with the waxing might of marauding "Sea Peoples" in the Mediterranean, finally ended the hostilities. With the conclusion of a mutual defense pact in 1259, the superpowers were again at peace. During the balance of his long reign, Ramesses II would resume the practice of diplomatic marriage and wed no fewer than two Hittite princesses (Kitchen 1982: 73–95; Goetze *CAH³* 2/2: 252–73; Schulman 1977–78; 1979). The equilibrium of the great powers in the Middle East was restored.

The scale and abundance of Ramesses II's monuments—which include the majestic rock temples in Nubia, imposing cult buildings at Thebes, and numerous constructions in the north—amply justify this pharaoh's posthumous reputation for grandeur. Among these projects, embellishments to ancient Heliopolis and the development of the royal residence Piramesse (at Qantir in the eastern Delta) probably lie behind the account in Exodus 1:11 of the Hebrews' servitude at the cities of Pithom and Rameses (Uphill 1968; 1969). See also RAMESES (PLACE). Widespread prosperity is also reflected in commemorative monuments of the high officials of the reign (Kitchen 1982: 97–182) and in the surviving workaday records of common people, notably those recovered from the workmen's village of Deir el-Medina in West Thebes (Bierbrier 1982).

In Asia, the turmoil that had beset the borders of Egypt's empire from the Amarna period into the early 19th Dyn. led to an intensified military presence in the remaining territories (Weinstein 1981: 15–22). This heightened security in the east was matched in Ramesses II's reign by defensive measures against the persistent infiltration of foreigners from Libya into the Delta (Habachi 1980). The movement of people from the Libyan homelands could not be stopped, however, and by the reign of Ramesses II's son Merneptah (ca. 1212–1202), bands of Libyans roved virtually at will through the western Delta. In 1208, Egypt's northwestern border was overrun by a massive invasion from Libya: spearheaded by the Libu tribe, it was rendered even more formidable by an alliance made by the Libyan chief with five peoples from the marauding groups at the fringes of the Mediterranean, known collectively as "Peoples of the

Sea" (Helck 1976). Merneptah's defeat of this horde, and his suppression of a major revolt in Nubia at about the same time, deflected a major challenge to Egypt's imperial and, indeed, political integrity (Faulkner *CAH³* 2/2: 232–35; Sandars 1985: 29–117). Egypt's territories in western Asia not only survived any disruption from the Sea Peoples' invasion of Egypt, but enjoyed (under Egyptian auspices) a renewed prosperity that lasted into the next century (Oren 1984). Egyptian dominance within her sphere of influence is also illustrated by Merneptah's war with the city-states of Ashkelon, Gezer, and Yanoam and with a people called Israel, the latter being mentioned in Egyptian records for the first time during this reign (Yurco 1986). Egypt, however, had not seen the last of her troubles from Libya or the Sea Peoples.

The quarter-century following Merneptah's death was marked by civil wars, capped by a fresh wave of foreign invasions. The first phase, marked by a dispute between rival branches of Ramesses II's family, was eventually settled in favor of Merneptah's son, Sety II (Yurco 1980; Krauss 1976, 1977; Osing 1979). At Sety II's death (ca. 1193), the crown passed to his feeble son Siptah; but real power was apparently held by Sety's chief queen, Tausret, and by a court official of Syrian extraction, the "great chancellor of the entire land" Baye. At Siptah's death, Tausret briefly took the throne, but when she died, there ensued another obscure period of civil war—this time between foreign mercenaries, supporting Chancellor Baye, and forces loyal to the country's administration, which stood behind a certain Sethnakht. This man's victory, after a struggle lasting somewhat in excess of a year (ca. 1183), restored order to the land and passed the kingly office to a new royal family (Drenkhahn 1980; Faulkner *CAH³* 2/2: 235–41).

F. Dynasty 20

Sethnakht had barely been succeeded by his son Ramesses III (ca. 1182–1151) when problems on the northern borders flared up anew. Two Libyan invasions (ca. 1178 and 1172) and a fresh incursion of Sea Peoples (ca. 1175) required the young pharaoh to engage in a vigorous defense of Egyptian territory. Particularly menacing were the Sea Peoples, who had eliminated the northeast Mediterranean states that had previously helped to contain them. Now they were advancing into Egypt's Asiatic possessions, while their fleet assaulted the coastal defenses of the empire. Pitched battles on land and sea prevented this invasion from penetrating Egypt itself (Faulkner *CAH³* 2/2: 241–44; Sandars 1985: 117–77; Stadelmann 1968). Ramesses III's defeat of the two Libyan invasions, especially that of the Meshwesh Libyans in ca. 1172, was also considered a major achievement; but the Libyans' infiltration into western border areas, which had continued despite Merneptah's victory, would be the source of recurring difficulties later on (*AESH,* 271–78; Kitchen 1985). Seen retrospectively, the victories of Ramesses III appear to have been won at some cost. Egypt could not defend her Asiatic vassals from the very Sea Peoples whom Merneptah and Ramesses III had defeated, and who were now settling on the Levantine coast. As a result, even the appearance of Egyptian imperial control in Asia ended by the second half of the 12th cent. (Dothan 1982; Weinstein 1981: 22–23). At home, large numbers of Libyans were incorporated into the armed forces. Settled in permanent military camps, these troops formed the basis of a soldier class that, within two centuries, would support the political ambitions of its native leaders, the "Great Chiefs of the Me[shwesh]" (Kitchen 1973: 243–45, 285–92).

Strikes by the workmen of the royal tomb late in Ramesses III's reign (Edgerton 1951; Janssen 1979) are among the first indicators of the economic difficulties that persisted through the 20th Dyn. (O'Connor *AESH,* 226–29). The extent to which these problems can be traced to lower annual inundations (Butzer 1976: 29–33) is debatable; but they are manifest in higher prices for basic foodstuffs (Janssen 1975a, 1975b) and in widespread corruption at all levels of society (Peet 1924, 1930; Wilson 1956: 267–88). Some of the social disruption seen in this period can be blamed on marauding bands of Meshwesh Libyans, whose depredations are mentioned frequently in surviving records from Thebes (Černý *CAH³* 2/2: 616–69). The pharaohs who succeeded Ramesses III are ill defined as historical personalities, and it is hard to escape the impression that they remained increasingly in the splendid isolation of their Delta residence, leaving the local management of affairs in other hands. In much of Upper Egypt this duty came to devolve upon the high priest of Amun, whose importance as the chief manager of his god's extensive land holdings increased when the office became hereditary during the 20th Dyn. (Černý *CAH³* 2/2: 626–

34; *AESH*, 211–18, 222–25). To all appearances, the competition that Akhenaten had feared from the Amun clergy was realized some two centuries after his death.

It was not the priests, however, but the generals who would preside over the dismemberment of NK Egypt. While much of this process remains obscure, it began with a rebellion that broke out in Upper Egypt near the beginning of Ramesses XI's reign (ca. 1098). Apparently directed against the central authority represented by the high priest of Amun (Wente 1966), the insurrection was put down by loyalist troops under the command of Panehesy, the viceroy of Nubia. Panehesy stayed on as governor of the Thebaid until he was driven out by the general Herihor, a commander of Libyan extraction who also professed loyalty to Ramesses XI. Herihor, like Panehesy before him, acted as military governor at Thebes, but he went a significant step farther by claiming the offices of viceroy of Nubia, vizier, and even high priest of Amun. In fact, Herihor was an independent ruler who appropriated the titles of kingship on some of his monuments at Thebes. The "Report of Wenamun," which (like the MK "Autobiography of Sinuhe") is probably an artful work of fiction with a factually realistic setting (Helck *LÄ* 6: 1215–17; but cf. Wente 1973), describes Herihor as having cordial relations with one Smendes, who wielded a commensurate power in the north from his headquarters at Tanis. The ideological legitimacy of these regimes was apparently grounded in their leaders' authority as representatives of the god Amun, who by now was reckoned as the true king of Egypt. Ramesses XI still reigned through all this, but it is clear that he did not rule.

However peacefully these usurpations were accomplished, they would have far-reaching and ultimately destructive results. When Smendes became the founding king of the 21st Dyn. at Ramesses XI's death (ca. 1070), he could command only the nominal submission of the Theban high priests, whose territory began some fifty miles south of Memphis. In the far south, the war that Herihor and his successors had begun with the viceroy Panehesy achieved only the detachment of Nubia, which would go her own way until she reclaimed her heritage from Egypt in the 8th cent. B.C.E. The NK had begun with the reunification of Egypt and her brilliant conquests in Asia and Nubia. It ended with the loss of both empires and the beginnings of an internal fragmentation that would eventually cost the nation its political independence (Kitchen 1973: 247–57; Černý *CAH³* 2/2: 626–43; *AESH*, 229–35).

A. Third Intermediate Period
1. Egypt in Dynasty 21
2. Libyan Era: Unity
3. Libyan Era: Anarchy
4. Kushite Era
5. Assyrians and Kushites
B. Saite Period

———

A. Third Intermediate Period

The era immediately succeeding that of the New Kingdom (NK) witnessed varied developments in society, culture, and economy (Kitchen 1973). Notwithstanding the apparent paucity of royal inscriptions, much has been revealed by recent research concentrated on this hitherto presumed Dark Age of Egypt. However, the paramount and consistent trend in the dynasties following the fall of the NK is one of political decentralization and corresponding lack of a firm unified monarchy (Yoyotte 1961). Foreigners, too, made an impact on the Nile valley, and not one but three different contenders for the prize of Egypt left their mark. First, there were the Libyans, who had already settled in the north during the reign of Ramesses III; then Egypt was faced with a southern incursion, that of the Kishites; finally, the mighty Assyrians attempted to conquer the land. As a result, the political history of this time is difficult to view as a whole if only because Egypt was not unified as before. For the sake of simplicity and ease of comprehension, modern scholarship now uses the term "Third Intermediate Period" to cover Dynasties 21–25 (ca. 1069–664 B.C.). This, in turn, was followed by the Saite Period, Dyn. 26 (664–525 B.C.), an era of unity (De Meulenaere 1951; 1967; all dates follow Kitchen 1982–83). However, it should be stressed that the 3d Intermediate Period is purely a global designation, revealing little about the 400-year span of Egyptian history, a time that witnessed the emergence of a society quite different than any preceding.

1. Egypt in Dynasty 21 (ca. 1069–945 B.C.). The last years of Pharaoh Ramesses XI saw a subtle alteration in the power structure of Egypt. The famous report of Wenamun (ca. 1076 B.C.) alludes in fairly direct language to the dual control of Egypt: in the south, control had effectively passed to the high priest of Amun, Herihor, while the north was under the *de facto* jurisdiction of Smendes from his capital at the seaport of Tanis in the East Delta (Wente 1972; Lichtheim *AEL* 2: 224–30). At the death of the last Ramesside ruler, the two offices passed smoothly to, respectively, the then incumbent high priest of Amun Pinudjem and to Pharaoh Smendes himself. It is noteworthy that there followed a sudden blanket of darkness concerning Egypt's control over Nubia. From the beginning of Dyn. 21, most of the territory south of Egypt proper was lost to the Egyptians, whether the royal house of Tanis or the pontiffs of Thebes. However, some degree of economic control may be inferred from the female side of the priestly family of Pinudjem II, high priest of Amun, which received titles such as "Superintendent of Southern Foreign Lands" and, presumably, revenues from Nubia (Kitchen 1973: 276). This cessation of control further aggravated the economic weakness of Egypt already begun with her withdrawal from Asia a half-century earlier. An examination of the difference between the two parts of Egypt at this time is more instructive. Not only was the high priest of Amun the religious leader of the south, controlling the old area of the "Head of the South" in Upper Egypt as well as most of Middle Egypt, but he was likewise a commander-in-chief of the army, or *generallissimo,* as modern scholars label him, and "army leader" (Kitchen 1973: 252, 257). Inscriptional evidence from Thebes points to the common practice of consulting oracles, in which the god Amun (through his priesthood) played a crucial role (Gardiner 1962; Kruchten 1986). A few such oracles have come down to us from this period, dealing with property settlements by members of the royal family; these texts stress the all-powerful connection of the religious hierarchy of Thebes and its far-ranging secular jurisdiction (Černý 1962). The judgments that were rendered had to be approved by the god, who "nodded vigorously" as the inscriptions recount. A famous inscription probably dating from the later reign of King Siamun (ca. 978–959 B.C.) narrates an oracle

decision wherein the legal case concerned misappropriation of funds (Kitchen 1973: 277; Kruchten 1985; 1986).

Pinudjem I renewed the burials of his royal ancestors in the Valley of the Kings, albeit with some possible mistakes in attribution (Černý 1946; Kitchen 1973: 257). He also had himself proclaimed pharaoh in his own right, the first clear-cut evidence of this practice from the temple of Khonsu at Thebes. In the 16th regnal year of Smendes (ca. 1057 B.C.), Pinudjem became the first pharaoh of the south, while his son Masaharta took the position of "high priest of Amun." Although this was not the start of a civil war, it essentially created a separate and continuing dynasty in addition to the royal line of Tanis. It is difficult to view such appropriation of royalty as *lèse majesté* or revolt by Pinudjem against Smendes, since the latter never had effective control over Thebes. Moreover, there are no regnal years associated with Pinudjem as king, a point worth stressing as it indicates that Smendes still was superior, if only in form. Indeed, the high priest may have taken this move owing to unrest in Thebes, which was finally resolved by his son (see below). Nevertheless, the natural division in Egypt between north and south finally reached its logical conclusion and the new king probably moved his residence to El-Hibeh in Middle Egypt, thereby establishing his court there. He was related by marriage to Smendes through his wife Henettowe and it is probable that relations between Smendes and his son-in-law were cemented by means of this physical alliance. In this light it is interesting that the next high priest, Menkheperre, traveled south (from the Middle Egyptian residence of El-Hibeh) to take up his new position in year 25 of Smendes. He was soon faced with dissension and civil disturbances in the Theban region (Kitchen 1973: 260). Rather than resulting from a conflict between adherents of the Tanis dynasty and those of Pinudjem I, it is more probable that these outbreaks of violence reflected the further disintegration of unity within Egypt, in this case with Thebes and the extreme south against Middle Egypt. Indeed, it is clear that Pinudjem attempted to firm his absentee control over this religious capital by ensuring that all of the key positions remained within his family. It should also be remembered that during the preceding dynasty, the Theban temples, especially that of Amun-Re at Karnak, possessed large tracts of land to the north (Gardiner 1942–48); there is no reason to think that such was not the case in the middle of Dyn. 21. Hence, he who controlled Thebes and its hierarchy automatically gained access to considerable resources, including tenants, land, and of course, wealth. The so-called "Banishment Stela" of Menkheperre recounts the apparent success of Pinudjem's son in quashing unrest when he reached Thebes, as well as his later grant of clemency toward banished malcontents who were then residing in the Khargah Oasis (Von Beckerath 1968). The most careful reading of the text fails to disclose any clue to the exact historical circumstances leading up to the Theban dissension, but one suspects that it was more politic for the high priest to aim at reconciliation rather than warfare.

With the deaths of Smendes and his short-lived son, the Tanite line then passed on to the energetic Psusennes I (ca. 1039–991 B.C.). Although the southern line of high priests never again rose to claim royalty after Pinudjem I's death seven years later, Psusennes himself took the title of high priest of Amun (this time in Tanis). He copied the policy of his southern contemporaries by securing his control over various priestly offices. Indeed, unlike the administrative setup of the NK, Dyn. 21 and its successors reveal the intimate family relationships that existed between the kings and the religious benefices in the land. It would be false to view only the south in this manner: Psusennes I and his royal descendants also established a joint religious-secular state, a "God's State," to employ the term used by German Egyptologists (Meyer 1928). In addition, the new monarch built extensively at Tanis, transforming it into the major commercial and administrative metropolis of the north. Noteworthy is his predilection for the Theban gods Amun, Mut, and Khonsu, reflecting the predominance of this triad, already known from the NK, outside of Thebes.

Very little is known concerning the south of Egypt during the reign of Psusennes and his successors. The line of Menkheperre continued to hold the office of High Priest of Amun, but none of his descendants ever took the kingship. Perhaps indicative of the independence of this region from the north was the establishment of El-Hibeh as the capital and fortress of the southern rulers, a fact well known from Menkheperre's own building program there and from a group of papyri (Spiegelberg 1917). This citadel

city was ideally suited both for possible defense against the north and commercial control over the north-south river trade owing to its vantage point on the Nile. In fact, Menkheperre and his sons may have found their hands full maintaining control over the southern city of Thebes from their capital in addition to keeping guard on the border just north of El-Hibeh. However, the close connections between Tanis and the southern pontiffs should remind us that there is no evidence of warfare or hostility between the two powers. Psusennes I and his immediate successors were recognized in Thebes, and the aged king himself was interred there.

The next three Tanite kings, although of relatively small importance, present interesting aspects. During the reigns of the first two, Amenemope and Osorkor (n), now named "The Elder," close connections appear to have been forged between the Tanite court and Hadad the Edomite (see 1 Kgs 11:14–22), a political refugee from the north (Malamat 1958; 1963: 8–17; Redford 1973: 5–6; Kitchen 1973: 273–75; Schulman 1983). It was probably during these two reigns that Hadad came to Tanis and secured for himself a place in exile after the victorious armies of King David had taken control of his kingdom. This passive support of an enemy of the Israelite Kingdom was to have repercussions toward the close of Dyn. 21. Such brief indications of international maneuverings clearly indicate that the paucity of our sources for this period does not necessarily indicate that the Tanite kings eschewed foreign affairs. The second pharaoh, Osorkor (n) (ca. 984–978 B.C.), bears a good Libyan name and there is little doubt, following recent research, that he was not related to the previous pharaoh (Yoyotte 1976–77). Quite the contrary, Osorkor (n) was descended from an important Libyan (or Meshwesh, as they called themselves) tribe that had settled in the north in Dyn. 20. His father was a tribal emir of great importance and he himself was the uncle of the future founder of Dyn. 22.

Such an occurrence indicates the gradual but steady rise in importance accrued by the Libyans in Egypt during the 21st Dyn. By and large, they were descendants of captured soldiers and families defeated by Ramesses III at the beginning of Dyn. 20. As such, they were given parcels of land on which to work, a fact confirmed from the data of Papyrus Wilbour (Gardiner 1942–48). Despite many years in Egypt, they appear to have kept their military ability as well as their tribal character. Indeed, although the next dynasty may be viewed as archetypically "Libyan," at this earlier date they still possessed their tribal political system and were ruled by chiefs designated as "Great Chiefs of the Ma" (or Meshwesh).

Siamun (ca. 978–959 B.C.) continued to support the refugee Hadad at his court. However, when the aged king David of Israel died, he took the opportunity to support fully Hadad's return to Edom and at the same time moved his army north into Philistia (Malamat 1963: 12–16; Kitchen 1973: 280–83). This campaign, although minor in comparison to those of the NK, nevertheless indicates that Tanis regarded her northern neighbor, the kingdom of Israel, with a jaundiced if not jealous eye. Precisely at David's death and coinciding with the problems of royal succession in Israel, Siamun moved on Gezer and seized it. Unfortunately for the Egyptian, events in Israel had also sped swiftly and Solomon quickly took control of his father's kingdom. As a result, the Tanite monarch made an about-face and, under the guise of a diplomatic marriage agreement, "gave" the captured city of Gezer to Solomon as a dowry with his daughter, thereby cementing an alliance with his powerful neighbor. Indeed, as Gezer belonged to the Philistines, it may be persuasively argued that Siamun's campaign was an attempt at curtailing, if not crushing, a commercial rival, since the Philistines were in control of much of the East Mediterranean sea trade.

The last pharaoh of Dyn. 21 (Psusennes II: ca. 959–945 B.C.) rounded out the domination of Tanis. Recent evaluation of his little-recorded reign has indicated that the rise to power, previously thought to be quite sudden, of an important Libyan family, was not so very rapid or unexpected (Redford 1973: 7–8; Kitchen 1973: 284–86). This lineage, which eventually saw one of its members (Sheshonk) placed on the throne, could trace its roots far back in time. Indeed, as Yoyotte was first to stress, the importance of the Libyan families in the north, especially in the Western Delta, was part and parcel of Egyptian society from Dyn. 20 onward. At Bubastis, the family of the future king intermarried with that of Tanis. Much of the background information concerning the future Sheshonk I of Egypt can be derived from a well-known inscription set up at the holy shrine of Abydos, as well as from some genealogical stelae and inscriptions

(Blackman 1941; Kitchen 1973; 105–6, 109–10, 282–85). They reveal that Sheshonk was related to the earlier Pharaoh Osorkor (n) and that his son in turn was married to the daughter of Psusennes II.

Certainly one of the most significant aspects of Dyn. 21 is the almost incredible linkages maintained by the royal family at Tanis and by the high priests of Amun at Thebes. Both in the north and south, the two powers consistently maintained their relatives in key economic and military positions of the land. One might well view a system wherein the king's wives, children, and other relations were all associated with the main cult centers of the day as quasi-feudal. This system was not practiced in the NK to as great an extent. Basically, the growing devolution of the Egyptian state in Dyn. 20 had revealed the importance of temporal and religious power, especially in the south with the immense influence of the priesthood of Amun-Re. No longer could a pharaoh depend upon an ostensibly impartial bureaucracy for his power. The situation had altered to one in which the king's might was not merely contested by the power of the pontiffs at Thebes but, more significantly, could not be effectively exercised without firm support from other temples in Egypt. Such limitations on actual rather than theoretical power must imply that the basis for the king's strength was more constricted than previously, a conclusion partially supported by the numerous officials in Egypt—not only at Thebes—who held military ranks side by side with religious ones, and whose loyalty was not necessarily to the pharaoh. The settlement of Libyan warrior-families undoubtedly hastened the change of the social setup of Egypt, for these settled soldiers carried with them a clan or tribal system alien to the Egyptians. This can best be seen in the plethora of Libyan titles mentioned earlier, and it is striking that these people kept for a long period of time their native names, unlike other foreigners who settled in Egypt. The West Delta at this time may be likened to a Libyan lake, an interpretation stressed by Yoyotte (1961: 148–49, 151–59) and Kitchen (1973: 285).

2. Libyan Era: Unity. Owing to the complexities of the period during which the Libyans dominated Egypt, it is best to divide it into a time of comparative unity (ca. 945–850 B.C.), followed by a gradual disintegration leading to the fragmented political structure so well evident (c. 750 B.C.) just before Assyria and the Kushites became interested in the Nile Valley. This section will therefore deal with the first kings of Dyn. 22 and their apparent success in holding the land. Unfortunately, despite grandiose plans, they were unable to alter the social and political structure of the day, and Egypt relapsed further into a decentralized form of government.

Such an interpretation belittles the apparently radical move of Sheshonk I to the throne of Egypt. This active and internationally minded pharaoh (ca. 945–924 B.C.) is well known to biblical historians and Egyptologists. He quickly associated himself with the religious capital of Thebes, while at the same time allying with the last members of the Tanite lineage. Indeed, as noted previously, Sheshonk could trace his ancestors back into the misty past of Dyn. 20, certainly indicating that his pedigree was as old and, from a residence point of view, as settled as any local commoner. He followed the practice of his less successful predecessors of Dyn. 21 in cementing control over the Theban hierarchy through appointments of his relatives. It is unclear whether he intended any new course of action, for records indicate that the army commanders under his dynasty, just as that preceding, held religious posts as well. Although he planted his supporters and relatives in key positions in the north and south, Sheshonk did nothing to invalidate that decentralized system. Indeed, in his inscriptions we note constant references to adherents from the army, thereby lending credence to the feeling that the new pharaoh was perhaps even more dependent upon his military retainers (Blackman 1941: 84–85; Tresson 1935–38: 825–26).

Sheshonk's well-known campaign into Asia, for example, was not one of conquest (Kitchen 1973: 294–300, 432–47; Redford 1973: 7–11; Feucht 1981). Quite the contrary, he seized upon an opportune time to damage the power of his immediate neighbor to the north by marching into Palestine a few years after the death of Solomon. Recent work has revealed that rather than attempt to annex property, Sheshonk preferred to despoil the territories of Israel and Judah, which had the added advantage of providing needed booty in order to pay his army. Certainly the campaign was a success if the limited nature of the strategy is seen and understood (Redford 1973: 7–13). Unlike Siamun before him, who had to contend with a united kingdom of Israel, the split between the north and south after the death of Solomon lent itself to an effective war of attrition. Significantly, Sheshonk did not return to Palestine, even though the

state of Judah was weakened from the attack as well as from the desertion of Israel. Hence, one might also interpret Sheshonk's action as an attempt to break Israel's commercial monopoly in the north which had grown considerably at the expense of a weak Tanite line. This argument has the indirect support of the date of the campaign: in year 21 of the king, which is quite late in comparison to NK pharaohs, who usually campaigned in their opening years, thereby indicating that Sheshonk waited for a favorable time before moving north. Whatever the actual cause, the pharaoh returned home with much captured booty from Jerusalem itself and soon after began building at Karnak the Bubastite Portal (Caminos 1952; Epigraphic Survey 1954: pls. 2–9). This overt sign of Theban construction indicates the importance that the new Libyan king attached to the temple hierarchy of Amun-Re, a policy very different from that of the preceding dynasty.

It is therefore wrong to view the policy of Sheshonk and his immediate successors, Osorkon I (ca. 924–889 B.C.) and Takelot I (ca. 889–874 B.C.), as an attempt to revive the glory and power of the NK. While it is true that the former (Sheshonk I's son) did involve himself to the north in Judah, this was a minor foray (2 Chr 14:9–15) and probably intended solely for added booty. Close connections were also maintained with Byblos, the age-old ally of Egypt in the Levant. At home, Osorkon I is presumed to have provided the major temples of Egypt (Thebes and those in the north) with a great deal of wealth, or so says a lengthy inscription from Bubastis (Redford 1973: 13–15; Kitchen 1973: 303; Naville 1891: pls. 51–52). However, it is possible that this text is a copy of an earlier inscription, an occurrence well known from one other text written by Osorkon's namesake at Bubastis, Osorkon II (see below). In Thebes, Osorkon I had one of his sons installed as high priest of Amun, thereby preventing the incumbent from securing for his own lineage this all-important post. A second son, "Sheshonk II," became coregent but never ruled in his own right. Oddly enough, this shadowy king is eclipsed by one even more unknown, Takelot I, of whom, as Kitchen has stressed (1973: 310), not one contemporary document can be found. Nevertheless, during his reign there was issued a famous inscription known as the Iuwelot Stela. This text, now in the Cairo Museum, is a will listing the Theban property given by the donor (Iuwelot) to his son (Legrain 1897: 13–16; Baer 1973: 14). Of crucial importance for prices of land and slaves at the time, the Iuwelot Stela is remarkable for the omission of the name of the then reigning pharaoh, Takelot I. Is it possible that Takelot was not readily accepted in Thebes or that Iuwelot, himself a military chief of Libyan descent who controlled most of Middle and Upper Egypt, was independent enough of the royal authority to ignore the pharaoh? Such questions can be answered only through speculation, although it is significant that both Takelot I and his elder brother, "Sheshonk II," remain as ephemeral today as they must have been considered in antiquity.

With Osorkon II (ca. 874–850 B.C.) we come to the last significant king of Dyn. 22. His reign is noteworthy for a great amount of temple building, especially at his capital, Tanis. A well-known inscription from Bubastis dealing with his *heb-sed* (or Jubilee) festival is actually a copy of an earlier text of Amenhotep III and as such, bears witness to Osorkon II's "pious plagiarism," for want of a better phrase (Kitchen 1966: 277; 1973: 320–21; Van Siclen 1973; Naville 1892, pl. 6). Building projects at Thebes in Karnak, as well as at Bubastis, also provide evidence for this king's wide-ranging activity. Nevertheless, a close examination of his relations with the standard political offices and officeholders of the day reveals that he did nothing outside of the ordinary. In other words, the same type of decentralization existed, with members of the royal family holding key military and religious centers of the land. Kitchen has noted (1973: 314) that a dangerous precedent was established by the pharaoh when he allowed a certain Harsiese, son of a previous high priest of Amun-Re, to be appointed to that position. Sometime after, Harsiese elevated himself to the level of kingship in a little-understood event that bode ill for the Libyan state. That he died before Osorkon II, and that the king placed one of his sons in this post, in no way contradicts the feeling that Egypt's unity was quite fragile. Indeed, oracular degrees written at this time parallel in their verbiage and formulae a text of Osorkon II which refers to evildoers and threats to one's family (Redford 1973: 13–14; Yoyotte 1961: 136–37; Jacquet-Gordon 1960: 77; Kitchen 1973: 317). This sense of insecurity probably was the result of two conflicting elements in the Libyan era, attitudes that can be traced back to an earlier date: the king had to secure control of the land through his

appointments, particularly from his family; however, the sons and descendants of these appointees sought the very same positions themselves. In other words, devolution was a natural by-product of such a policy, and Egypt may be likened, for the first time in her history, to a feudal state following the model of medieval Europe. Yoyotte has noted (1961: 122–24, 129–30, 134–36) that toward the middle of the 9th cent. B.C. the title "Great Chief of the Ma (swesh)" was taken up by members of the royal family even though they were not clan leaders, properly speaking. And as for Osorkon himself, despite his construction projects, his close connections with Byblos and his abortive attempt to stave off the Assyrians at Qarqar (853 B.C.), he was unable to halt the internal developments within Egypt. Although he passed the throne to his son Takelot II, with his death the land split into warring camps.

3. Libyan Era: Anarchy. Within the next twenty or so years, Egypt was witness to the complete fragmentation of political power so evident in the numerous small principalities that the Assyrians later faced. At this time one of the ostensible causes was the attempt of Pharaoh Takelot II (ca. 850–825 B.C.) to secure his son, a certain Osorkon, the position of high priest of Amun-Re in Thebes. The trials and tribulations of this man are aptly considered to be his chronicle. In them, one reads of the continual opposition of the locals in Thebes as well as their adherents in Upper Egypt against the Bubastite ruler (Caminos 1958; Kitchen 1973: 329–33). Even though Osorkon's chronicle is one-sided, enough historical information is provided to follow the main thread of political dissolution. Basically, the king attempted to control the south by placing his son, Osorkon, as pontiff. This time the resistance was too great. For ten years the political and military fortunes of this man waxed and waned, until he reconciled with his opponents and then studiously followed a policy of realism. As stressed above, the real causes of dissent did not lie within Thebes itself. By following the decentralizing practices of Dyn. 21, the pharaohs of the Bubastite line only made the political situation worse. Actually, considering the tribal nature of the Libyans themselves and their dependence upon a leader for each clan, the so-called "Great Chiefs of the Ma," it is hardly surprising that the state of Egypt should become fragmented. The high priest Osorkon found during his lifetime that the system was too weak for effective royal control. Let it not be forgotten that during this time all the pharaohs resided in the extreme north at Tanis, quite distant from the religious center of Thebes. In addition to this center of potential opposition, other cities in Middle Egypt (Heracleopolis, Hermopolis, and El-Hibeh) were controlled by powerful Libyan dynasts; even if one could trace their ancestry back to a common royal figure, this says nothing concerning the real temporal power of the day, viz., inheritance of office without royal intervention. Such appears to have been the *causus belli* following Osorkon's fatal move to Thebes. He eventually lost and was buried soon after his father.

With Sheshonk III (ca. 825–773 B.C.), we reach the end of a united kingdom. Although the south, particularly Thebes, went its own way, a second dynasty established itself at Leontopolis in the East Delta (Kitchen 1973: 123–37; Baer 1973: 11–12, 21–23 differs). Indeed, the country can be envisaged at this time as being peppered with pro-Bubastite (Dyn. 22) and pro-Leontopolite (Dyn. 23) rulers, all small Libyan potentates. This political fragmentation is confusing as both lines followed their own system of regnal dating. Rather than recount the history of these two rival dynasties, it would be better at this point to turn to a more generalized picture of the land.

For the next eighty years or so the Egyptian state became a country with numerous Libyan principalities, each quasi-independent of any royal control. The split between Dyn. 22 and 23 merely hastened the breakup of the country. Indeed, toward the end of this period we find that some local Libyan rulers omit their nominal pharaoh's name while still using his regnal years! The redoubtable prince Osorkon, whose appointment to Thebes began this fragmentation, still pursued a persistent but unsuccessful policy against his opponents in the south. With Thebes went Heracleopolis, although Memphis and most of the Delta remained pro-Bubastite. Owing to this extreme state of affairs, a group of mini-dynasts or kinglets eventually arose. The trail-blazing research on this period was done by Yoyotte (1961), whose work remains the basis for all future analyses. He pointed out that, in the middle of the 8th century B.C., a new power arose in the West Delta and managed to unify most of that area within two decades. The leader of this territory held the Libyan title of "Great Chief of the Libu," unlike his

compatriots in other corners of the Nile valley (Yoyotte 1960a; Kitchen 1973: 350–51, 355). These local yet increasingly powerful chiefs had not yet reached the point of claiming royal status, although they effectively ran a homogeneous territory, at least geographically speaking, in contrast to their rivals of Dyn. 22 or 23. Indeed, if one were to survey Egypt at the time of the Bubastite king Sheshonk V (ca. 767–730 B.C.) or his contemporary Iuput II of Dyn. 23 (ca. 754–717 B.C.), one might well find at least a surface resemblance to Medieval France or Germany.

One interesting sidelight of the Libyan period is that much of our information, especially concerning the royalty, is derived from a series of inscriptions generally termed "Donation Stelae" (Meeks 1979). These were erected by a king or private individual to record gifts of land to a temple. Such monuments were in effect the visual declaration of a previously ratified contract, presumably on papyrus. For modern scholars their importance lies in the economic as well as political sphere. Although such stelae are known from as early as Dyn. 13, they appear to have become more popular close to the end of the NK and especially later, in the Third Intermediate Period. In particular, one can determine the allegiance of a specific locality from the name of the king at the beginning. As mentioned earlier, quite late in the Libyan anarchy even the cartouches were left blank, thereby strikingly testifying to the impotence of the nominal rulers of Egypt.

This period of extreme political fragmentation did not end abruptly. A series of internal struggles was to be compounded by external threats from both the south and the north, until a new and unified Egypt could be forged. One such long-range trend was the consolidation of the kingdom of the West Delta. By year 36 of Sheshonk V (of Bubastis) a certain Tefnakht of Sais claimed to be Great Chief of the Libu and two years later absorbed the remaining western principalities into his realm. His later contemporary, Osorkon IV, ruled as the nominal head of Dyn. 22, while the contender of Dyn. 23 faced more serious problems from the south. Indeed, it is the south and particularly the kingdom of Kush that performs the main role in the next act of Egypt.

4. Kushite Era (ca. 747–664 B.C.). The Kushites did not begin with their surprise move northward into Egypt. One must remember that, after the fall of the NK, the south was severed from Egyptian control. A new power had emerged which, although native, was very Egyptianized and had absorbed much of NK Amun religion. This new expansive commercial kingdom had its capital at the Fourth Cataract at Gebel Barkal (Napata) and held territory even farther south. By the middle of the 8th century B.C., this new state began a series of northern campaigns that was to head it into the hornets' nest of divided Egypt. Under the first known king, Kashta, both Lower Nubia and Thebes were taken (Leclant 1963; Priese 1970: 16–22; Kitchen 1973: 358–59). This move downstream (i.e., northward) was not lost upon the nominal ruler of Thebes, a Dyn. 23 ruler. However, the Kushites possessed a unity sorely lacking in Egypt, and a religious fervor for their god Amun which seems to have enabled them to withstand adversity. Following Kashta's death, his son Piankhy (or Piye as perhaps he should be called) was the effective ruler of a kingdom that included part of Upper Egypt (Thebes to Elephantine) and all of Nubia, in addition to core territory with a capital at Napata. It was in his 20th regnal year that Piye heard of an ominous development—the Chief of the West Delta, a certain Tefnakht, had not merely laid claim to his father's territory (with its capital at Sais), but had moved southward and found allies eastward (Yoyotte 1961: 151–59; Kitchen 1973: 363–68). In other words, a rival to the Kushite king now existed. Considering the virtual political anarchy in Egypt, such a situation could have bode ill for Piye and he was now slow to react.

The campaign of this Kushite king is well known owing to his famous and detailed stela of victory now in the Cairo Museum (ET in Lichtheim *AEL* 3: 66–84; see also Grimal 1981a). Piye followed a cautious and careful strategy, first sending his army to Heracleopolis north of Thebes in Middle Egypt and then, after that strategy had failed, traveling to Egypt itself (Spalinger 1979; Kessler 1981). Piye's effective maneuvering was counterbalanced by his devout belief in the Egyptian gods, and it is revealing that he spent part of his time in Thebes performing religious rites before marching north. His campaign was a relative success: whenever the Kushite met the Libyan allies of Tefnakht or even those cities loyal to the new ruler, he was victorious, even under siege conditions (as, for example, at Hermopolis and Memphis). On one occasion, disregarding the condition of the inhabitants themselves, he vociferously complained

about the treatment of horses in Hermopolis after his siege had succeeded, probably owing to the crucial role that the beasts played in the army. Piye also recorded in minute detail the political setup of the day: local Libyan chiefs are correctly labeled and their names included; the various kings (pharaohs) are enumerated (there were four at this time); and a very competent account of the warfare is described with many asides known only from the NK. The stela is itself a masterful piece of political propaganda, glossing over setbacks (although not failing to note some losses) and glorifying the pharaoh. However, Piye failed to achieve his ultimate desire: despite the fact that Tefnakht was pushed out of Middle Egypt and lost Memphis as well, the Kushites were unable to penetrate far into his kingdom of the west. This limitation of power is best seen in the final act of this drama. Piye first received the submission of his opponents in Memphis after Tefnakht had fled home. The latter eventually sent a messenger to sue for peace, but this was only a token submission: Tefnakht remained in complete control over his small kingdom, and when the Kushites withdrew southward, he was now slow in claiming royalty for himself.

In Tefnakht's resilience we see the kernel of the failure of Kushite policy in Egypt. Although they could defeat the motley and heterogeneous Libyans and Egyptians, they could not effectively administer the land unless they themselves moved north. Piye was unable to prevent the recovery of power by Tefnakht, who capitalized on the absence of any Kushites in the north by proclaiming himself pharaoh and effective founder of Dyn. 24. Since no military or administrative network was established by the victorious Kushites, one wonders if their main purpose was simply to prevent any major kingdom coming to power in Egypt that would threaten their control of Upper Egypt. For example, Piye's successor and brother, Shabako (ca. 715–700 B.C.), was forced to repeat the military actions of his predecessor, although after conquering the north, he remained in Egypt. Dyn. 24 was itself extinguished with the last pharaoh, Bakenranef (Bocchoris), dying in opposition (Yoyotte 1971). The new Kushite capital was placed at Memphis and it is from this time that a marked intellectual influence can be seen on the Kushites. Now settled in the age-old capital of the north, they quite naturally were influenced by the art and culture of Memphis. This period of artistic endeavor has often been called the Kushite Renaissance, following earlier historical work which labeled the succeeding dynasty (26) as the Saite Renaissance (Russmann 1974; Bothmer, De Meulenaere, and Müller 1960: xxxvii). Of course, both terms are ill employed. By "Renaissance," we commonly mean a distinct intellectual break with the period immediately preceding and an attempt to link with a far older era which is then cherished and emulated. There is little doubt that the Kushites and later their successors of Dyn. 26 copied the artistic style of the Old Kingdom (OK), but this was probably in part due to the proximity of private tombs at Memphis and Sakkara. The Kushite move from Thebes as their outlying capital in Egypt to Memphis meant a switch from NK traditions (for example, the cult of Amun-Re) to those of the OK.

Despite the apparent unity under the 25th Dyn. kings, the fabric of Egyptian society remained complex. The local Libyan princes were suppressed but their lineages were alive; resistance was quashed but nationalism persisted. Hence, Shabako and his successors, Shebitku (ca. 702–690 B.C.), Taharqa (690–664 B.C.), and Tanwetamani (Tanutamun) (664–656 B.C. in Egypt), always faced the same problem: their administration was strained, stretching from Napata at the Fourth Cataract up to the Mediterranean, and they continued to depend heavily upon local support, whether it be from an Egyptian prince or a Libyan. In fact, they left alone the local military caste system so typical of the period of Libyan anarchy. Even the very city of Sais itself, the former capital of Tefnakht and Dyn. 24, remained a focal point for future pharaonic aspirations by its local rulers.

5. Assyrians and Kushites. The main impetus for change was not to come from the Egyptians themselves. Outside of Egypt a world empire had been in existence for many years. This kingdom of Assyria had already proven that it had the ability to absorb most of its enemies, including any small state in its path. Over a period of expansion lasting three centuries, Assyria had moved from an insular state to a far-ranging one. Her battles against the Arameans had formed the nucleus of the greatest army that the world had seen: the north Syrian states had fallen, one by one, in the 9th and 8th centuries B.C., the Lebanon was taken, Phoenicia made into a client, and the kingdom of Israel crushed in 722 B.C. Confrontation with Egypt was inevitable. Sargon II (722–705 B.C.) was the first Neo-Assyrian ruler to

encounter Egyptian or Kushite armies (Tadmor 1958: 33–38, 77–80). His claim was not on Egypt herself; rather, Sargon intended to control the sea trade of the East Mediterranean through the subjugation of the small kingdom of Judah, Egypt's northern neighbor, and the capture of Philistia. However, such a policy automatically carried the seeds of further warfare since Judah, Philistia, or even a Phoenician city, could always appeal to Egypt for aid. Thus in ca. 726 B.C. Hoshea of Israel had sought military support against the Assyrians who were besieging his country. The king wrote to a certain "So, King of Egypt," for aid (2 Kgs 17:4) and it has been argued that the local Egyptian ruler was Osorkon IV, the last nominal pharaoh of Dyn. 22 (Kitchen 1973: 372–75; Goedicke 1977). In 720 B.C. Sargon of Assyria marched into Philistia, Egypt's closest neighbor to the north. At this time the king of Gaza received logistic support from one of the generals in the Delta. The upshot of the affair was that Gaza fell and Raphia, the final post leading from Palestine, was taken (Tadmor 1958: 33–38). However, it must be noted that Sargon's policy was circumscribed: he set up a trade entrepôt but made no pretense of invading Egypt. Four years later the same Osorkon IV sent gifts to the Assyrian ruler, clearly supporting him in his annexation and reorganization of Philistia and, at the same time, maintaining good political ties (Kitchen 1973: 376). On all of these occasions only local Egyptian-Libyan potentates were involved; the kings of Kush were yet to meet the Assyrians.

With Shabako's triumph, Dyn. 25 now controlled the north more or less completely. However, relations with Assyria could not be ignored by him. By 713/12 B.C. another minor affair, again close to the southern border of Philistia, broke out. This time the city of Ashdod rebelled and the local ruler, Yamani, fled to Egypt. He was ungraciously returned by Shabako, whom the Assyrians designated king of Egypt, adding that the territories now belonged to Kush (Spalinger 1973; Kitchen 1973: 380). Hence, despite a change of political climate in the Nile Valley, relations between Assyria and Egypt remained ostensibly cordial.

Sargon's death in 705 B.C. brought no end to Assyrian aggressiveness. This was as much due to the attempt of her captured territories to free themselves as to the continual battles with rebels and lands farther away from her homeland. The famous 701 B.C. clash with Sennacherib (705–689 B.C.) indicates just how extended the interests of Assyria had become (Kitchen 1973: 383–86; Spalinger 1978). The Assyrian king tried to crush totally the rump kingdom of Judah, now under the leadership of Hezekiah. The latter sought active support from Egypt, or from the Kushites. An army composed of Egyptians, Kushites, and Libyans was sent north to meet the Assyrians, but failed and retreated after losing the battle of Eltekeh. The Bible (2 Kgs 18:13–19:37), as well as Assyrian sources (*ANET* 287–88), provide independent accounts of this conflict: the Kushites may have been led by Taharqa, who was not yet pharaoh; the Judeans resisted the siege of Jerusalem; and the Assyrians failed to achieve their desired goals. Henceforth, Sennacherib stayed out of Judean politics, preferring to concentrate his energies elsewhere, and the Kushites, although defeated, had time to regroup for further war. In a nutshell, the battle of Eltekeh reveals the foreign policies of this region for the next half-century or so: Egypt would support Judah and any local city against the superpower of Assyria, despite the latter's overwhelming strength and military capability. Under the reign of Taharqa, the Kushites and Assyrians fought more than once.

To the outsider, these battles and political sallies appear monotonous. However, such definitely was not the case under Taharqa's reign. His was the unfortunate task to deflect the Assyrians from an all-out attack on Egypt. Again, late in the 670s, he fought with his enemy in Asia. His opponent, Esarhaddon, finally managed to defeat the Kushite king and drive him out of Memphis ca. 671 B.C. (Kitchen 1973: 391–93; Spalinger 1974b). This apparent success ought to have resolved for the Assyrians their perennial difficulties with Egypt. Nevertheless, they found themselves in the same situation as Kush herself following Piye's invasion almost a half-century earlier, viz., the land was divided into small principalities each led by a warrior class. In other words, the Libyan setup had not yet been erased and the conqueror was by necessity forced to rely upon the local kinglets, since he could not change the social and political system of the land. Any attempt to do so would involve a great deal of time and expense, in addition to

encouraging even more severe outbursts of rebellion. As a result, Assyria practiced the same internal policy that Kush had done: holding nominal rule, but leaving local structures alone.

It comes as no surprise that Egypt (or Kush) revolted when the Assyrians left and a second campaign was undertaken in 669 B.C., the date of the death of Esarhaddon. Taharqa's support came from the native Egyptians or their Libyan leaders, but so did Esarhaddon's. It was clear that whoever wrested effective control of the land would be the accepted pharaoh. Assurbanipal, Esarhaddon's successor, attempted twice. In 668/67 B.C. and 664 B.C. the Assyrians marched to the Nile, first taking Memphis and then even Thebes (Spalinger 1974b; Kitchen 1973: 393–94). Significantly, in the interim there was another revolt and the Kushites regained their former territories. On the second occasion, Taharqa was succeeded by his nephew Tanwetamani, who proudly reports on his Dream Stela of his victories in the north (Grimal 1981b). However, even a cursory reading of the inscription reveals that his success in Egypt (the Delta in particular) was against the local kinglets, not Assyria. As it turned out, some of the Delta kings supported Assyria and Assurbanipal's army was soon on the road. Tanwetamani was forcibly removed from Memphis and Thebes, and for all practical purposes, Kush never again could claim the north, although it must be noted that she still had a degree of influence in Thebes until 656 B.C. (Kitchen 1973: 403–4).

But the Assyrians were still faced with recalcitrant local potentates. This time Assyria attempted reconciliation—whether for altruistic reasons or otherwise, we cannot say. The city of Sais was particularly singled out by Assurbanipal, if only because it had held the seeds of revolt against Kush for many years (cf. Tefnakht and Bakenranef above). Indeed, there was the tradition of a pharaonic dynasty there, and what could be better than enlisting the support of Necho I of Sais and his son Psamtik (Psammetichus) I (664–610 B.C.) against the southern foreigners. Such turned out to be Assurbanipal's policy and it served him well. Beset by a massive revolt in Babylon plus a threat from the east—not to mention Arab incursions—Assyria preferred to maintain her alliance with Sais, now the seat of Dyn. 26, even though it meant the unification of Egypt. This was no rapprochement: Psammeticus was not a king of Kush, nor had he advocated a pro-Kushite policy.

B. Saite Period (664–525 B.C.)

The following period properly speaking belongs to the rule of a united Egypt led by the pharaohs of Sais (De Meulenaere 1951). It should be added by way of clarification that Psammetichus remembered his alliance with Assyria and that he and his son, Necho II, aided the tottering Assyrian Empire in the last decades of the 7th century B.C., thereby proving their allegiance. In Egypt itself, Psammetichus carefully quashed his Delta rivals and took first Memphis and then, after some diplomatic wrangling, Thebes (Kitchen 1973: 401–4; Spalinger 1976). The latter affair is quite well known owing to a length report entitled the Nitocris Stela (Caminos 1964). The Kushites appear to have simply withdrawn from Egypt, probably owing to their continual losses against the Assyrians, while Psammetichus peacefully (and with pomp) had his daughter Nitocris appointed to the position of God's Wife of Amun in Thebes. With that act, Egypt was once again reunited and the Libyan anarchy finally at an end. Indeed, its demise was more protracted than it should have been, owing to the rival interests of Kush, Assyria, and Sais.

The reign of Psammetichus I (664–610 B.C.) set the paradigm for the new united dynasty. He carefully built up his power in the Delta, outwitting his local rivals until the only opposition remaining was that of Thebes. With the active intervention of Montuemhet—the Fourth Prophet of Amun, City Mayor, and actual power in Upper Egypt—Psammetichus accomplished the annexation of the south by 656 B.C. Noteworthy in the first decades of his rule is the king's reliance upon the military (Spalinger 1976). Indeed, the account of Herodotus places a great deal of emphasis upon his employment of Greek mercenaries in the army and their usefulness in defeating his foes. It was from this time that mercenaries began to play a significant role in the country, later forming a separate division in the Egyptian army, a fact known from texts dealing with Psammetichus II's campaign into Nubia (see below). Garrisons were established at the south in Elephantine, and to the northeast at Daphnae. A local war with the Libyans ended successfully for Psammetichus, and he erected a series of stelae commemorating his army's victory over these perennial foes in regnal years 10–11 (Goedicke 1962; Basta 1968; Kitchen 1973: 405). In this case, it is clear that the Libyans actually represented Egypt's western neighbors, rather than the former

kinglets of the Delta. It is possible that a third garrison was founded on the west soon after this victory. All three were built to control the entrances into the land, since Egypt had to fear invasion from Kush (south of Elephantine), Assyria (northeast at Daphnae), and Libya (northwest at Marea). In addition, the Nile itself was supplied with an independent fleet, a forerunner of the navy developed in the East Mediterranean by later Saite monarchs. Finally, Psammetichus allied himself to the Lydians who, under King Gyges, began to expand and form a kingdom hostile to the Assyrians (Spalinger 1978c; Millard 1979).

Internally, Egypt lost much of the character of the preceding age. The abiquitous donation stelae were still erected but now under only one king. Local independence in the north had ended by year 8 of the pharaoh and even though Libyan families still held power in some cities, their might was now subservient to the monarch. Initially, Psammetichus stressed the importance of the powerful families in Egypt, such as the Masters of Shipping at Heracleopolis and the Theban dignitaries (Kitchen 1973: 402–3). Later, he placed his adherents, most of whom came from the north, in key positions in the land (Kees 1935). However no real administrative reform took place. The local administrative units, the nomes, became tax collectors' districts, and outmoded titles dating back to the Old and Middle Kingdoms were employed, but no major reorganization of the finances or bureaucracy was apparently needed. By simply sending his new officials to the south, Psammetichus ran the land effectively.

Necho II (610–595 B.C.) succeeded his father to the throne of Egypt and reigned during one of the momentous periods of world history. Already late in the life of his father, the Assyrian Empire had begun to break up at the death of Assurbanipal (629 B.C.). Egypt, which may well have been promised support and territory from the Assyrians, sided with them against the new opposition of the Babylonians and Medes (Freedy and Redford 1970: 476–78; Spalinger 1978a). From 616 B.C. on, the collapse of this empire precipitated Egypt into an aggressive foreign policy which continued upon Necho's accession. In his first regnal year he marched north to aid the tottering Assyrians, now fighting for their rump state in Syria. In a famous encounter with the resurrected kingdom of Judea, now led by Josiah, Necho (biblical Neco; see 1 Kgs 24:29) smashed his opponents at Megiddo before traveling north (Malamat 1973; 1975). See also NECO. Allied to Assuruballit of Assyria, Necho fought against Nabopolassar, the king of Babylonia. In the next few years, Assyria fell, but the Egyptians maintained a presence in Lebanon until Nabopolassar's son, Nebuchadnezzar, defeated Necho at Carchemish in 605 B.C. (Yoyotte 1960b: 374–92). Necho was able to keep the Babylonians out of Egypt, being just sufficiently powerful to prevent an invasion in 601 B.C. The result of these sudden political and military alterations was that Egypt lost whatever power she had accrued in Asia during the reign of Psammetichus I. Indeed, despite later support for the kingdom of Judah, the best that Necho and later Psammetichus II could do was to stave off invasion by a triumphant Babylonia.

Internally, Necho is best known for his attempt to build a canal between the Red Sea and the Nile, a "proto-Suez Canal," one may say (Posener 1936; De Meulenaere 1951: 50–54). This probably successful enterprise highlights the direct continuation of his father's policy. Owing to the importance of the kingdoms of Lydia and Cyprus during this period, the Saite rulers found it politically beneficial to maintain a strong commercial and military presence in the East Mediterranean. In similar fashion, Necho supported the circumnavigation of Africa, an event well known to the Greeks, who later kept record of this astounding maneuver (doubted by Lloyd 1977). With Babylonia now fully in control of the Lebanon, Necho's maritime strategy had the added advantage of not involving him in fruitless land wars. Internally, Necho undertook building work in Thebes, although for the most part he appears not to have been preoccupied with the temples of the land (Yoyotte 1960b: 367–68). Significantly, his reputation came into disgrace after his death, a fact made visible by the erasures of his name (cartouches) on his monuments and those of his officials (Yoyotte 1960b: 370–71; Bothmer, De Meulenaere, and Müller 1960: 50–51). The exact cause of this later disrepute is unknown, but perhaps Necho's lack of visible success with the Babylonians and his loss of empire in Asia were a major contributing factor.

Necho's son, Psammetichus II (595–589 B.C.), did not rule long. Nevertheless, he followed an interesting foreign policy with respect to the north and south. Although avoiding direct involvement with

Babylonia, he actively supported the state of Judah against Nebuchadnezzar just as earlier the Libyans and Kushites maneuvered in Palestine against the Assyrians. It is probable that the Egyptians reckoned correctly with their Judean allies by not overtly committing themselves to a policy antagonistic to Babylon: Judah under her last king Zedekiah was, after all, nothing more than a rump state with no outlet to the sea. Although Psammetichus II marched to Asia in his fourth regnal year, the affair was nothing more than a show of Egyptian presence (Yoyotte 1951b). When the final seige of Jerusalem took place (ca. 589 B.C.), Egypt watched the fall of her former ally without taking arms in her defense (Malamat 1968; 1973; 1975). Perhaps part of this cautious policy owed a great deal to a sudden war in the south with a former foe, Kush. In year 3 of Psammetichus II's reign, a combined Egyptian-Greek army, led by Egyptians, traveled south into the heartland of Nubia. This military campaign was successful and we possess important hieroglyphic records of the encounter which indicate that Napata (Gebel Barkal) was taken (Sauneron and Yoyotte 1952; Bakry 1967; Habachi 1974; Goedicke 1981). The Kushite kingdom removed its capital farther south and henceforth no longer played an important role in the affairs of Egypt. It is not surprising to learn that Psammetichus II then systematically erased from the monuments the names of the 25th Dyn. kings (Yoyotte 1951a). Such a policy of anathematization fits perfectly with his military activity and reflects the new dynasty's antagonistic feeling toward its immediate predecessor.

Psammetichus II died and was succeeded by his son Apries, who ruled until 570 B.C. This pharaoh continued to play an important role in the political affairs of the east by moving against the Phoenician cities of Tyre and Sidon in an effort to prohibit their control by Nebuchadnezzar. Although inheriting the continual war with Babylon, for almost all of his reign Apries was able to keep the enemy at bay. His dependence upon Greek mercenaries was cited by later historians, such as Herodotus, as proof of his philohellenic policy. On the other hand, among the Egyptians, a great deal of resentment had built up which was to spill over in the successful revolt of his general, Amasis (Ahmose). A famous stela from Mitrahineh, first edited by Gunn (1927), is notable for the archaism in language as it reads almost like an original OK document. The deliberate attempt to emulate OK artistic representations as well as language had begun earlier in Dyn. 25, but by the Saite Period such imitation was part and parcel of official monuments and inscriptions. Blocks from the capital of Sais indicate that Apries apparently celebrated a *heb-sed* (Jubilee) festival, although he did not rule the standard thirty years required for such a celebration (Habachi 1943: 402; Koefoed-Petersen 1956: 45–46 and pl. LV). A famous commander of the southern fortress at Elephantine, Nesuhor, is known from the reign of Apries (Schaefer 1904; Kees 1935: 95–96, 101–2). He suppressed a revolt of his troops who wished to leave their posts and flee to Nubia. Later, Nesuhor donated gifts to the god of Mendes, an action mentioned by other texts of the Saite Period.

A recent reinterpretation of the Amasis Victory stela by Edel (1978) has revealed the complexity of the period surrounding the fall of Apries. In 570 B.C. Amasis, a general of Apries, revolted after a defeat at Cyrene. With Cypriot troops as well as his Greek soldiers, Apries recaptured control of most of Egypt. However, this counterattack was not long successful and Apries fled to the east. His return in 567 B.C. (year 4 of Amasis) led to his ruin. Against a combined naval and land attack, Amasis, now allied with Cyrene and, utilizing Greek mercenaries, overwhelmed the former pharaoh, who died in battle. This inauspicious beginning of a new reign does much to reveal the weaknesses of Egypt in the middle of the 6th cent. B.C.: she continually had to defend herself from foreign intervention, but such defense could be accomplished only through the aid of mercenaries, mainly Greeks (specifically Carian and Ionian soldiers). It is not surprising to see that Amasis later allied himself with Polycrates of Samos and Croseus of Lydia (De Meulenaere 1951: 98–100, 113). Further contacts were cemented through gifts to various Greek temples, and later by a conquest of Cyprus, thereby attempting to counter the Babylonian threat. Finally, to the south, a possible campaign (ca. 529 B.C.) is reported on a fragmentary account (Erichsen 1941).

At home, the tradition of Amasis befits his plebian origin. Clearly not of the royal family, he apparently received from the popular press of the day a reputation as a wine bibber (De Meulenaere 1951: 93–96). Such reports reached Herodotus a century later and are confirmed from a Demotic tale centered on Amasis. More important, the settlement of Greeks at the Delta site of Naucratis is generally dated to his

reign (De Meulenaere 1951: 100–10). This policy of permitting the Hellenes to reside permanently in Egypt in the Delta is further proof of their growing significance in the internal affairs of the Nile Valley.

Unfortunately for Egypt, the Babylonians were overrun by the more vigorous Medes and Persians, led by Cyrus. With the fall of Babylon (ca. 546 B.C.), most of the Near East became part of the second World Empire, i.e., Achaemenid Persia. Cyrus then marched against Lydia and took it. Therefore, at the death of Amasis in 526 B.C. little remained independent of Persia in the Near East outside of the Nile Valley. In fact, under Cyrus' successor, Cambyses, plans were already under way for an attack on Egypt. Cambyses found natives who would support him, and within a year, purposely not long after the accession of the new pharaoh Psammetichus III, the Persians moved southwest and conquered Egypt.

Dyn. 26 became one of the last native ruling families of Egypt for a long period of time. This period saw a restoration of unity and the beginnings of another empire. Although the latter was short-lived, the Nile Valley did witness a continuance of its art and religion as previously. The dynasty fostered a new landed nobility by allowing them to receive a salary from plots of land given by the kings. However, these parcels of land were also donated to temples and therefore could not be used by the nobility to build up an independent power base. Indeed, the right of succession to the plots was conditional. By the 7th–6th centuries B.C., Egypt was no longer parochial. Foreigners in increasing numbers traveled freely within its borders. If the backbone of the army came more and more to be Greek, this was in part due to their advanced state of military preparedness. At the same time, these mercenaries posed no real threat to the safety of the country. The Saite kings also relied heavily upon the sea and it is ironic that their final fall to the Persians was connected with the defection of one of Egypt's admirals. Certainly fatal to her might was the lack of iron deposits, now crucial since the world had turned from bronze to iron; for the first time Egypt was reduced to the role of a dependent importer for her armament.

The annexation of Egypt by the Persian ruler Cambyses led to a stronger foreign domination than that attempted by the Assyrians. This was in part due to the resilience of the Persians, as well as their newly founded empire. Persia at the close of the 6th century B.C. was unlike the Assyrian Empire in the middle of the 7th. Egypt became effectively administered by a satrap who, with Persian troops, lived in Memphis. However, the history of Egypt as part of the Persian Empire belongs to another chapter.

ANTHONY SPALINGER

PERSIAN PERIOD (DYN. 27–31)

A. Political and Military History
B. Administration
C. Culture

A. Political and Military History

Persian control of Egypt fell into two stages: the First Persian Occupation (525–404 B.C.) and the Second Persian Occupation (343/2–332 B.C.). The invasion of the country by Cambyses in May/June 525 was the result of a long period of hostility initiated by Egyptian fears of Persian expansion westward. As early as the reign of Cyrus (538–29), these fears had led to the formation of a grand defensive alliance between Egypt, Lydia, Babylonia, and Sparta (Hdt. 1.77.1–2; 1.53.4). The destruction of Lydia and Babylonia left Egypt as the only significant Near Eastern opponent by the beginning of Cambyses' reign. The latter ruler's invading force defeated the Egyptian king Psamtik (Psammetichus) III at Pelusium, took the capital city of Memphis, and swiftly achieved the subjugation of the entire country (Hdt. 3.1–26; Lloyd 1988b: 55, 63–64).

Information on Cambyses' behavior within Egypt is contradictory. The classical tradition is generally hostile and paints a picture of a brutal and impious tyrant afflicted with intermittent and progressive insanity (Hdt. 3.16, 27–29, 37; Brown 1982: 387–403; Lloyd 1988b: 56: cf. *CAP* nos. 30–31). On the other hand, hieroglyphic sources depict a ruler making a great effort to respect Egyptian sensibilities by establishing himself as pharoah in the fullest sense and acting in religious matters with the strictest propriety (Posener 1936: 1–26; Lloyd 1982: 166–80). In all probability, the hostile tradition arose from priestly resentment excited by Cambyses' determination to define precisely the privileges of Egyptian temples. Negative reactions to Cambyses as a fratricide and king associated with widespread rebellion could also have encouraged this hostile attitude (Lloyd 1988b: 65–66). Be that as it may, in 522 B.C., this general unrest compelled him to depart from Egypt, leaving Aryandes in control as satrap. *En route* he died, under somewhat mysterious circumstances, probably in September of that year.

Cambyses was succeeded by Darius, who had been one of his bodyguards during the Egyptian invasion (Hdt. 3.2.3–140; Xen. *Cyr*. 4. 2. 46); Egypt immediately revolted as a result of the harsh government of the satrap Aryandes. Problems elsewhere in the Empire meant that Darius could not immediately march on Egypt, but in 519–518 he had regained control. His reign in Egypt was characterized by circumspection and a concern for developing it as part of the Persian Empire. In 518 he undertook a reform of the laws which made a deep impression on later tradition (Spiegelberg 1914: 30–32; cf. Diod. Sic. I. 95. 4–5); in the same year, he buried an Apis bull with all the traditional honors (Posener 1936: 36–41, cf. 30–36); he was active in temple building or restoration at Hibis in the Khargeh Oasis, Abusir, Edfu, and El-Kab (Porter and Moss 1927–74, 4: 44; 5: 173; 6: 167; 7: 277–90); and he began the construction of a canal in ca. 510 B.C. to join the Nile to the Red Sea as part of a policy of improving communications within the Empire (Posener 1936: 48–87; Hinz 1975: 115–21). Overall, therefore, it is

not surprising to find that Herodotus can depict Darius as remarkably tolerant of Egyptian nationalist pretensions (Hdt. 2.110.2–3). However, membership in the Persian Empire brought obligations as well as benefits, and Egypt was no exception: Egyptian craftsmen were employed in making Darius' citadel at Susa, and we can be confident that they were also active in Persepolis during his building operations between 503 and 494. Whether "the Egyptian" mentioned in Babylonia in the 490s was, in any way, involved in these activities remains an open question (Olmstead 1948: 168, 193). Military duties were also discharged; for we find an Egyptian naval contingent participating in the Persian assault on Miletus in 494 at the end of the Ionian Revolt (Hdt. 6.6). Evidently, Darius extracted full benefit from this rich and populous satrapy, and it comes as no surprise that Persian exploitation drove the country into revolt toward the end of his reign in 486 (Hdt. 7.1.3; Porten *ArchEleph,* 25–26).

Darius' successor, Xerxes, came to the throne in 485 B.C., and although anxious to exact vengeance from the Greeks for his father's defeat at Marathon in 490, he gave priority to the Egyptian revolt. Xerxes marched south as soon as possible and had subjugated the country by early January 484, placing it under the control of his brother Achaimenes. The tradition of Herodotus that Xerxes' rule was harsher than that of Darius is powerfully confirmed by the Satrap Stele of 311, which vividly describes his iniquitous treatment of the deities of Buto (Sethe 1904–16: 11–12; Bevan 1968: 30–31: cf. Posener 1936: 120–24). However, the Egyptians' resentment of Xerxes did not prevent their employment in his military operations. In the fleet which accompanied the invasion of Greece in 480, no fewer than 200 Egyptian ships were engaged under the command of the satrap Achaimenes and carrying contingents of heavily armed Egyptian marines. According to Herodotus, they distinguished themselves at Artemisium, capturing five Greek ships, and were also present at Salamis and Plataea (Hdt. 7.25.1; 34; 89.2–3; 97; 8.17; 68.2; 100.4; 9.32).

The accession of Xerxes' successor, Artaxerxes I (464–423 B.C.), was greeted by general unrest throughout the empire. Egypt became involved through the revolt of the Libyan Inarus (ca. 463), which quickly spread eastward. The latter was successful in gaining the support of the Athenians and proceeded to defeat and kill the satrap Achaimenes at Papremis in the western Delta, penning up the remnant of the Persian forces in Memphis. These initial successes were, however, short-lived, and the main revolt was brought to a disastrous conclusion (ca. 455/54). The embers of rebellion were kept alive in the Delta by a certain Amyrtaeus, with some halfhearted support from the Athenians ca. 450, but the affair was probably highly localized and of no great importance (Olmstead 1948: 303–4, 308–12; *ArchEleph,* 26–27; Meiggs 1979: 93–95, 101–8).

The reign of Darius II (423–404 B.C.) is best recorded in Egypt for the problems created among the Jews at Elephantine by his intervention in their religious life. We also hear of a revolt by a certain Hydarnes in 410, which clearly had Egyptian support but was quickly suppressed. Much more serious was the revolt of the younger Amyrtaeus (ca. 405), which brought a speedy end to the first Persian domination.

Even though the Persians had been expelled from Egypt by Amyrtaeus, they continued to dominate Egyptian foreign policy since they evidently had no intention of relinquishing their claim to the country. The Egyptians attempted to keep them at bay by military and diplomatic means, but these did not prevent the Persians from mounting four major assaults on the country, one by Artaxerxes II in 374 (Diod. Sic. 15.29; 38.1; 41–44; Kienitz 1953: 89–92), and three by Artaxerxes III in 359–358, 351, and 343 (the first as crown prince) (Trogus, prol. 10; Kienitz 1953: 99–107). The third of these was successful; the last pharaoh of the 30th Dynasty, Nectanebo II, fled the country. Artaxerxes then set about consolidating his conquest by pulling down the walls of major cities and establishing Pherendates as satrap. He is also alleged both in Greek and Egyptian sources to have engaged in widespread plundering of Egyptian temples (Diod. Sic. 16.47–52; Bevan 1968: 30, 209, 390).

The Second Persian Occupation may well have been difficult to sustain initially, since there are indications of an Egyptian nationalist revolt under a certain Khababash, who may have regained at least part of the country sometime between ca. 343 and 339–338. The revolt was brought to an end by a second Persian invasion (Kienitz 1953: 109–10, 185–89; Lloyd 1988a: 159–60). Be that as it may, the last Persian Dynasty has left few traces in Egypt (Kienitz 1953: 231), a situation which bears striking

testimony to the Persian lack of commitment to the country. This was, in turn, reflected in the grim catalog of maladministration and incompetence characteristic of the period; thus, it is hardly surprising that the invasion of the country by Alexander the Great late in 332 was welcomed with open arms.

B. Administration

Civil government followed the usual Persian laissez-faire approach. The great king became the pharaoh and was given all the traditional titles and divine status which formed the theoretical basis of the pharaoh's authority. Generally, however, the Persian emperors were absentee rulers, and their powers were wielded by a satrap or governor whose activities were subjected to regular scrutiny by imperial officials such as the *gauša-ka,* "ears," and "the King's Eye." The satraps were drawn from the cream of the Persian aristocracy and based in Memphis, the capital. Here they disposed of a chancellery modeled on that of the great king himself and were supported by an army of scribes and officials either Egyptian or Persian in origin, though the overall trend ran clearly toward a progressive Egyptianization. The administrative language, as elsewhere in the Empire, was Aramaic, but there were at Memphis scribes for translating relevant texts into the native language, and we can be confident that bilingualism was common.

The most important section of the satrap's administrative machinery was undoubtedly the treasury which was under the protection of the god Ptaḥ (hence its Egyptian name *pr-ḥḏ n Ptḥ,* "treasury of Ptaḥ") and administered by a treasurer who on at least one occasion and probably always bore the old Egyptian title *iꜣmy-r pr-ḥḏ,* "overseer of the treasury." Its most important function, from the Persian point of view, was the collection of taxes paid both in cash and in kind (Hdt. 2.98.1; 149.5; 3.91.2–3). In addition to this fiscal role, the satrap also functioned as the ultimate court in legal matters, thereby inheriting another of the major functions of the pharaoh, though normally these legal duties were discharged by the *patifrasa/frasaka,* "inquisitor." The law which he administered for the subject population was Egyptian law which shows no break with the system used under native rule. In addition, the satrap exercised a general supervisory control over local government and for this purpose probably conducted annual inspection tours.

The precise details of local government under the Persians are obscure, but the system evidently followed traditional pharaonic practice. We hear of the nomes, which were extremely ancient administrative subdivisions of the country reminiscent of English counties. These were administered by nomarchs, and traditionally numbered forty-two, but whether that held true for the Persian period cannot be determined. At least in the southern part of the country nomes could be grouped together into larger units, the best known being *Teshres* or *Ptōres,* which possibly extended from Elephantine to Hermonthis. Within the nomes themselves, cities functioned as distinct administrative areas under the control of governors, and the same held true of villages. Probably all these administrative entities had their own treasuries and record offices. If there were garrisons in a particular area, the head of the garrison could function in a civil capacity in local administration. Attempts to identify within this scheme the role of such Persian officials as the *fratarak* mentioned in 5th-century Aramaic documents have generated more conflict than consensus, but these texts at the very least provide a clear picture of the general character and problems or provincial government, including the suspect loyalty of some of the Persian officials (*BMAP* 32–40; Bresciani 1958: 132–47; *ArchEleph,* 28–61).

Details of administration during the Second Persian Period (343–332 B.C.) are very sparse, but we can safely assume a system based on that of the last period of Egyptian independence which, in turn, evolved from the scheme described above. The written evidence shows clearly that it was characterized by a mixture of avarice, arrogance, impiety, and violence which inspired bitter hatred (*POxy.* I.xii [col. IV]; Q. Curtius Rufus 4.1[5]; 7[29]; Diod. Sic. 17.49; cf. the Demotic Chronicle [Spiegelberg 1914: 19–20], and possibly the autobiography of Petosiris [Otto 1954: 181–82; Lloyd 1982: 177–78]).

The satrap was also the commander of the military resources of the province, which were substantial. The army consisted of two main elements: the native Egyptian militia, or Machimoi, and foreign units. The Machimoi amounted, according to Herodotus, to 410,000 in the 5th century. They were inherited by the Persians from their pharaonic predecessors and were settled almost entirely in the Delta. In exchange

for the obligation of required military service, they were each given tax-free plots of land, allegedly ca. 8 acres (3.2 hectares) in extent, though this is likely only an average (Hdt. 2.168; Lloyd 1988c: 200–1). They could also serve as marines in the Egyptian fleet, a capacity in which we encounter them during Xerxes' campaign of 480–479 against Greece (Hdt. 7.25; 89; 97; 8.17; 68; 100; 9.32). As for the non-Egyptians, the best-known group is the force of Jewish troops maintained in the important garrison town of Elephantine at the First Cataract. The substantial corpus of Aramaic papyri from this site has yielded a vivid picture of their life, revealing an intriguing vista of assimilation, on the one hand, and religious antagonism, on the other. The latter arose mainly, if not entirely, from local Egyptian resentment at the sacrifice of animals in the cult of Yahweh (*ArchEleph*, 278–98; cf. *BMAP*, 100–10). See also ELEPHANTINE PAPYRI.

In addition to the army, the Persians inherited a substantial fleet of warships from the Saites, which they put to good use (see above). Clearly, despite some disparaging comments, they were not the least efficient or successful contingent in the Persian fleet.

C. Culture

The ambiguity of the evidence makes it very difficult to define precisely the impact of Persian culture on specific aspects of Egyptian civilization. Possibly the marked upsurge in Demotic papyri of a legal nature reflects Persian practice. There is some reason to believe that the Egyptians took over loan words from Aramaic and Persian at this stage; it is also feasible that they were influenced by Mesopotamian ideas on prophecy using astronomical phenomena. Mathematics may have drawn on Mesopotamian influences at this period; and Egyptian literature may also have borrowed from Achaemenid sources (Ray *CAH²* 4:280–81). However, in essentials, the overall impression is one of continuity with earlier Egyptian civilization. Egyptian religious tradition was quite unimpaired, not least because the Persian kings generally showed considerable circumspection toward it. This is illustrated by the sequence of Persian Serapeum stelae, the exploitation of the Wadi Hammamat greywacke quarries for building stone, and the restoration or building of temples. Overall, however, the corpus of work is small, given the length of Persian occupation, and the quality of the workmanship inferior to that of the 26th Dynasty. The attractions of Egyptian religion for the invaders were, however, very real, and the devotion of some of them to Egyptian deities is easily demonstrated (Ray *CAH²* 4: 279–80).

When we turn to sculpture, continuity is again the hallmark. Certainly, private statuary shows an upsurge of realism at the beginning of the Persian period which sets a trend for the development of Egyptian sculpture down to the end of the pharaonic period. One also detects a growing tendency to crowd hieroglyphs, which was to become a standard feature of Greco-Roman writing. In addition, the statuary shows modifications in dress. Only occasionally, however, can we detect unequivocal Persian influence: a gesture involving the clasping of hands before the body is the one conspicuous exception (Bothmer 1960: xxxiv–xxxix, 67–87; Bianchi *LÄ* 4:946–47). In general, the distinctive artistic features of this period should be regarded as the result of the evolution of a native tradition which is at most reacting to the experience of foreign occupation and has little interest in assimilating traits of the invaders' civilization.

ALAN B. LLOYD

GRECO-ROMAN PERIOD

The Hellenistic period of Egypt's history began with the arrival of Alexander the Great in late November 332 B.C. This period, shaped by the succession of rulers descended from Ptolemy I, was itself brought to an end by Rome's annexation of Egypt in 30 B.C., following Cleopatra's death on August 12 of that year. Rome's direct influence over Egypt ceased with the establishment of Constantinople as the first city of the Roman Empire by Constantine in November A.D. 324. The Byzantine era lasted until September A.D. 642—except for ten years of Persian rule (618–28)—when the conquering Muslims compelled the remnants of the Byzantine army to leave Egyptian soil.

A. Alexander the Great

Except during the 29th and 30th Dyn. (ca. 399–343 B.C.), Egypt was ruled as a Persian satrapy after Cambyses conquered the country in 525 B.C. Because of the harsh character of much of Persian rule, contemporary Egyptian sources complained about conditions under which people were obliged to live. Consequently, Alexander was hailed as a liberator when his conquering troops—coming from a seven-month siege of Tyre and a major battle at Gaza—drove out the Persians.

During Alexander's brief stay, limited to a few months, he forced the submission of the Persian satrap, journeyed to Memphis, where he was crowned pharaoh, returned to the sea coast, where he established boundaries for the future city of Alexandria, paid his famous visit to the oracle of Amon at the Siwa oasis, then returned to Memphis, where he organized the government. Even though legends have elaborated on these events, their main outline remains solid. Alexander's most memorable experience may have

occurred at Siwa, home of the oracle of Amon, which ranked in the Greek world with the oracles at Delphi and Dodona. Here he was addressed as "son of Amon," a title he took seriously, affirming as it did his divine station. It was this affirmation of divinity that the Ptolemaic rulers, who eventually inherited Alexander's power in Egypt, adopted to show that they were his true successors, as well as heirs to the godly prerogatives of the pharaohs.

In his governmental restructuring, Alexander first appointed two native Egyptians as satraps, one over Upper Egypt and the other over Lower Egypt, reversing the Persian policy of a single governor. When one of the satraps failed in his office, Cleomenes of Naucratis—appointed as financial overseer—took his place. The task of collecting taxes from the native population was initially entrusted to local Egyptian officials, presumably to protect against extortion. The small occupation army left behind was placed under Macedonian commanders, one of whom oversaw the mercenaries formerly employed by the Persians.

B. Administration under the Ptolemies

Substantial links to the Greek world had existed for about three centuries before Alexander. The delta city of Naucratis, situated on the western or Canopic branch of the Nile, had been established in the 7th century as a trading colony by the city of Miletus in Ionia. Greeks seeking opportunities abroad had settled in Memphis and elsewhere. An additional Greek city, Ptolemais, was founded by Ptolemy I in Upper Egypt—320 miles upstream from Memphis—doubtless to play an economic and political role in the south similar to that of Alexandria in the north, and to underscore this king's status as Alexander's successor.

Egypt already served as the granary of the region as well as the sole supplier of papyrus. The Ptolemies maintained the export of grain, adding to it barley beer, alabaster, linen, and the polychrome glass which would make Alexandria's artisans renowned. Imports were necessary in Egypt, a country poor in natural resources, especially in timber and metals. Wine and olive oil were imported, even though the production of both was fostered by the Crown. But the local variety was inferior, principally because of growing conditions. Other imports included cheeses, fruits, slaves, and horses. One major contribution to trade was the domestication of camels early in the Ptolemaic era.

The early Ptolemies pursued both land reclamation and improvement of irrigation. Building a system of canals, they brought more land under cultivation. Further, agricultural experts from Greece soon improved farming methods so that in some areas three crops became the annual norm. Attempts to improve viticulture—largely to meet the demands of wine-drinking Greeks—were frustrated by the inferior quality of the product. Even though olive oil was not of the same grade as that produced abroad, Ptolemy I saw opportunity for export and established state control over the amount produced, the price received by growers, and the sale price abroad. The state had virtual monopolies over salt, beer, and textiles. It also controlled banking. But even though banks and a new coinage were now established, bartering and payments made in kind were not entirely eliminated. Indeed, rents on royal lands were paid in kind.

Taxation added substantial revenues, in addition to those profits acquired from rents of arable land and royal industries. The welter of taxes included those on sales of certain goods, on homes and estates, on licenses for artisans in various trades, and on revenues generated by religious activities. Moreover, the Ptolemies imposed duties on imports to protect certain homegrown commodities—such as olive oil—and quite simply, to generate revenue. The collection of such fees was let out for bid to "tax farmers" whose activities were regulated by decree. Hence, the profit realized by tax farmers was never very great, and as time passed, the numbers of bidders became fewer.

The most valuable resource was land. Made fertile by the late summer flooding of the Nile, it was treated largely as royal estate. In a sense, the Crown was the sole landowner. Some of the best land, retained in regal hands, was leased as "royal land" to freeman peasants, even though they were not free to move from the land while agricultural work was in progress. For lessees of "royal lands," the lease could be canceled at any moment, causing obvious difficulties. To a degree, ownership of private property was allowed, minimally under the early Ptolemies, but more broadly under later rulers. To be sure, "sacred land," i.e., parcels that belonged to temples while actually administered by the Ptolemies, was managed nonetheless for the benefit of the temples. Sacred land could even be leased or purchased by individuals.

Military personnel—of Greek or Macedonian descent—were encouraged to settle in Egypt with the offer of land grants *(klēroi),* a tactic that assured the presence of a permanent group of soldiers for defense. As time went on, the *klēroi* were of inferior land, occasionally parcels already abandoned by prior tenants. Thus, the numbers and quality of soldiers loyal to the royal house diminished so that, by the time of Ptolemy IV (222–205 B.C.), the army survived only by conscripting native Egyptians. In the case of land allotments to soldiers, only occasionally was such land passed on from one generation to another. But as enticing mercenaries from abroad with offers of land grew more difficult, the Ptolemies allowed *klēroi* to be inherited by soldiers' sons. In time, it became possible for the wife or a brotherless daughter to receive title to such land, indicating a basic shift toward rights of women.

While Greek newcomers were attracted chiefly to Alexandria, Naucratis, and Ptolemais, a substantial number settled in Egyptian villages and cities, particularly Memphis. Those who resided away from concentrations of Greeks usually dwelt on lands awarded to military personnel. Intermarriage between natives and newcomers became widespread, but there seems otherwise to have been little intercultural borrowing. Rarely did Greeks learn the Egyptian language. Some natives, of course, sought opportunities in the Hellenic centers; but they were a small group who, to further ambitions, learned Greek and adopted Greek culture. Even so, they could not acquire citizenship in the Greek cities, just as other ethnic groups were excluded from the citizenry, including Jews. Plainly, Greeks formed an élite. This situation doubtless contributed to the resentment felt by natives toward their foreign overlords, feelings which grew until, at the end of the reign of Ptolemy IV, the whole of the Thebaid in Upper Egypt revolted and, for a period, became independent. Ever after, there were sporadic, local outbreaks, although never a rebellion of the whole native populace.

Citizenship in the Greek cities was limited to Greeks and Macedonians alone. Citizens were organized much like those of a Greek city-state, formed into demes and tribes, with a senate, assembly, and magistrates. Such an arrangement engendered a certain independence in this part of the population and, inevitably, led to conflicts between Crown and citizenry, with some disputes leading to rioting in the streets of Alexandria. Evidence suggests that Alexandria's senate, because of its pugnatious tendencies, had been disbanded before Rome took charge of affairs in 30 B.C.; but the date of such action cannot be fixed.

Of the Macedonians, little is known. To be sure, they formed the majority of colonists who came in Alexander's wake. They also formed the king's guard and made up part of the court. One of their contributions came in liberalizing attitudes and laws toward women, certainly within the Greek population. This tendency began in the royal family, but eventually spread to a growing segment of the population.

The Jewish population, growing to an estimated one million people in the Roman era, centered largely in Alexandria, and initially in the delta quarter near the royal palace. Eventually they occupied much of a second of the city's five areas. In fact, early in the Roman age, synagogues stood in all of Alexandria's quarters. Although Jews could not become citizens, they were allowed their own courts as well as their own magistrates and council of elders, and thus possessed, in effect, a government within a government.

Extensive foreign possessions characterized the reigns of the first four Ptolemaic kings (323–205 B.C.). Thereafter, rulers were unable to maintain an extended empire, owing not only to strife within Egypt and the royal family, but also to Rome's refusal to return lands when it halted the expansionist designs of Seleucia (198) and Macedonia (197) during the childhood of Ptolemy V. At the height of Ptolemaic influence, foreign dominions included Cyprus and Cyrene—each held for more than 200 years—as well as major cities and their environs throughout Palestine, Coele Syria, Phoenicia, southwestern Asia Minor, islands in the southern Aegean Sea, and the islands of Samothrace and Lesbos. Soon after the fifth Syrian War (202–199 B.C.), Egypt's empire had been reduced to little more than Cyprus (finally lost in 30 B.C.) and Cyrene (lost in 96).

In matters of religion, the Ptolemies were far more tolerant of the Egyptian gods than the monotheistic Persians had been. Moreover, it was in this area that the Greek populace apparently assimilated most from Egyptian culture. Worship was augmented by the introduction of the cult of Sarapis by Ptolemy I. Besides

a shrine in Memphis, the major cult center for this deity was the Serapeum, built in the native Rhacôtis quarter of Alexandria. While the origins of both Sarapis as a god and his cult are debated, it is clear that few Greek settlers and Egyptians worshipped Sarapis. Even though this god, represented in male form, was the patron deity of the Ptolemaic dynasty, his cult was received much more enthusiastically outside Egypt. In time, the worship of Sarapis was established as far away as Britain. It was Sarapis, along with deities such as the Persian Mithras and the Great Mother of Phrygia, which were marshaled by pagans in their last struggles against Christianity in the third and fourth centuries. Worship was further augmented by cults in honor of kings and queens, effectively broadening state support for the powerful priesthood. According to the Decree of Canopus, Ptolemy III and Queen Berenice II even inaugurated a cult to honor their daughter Berenice, who died in her youth. Under Ptolemaic leadership, some of the most important temples preserved were founded: Philae, begun and almost completed by Ptolemy II; Edfu, began in the reign of Ptolemy III; and Dendera, started by Ptolemy IX and Cleopatra III.

C. The Ptolemaic Dynasty

1. Ptolemy I Soter (323–383 B.C.). Ptolemy, son of Lagos, a general in Alexander's army, took over the office of satrap of Egypt from the devious Cleomenes not long before Alexander's death in 323 B.C. When Alexander's generals divided up the empire, Ptolemy governed Egypt first for Alexander's half-brother, Philip Arrhidaeus, and then on behalf of his son, Alexander IV. After eighteen years as satrap, Ptolemy declared himself king on November 7, 305 B.C., establishing his descendants as "pharaohs" for the next 275 years. Years before, in order to secure his claim as Alexander's successor, Ptolemy had brought the late king's body to Memphis and then, with lavish pomp, to Alexandria, where it remained—an act which also demonstrated that the new Greek city had replaced the ancient capital.

Ptolemy I was a vigorous ruler. Even during his satrapy, his confidence as overseer was evident from the hieroglyphic "Satrap Stela," which stressed his role in liberating the country from the Persians. He grew strong enough to be able to marry women from other royal families. He divorced his first wife, a Persian woman. In 321 B.C., he married Eurydice, daughter of Antipater, satrap of Macedonia. Within four years, he married Berenice (I). Plutarch reported that Berenice exercised "great influence" over Ptolemy as well as being a fine example of virtue and wisdom [*phronēsis*], in the best Greek sense. Unfortunately, it is not possible to determine at what points in affairs of state she had her strongest influence.

Ptolemy viewed Egypt more or less as his estate; it was to furnish him with a base not only for pursuing domestic and particularly foreign interests, but also for filling the treasury. Because he was Greek, he looked to the Mediterranean for commercial and political ties. Indeed, his divine title Soter ("savior") was granted by the senate of Rhodes after he had helped to end a blockade of the island in 304. Thereafter, kings and queens adopted titles which pointed to their divine character.

For its inhabitants, Alexandria was a thoroughly Greek city. Here, Soter founded both the Library, which eventually housed the largest collection of texts assembled in the ancient world, and the Museum, an unrivaled center of higher studies. In medical studies alone, the Museum surpassed the schools at Cos and Cnidus, establishing a standard at its zenith that would not be matched until modern times.

2. Ptolemy II Philadelphus (285–246 B.C.). Late in 285, Soter handed power to one of his sons, selecting Ptolemy II Philadelphus ("sibling-loving"), son of Berenice, over the older Ptolemy Ceraunus, son of Eurydice. When the old king died early in 282, he left an empire which spread from the western Mediterranean to the Aegean Sea. Ptolemy II did not rigorously pursue foreign dominions, but he did establish outposts in Arabia and eastern Africa and, with his sister-wife Arsinoë II, sent an embassy to Rome in 273. The negotiations, which included a return visit by a Roman delegation, resulted in a lasting *amicitia* ("agreement of friendship"). This mutual recognition formed the first link between the two states and, later, placed each in position to serve as intermediary in disputes involving a third party. The agreement lent status to Philadelphus and Arsinoë II, who were facing both insubordination from their half-brother Magus in Cyrene and military expansionism into Coele Syria by the Seleucid king Antiochus I.

According to extensive papyrus remains, Philadelphus began, or at least continued, restructuring the country's administrative system. He also continued state support of culture and education; it was under his rule that the Library and Museum were completed. Legend has assigned to his reign the production of the Septuagint, the Greek translation of the Hebrew Bible. The account in Pseudo-Aristeas exhibits terminology peculiar to the Ptolemaic age, pointing to an Egyptian backdrop. Moreover, Manetho, an Egyptian priest of Heliopolis, dedicated his history of Egypt to Ptolemy II. This account has provided the traditional divisions of pharaonic Egyptian history not only into thirty-one dynasties, but also into the three overarching periods known as the Old, Middle, and New Kingdoms. Ptolemy II was also the founder of the Ptolemaieia, a celebration modeled on the Olympic games to honor his father, including contests in equestrian events, music, and gymnastics.

Philadephus' marriage to his older full sister Arsinoë set a precedent for his successors. Although they may have been imitating marriage practices of ancient pharaohs, or even following the divine model of Zeus with Hera, or Isis with Osiris, their marriage seems to have offended the sensibilities of their Greek subjects. Arsinoë had first been married to the aged Lysimachus of Macedonia, then to Ceraunus, her half-brother and contender for Philadelphus' crown. But after each of her husbands perished as a result of foul play, and after two of her three children by Lysimachus were killed by Ceraunus, she returned to Egypt and supplanted Ptolemy II's first wife, also named Arsinoë (I). Besides being an ambitious woman, Arsinoë II was a capable administrator, a trait that ensured the continuing success of the royal couple. She and her husband were later deified, receiving the title "Gods Adelphi." She was known in Egyptian sources as "King of Upper and Lower Egypt."

3. Ptolemy III Euergetes (246–222 B.C.). The third Ptolemy, named Euergetes ("Benefactor"), came to the throne on 29 January 246 upon the death of his father. Internally, Egypt was prosperous and peaceful, but the new king's sister, Berenice, the queen of Syria, whose husband had just been murdered, fell into mortal danger. Before Euergetes' military force could reach her, she and her young son were betrayed and killed. Ptolemy's rescue effort then became a campaign to avenge his sister. Though Syria lay helpless before his army, he chose to withdraw, retaining only territories as far inland as Damascus. In returning, he brought back statues of Egyptian gods originally taken by the Persian Cambyses, an act which earned Ptolemy the goodwill of Egyptians as well as his divine title "Euergetes."

Berenice II, a cousin, married Ptolemy upon his coronation. A skilled horsewoman, she not only sponsored horses at equestrian events, but also rode into battle herself. In Demotic sources she was called "the female pharaoh." Her divinity was celebrated in a poem of Callimachus, which relates that a lock of her hair, offered at the shrine of Arsinoë Aphrodite for the safe return of her husband from Syria, was whisked to heaven to become a constellation.

Papyri from the Fayyum, substantial for this period, reveal that life continued in that part of Egypt much as it had before. The Canopus decree, intended to honor Ptolemy III and Berenice II, points not only to the inauguration of a cult dedicated to their late daughter Berenice, but also to a chronometrical reform that anticipated the modern calendar by adding an extra day every four years to the Egyptian calendar of 365 days. The most enduring monument from this period is the famous Edfu temple in Upper Egypt, begun in 236. All succeeding Ptolemaic rulers contributed to its ongoing construction and adornment.

4. Ptolemy IV Philopator (222–205 B.C.). Both Polybius and Strabo maligned Philopator ("father-loving") as a pleasure-seeking, careless ruler whose reign—influenced by self-seeking courtiers—saw the onset of Egypt's decline. Early in his reign, his army was ill prepared to meet the threatening Syrian army of Antiochus the Great, a temporary weakness which may have resulted from his father's relaxed policies in his later years. The Egyptian victory at Raphia in southwestern Palestine in 217 was decisive in Philopator's foreign affairs. Thereafter, Antiochus and Ptolemy's other nemeses kept their distance. The victory had other consequences at home. In the rush to assemble an army to defend Egypt, Sosibius, Ptolemy's confidant and leader of the influential palace circle, not only hired mercenaries from abroad, but also brought in Greek commanders to train native Egyptians as soldiers. The performance of the Egyptian force at Raphia helped turn the tide against the Syrians. The lesson was not lost: their hard-won confidence inspired natives to revolt when opportunity arose.

After Arsinoë III finally married her brother the king, she bore a son. Her murder at the behest of Agathocles, another confidant of the king, was kept secret until Ptolemy IV died under mysterious circumstances. A riot ensued at Alexandria, ostensibly owing to outrage over Arsinoë's fate. Agathocles was killed when turned over to the mob by the Macedonian guard. Aside from this outburst in the capital city, affairs were in largely good condition when Philopator died, except for a local flareup in Upper Egypt during his last year.

5. Ptolemy V Epiphanes (205–180 B.C.). Ptolemy V Epiphanes ("God-manifest") was crowned king at age five and was guided by courtiers who vied with one another for influence. Internally, the troops dispatched to Upper Egypt (a still troubled region) did not return for several years, illustrating the seriousness of the rebellion. Externally, Antiochus of Syria, Ptolemy IV's old foe, and Philip V, king of Macedon, agreed to move against Egyptian holdings. Philip made war against cities loyal to Egypt in Samothrace and Thrace while Antiochus attacked Palestine. Rome eased into affairs when an embassy came to Alexandria in 200 to thank the royal house for its neutrality in the Second Punic War. Rome had no quarrel with the Syrians, but was on the brink of hostilities with Philip. Then in 197, Egypt lodged a protest in Rome against Antiochus, who had recently vanquished her territories in southern Asia Minor. In the end, Egypt settled her differences with Antiochus, who, in the bargain, betrothed his daughter Cleopatra (I) to the young Egyptian king. Rome, after bullying Philip and then Antiochus into relinquishing former Egyptian lands, restored none to Ptolemy's control; Egypt's power had been eclipsed.

Cleopatra wedded Epiphanes in 194/3. It is said—not without dispute—that her dowry included lands in Coele Syria, a territory which Egypt had recently lost in war to Syria. In any case, she brought a certain amount of independent wealth to the union as well as a resilient personality.

A year after Epiphanes celebrated his majority (197), he accorded honors to the Egyptian religions at a synod; these were recorded on the now famous Rosetta Stone. The language of the commemoration was certainly Demotic, the Greek panel representing a rather slavish translation. Compared to the Canopus decree, the growing sensitivities of the Greek monarchy toward native affairs are apparent and, from this period, were visibly continued by the queen, who introduced Jews and other non-Greeks into administrative posts. Epiphanes died while trying to recapture lands under Syrian control. There is evidence that, to raise money for the campaign, he forced the wealthy to buy titles and ranks.

6. Ptolemy VI Philometor (180–145 B.C.). The second successive king to come to power as a child, Philometor ("mother-loving"), enjoyed his mother's guidance. While regent, Cleopatra ruled as monarch, minting her own coins and placing her name before her son's on official documents. Following her death in 176, the Syrian and Egyptian courts quarreled, and the two sides prepared for hostilities. In the meantime, a joint rule was celebrated, elevating as a triumvirate Philometer and his sister-bride Cleopatra (II), along with their younger brother Ptolemy VIII Euergetes II.

When the Egyptians attacked, Antiochus IV Epiphanes, the Syrian ruler, overwhelmed them and fought his way to Memphis, where he had himself crowned pharaoh. A dispute between the two young Ptolemies undercut the war effort until it was healed by their sister. After Antiochus IV had subdued much of Egypt, had captured Ptolemy VI—apparently during an attempted escape to Samothrace—and had made the young ruler his client overlord in 168, he returned to Syria. But when he came the next year, he found that Cleopatra II and Ptolemy VIII had turned the countryside against him. His ensuing attempt to crush Alexandria failed. In the course of the war thus far, Cleopatra and her younger brother had sent appeals for help to Rome. Subsequent events turned the relationship of Rome and Alexandria from one of cordial but distant dealings to one of Egyptian dependence. The Roman ambassador sent to settle difficulties was C. Popillius Laenus. After delaying until he learned of Rome's victory over the Macedonians at Pydna, he ordered Antiochus to withdraw. When Antiochus hesitated, Laenus drew a circle in the dust around his feet and told the Syrian king to make up his mind before stepping out. During his forced return, Antiochus took out his frustrations on Jews in Jerusalem, an action that galvanized Maccabean resistance and led to Jewish independence.

7. Dynastic Rivalries and Relations with Rome (145–52 B.C.). By pressing appeals at Rome in the winter of 169/8 for help against Antiochus IV, Egypt became a virtual client state. This situation, which lasted for almost a century, was characterized and perpetuated largely by feuding within the royal house. Barely four years after Rome forced Antiochus to withdraw, a quarrel between the two royal brothers became cause for public storm, leading to the ascendancy of the younger, Euergetes II. Philometor was forced into exile, and went to Rome. When members of the senate learned, to their embarrassment, that he was in the city, living in a cheap dwelling, they received him and heard his pleas for righting injustices committed against him. To its credit, the senate agreed only to "reconciling the kings." In time, Alexandrians demanded that Philometer be restored to Egypt; in the settlement, Euergetes II was handed control over Cyrene, a lesser appointment. Thus affairs remained until Ptolemy VI died from injuries suffered in 145 while on the threshold of regaining dominion over territories formerly held by Egypt in Coele Syria.

Cleopatra II's attempt to install her young son on the throne as Ptolemy VII ended in disaster for him. The queen's younger brother Ptolemy VIII seized power, had his nephew killed, and married his sister, whom he unofficially set aside in favor of her daughter Cleopatra III. Euergetes' suppression of opponents, including the murder of his own son born to Cleopatra II, finally sparked a revolt in 131 which was backed by Cleopatra II. After an uneasy peace concluded between brother and sister in 127, Cleopatra II turned to the Seleucid ruler of Syria, Demetrius II, who had married her daughter, and embroiled the ruling houses of the two nations in quarrelsome matters of royal succession.

Both Cleopatra II and Ptolemy VIII died in 116, opening the way for Cleopatra III to rule without rival. But instability also grew. Her attempt to elevate her younger and favored son, Alexander, met resistance from the Macedonian guard, who would not breach tradition, installing instead her older son Ptolemy IX Soter II. It was he who, except for the year 110/109, ruled with his mother until he was expelled from office in 107 by Ptolemy X Alexander I, Cleopatra's favorite. Alexander reigned through a period of worsening relations with his mother and the apparent crisis engendered by her death in 101. He then ruled with Cleopatra-Berenice (III), daughter of his older brother Soter II, until 88 when he was removed by Soter II, who again ascended the throne, this time with his daughter, until he died in 80. This king and his mother, Cleopatra III—even while hating each other—together launched an extensive building campaign during Ptolemy IX's first regnal period, laying the foundation of the great temple of Dendera and adding to other temples, notably that at Edfu. Ironically, in order to suppress a revolt during his second kingship, Alexander had much of Thebes destroyed in 85 B.C.

Berenice III became sole ruler after her father Soter II died in 80. She married and elevated to the throne her cousin Ptolemy XI Alexander II, son of Ptolemy X. He then had her murdered and, after reigning nineteen days, was himself murdered in retaliation by soldiers.

It was during the period of these kings and queens that Rome's influence grew in the eastern Mediterranean. Direct interference in domestic affairs of Egypt was never part of the Roman program, but the country's wealth was ever an attraction. The most important of Egypt's dominions to fall under Roman sway was Cyrene, which had been bequeathed to Rome by Ptolemy VIII while he still reigned there. In the interim, his illegitimate son, Ptolemy Apion, had ruled this dominion until his death in 96. Rome allowed its cities to remain independent until 74 when Cyrene as formally annexed as a province, a territory that had been Egypt's for more than two centuries. Next to be annexed was Cyprus in 58.

8. Ptolemy XII Auletes (80–51 B.C.). Nicknamed Auletes ("flute player") because of his skill with the flute, Ptolemy XII was the son of Soter II. He held on to power through support which he brought with gifts at Rome. Though ineffectual as king—even being forced into exile for two years by Alexandria's citizens—he was able to remain neutral in Rome's war with Mithridates of Pontus in northern Asia Minor. While he was in Rome winning patronage to be reinstated by passing out lavish bribes to officials (including Julius Caesar), the queen, Cleopatra VI Tryphaena, assumed rule with her sister Berenice (IV). When Auletes was restored in 55 through the intervention of one of Pompey's officers, the king was obliged to install the Roman banker Rabirius Postumus as finance overseer, a result of Rabirius' huge loans for the king's lavish gifts. Although the appointment of a Roman was unprecedented, and eventually

public outcry drove Rabirius from Egypt, his nomination doubtless arose because Egypt's taxes would lie under his direct control.

9. Cleopatra VII (52–30 B.C.). The most famous of the Ptolemaic line, she and her older brother Ptolemy XIII became co-regents with their father Auletes in 52, a year before his death. Not content merely to share Egypt's throne, she involved herself in the upheavals besetting the late Roman Republic. Her first opportunity came in 48 when Julius Caesar arrived at Alexandria in pursuit of the defeated Pompey. When Caesar departed the next year, after subduing the Egyptian forces that had pinned him in the capital city, and solidifying Cleopatra's regal hold, by her account he left her with child. She named her infant son Caesarion. During the same year, Ptolemy XIII died and she married her younger brother Ptolemy XIV, who reigned with her until his death in 44.

In the meantime, two important events occurred. First, Egypt's economy, which had sagged for decades (most recently under the weight of Aulete's bribes in Rome), began to revive under Cleopatra's leadership. With it, the country's fortunes seemed to rise. Taking an interest in all her subjects, even learning Egyptian along with several other languages, she came to enjoy solid popular support. Second, pursuing her loftier aim of being queen of the Roman world, she followed Caesar to Rome in 46. Her efforts to link her fortunes with his came apart in 44 when he was assassinated. Her retreat to Egypt did not last long. In 41, after the victory of the party led by Octavian and Mark Antony, she answered Antony's summons to account for her neutrality by going in person to Tarsus. Thereafter, Antony became Cleopatra's slave.

In 40, Antony returned to Rome. There, in an apparent effort by Octavian to draw him from Cleopatra's grasp, Antony was married to his friend's sister Octavia. But in 36 he was sent east to lead the war against the Parthians. Once again, he fell under the Egyptian queen's charm. Politically, this was fatal for him in Rome, particularly when he gave large tracts of land to Cleopatra and, additionally, refused to visit his wife Octavia in Athens where she had come to meet him, choosing instead the company of the queen. Militarily, he was vanquished by Octavian in the naval battle fought at Actium in September of 31. When Cleopatra and her ships pulled away from the battle, Antony followed. It was only a matter of time before Octavian caught up with them in Egypt. The victor finally arrived in August of 30. Antony committed suicide. Cleopatra, after seeing that she could not entice Octavian, reportedly exposed herself to the bite of a cobra, the snake which had long symbolized royalty and divinity. Within days of her death, Egypt belonged to Rome.

D. Egypt as a Roman Province (30 B.C.–A.D. 324)

As the Ptolemies had thought of the land and its inhabitants as their personal property and workforce, so the emperors of Rome continued to look upon Egypt as their own. Octavian—later known as Augustus—and his successors allowed no Roman of senatorial rank to visit Egypt without permission of the emperor. He had two reasons for this decision. First, Egypt's geography gave it a unity possessed by no other province. Flanked on both east and west by desert, it was difficult to invade. By sea, because of the prevailing northwest winds, it was most easily approached from the west. But no natural anchorage existed along the delta coastline except at Alexandria. Hence, Egypt could be turned into a base of power by an enterprising adventurer. The second reason was linked to Egypt's character as the most abundant agricultural producer among territories abutting the Mediterranean Sea. The confinement of the Nile valley—coupled with the Ptolemaic bureaucracy already in place—made management of shipping a simple matter. During the early empire, Egypt's produce offered the most certain and abundant supply of food for Rome. As Italy's needs for food grew, the stability of Egypt became paramount.

1. Administration under Rome. Egypt was now governed from afar. Although his representatives lived in Egypt, the Roman emperor only occasionally visited the country. For the same reasons that those of senatorial class were to stay away, members of the emperor's family were not to come. Consequently, any appeal to Rome's highest authority, whether by a Roman citizen or on behalf of a person or a group—as that carried out in A.D. 40 for Alexandria's Jews by Philo Judaeus and his associates—had to be made in Italy.

The highest-ranking appointee in Egypt was the prefect, a person from the equestrian or knight class. His authority was preeminent, since responsibilities included those of principal financial officer, chief justice, and head of both the military and civil service. In the judicial realm, differences between the Ptolemaic era and that inaugurated by Rome are readily apparent. In place of the previous system of itinerant courts, the prefect now served as virtually the only judicial officer. Consequently, litigations could be resolved only by a certain expense and inconvenience to the parties. Yet the prefect's judicial circuit was largely limited to Pelusium in the eastern delta, Alexandria in the west, and Memphis for Upper Egypt. It must have become clear to many Egyptians that Rome intended to rule in civil matters with the least expense possible.

The civil administration was reinforced in its duties by the military, with the prefect holding both. Rome could afford to keep relatively few civil servants on its payroll because the army secured order and cooperation, an empire-wide trait. When revolt broke out in the Thebaid over the first Roman census, the disturbance was quelled with a strength which showed that Rome would brook no dissent. The census, conducted every fourteen years, was designed chiefly to inventory properties for taxation purposes. The resulting records were deposited in Alexandria in a central records office, as well as in the capital city of the relevant nome or region.

The nomes, consisting of more than thirty administrative regions in Egypt, acquired a new status under Rome. All village gymnasia—the basic educational institutions of Hellenistic societies—which had sprung up under the Ptolemies were now concentrated in nome capitals. The heads of these schools, gymnasiarchs, were given official status, each in a magistracy or urban office. These magistracies constituted an innovation. Several such offices were joined to form a type of city council, each officer with a different responsibility. One function of the urban magistracies was to keep track of youths who qualified by birth or otherwise for special privileges, including citizenship and reduced taxation. This policy perpetuated social classes, a fixation in Roman society. At the end of the second century, the urban magistracies formed the core for Septimius Severus' creation of senates in each nome capital.

Service in a magistracy became difficult over time. Under the Ptolemies, civil service had been voluntary, except in crises when persons were conscripted, for example, to lease a certain tract of land. Although voluntary acceptance of governmental trusts continued under the Romans, during the first century the "liturgy" was introduced. Under this system, not only were officials to use their own resources in performing their duties but their persons and properties were warranted as guarantees against any failure occurring during their tenure in office. One result was to weaken the wealthier peasants and, eventually, the more affluent of the middle class. To escape the harsh penalties for failures caused, say, by a bad agricultural year, some abandoned homes and lands. One reads of villages from which 10 or 12 percent of the inhabitants had fled. In order to make up shortfalls, others were compelled to cultivate abandoned fields and were held liable for further failures. The reforms of Septimius Servus in 200 A.D. were designed to address falling revenues, then epidemic throughout the empire. He awarded senates to Egypt's nome capitals, making these bodies of about 100 persons responsible for the financial functions within the nome, e.g., collecting taxes or financing the municipal gymnasium. Each senator became liable for shortfalls that might occur in the jurisdiction of any and all associated on the council. To refuse the nomination to serve—even for a term of a few days, an attested circumstance—was no solution, since the nominee would thereby forfeit two-thirds of his property. While the impact on the wealthy who could accept such nominations was often ruinous, the effect was not uniform.

Religion required attention. In Ptolemaic times, temple priests, often sympathetic to nationalist sentiments, were treated with respect. Under Rome, the rules changed. While sacred lands underwent no fundamental alteration, temples and priesthood ranks came under supervision of the "high priest of Alexandria and all Egypt," a Roman civil officer. Temples were inspected regularly and the ranks of priests limited, any excessive numbers being liable to the poll tax, a fee from which the priesthood had earlier been exempt. Even so, within the guidelines, temple personnel prospered and little complaining was heard from that quarter for a long time.

To traditional religion in Egypt was added the emperor's cult. The emperor had taken the place of the Ptolemies as pharaoh, "Lord of the Two Lands." His divinity, celebrated in his cult, was widely accepted. *Libelli,* certificates of sacrifice submitted by all subjects, were imposed to ensure the ongoing function of emperor worship. Only Christians who were willing to risk public ridicule, and even death, refused to comply.

Christianity's arrival probably occurred by the third quarter of the first century. Although literary evidence is thin, recent archaeological finds in the Fayyum are compelling. The movement is often thought to have embraced so-called heterodox forms and ideas; but the fourth-century gnostic texts from Nag Hammadi, taken with the speculative elements in the writings of the Alexandrian scholars Clement and Origen, need not be seen as broad indicators of Christianity's character throughout the country. While Egypt became a seedbed for movements later deemed schismatic, e.g., the Arian controversy of the early fourth century and the later Monophysite dispute which drove a wedge between Egyptian Christians and others, Egypt's contribution to Christendom in the early centuries is not thereby diminished. Like Christians everywhere, Egyptian adherents suffered severely—often for refusal to join in emperor worship—during both local and empire-wide persecutions. These gave rise to a martyrdom literature whose more sober accounts detail dreadful human suffering at the hands of Roman officials. Persecution also led to growth, with Christians becoming the numerical majority as early as 325 A.D. See also CHRISTIANITY (EGYPT).

Citizenship was the dominant feature which perpetuated distinctions within Roman society. In Egypt, citizenship could be either Roman or of one of the "Greek" cities: Naucratis, Alexandria, Ptolemais, or Antinoöpolis (founded in Middle Egypt in 130 by the emperor Hadrian in memory of his friend Antinoüs, who drowned in the Nile). People attracted to Antinoöpolis at its founding were awarded privileges, including exemption from certain taxes. Citizenship in the "Greek" cities continued much as it had under the Ptolemies, featuring special exemptions. Roman citizenship formed the highest prize and, during the first two centuries of Roman rule, was awarded to those who had served in the legions. But the Edict of Caracalla *(Constitutio Antoniniana de Civitate),* issued in 212 A.D., gave citizenship to all inhabitants of the empire, diluting its importance. For those in Egypt, it apparently made little difference.

2. Diocletian's Reforms. The empire came under increasing strain in the late third century when a series of military leaders seized imperial power, none holding office for more than a decade. Diocletian, who became emperor in the fall of 284 A.D., saw the difficulties, and with his organizational acumen, revamped the empire's administrative structure. Egypt became a part of the eastern diocese and was divided into three provinces. The prefect's duties were restricted to the northernmost province in the delta. The other two provinces received governors *(praeses),* both of whom reported to the prefect. Military authority was placed in the hands of a duke *(dux),* leaving the prefect as a civil authority only. Taxation underwent simplification and was linked to a fifteen-year cycle ("indiction") of production estimates for a province, rather than to a quota established locally. In a further move to unify, Latin replaced Greek as the language of administration, but the impact in Egypt was slight.

In Egypt, most prior governmental attempts to meet difficulties did not involve thorough reformation, only temporary measures which often led to further problems. Even after Diocletian's reforms, the strictures faced by small landholders drove them to deed their lands to owners of larger estates who could bear the burdens of ownership, a feature which would dominate Byzantine Egypt. All that the former sought in return was the right to farm their own holdings as lessees. Further, Roman objectives in Egypt did not really change. The wealth of the country was at Rome's disposal. Unlike the Ptolemies, who amassed wealth from the country and then disposed of most of it there, Rome was an absentee landlord. Egypt's riches, gathered by Roman civil servants, were sent off to Italy; Rome's fiscal interests were to be served, first and foremost. However, it is not completely fair to conclude that all in life was miserable. Evidence from papyri shows that, even in periods of political or economic difficulty, for many (perhaps the majority) of Egyptians life went on much as it always had, unperturbed by forces that shaped the larger picture of the empire's destiny.

S. KENT BROWN

EGYPT, PLAGUES IN. The series of nine plagues *(maggepōt),* also called signs *(ʾotōt)* and wonders *(mōpetîm),* climaxing with the tenth plague, the death of the eldest son (i.e. Passover), which Yahweh brought on Egypt to move the obdurate pharaoh to allow the Israelites to leave Egypt (Exod 7:14–12:32). These events play a significant in Israel's salvation history in as much as they are linked to the deliverance from Egypt.

A. Sources in the Plagues Narrative

The three-source analysis (J, E, P) of Driver (1913: 24–29), which goes back to Wellhausen, has continued to find support (*IDB* 3: 823 and accompanying table; Clements *Exodus* CBC, 40–41; Childs *Exodus* OTL, 130–142). The reasoning for distinguishing J from E is not at all clear. The use of the rod in introducing the first plague (Exod 7:15b, 17b) is assigned to E (Childs, *Exodus,* 137), and yet the introduction of the magical rod is found in a passage generally regarded as belonging to J (Exod 4:1–4; Hyatt *Exodus* NCB, 48; Clements *Exodus,* 26). When the rod is in Aaron's hand, that section is assigned to P (Hyatt *Exodus,* 103).

The use of divine names, *ʾelōhîm* (E) and YHWH (J), is considered as diagnostic for these two sources. However, this criterion does not work in the story of the plagues. In passages connected to E, according to Hyatt (p. 48; e.g. 9:22–23a, 35; 10:12–13a, 20–23, 27) and to Childs (p. 131; 7:15b, 17b, 20b, 23; 9:22–23a, 24a, 25a, 35a; 10:12–13a, 15, 20, 21–23, 27; 11:1–3) YHWH is written, not *ʾelōhîm.* In fact, *ʾelōhîm* is never used without being associated with the divine name. Noth (*Exodus* OTL, 9–18) recognized this problem and maintained that J and E were virtually indistinguishable, and hence he referred to these narratives as JE, and the remaining sections were the work of P. G. Fohrer (1964: 60ff.), however, has argued against Noth for three sources in the plague narratives. His conclusions have more recently been endorsed by Childs (*Exodus,* 131). The work of a redactor, it is argued, removed some of the distinctions. The redactor is thought to be the work of the Deuteronomist by Clements (*Exodus,* 4), while Noth (*Exodus* 18) speaks of additions after P, and does not assign a particular redactor. For Childs, three sources are present and P is the redactor (pp. 131–32).

A complicating factor in the source analysis is the relationship between Exod 7:14–12:44 and Psalms 78 and 105, which have different sequences for the plagues than that in Exodus (see table in *IDB* 3: 823), and in recent years this has attracted considerable discussion (Lauha 1945: 39–50; Margulis 1969: 491–96; Loewenstamm 1971: 34–38). The differences may "reflect only a free handling of the source material" (Allen, *Psalms 101–150* WBC, 41), or what might be called "liturgical license." Psalm 78, for instance, mentions the rebellion in the wilderness (78:40–41) before mentioning the plagues in vv 44–51. The reversal in sequence is not accidental but deliberate to show that in the wilderness the Israelites forgot God's power as evidenced in the signs and wonders in Egypt. The reversal in order of wilderness period and the plagues/exodus events does not mean that the Psalmist had his history backward.

It is clear that both Psalms refer to only seven plagues, which may in part account for the differences between them and Exodus. Again, liturgical reasons may lie at the root of this problem. Drawing conclusions on the relationship between these Psalms and Exodus, and what sources they may reflect, still entails much speculation.

In recent years a number of scholarly works have raised serious questions about traditional sources and tradition criticism (Alter 1981; Kikawada and Quinn 1985; Rendsburg 1986; Whybray 1987). The emphasis has shifted from the micro to the macro structure of pericopes.

B. The Structure of Plagues Narratives

In their present form, the first nine plagues are closely related and constitute three parallel cycles of three plagues each, which for some indicate the literary unity of the text (Cassuto 1967: 92–93; Sarna 1986: 73–78 and his table 4.2). The tenth plague represents the climax which resulted in the release of the Hebrews. Like the number seven, ten signifies completion and perhaps may be a climactic number (Loewenstamm 1971: 38). If the the literary unity, a tightly woven fabric, found in Exod 7:14–12:30 merely reflects the work of the redactor, it might be asked if it is possible any longer to isolate the threads that have been so thoroughly reworked. This factor in part has led a number of scholars to aver that in matters of exegesis and theological reflection, the present form of the text must be seriously considered (Childs, *Exodus,* 149–51; Noth, *Exodus,* 18; Rendtorff 1986: 290).

C. The Phenomena of the Plagues

On the phenomena of the plagues from an Egyptian perspective, Petrie has said, "The order of the plagues was the natural order of such troubles on a lesser scale in the Egyptian seasons, as was pointed out long ago" (1911: 35). For Petrie, the bloodlike Nile derived from stagnating conditions associated with the lowest level of the Nile before the beginning of the inundation which generally began in July. One very early rationalistic approach to the plagues was that of Eichhorn in *De Aegypti anno mirabili* (1818). In modern times, Hort (1957: 84–103; 1958: 48–59) has examined various natural explanations for the first plague and argued that for the right condition of the Nile to be determined it had to meet four attendant phenomena as outlined in Exod 7:20–24; (1) the blood red color (7:20), (2) the death of the fish (7:21a), (3) the putrid smell of the water (7:21b), and (4) the undrinkableness of the water (7:21c). For Hort, only one scenario explains all four and provides a basis for the rationale for some of the later plagues that appear in chapters 8–9, and that is presence of massive numbers of flagellates (*Euglena sanguinea* and *Haematococcus pluvialis*) in the waters of the inundation (1957: 94). The flagellates likely originated in Lake Tana and came via the Blue Nile to Egypt. The presence of the flagellates would account for the color as well as the loathsome taste of the water (p. 94). The flood waters are generally reddish owing to the presence of suspended particles of soil *(Roterd),* but this alone would not cause the other three phenomena. Furthermore, the flagellates yield high amounts of oxygen during the day but absorb oxygen during the night. Fish require a consistent amount of oxygen, and this fluctuating condition could lead to their death. If this theory is correct, then a chronological framework for the plagues can be established. The Nile rises in July–August, cresting in September, and declining in October and November (Hort 1957: 95). The implications of Hort's thesis for the study of the plagues of Egypt is so important that a thorough review of her observations is in order.

In connection with the annual inundation, frogs are known to invade the land from the marshy banks of the Nile, usually in September–October (Hort 1957: 95). Hort notes that 7:25 dates the occurrence of the second plague seven days after the waters had been infected by the first plague, showing the relationship between the two (p. 96). The sudden death of the frogs (8:13) is attributed to their being contaminated by bacillus anthracis, which is found along the banks of the Nile and may have come from the decomposing fish (p. 98).

The identity of the insect mentioned in the third plague *(kinnîm)* has been debated. "Gnats" is a popular understanding (RSV; NASB; NIV; Cassuto 1967: 105); "lice" is another suggestion (KJV, Clements, *Exodus,* 49). "Mosquitos" (JB) makes very good sense in the aftermath of the inundation season, especially if it had been an abnormally high flood, which would take longer for pools and puddles to dry (Hort 1957: 98–99). Childs understands "gnat" to be a type of stinging mosquito (*Exodus,* 156).

The fourth plague is flies *(ʿārōb),* which as a collective means "swarm" (Hyatt, *Exodus* NCB, 111). The LXX reads *kunómuia,* "dog-fly," so named because it is especially vicious. Hort also associates this flying insect with the sixth plague (1957: 101–3). The fifth plague *(deber),* which affected field animals (Exod 9:3), is often described as "murrian" (Hort 1957: 100; *IDB* 3: 823; KJV, RV). For Hort, the anthrax that

was associated with the second plague now affected limited numbers of field animals, since most animals were kept in stables and shelters away from the flood waters during this season (1957: 100).

"Boils" is the usual understanding for the sixth plague *(šĕḥîn),* but boils do not afflict animals, and Exod 9:9 specifies that this plague affected man and beast alike. For this reason, Hort ties this plague to the flies of the fourth plague (which she identifies as *Stomoxys calctirans*), which transmitted the anthrax to both humans and animals (1957: 102). *St. calcitrans,* known to multiply rapidly in warmer climates, bites its victims in the lower regions of the body, a point acknowledged in Deut 28:35.

Hail, thunder, and lightning make up the seventh plague (Exod 9:23), which caused considerable damage to vegetation (9:25, 31–32). Rain and hail are not that common in Egypt (hence the statement in 9:24), but very violent and heavy storms are known to strike even in modern times. In ancient times such storms were considered divine manifestations (Hoffmeier 1985: 224–45). Hort suggests, based on the time when storms hit Egypt and the agricultural date offered in 9:31–32, that February would have been the likeliest time for this plague to have occurred (1958: 49).

Locust hordes, a known plague in the Mediterranean world and Africa—as the Bible elsewhere attests (Amos 7:1–2; Joel 1:4–7)—was the eighth plague. According to 10:13, an east wind *(rûaḥ qādîm)* brought the locusts to Egypt, and after the pharaoh softened his stance, a west wind drove them into the Red/Reed Sea (10:19). Hort argues that a north wind driving the locusts down the Nile valley better accords with the description in Exod 10:15 and with the prevailing wind patterns, which blow in off the Mediterranean; it also makes good sense of *rûaḥ yam,* a sea wind, i.e. a north wind (1958: 51). To resolve how a north wind could blow the locust west to *yam sûp,* Hort proposes emending *yam sûp* to *yamin* based on a misreading of the *mem* as *samek* and *waw* for *yod. Yamin* would mean toward the south. This is certainly a possible explanation, but unnecessary. The blowing of the locusts into the Red Sea possibly foreshadows the destruction of the Egyptian armies in the same waters in Exodus 14 (Cassuto 1967: 128–29).

The obscuring of the sun for three days (10:21), the ninth plague, must certainly have seemed strange in Egypt, a land accustomed to sunshine year round. Most commentators agree that a sand storm (Arabic *khamsin*), prevalent in Egypt between March and May, is the phenomenon in question (Clements *Exodus,* 63; Hyatt *Exodus,* 126). Having traveled in Egypt from Minya to Cairo (ca. 170 miles) on a train in May 1967, through the brown-orange darkness caused by a *khamsin* that blanketed a good portion of Egypt, the writer can attest to the eerie feeling caused by this phenomenon. Cars had to drive with lights on in the afternoon. Hort points out that the *khamsin* was exacerbated by the *Roterd* left behind by the sudsiding flood waters that would have covered the land (1958: 53).

The tenth plague generally is considered to belong to a different realm than the nine. Sarna says, "From a theological perspective, they are the instances of God's harnessing the forces of nature for the realization of His own historic purpose. The tenth and final visitation upon the pharaoh and his people is the one plague for which no rational explanation can be given. It belongs entirely to the category of the supernatural" (1986: 93).

Some (Finegan 1963: 47–57; Kitchen, *NBD,* 943–44) agree with Hort that the scheme she proposes demonstrates "that the Biblical account gives us true and historically accurate information of the events which led up to the Exodus of Israel from Egypt" (1958: 59). On the other hand, McCarthy (1965: 336–37) rejects the approach of Hort owing to the inconsistencies between the Exodus material and Psalms 78 and 105, claiming that there was no attempt to "mirror reality" in the "sequence of these episodes." He maintains that the long oral and literary history of the traditions behind the development of the Exodus plagues pericope militates against the naturalistic analysis. In view of the literary considerations discussed already and the source critical questions raised above (sections A and B), one could equally ask, if the scheme proffered by Hort is logical and can be demonstrated as a sequence of events, how is it that a variety of traditions could be drawn together centuries later by a redactor that makes such good sense in an Egyptian context, but certainly not in Palestinian or Mesopotamian locales?

D. Egyptian Religious Background to the Plagues

It has long been maintained that Egyptian local color and a specific degrading of Egyptian deities are evident in the plague narratives. Exod 12:12 and Num 33:4 point out that plagues and exodus were God's executing judgment on "the gods of Egypt." Furthermore, Jethro, Moses' father-in-law, said "Now I know that the Lord is greater than all the gods" (Exod 18:11a; RSV). Some have tried to see an Egyptian deity behind each plague (Davis 1971: 79–129; Aling 1981: 103–9); e.g. the Nile and the god Hapi; frogs and the goddess Heket; the cows and bulls struck by the murrain as representing Hathor and Apis respectively; the Sun being obscured and the god Re; etc.

It is incorrect to regard animals in Egypt as "sacred." In some cases, there has been a misunderstanding about certain deities and their function. A few examples will suffice to demonstrate this. Concerning the first plague, Aling says, "it is quite obviously an attack against the Nile god, Hapi. The god and the river were synonymous …" (1981: 106). However, Hapi is not the Nile, nor the Nile god. In fact, Hapi is associated with the annual innundation. While there are hymns to Hapi (P. Sallier II, P. Anastasi VII, and P. Chester Beatty V), there is no known temple, priesthood, or cult of Hapi. His praises were likely sung in connection with the annual innundation at other temples. The obese fecundity figures, wrongly called "Nile-gods" by early Egyptologists, are now classified as personifications of fertility by J. Baines in his authoritative monograph *Fecundity Figures* (Aris & Phillips 1985). Furthermore, it is inappropriate to call the river Nile "sacred" because the Egyptians never used words like "sacred" or "holy" attributively of the Nile (Hoffmeier 1985). There is no evidence to suggest that the Nile was a sacred river in the sense used by Hindus of the Ganges river. These observations have an impact on the view that the Nile god is somehow shown to be overmatched by Yahweh. If the plague on the Nile, however, coincided with the annual innundation, as Hort suggested, then it could be argued that Hapi's manifestation in the innundation is overshadowed by Yahweh.

The annual innundation was also connected to the resurrection of Osiris (Frankfort 1978: 190–91). It has been suggested that the reddish flood waters might have been seen by the Egyptians as the failure of Osiris to come back to life (Sarna 1986: 79). Or possibly, the red waters might remind the Egyptians of Osiris' death because his corpse was pulled from the Nile near Memphis, according to the tradition in the Memphite Theology (l. 9) and the Pyramid Texts (§ 615).

In general, animals, even though associated with a particular deity, were not considered "sacred." Indeed, from the time of Amenhotep III the Apis bull at Memphis was mummified and buried at Saqqara. But only one bull at a time received the special treatment in the temple. Cows and bulls were slaughtered for meat. They were not revered in the sense that cows have a special status in Hinduism. While some animals were associated with a particular cult center and may have been kept as pets (Spencer 1982: 196–97), not every animal of that species received special treatment or was linked with the deity. The proliferation of mummified animal burials (e.g. falcons, cats, ibis, baboons, etc.) began in the 7th century and possibly expanded as a nationalistic movement against Persian domination in an attempt to express the superiority of traditional Egyptian religion (Spencer 1982: 212). During the Greco-Roman period, the practice of mummifying animals reached its zenith. Whatever religious attitudes these burials reflect on the sacred nature of certain animals, they are certainly too late to have any association with plague on the animals in Exodus.

The supremacy of the sun god Re (or Atum) throughout much of Egyptian history is well known. For this reason, the obscuring of the sun in connection with the 9th plague has been regarded as the triumph of the Hebrew God over the head of the Egyptian pantheon (Sarna 1986: 79; Aling 1981: 106). It was noted by Cassuto that "evil" *(rāʿâ)* in Exod 10:10 was a word play on the Egyptian term *rʿ* for sun, and that the darkness was a response to pharaoh's comment there (1967: 129). A recent detailed study of *rāʿâ* elsewhere in the Pentateuch has made a good case for this word play on the sun god (Rendsburg 1988: 3–15). It seems quite likely, then, that a connection between the 9th plague and Re can be made.

One area of Egyptian backgrounds that has not sufficiently been explored is how the plagues affected the pharaoh and his office. In Near Eastern parlance, the "hand of god X" is an idiom for a plague, and it has been suggested that the expression "hand of Yahweh" in Exod 9:3 and 15 should be understood in this manner (Stieglitz 1987: 47). Consequently, plagues were considered to be divine in origin. This

observation certainly fits the scenario of the epic struggle between God and pharaoh. It has also been observed that the expressions about the hand or arm of God in the exodus narratives take on a special meaning when it is realized that similar expressions are found in Egyptian literature that symbolize the conquering and controlling power of pharaoh (Hoffmeier 1986: 378–87; Görg 1986: 323–30). This realization shows that the contest was primarily between Yahweh and pharaoh, known in Egypt as the "Son of Re," "Good God," and other divine epithets. The final assault on the power and authority of pharaoh came at "the sea." God says to Moses, "I will get glory over Pharaoh and all his host; and the Egyptians shall know that I am the Lord" (Exod 14:4). The plagues, exodus, and the incident at "the sea" were all a part of a cosmic struggle between Yahweh and pharaoh.

The cumulative effect of the plagues on the Egyptian view of cosmic order and the king's role in maintaining it is a major issue in the plagues. From Dynasty 4 onward, the pharaoh bore the title "Son of Re." As such, he was the god of the Egyptian state and was responsible to maintain the cosmic order *(ma‹at)* on earth that had been established by Re at creation (Frankfort 1978: 51–56). Because of the bond that existed between the created order and the king as the incarnate "Son of Re," he was responsible for the fertility of the land as well as for the proper function of the Nile, and because of the strong bond between the sun god, Re, and the king, he was the one who illuminated the two lands, i.e., Egypt (Frankfort 1978: 56–59). The vitality of the land was ensured by a number of annual festivals and related rituals over which the king presided.

The nine plagues certainly showed that a cosmic struggle was in progress, and they challenged the king's ability to maintain that cosmic order. If the king failed to execute his duties properly, the land would suffer, i.e., it would be in a state of chaos *(isft),* which is how Egyptian literature describes the 1st and 2d Intermediate periods. When a strong king appeared and regained control of the land, *ma‹at* was reestablished. The "Admonitions of Ipuwer" laments the deplorable conditions within Egypt:

> Lo, the river is blood, as one drinks of it one shrinks from people and thirsts for water …
> Towns are ravaged, Upper Egypt became a wasteland …
> Lo, the desert claims the land, the nomes are destroyed, foreign bowmen have come to Egypt …
> See now, the land is deprived of kingship by a few people who ignore custom … (*AEL* 1: 147).

The same despair is found in "Prophecy of Neferti," which dates to early in the 12th Dynasty, and was apparently written to help legitimize Amenemhet I (1991–1961 B.C.), the founder of the dynasty. Conditions move from gloom to glory at accession of Amenemhet as king. Neferti states:

> Dry is the river of Egypt, one crosses the water on foot; one seeks water for ships to sail on, its course having turned into shoreland …
> The land is bowed down in distress, owing to those feeders, Asiatics who roam the land. Foes have risen in the East, Asiatics have come down to Egypt …
> Re will withdraw from mankind: Though he will rise at his hour, one will not know when noon has come; No one will discern his shadow, no face will be dazzled by seeing him.
> Then a king will come from the South, Ameny the justified his name … Then Order *(ma‹at)* will return to its seat, while Chaos *(isft)* is driven away (*AEL* 1: 141).

These texts have several points in common. First we see that the Nile is either extremely low, owing to poor innundations, or in some way is contaminated, and so the crops fail and people don't want to drink the water. Second, kingship that unites and controls the land is absent. Third, foreigners are present in Egypt; and fourth, the sun was concealed in some way.

The plagues of Exodus 7–10 would have been understood by pharaoh and the Egyptians as a direct assault on the king, who was responsible for the proper function of the Nile, the crops, and the sun. This could be why the unnamed pharaoh of the exodus is so angered by the "signs and wonders." They were beyond the limits of his control. Perhaps his continued obstinacy was due to his hoping he could somehow reestablish himself as the Lord of Ma›at.

Indeed the gods of Egypt were shown to be impotent through Yahweh's "signs and wonders." But much of the language and symbolism of the exodus narratives is directed at the monarch and his inability to maintain order and protect Egypt from the Asiatic foreigners.

E. Theological Implications of the Plagues

In Exod 5:2 Pharaoh asks, "Who is the Lord, that I should heed his voice and let Israel go? I do not know the Lord …" Ultimately, the plagues were the means used by God to convince Israel, Egypt, and Pharaoh that Yahweh was supreme. The plagues, along with the exodus from Egypt and the deliverance at "the sea," were regarded as part of the mighty acts of God (Deut 3:24). In later Israelite worship, the plague traditions did not play a major role, and when they did, they were reworked (i.e. Psalms 78 and 105) for reasons which are not clear. The recitation of the plagues in the Psalter serves to remind later Israelites of God's grace and power, which were soon forgotten in the wilderness (Childs *Exodus,* 169).

JAMES K. HOFFMEIER

EGYPT, RIVER OF. Appearing only once in the OT, the expression *nahar miṣrayim* "river of Egypt" serves as an element of the phrase "from the river of Egypt to the great river, the river Euphrates" (Gen 15:18). The expression might suggest the Nile, certainly the best-known Egyptian river. But the contrasting designation of the Euphrates as the "great river" implies that the *nahar miṣrayim* is a lesser waterway, probably the Brook of Egypt (see EGYPT, BROOK OF). Emendation of MT *nahar* "river" (Gen 15:18) to *naḥal* "brook, wadi" is unwarranted; the author of Gen 15:18 is placing Israel in contrast to, but also on a par with, the neighboring powers (on the passage, see Lohfink 1967: 65; Mölle 1989: 166–67; Weimar 1989: 405–6). A late mention of the River of Egypt is found in LXX *potamos Aigyptou* (Jdt 1:9), clearly indicating the border of Israel with Egypt.

EGYPTIAN LITERATURE. Writers in ancient Egypt produced a great quantity of texts that can be considered as "literature" in the sense that they partake in a tradition and were not composed simply to meet immediate needs of communication and finance. This entry consists of four articles. The first provides a broad, introductory survey of Egyptian literature. The second focuses on perhaps the earliest type of Egyptian literature—the biography. The second and third articles respectively cover two types of Egyptian literature that seem to have influenced Israelite (and therefore biblical) literature: love poetry and wisdom writings.

SURVEY OF EGYPTIAN LITERATURE

In this survey the term "literature" will be used in a broader sense to include all kinds of texts belonging to the written tradition of ancient Egypt but excluding actual letters, receipts, files, and other documents that were not meant for tradition but for everyday use.

———

A. Generalities

1. Definitions, Literaticity, and Poeticity. Literature in the narrow sense of aesthetic or fictional texts will be called *belles-lettres.* These texts are called "literary texts" in contrast to "nonliterary texts," which constitute the body of "functional literature." The criterion for attributing texts to one or the other corpus is their functional fixity. While some texts are meant to serve only one well-determined function, as is the case with magical spells or biographical tomb inscriptions, others, such as narratives, harper's songs, and wisdom texts, may serve several functions. The latter appear in different contexts because they are functionally nonspecific, that is, not permanently bound to a single context. This functional nonspecificity is our main criterion for determining the "literaticity" of a text, regardless whether it exhibits poetic form ("poeticity") or not (Assmann and Assmann 1983: 269–74). Poetic texts may in fact be found within both belles-lettres and "functional literature."

All Middle Kingdom (hereafter MK) texts belonging to belles-lettres are framed by a narrative which explains their setting. This interior frame may be interpreted as the intratextual substitute of the extratextual context which is lacking in the case of literary texts. This custom of framing literary texts has caused chronological problems. Most Egyptologists tend to identify the date where the author locates the plot (the literary date) with the time of the author himself (the historical date). The literary date may in

most cases, however, point to a much earlier time than the historical date and may thus have a special, symbolic meaning (which has, of course, nothing to do with "pseudepigraphy" much less "forgery").

2. Institutional and Functional Frames. Institutions of literature, where books were produced, stored, and copied, were primarily the "House of Life" (Eg *pr ʿnḫ;* Weber *LÄ* 3:954–57) and to a lesser degree the school. Houses of Life were attached to the major temples. They served not only scriptorial, but also ritual purposes for the sake of "the preservation of life." Their primary concern seems to have been the tradition of ritual and magicomedical knowledge, but the literary activities extended into the fields of education, wisdom, and belles-lettres on the one hand, and astronomy, cosmography, and "sacerdotal sciences" on the other. In the schools the main focus was on educational ("teachings") and administrative knowledge (model letters). Our main sources here are the ostraca from Deir el Medinah and papyri from the Memphite area. Officials typically assigned to the House of Life were the priests of Sakhmet—physician-scholars of broad erudition and magical competence (von Känel 1984), who appear in the Bible (e.g., Gen 41:8; Exod 7:11; Dan 1:20) as *ḥartummîm* (Eg *hrjw-tp*) and constitute the typical entourage of pharaoh (Quaegebeur 1985; 1987). This institutional frame accounts for the seemingly strange combination of wisdom texts, narratives, rituals, hymns, and magicomedical texts which typically occurs in each of the (rare) relics of, or references to, libraries: e.g., the Ramesseum find (a chest with books, 13th Dyn.; Gardiner 1955b), the Chester Beatty find (a group of papyri from Deir el Medinah, 20th Dyn.; Gardiner 1935) and the papyri from Elephantine (temple of Khnum, ptolemaic period) and Tebtunis (Roman period; Tait 1977; Reymond 1977), and the catalogues of temple libraries at el-Tod and Edfu, as well as the canon of 42 books described by Clement of Alexandria (Fowden 1986: 58–59).

There are four major functional frames, or "macro-genres," to be distinguished in Egyptian literature: temple, tomb, palace, and administration. Within both temple and tomb literature a distinction should be made between "recitation" and "knowledge" literature. The latter term refers to codifications of knowledge necessary for the priest to perform a ritual or for the deceased to resist the dangers and pass the trials of the netherworld. Under the notion of "palace," we subsume the body of official royal inscriptions, most of which do not occur in palaces but in (relatively) public spaces like temple outskirts, courtyards, rock inscriptions, etc. Biographical inscriptions of nonroyal persons seem to address the same kind of public. They occur mostly on tomb walls and on temple statues. These genres are by necessity linked to the inscriptional or monumental form and therefore can be grouped together as "monumental literature." Bureaucracy seems to have been the most productive realm of all. The annual output of one minor temple office in the Old Kingdom (hereafter: OK) could amount to 120 m of papyrus. Bureaus of similar productivity were attached to palaces, various offices, granaries, workshops, and courts of justice. Quotidian administrative records should not be regarded as "literary," even in the broadest sense of the term, insofar as they do not belong to the Egyptian tradition by which is meant the body of texts intended for reuse or repeated reference.

3. "Poeticity": Formal Devices and Metrics. The basic formal principle in Egyptian literary compositions is semantic recurrence (*LÄ* 4:900–10), combining both continuous units and discontinuous units. The unit or verse corresponds to clauses of normal language, without any specifically poetical accentuation rules. Verse accent is identical with clause accent with the sole restriction that a "verse" may not contain fewer than two and more than three pitches or cola (Fecht *LÄ* 4:1127–54). A carefully written literary manuscript may indicate verse stops by placing red dots above the line. Such verse points may occur in virtually every genre of Egyptian literature. Higher units of text organization, such as verse groups, stanzas, paragraphs, songs, or chapters, are also semantically defined. They may be graphically indicated by rubrics or other signs (Assmann 1983d). "Poeticity" is scalar; poetry differs from prose not in kind but in degree. A measure of poeticity is the recurrence of elements. The number of recurrent elements can be increased or decreased. Especially popular were songs with several short stanzas, each stanza beginning with the same line as a refrain. But the intensified use of imagery may also have been esteemed as a sign of poetical value.

4. Inscriptions and Manuscripts. In ancient Egypt there were two writing systems in use: *hieratic,* the cursive script, and *hieroglyphic,* the monumental script. In spite of the fact that *hieratic* developed out of

hieroglyphic, they had to be learned separately. The Egyptian scribe was taught the hieratic script. Only artists went further and studied the hieroglyphs as well. A scribe was supposed to possess a reading competence in hieroglyphs; writing them required special training. Significant for hieroglyphic script is its iconicity: hieroglyphs retained (in opposition to almost all other scripts which started as picture writing) their pictorial character and thus belong as much to the sphere of monumental art as to that of writing (Assmann 1988a).

Hieroglyphs are the monumental script. Virtually all Egyptian monuments bear inscriptions. The extraordinary cultural significance of monumentality seems the most prominent feature of ancient Egyptian civilization (Assmann 1988b). The inscribed monument (tomb, statue, stela, offering table) bestows a "body" and a "voice" to the deceased. The hieroglyphic text is thereby always linked to a place and a person; it is "situationally bound" (in opposition to the "situationally neutral" character prerequisite of belles-lettres). All inscriptional literature is "eponymous" (produced in the name of a historical person) and "autothematizing": temple inscriptions refer to a king, tomb inscriptions to a deceased person.

Hieratic is the script for "manuscripts" on portable materials like papyrus, ostraca (limestone and pottery), and (more rarely) leather and wood. The demarcation line between hieroglyphic/monumental and hieratic/mobile communication is rather strict. There are virtually no texts pertaining to belles-lettres in hieroglyphic/monumental form, whereas in some exceptional cases, inscriptions pertaining to official literature were copied in papyrus (the Kadesh poem, the Kamose stela, the Berlin leather roll among others). In the genres of temple and tomb literature, however, the distinction between the monumental and the cursive is blurred, because the decoration of temple and tomb walls was carried out from manuscript prototypes.

There are three functions of recording to be distinguished: eternalization, publication, and storage. *Eternalization* is the function which is linked to the inscriptional form. It keeps a text present at a certain place, regardless of its readability for human eyes. Eternalization belongs to the "monumental sphere" as a sphere of eternal duration (in Egyptian: *ḏt*/djet/ "endurance" "unchangeability") into which one may enter by erecting a monument. *Publication* is the function that addresses human readers (letters address specific readers), thus implying different kinds of readerships. For publication, either inscriptions or manuscripts may be used. The inscription on a royal stele, for example, addresses visitors to a given place; the manuscript can reach distant readers. *Storage* is a function serving to keep texts and data permanently accessible. It is always linked to the manuscript form.

5. Forms of Transmission. Two kinds of transmission have to be distinguished: *productive* and *reproductive* transmission. Reproductive transmission affects *texts*, which are copied, epitomized, and in exceptional cases even commented on, whereas productive transmission is based on types or genre-specific deep structures (*ÄHG*, 1–94). Type-oriented text production achieves functional identity through being related to a specific situation and by virtue of a corresponding situational competence. Text-oriented reproduction achieves *formal* identity by the techniques of copying. A copyist may acquire the source text by reading it, by dictation, or from memory. Each method can give rise to different kinds of possible mistakes.

The Egyptian scribal culture does not seem to have developed more than very rudimentary methods of philological emendation (text control) and exegesis (sense control). Besides *textual* and *contextual* relationships between texts, there is also the possibility of *intertextual* relationship, which is based on texts (and not types), but in a productive way, producing new texts with (explicit or implicit) recourse to older ones. Intertextuality is most prominent in Wisdom Literature, where references to classical texts (such as the *Teachings of Ptahhotep*) occur even in late Egyptian instructions (like *Amenemope*). The notion of "classical" texts seems also to be restricted to Wisdom Literature. The two different lists of "classical authors" preserved from the Ramesside Periods contain names connected with wisdom texts (Assmann 1985).

A special problem of transmission is addressed by the terms "sacred literature" and "canonization." Sacred texts are texts which not only deal with "sacred" matters but also possess in themselves a kind of sacredness. Sacred texts may thus be regarded as "verbal sanctuaries" of restricted access requiring

special qualifications (purity, initiation) in their reciter. Most of the temple and tomb literature belongs to this category. Funerary literature was almost exclusively confined to the inaccessible parts of the tomb. This seems to be the only domain where, beginning perhaps in the Persian period (27th Dyn.), a process of *canonization* developed. At about this time, the body of mortuary spells was compiled within a "book," fixed with respect to outer limits and interior arrangement.

An attempt at canonization in a somewhat different sense may, however, be observed in the transmission of literary texts during the Ramesside period. Only a limited selection of "Great Texts" seem to have been treated in the scribal curriculum and therefore survive in dozens of (mostly very corrupt) copies.

B. Genres

1. Belles-Lettres. a. Wisdom Literature. Wisdom Literature is the earliest and the most important genre of Egyptian belles-lettres and seems to have been considered by the Egyptians themselves as the very quintessence and apex of their literature. (The "encomium of ancient writers" in pChester Beatty IV endeavors to show that a "book" is a far more glorious monument than a pyramid; the examples mentioned are sages appearing in wisdom texts.) There is no Egyptian term corresponding to Heb *ḥokmâ* ("wisdom"). Egyptian wisdom texts employ the word *maʿat* (hereafter Maat), signifying "truth, justice, righteousness, order." Wisdom Literature consists of two major genres: "teachings" (Eg *sb3jjt*) and lamentations (also comprising dialogues and prophecies). The teachings deal with Maat and the individual, the lamentations with society as a whole vis-à-vis the social and political norms of Maat.

Teachings date back to a time perhaps as early as the OK. Following the Egyptian tradition, the genre of teachings begins with Imhotep, the famous vizier of King Djoser of the 3d Dyn.; the "literary dates" of many preserved teachings point to the OK: *Instruction for Kagemni* (Snofru). *Instruction of Djedefhor* (4th Dyn.), *Instruction of Ptahhotep* (Isesi of the 5th Dyn.). All these dates may be literary fictions, but the possibility of an OK date for at least a part of these texts cannot be entirely excluded. Whereas teachings continue well into Hellenism (Lichtheim 1983; Sanders 1983), lamentations seem to be confined to the MK and to the Late Period. Late examples are: the Moscow Literary letter (Caminos 1977), demotic texts like the *Oracle of the Lamb* and the *Demotic Chronicle*, and the Greek *Oracle of the Potter*. Many of the (presumably) MK texts are, however, preserved on New Kingdom (hereafter: NK) mss (Neferti, Khakheperreseneb [*AEL* 1: 145–49], Admonitions [*AEL* 1: 149–63]).

b. Narratives. (1) Didactic. There are two narratives of the MK which show a very high level of reflection and have therefore been labeled "didactic" pieces (Otto 1966). These are the *Story of Sinuhe* and the *Tale of the Shipwrecked Sailor*. Both are situated outside Egypt. Sinuhe flees from Egypt to Palestine, where he achieves wealth, family, and social recognition, but returns to Egypt in order to be buried with royal favors (Loprieno 1988). The story reflects upon problems of intentionality (attributing the flgiht to the "plan of some god"), of the relationship between human and divine, commoner and king, individual and the social environment and the individual with the interior self (Eg *jb* "heart"). The story illustrates the basic conviction, typical of ancient Egypt, that there is an indissoluble bond between pharaonic dominion and life beyond death. The shipwrecked sailor (*AEL* 1:211–15) travels east and become stranded, after a shipwreck, as sole survivor on the shore of an exotic island, where he encounters a serpent god. The question which the serpent asks repeatedly and with increasing emphasis, "Who has brought thee to this island?," requires the answer "god," and thus points in the same direction as *Sinuhe:* divine intervention in human life. A special feature of this text is its concentric structure. Not only is there a *frame*-story motivating the main tale and providing it with a setting, but also an interior tale told by the serpent. Both tales have a consolatory and admonatory function. The serpent admonishes the sailor to survive solitude by self-control *(dōr jb),* the sailor admonishes an expedition leader to overcome fear by self-control.

From later tradition, only the report of Wenamun (Helck *LÄ* 6: 1215–17; Loprieno 1988: 64; *AEL* 2: 224–30) may be compared with these MK stories. It is most closely related to Sinuhe in its imitation of a nonliterary form: Sinuhe is cast in the shape of a tomb biography, Wenamun in the shape of an official report. Wenamun addresses the same topic: an Egyptian outside Egypt. Wenamun travels to Byblos on an

official mission to fetch lumber for the bark of Amun. His lord is none other than Amun himself, for the story takes place in the time of the Theban theocracy (21st Dyn.). The pretention and impotence of this regime are most amusingly ridiculed by the diverse failures of the hero to acquit himself of his commission.

The *Doomed Prince* (pBM 10060 = Harris 500 vso 4.1–8.15; Gardiner 1932: 1–9; *AEL* 2: 200–3) is another NK story dealing with the Egyptian abroad, but in a completely different, fairy tale manner. A prince is doomed to die by one of three destinies: the crocodile, the serpent, or the dog. He emigrates to Syria, marries a princess, and escapes his first destiny by her vigilance (the remainder is lost; pBM 10060 = Harris 500 vso 4.1–8.15). The allegorical story of the *Blinding of Truth* (pBM 10682; Gardiner 1932: 30–36) may be classified as "didactic" because of its strong moralizing tone. "Truth," a man, is falsely accused of theft by his brother "Lie," and blinded. But "Truth" begets a son with "Desire" (the name is only conjectural), who avenges his blind father before the tribunal. The story stresses the two fundamentals of Egyptian ethics: the superiority of truth over lies, and the son as avenger of his father (in which respect the story is an allegorical variant of the myth of Osiris).

(2) Mythological Tales. Contrary to what might be expected in Egypt, mythological tales belong not to religious but to "entertainment" literature, the only exception being the insertion of mythological episodes in magical spells, where they assume the function of mythical precedents. There are no nonmagical examples preserved antedating the NK. The most important text is *The Contendings of Horus and Seth* (*AEL* 2: 214–23) preserved on pChester Beatty I. In its present form, this text is an attempt at collecting various tales and episodes concerning the struggle of Horus and Seth for the succession to the throne of Osiris within the frame of an endless litigation. Six episodes appear to have originally been autonomous tales: (1) the offending and reconciling of Re (who is offended by Baba's injunction: "Your shrine is empty," and reconciled by Hathor (who shows him her pudenda); (2) the ruse of Isis who, in the guise of a beautiful girl, brings Seth to proclaim his own judgment (an etiology of the claw-footed god Nemti); (3) Horus and Seth's combat as hippopotami (Säve-Söderbergh 1953); (4) the blinding and healing of Horus; and (5) the "homosexual episode" (this portion appears already in a late MK papyrus from Kahun, probably in a medico-magical context [pKahun VI,12 recto; cf. Posener 1951b: 36.]).

Other tales are fragmentarily preserved: an early version of the *Myth of the Solar Eye* (pMoscow 167, ed. Caminos 1956: 40–50) and a story concerning the Syrian goddess Astarte (pAmherst 9; Gardiner 1932: 76–81; see also Helck 1983). The *Story of Isis and Re* (pTurin Pleyte and Rossi pl. 131.10–135.14 and pChester Beatty XI rto. [Gardiner 1935, pl 64]; *ANET*, 12–14) figures in a magical text. Common to these tales is a rather burlesque rendering of the divine characters and actions, a feature also characteristic of Mesopotamian mythology. Very different in its exterior form of presentation is the *Myth of the Heavenly Cow* (Hornung 1982), preserved as an element of wall decoration in royal tombs, perhaps because of its proximity to cosmography. This myth gives an account of the "Fall," or rather of the "Parting," of the world, because it is the separation of heaven and earth, of gods and men, which, according to Egyptian concepts, marks the decline of the "Golden Age." The *Tale of the Two Brothers* (Gardiner 1932: 9–30; *AEL* 2: 203–11; Blumenthal 1973: 1–17) is not a myth but rather a folk tale whose protagonists are gods. (The mythological links point to the 17th–18th nome of Upper Egypt, where Anubis and Bata appear together in cult legends.) The story resembles the biblical story of Joseph and Potiphar's wife. Bata, a herdsman, is asked by Anubis, his elder brother and a farmer, to help him with the sowing (in Egypt the seed was stamped into the ground by cattle which were driven over the newly sown fields). Anubis sends Bata home to bring more seed, where the wife of Anubis tries in vain to seduce him. Later, she calumniates him before her husband. In its Egyptian version, the myth has an evident original meaning: the act of sowing puts the herdsman in a suspicious position, because he enters and even "inseminates" the farmer's fields with his cattle. The tale, by its explicit exculpation of the alleged adulterer, helps to disambiguate the situation. On tomb reliefs of the OK there is even a song connected with the scene of sowing which alludes to the myth of Bata, the innocent shepherd (Assmann 1977a; 20–21).

(3) Tales of Kings. Apart from official inscriptions, narratives in which kings appear as protagonists are surprisingly rare: the *Story of Neferkare and the General Sisene* (pChassinat I = Louvre E 25351; Posener 1957) and the *Story of King Djedkare (?) and General Merire* (pVandier = pLille; Posener 1985) are tales situated in the distant past and critical of the pharaoh and his moral stature. In the first tale, Pepi II indulges in nocturnal escapades with homosexual implications and neglects law and order; in the second tale, Pharaoh breaks his promise to protect the widow and orphan of Merire, who has consented to die in his stead. With these tales, we are close to the anecdotes of Egyptian kings which appear in Herodotus' history and reflect the oral tradition of the time. But in the *Tale of the Two Brothers,* the pharaoh also appears as an unprincipled dallier with his wives, courtiers, and appetites (Posener [1960] contrasts the negative image of the king in literary narratives with the elevated representation of divine kingship in official records).

Closer to official literature may have been the fragmentary *Story of Apophis and Seqenenre* (Gardiner 1932: 85–89; Goedicke 1986; *LAE,* 77–80). But here also, one is surprised to find Seqenenre, who to judge by the state of his mummy must have met a heroic death in a battle against the Hyksos, unable to find an adequate answer to the insulting challenge of the Hyksos king, who has complained about the noise of the hippopotami. The narrative contrasts sharply with a contemporary and official document, the stelae of Kamose, which glorifies the deeds of the victorious king.

Related to royal narratives is *The Story of King Kheops and the Magicians* (pWestcar [pBerlin 3033]; Blackman 1988; *LÄ* 4: 743–45; *AEL* 1: 216–22; *LAE,* 16–30). Various tales about miracles worked by several magicians are followed by an account of the divine origin of the 5th Dyn.: the sun god begets triplets with Rud-djedet, the mortal wife of a provincial priest, and the triplets eventually ascend the throne of Egypt (Brunner-Traut 1988: 31–59). Kheops (Khufu) threatens the newborn future kings with persecution (like Herod in Matt 2), showing the typical unreliability of the "roi des contes" (Posener 1956: 10–13).

(4) Satire. Many of the ostraca and some papyri which contain series of drawings seem to give illustrations of fables (Brunner-Traut 1968) and fabliaux (Omlin 1973) existing only in oral tradition. Some of the fables recur in demotic and Greek texts more than a thousand years later (parallels have been pointed out by E. Brunner-Traut in various articles). Especially conspicuous is the theme of the "world turned upside down," e.g., a mouse pharaoh conquering a town defended by cats (Brunner-Traut 1968: 4 with fig.1) or a hippopotamus collecting figs in a tree (ibid. p.5 with fig. 8). These pictures give an idea of what might have been Egypt's place in the "history of laughter" (see also HUMOR AND WIT [ANCIENT EGYPT]).

(5) The World of the School. Although the school is where most of the belles-lettres were transmitted and perhaps also produced, there are some texts or books which seem connected with this institution in a more particular way. The book *Kmjt* ("the sum"), which dates from the MK and which Posener was able to reconstruct out of hundreds of ostraca (Posener 1951a), has been convincingly identified as a schoolbook containing formulas of salutation, narrative passages, and maxims (Barta 1978). In the NK, the "satirical letter" (pAnastasi I; *ANET,* 475–79) served similar purposes, presenting a great variety of salutation formulas and information about the geography of Palestine and related subjects (Gardiner 1911; Fischer-Elfert 1986). The most characteristic feature of scholastic literature is found in the "miscellanies," papyri containing model letters and literary exercises of all sorts. Miscellanies include eulogies; hymns and prayers; admonitions to the pupil not to become a soldier, or not to get drunk or indulge in similar debaucheries; satires of the trades (after the model of the *Instruction of Kheti,* perhaps the most famous classic of Egyptian literature [see Brunner 1944; Helck 1970]); and lists of commodities (Gardiner 1937; Caminos 1957). Real letters, a fair number of which have been found, exhibit the hallmarks of this scribal training (Bakir 1970), but they cannot be considered "literature" even in the broadest sense of the term. (Letters from the NK were published by J. Černý [1939] and translated by Wente [1967]. Letters to the dead were published by Gardiner and Sethe [1925].)

c. Poetry. (1) Religious Poetry. Hymns and prayers appear in both the genre of belles-lettres and the functional genre of temple literature. In spite of some common aspects, the two categories are distinct.

The *Hymn to the Nile* (latest edition: van der Plas 1986), which appears in NK mss as one of the "classics" of MK poetry to be studied in school, is clearly a literary text. The hymn is didactic, depicting a great variety of phenomena from both nature and culture as manifestations and gifts of the Nile. The *Teaching for Merikare* (*AEL* 1: 97–109) closes with a beautiful hymn to the creator god. At the end of a passage, the central theme of which is recompense and retribution, the author shows that god has always given, thus placing all human action in the role of response. The famous Cairo hymn to Amun-Re (*ÄHG*No. 87; *ANET*, 365–67) is a collection of hymns evidently intended more for literary than for liturgical purposes (the number of surviving ostraca indicates that the text was studied in school). Both texts praise "God" as the one and only creator and maintainer of the world, the other gods being merely part of the world, along with men and animals, heaven and earth, trees and plants. The hymns from Tell el-Amarna (*ÄHG*Nos. 91–95), which may well have been composed by King Akhenaten himself, continue in some way this tradition and may, in spite of their liturgical purpose, be placed among religious poetry because of their unusual perfection. The Leiden Papyrus J 350 contains a cycle of hymns to Amun, arranged by numerical puns as in some cycles of love songs. Some of these hymns, e.g., the hymn "200" (*ANET*, 368), mark the summit of Egyptian theological reflection (Assmann 1984: 274–77). These texts achieve a new concept of the oneness of "God," in opposition to the virtually infinite multitude of "gods." Instead of primacy—one divinity ruling others—there emerges the idea of abscondity—God being the hidden unity symbolized by the manifest multitude of divinities—to dominate theological discourse.

An important part of scholarly "miscellanies" is alloted to prayers (*ÄHG*Nos. 174–95) and among the exercises on ostraca are some of the jewels of Egyptian religious poetry (e.g., *AEL* 2: 110–14). These poems share the spirit of personal piety which dominates late Egyptian Wisdom Literature, exemplified in the *Wisdom of Amenemope* (*AEL* 2: 146–63; Assmann 1979).

(2) Banquet Poetry. Banquet or "entertainment" songs are linked with the Egyptian concepts (and customs) of "making holiday" *(jrj hrw nfr)*, "following the heart" *(sms jb)* and "diversion" (*sḫmḫ* jb, lit. "cause the heart to forget" [Fox 1982; Assmann 1989a]). Two genres in particular seem to be connected with the banquet scene: love songs (see the article on EGYPTIAN LOVE SONGS below) and harper's songs.

Some 25 harper's songs have so far been identified (Assmann 1977b). With the exception of one song on papyrus—said to have been copied from the tomb of a king "Antef" (*AEL* 1: 194–97; *ANET*, 467)—all are preserved on tomb walls, accompanying the figure of a harper or lutist. They can be classified into two groups: (1) the "make merry" songs, which combine the motifs of *memento mori* and *carpe diem*, and (2) songs which assume the form and content of funerary liturgies. Only group (1) has preserved—within the context of tomb decoration—the characteristics of its original situation: the festive banquet. The *memento mori* motif—in connection with an exhortation to enjoy life—occurs from the epic of Gilgamesh and the biblical book of Qohelet to late Egyptian festival customs as described by Herodotus (2.78) and in the Roman writers Horace and Petronius.

2. Functional Literature. a. Temple literature. (1) Recitation literature. The most archaic ritual papyrus, the "Dramatic Ramesseum Papyrus," discovered in a wooden chest along with literary works (*Sinuhe, Eloquent Peasant*, and wisdom texts) and medico-magical texts, contains a ritual for the accession or jubilee of Sesostris I (Sethe 1929; Barta 1976). The papyrus is horizontally divided into a broader zone containing the text (139 lines referring to 47 scenes), beneath which runs a narrow strip with 31 pictures. The text of each scene begins with (1) the title of the scene and (2) its mythical interpretation, followed by (3) a direct speech, which is introduced by an identification of the (always divine) speaker and addressee, and (4) some notes concerning roles, objects, and places. Nos. 2 and 3 typically refer to the divine world, whereas No. 1 and the pictures refer to the cultic sphere, giving the names of priests, objects, and ritual actions. Two elements are very typical of the Egyptian cult: first, cultic communication is divine communication, man addressing the gods in the role of a god (Horus or Thoth) and uttering words which have the magical force of divine speech; second, cultic action is interpreted by the accompanying recitation as a mythical event taking place in the divine world ("sacramental interpretation"). But the myths are never coherently represented in cultic action, only alluded to in a very

discontinuous manner. The coherence of the ritual is on the cultic level, not on the level of mythical interpretation (Schott 1945; Otto 1958).

A similar "dramatic text" is preserved on the Shabaka stone in the British Museum and forms the first part of the "Memphite Theology" (*AEL* 1:51–57), but this text refers exclusively to the mythical sphere. It gives an account of the development of the Egyptian kingdom (1st stage: two kingdoms under Horus and Seth; 2d stage: one kingdom under Horus at Memphis; see Junker 1941). Here, coherence is established on the mythical, not the ritual, level. We are dealing here with ritual and even dramatic representation of mythical events; this type of cultic performance seems to be exclusively connected with some of the major festivals, like that of Osiris at Abydos (see Schäfer 1904) or the *Triumph of Horus* as it was performed in Ptolemaic times in Edfu (Fairman 1974) and Philae (Goedicke 1982). The festival of "the birth of the god" *(mswt nṯr)* was performed in the *mammisi* ("birth house," attached to the temples) in the form of a sacred drama consisting of a sequence of scenes and long speeches of gods (Daumas 1958; Sauneron 1962: 185–244). (For the general question of theater in Egypt, see Drioton 1942.)

Several papyri from the early Ptolemaic to the Roman period contain liturgies especially connected with rites and ceremonies of the cult of Osiris in Abydos. Most important among these texts, in terms of lyrical composition, is the *Lamentations of Isis and Nephthys* which exist in several versions (pBerlin 3008 [Faulkner 1935–38; *AEL* 3: 116–21; pBremner Rhind [Faulkner 1933]; pNew York Metropolitan Museum of Art 35.9.21, 38–54). Another important genre of recitation connected with the cult of Osiris is the so-called *glorification (sōḫw)*, several liturgical collections of which are preserved (Goyon 1974; Haikal 1972; Möller 1900; Smith 1987). The cultic setting of both lamentations and glorifications is the *Stundenwachen* (hourly vigil), an Osirian rite performed in the temples of Edfu, Dendera, Philae, and elsewhere (Junker 1910; Soukiassian 1982).

The purpose of the daily temple ritual is to tend to the cult image with fumigations, libations, unctions, and adorations (pBerlin 3055 [Moret 1902]), and to feed the god (this aspect of the ritual has been preserved in the ritual for Amenophis I [pChester Beatty IX; Gardiner 1935, pls. 50–58 and pCairo CG 58030+pTurin CG 54041]). In the Ramesside period, the scene of the offering of Maat, a symbol of truth, justice, and order to be established on earth by the king, gains a prominent place in the ritual. This scene by itself expresses the whole ideology of sacrifice, which, in Egypt, is based not on the idea of a communal meal, where the community of offerers or sacrificers share in the consuming of the victim (as in the Mesopotamian, Israelite, and Greek conception), but on the idea of exchange (in the sense of Mauss 1966), where humans render to the divinities what they have given, in order that they continue to give. Maat is what emanates from god in the form of vivifying and organizing energies, and it is rendered to one "who lives on Maat" as justice and ritual correctness. This idea is expressed in a long recitation, the "Litany of Maat," which accompanies the offering (*ÄHG*No. 125). The Litany originated in the cult of the sun god, but extended to other cults during the NK, especially that of Amun-Re, it is attested in the Ptolemaic period in numerous copies in all the major temples. Another prominent place in the daily as well as the festival ritual was allotted to the recitation of hymns, of which several hundred exist mostly on private (i.e., funerary) monuments. The hymns to the sun god and to Amun-Re show an especially great variety of form and theological evolution during the NK (Oswalt 1968; Assmann 1969; 1983a; 1983b; Daumas and Barucq 1980). The most explicit version of the myth of Osiris is to be found in a hymn to Osiris on a stela of the 18th Dyn. (*AEL* 2: 81–85). Hymns to the king exist on papyri from the MK (cycle of hymns on Sesostris III; pKahun [*ÄHG*Nos. 228–31]) and of the Ramesside period (Condon 1978). The "Loyalist Instruction" (*LAE*, 198–200), a wisdom text of the MK, begins with an elaborate eulogy of the king (Posener 1976).

A special place must be reserved to the (mostly penitential) hymns and prayers subsumed under the rubric *personal piety*. Some forerunners date back to the 18th Dynasty (Posener 1975), but as a literary phenomenon the movement belongs to the age of the Ramessides (13th–11th centuries). Personal calamity, sickness especially, is now interpreted as a case of divine intervention (Borghouts 1982; Griffiths 1988) in punishment for some crime which has to be publicly confessed in order to restore the disturbed relationship between the individual and the offended deity. Many of the texts show remarkable

literary qualities in their poetic form and religious content, thus testifying to an oral tradition which may have originated during the Amarna age (14th century B.C.) as a period of persecution, during which the ancient cults were prohibited and adversity was explained as divine wrath and abandonment (Assmann 1984: 258–67).

(2) Theological and Mythological Treatises. Scattered among various genres of temple and even funerary literature (like spells, hymns, and architectural inscriptions), some texts display elements of a coherent theological system. Among the earliest examples are the "Theology of Shu" in Coffin Texts (CT) spells 75–83 (de Buck 1947; Assmann 1984; 209–15; Allen 1988; 13–27), and the "Theodicy" in CT spell 1130 (Assmann 1984: 204–8). CT spell 80 recounts how Atum floated unconscious in the primeval waters and, in the act of becoming conscious, "becomes three" (CT II 39e). The ancient names of Shu and Tefnut, the twin children of Atum with their cosmic significations "air" and "humidity" (?), are translated in the new theologico-philosophical system as "life" and "truth" (Maat).

Thus, "life" and "truth," together with Atum (whose name expresses both the "totality" and "nonexistence" of being), constitute a primordial trinity foreshadowing similar conceptions in neo-Platonist cosmology. The theodicy of spell 1130 is a monologue in which the creator takes credit for four good deeds which he performed at the time of creation. In listing the four deeds, the god makes two assertions of prime importance: that he created all persons as equals; and that it was not he who taught humanity to do wrong; rather, people do wrong of their own volition (*AEL* 1: 131–33; *ANET*, 7–8).

It has been argued that the theodicy of CT spell 1130 may have been a response to that part of the *Admonitions of Ipu-Wer* (*AEL* 1: 149–63), which Otto has called *The Reproach to God* (Otto 1950; Fecht 1972). The most famous of Egyptian theological treatises is preserved in the second part of the Shabaka inscription (commonly referred to as the "Memphite Theology": Breasted 1901; Sethe 1929: 1–80; Junker 1940; *ANET*, 4–6; *AEL* 1:51–57; Allen 1988: 42–47, 91–93), which recounts how Ptah created the world "through heart and tongue," i.e., by conception and proclamation, and how heart and tongue operate in nature. The text, which had formerly been dated to the OK, is now proved to be, at least in its final state, not earlier than the 13th century B.C. In the stress it lays on conception and speech as means of creation, it comes closest to the biblical account of creation (Koch 1965). Theban theology produced a similar treatise, which centers around the concept of "life": Amun vivifying the cosmos by means of his 10 *Ba*s: *Ba*s 1–5 are the vivifying elements: the sun, the moon, the air (Shu), the water (Nun), the fire (Tefnut); *Ba*s 6–10 are the vivified beings: the royal Ka (humanity), the lion-and-bull (i.e., quadrupeds), the hawk (i.e., birds), the crocodile (i.e., fishes and reptiles) and the serpent (i.e., the dead and all chthonic animals) (*ÄHG* No. 128; Goyon, Parker and Leclant 1979: 69–79).

Many of the great hymns from the Ramesside period onward shows the same systematizing approach and may well be termed treatises (note *ÄHG* Nos. 127–31, 143–45; *AEL* 3: 109–15; Sauneron 1962). Architectural inscriptions of Ptolemaic temples often include very elaborate accounts of the mythical origin of the temple. Obviously, these inscriptions represent a larger body of mytho-theological literature which is otherwise lost.

b. Funerary (Mortuary) Literature. (1) Funerary and Mortuary Service. The funerary ritual exists only in the form of a sequence of pictures (Settgast 1963); the accompanying recitations are lost, except for a great variety of dirges, some of which are very expressive in their treatment of affliction and bereavement (Lüddeckens 1943). Much better preserved is the ritual of "Opening the Mouth," for which we have not only the pictures but also the spells (Otto 1960; Goyon 1972: 85–182). The ritual was originally intended for the "vivification" of statues and was later extended to mummies, objects, and even temples. It contains a very archaic section (scenes 8–21) where the "shape" *(jrw)* of the deceased is captured by the sleeping son in an oneiric vision. (P. Munro [1984] interprets this part as the ancient ritual of regicide). The embalming, which took place in a separate building *(wꜥbt)* during the 70 days between death and burial (see also EMBALMING), was accompanied by the recitation of a collection of spells known as the "Ritual of Embalment" (Sauneron 1952; Goyon 1972: 17–84) as well as of the ceremonies of *Stundenwachen* (hourly vigil) comprising lamentations and glorifications (*LÄ* 6: 104–6). The offering cult in the tomb chapel was also accompanied by recitations, which appear as inscriptions on tomb walls

but are also found on papyrus (*LÄ* 6: 998–1006). Many hundreds of these "glorification spells" *(s3ḫw)* exist. They complement the corpus of funerary literature in a fortuitous way, because they belong to a "productive" rather than "reproductive" tradition and thus reflect the development of funerary beliefs far better than the magical spells of funerary literature.

(2) Funerary Literature. The textual equipment of the dead is called "funerary literature" (Sethe *Pyr*). In the OK, it is restricted to the tombs of kings and appears from the end of the 5th Dyn. (e.g., pyramid of Unas: see Piankoff and Jacquet-Gordon 1974) in the form of hieroglyphic inscriptions on the walls of the hidden chambers inside the pyramid. More than 2,200 spells are known; together these constitute the so-called "Pyramid Texts" (PT; Sethe *Pyr*; Faulkner 1969), the most ancient corpus of religious texts. After the breakdown of the OK, the institution of funerary literature was extended to nonroyal use (a process called "democratization," or better "demotization"). Many of the PT survived embedded among a great number of new spells, the "Coffin Texts" (CT: de Buck 1935–61; Faulkner 1973–78; Barguet 1986), which were inscribed on the panels of wooden coffins of the MK. In the NK, a selection of these spells reappears together with new spells on papyrus scrolls known as "Books of the Dead" (BD; Naville 1886; Budge 1898, 1910; Faulkner 1985; Hornung 1979). During the NK, and until the Late Period, there is great variation among the individual scrolls: no two of them coincide. Only in the Saite or Persian period does this fluctuation give way to a more strictly canonized form, where the number and sequence of "chapters" become standardized (Lepsius 1842; Allen 1960). In the Ptolemaic and Roman periods, new compositions appear which are more adequate to the changed funerary beliefs of the period: the two "books of breathing" (Goyon 1972, 183–317) and the "book of traversing eternity" (Stricker 1950–56). Related documents are the collections of "glorification spells" *(s3ḫw)* which occur on separate scrolls or annexed to Books of the Dead, both in Hieratic and Demotic (Smith 1987) script (Goyon 1974).

The spells of the PT are still close to cultic recitations performed in the process of embalming, the funerary procession, and the mortuary cult. Probably all of them derive from "festival scrolls" *(h3bt)*, though only the spells connected with the ritual of food offering (PT 26–203) can be attributed with any certainty to a cultic context. Many of these sequences of spells remain in liturgical use until the LP, when they reappear, copied not from the pyramids themselves but from other liturgical manuscripts in the temple library (Möller 1900). The principle of "sacramental interpretation" is very prominent in almost all the spells. For example, in PT 373 the presentation of food is connected with the sacramental ideas of revivification (bodily reintegration) and ascension to heaven.

Spell 273–74, the famous "cannibal hymn," gives a sacramental interpretation of some yet unidentified rite, wherein the king is said to "live on his fathers and to feed on his mothers" (*AEL* 1: 36–38). With the CT, the situation is different. Here one finds liturgical sequences of spells, some of which can be traced back to the PT and downward to liturgical papyri of the Ptolemaic period. Most of the spells serve some magical purpose for the deceased in the hereafter: "transformation spells" to transform him into every shape he desires, "food spells" to provide him with food, every kind of apotropaic spell to ward off dangerous demons, the "Book of the Two Ways" to guide him through the difficult topography of the netherworld (Lesko 1972), as well as the maps of the "field of Hetep," the Egyptian paradise (Lesko 1971–72; Mueller 1972). Titles and postscripts, carefully written in red, give indications as to function, accompanying pictures, objects, actions, and success ("proved efficient, a million times"). This "bookish" layout of the texts contrasts most strikingly with the monumental austerity of the PT. The PT "eternalize" the oral recitations of the funerary and mortuary cult, the CT equip the deceased with all kinds of magical material and knowledge concerning the hereafter. The BD continues this development from funerary liturgy to magical book. The great innovation of the 18th Dyn. are multicolored vignettes, which come into standard use after the Amarna period (Munro 1988). With the *Book of the Dead*, the Egyptian idea of a post-mortem judgment has achieved its classical form (chaps. 30 and 125; see Yoyotte 1961; Brandon 1967; for representations, Seeber 1976, and Grieshammer 1970 for earlier stages). Another remarkable text is chap. 17 (= CT spell 335), which seems to be one of the very few Egyptian texts that received a "philological" treatment in the form of a commentary with numerous glosses written in red ink (Rössler-Köhler 1976).

(3) Books of the Netherworld. Whereas the PT are exclusively royal, the CT and BD are nonroyal. Only with the NK does a new body of texts appear which seem to function as exclusively royal funerary literature. These are the "books" which decorate the walls of the royal tombs. For the most ancient compositions, the "Amduat" and the "Litany of Re," an origin in the solar cult is very probable. But some of the later compositions which do not appear in tombs until after the Amarna period may have been made expressly for the royal hereafter. All of them, however, are centered around the theme of the solar circuit in its nocturnal phase (when the sun god Re passed through the underworld) and may be better understood as codifications of priestly knowledge in connection with the solar cult.

c. Magical Incantations. Magic, following the *Teaching for Merikare* (*AEL* 1:106), was given to humanity as a weapon "to shield off the blow of what might happen." Magic is always directed "against" something: snakes, scorpions, evil demons that might threaten a newborn child, and especially diseases. There is a very strong link between medicine and magic, and most of the preserved texts are medico-magical. But magic can also be directed against political enemies (Sethe 1926) or cosmic foes (pBremner Rhind 22.1–32.12 [Faulkner 1933]) and is therefore not restricted to the private sphere (as opposed to the temple). Catalogs of sacred books mention compositions entitled "Manifestations of Re" *(b3w R'w),* which may well have been magical books of execration and protection. The literary importance of magical literature lies in the fact that it preserves many accounts of mythical episodes in a vivid and often even poetically structured narration (among the most important are "Re and Isis" [*ANET*, 12–14] and the texts on the Metternich stela [Klasens 1952]. For a very useful collection of translated spells, see Borghouts 1978).

d. Codifications of Knowledge. (1) Onomastica. Egypt cannot compete with Mesopotamia in its use of lists and tables for the systematization of knowledge. But this might be due to the scarcity of secular material. The Abusir Papyri from the archives of the funerary temple of Neferirkare Kakai (ca. 2470 B.C.) make ample and very careful use of tabular forms (Posener-Kriéger and de Cenival 1968; Posener-Kriéger 1976). Many of the spells of the CT and some of the chapters in the BD reflect these bureaucratic techniques in their arrangement. They are arranged in the same systematizing manner, listing the parts of the ferry boat (CT 398) or the fowling net (CT 474; see Bidoli 1976) and their mythical counterparts, the members of the body and their divine equivalents (BD 42) and the 42 assessors of the divine tribunal, their places of origin, and the specific sins which the deceased declares not to have committed (BD 125). Especially important is the "list of offerings" which developed during the first five dynasties. The first lists were documents of real funerary possessions and equipment, but soon such lists became standardized and developed into tabular representations of a very complex ritual of funerary offerings (Barta 1963).

The Egyptian Onomastica, catalogs of things arranged by their kind, contain "everything that Ptah has created, what Thoth has written down, heaven with its affairs, earth and what is in it, what the mountains belch forth, what is watered by the flood, all things upon which Re has shone, all that is grown on the back of earth" (Gardiner 1947: Onomasticon of Amenemope). The earliest example of this genre dates back to the MK, but the best-known composition, the onomasticon of Amenope, is from the 21st Dyn. (11th century B.C.). These Egyptian "catalogs of the universe" have been compared with the closing chapters of the book of Job (von Rad 1960; Keel 1978: 24). There are strong connections between the onomastica and the "satirical letter" (pAnastasi I), which may be regarded as just a variant form of presentation for a similar albeit more specialized material. The latest onomasticon, dating from the 1st and 2d centuries A.D., was discovered by J. Osing on a papyrus from Tebtunis. Here, we are dealing with a real vocabulary, because the material is arranged in linguistic categories.

The famous king-lists date from the NK and exist in monumental form at Karnak (Redford 1986: 29–34) and Abydos (ibid: 18–20), as well as on a papyrus (the "Royal Canon of Turin"). The papyrus list is much more complete than the monumental versions and represents the kind of sources on which Manetho's *Aegyptiaca* was based.

King-lists and annals have to be carefully distinguished from historiography; they contain no narration and thence do not attribute any specific meaning or significance to the past, but are simply tools of time reckoning and chronological orientation (Redford 1986). Similar attempts at systematization and

codification must have been undertaken for other fields of knowledge as well, but these are only indirectly attested. The beautiful reliefs in the solar sanctuary of Niuserre (5th Dyn. [Edel 1961–64]) and the reliefs of Thutmose III known as "Botanical Garden" (Porter Moss 1960–81, 2: 120) show a sophisticated level of biological knowledge. (The Punt reliefs in the temple of Hatshepsut at Deir el Bahari are similar.) A papyrus in Brooklyn with an ophiological treatise is still unpublished. The existence of legal codifications is, however, controversial (Allam 1984).

(2) Medical and Mathematical Manuals. Medical manuscripts exist in great numbers from the MK (pKahun, pRamesseum III, IV and V; and many medico-magical manuscripts) to Roman times (Reymond 1976). The most important manuscripts date from the NK, but may contain much older material (pEbers, pEdwin Smith, pHearst, pMedLondon, pMedBeatty VI, pCarlsberg VIII, and pMedBerlin 3038; a list is given in HO $1/2^2$ §36 pp. 212–14). The manuscripts differ very significantly from each other in the extent of magical elements. Some are almost free of magic (pSmith, pEbers, pDemWien), some almost free of technical medicine.

Medicine was the domain of the priests of Sakhmet, who were assigned to the "House of Life" and combined the highest erudition in all fields of science with magical competence (von Känel 1984; Ghalioungui 1983). The medical manuscripts, especially pSmith and pEbers, are excellent examples of "scientific prose." The individual sections follow strict formal patterns and often contain glosses written in red ink which explicate phrases and technical terms, or provide additional information or variant readings.

Mathematical manuals are attested from the MK onward (pRhind = pBM 10057+58 from the Hyksos period, copy of an MK original; five MK documents, others of Greco-Roman date). The NK is represented only by a section in pAnastasi I. The title of pRhind is of remarkable solemnity:

> Exact reckoning. The entrance into the knowledge of all that exists, everything obscure, (…), every secret. (Peet 1923: 33; Chace et al. 1927: 49)

The manuscripts give collections of mathematical problems arranged in systematic order (Gillings 1972).

(3) Cosmographies. (a) "Funerary" cosmographies in the royal tombs. The "Books of the Netherworld," which appeared as elements of wall decoration in the royal tombs since the reign of Thutmose I, can be viewed in two ways: (1) as the royal equivalent to the Book of the Dead, that is, as funerary literature (Barta 1985), and (2) as cosmographic codifications of knowledge about the netherworld and part of a "sacerdotal science" particularly connected with the solar cult (Assmann 1970). The earliest of these compositions are the *Amduat* (Hornung 1963–67) and the *Litany of Re* (Hornung 1975). The first is more descriptive, being an itinerary of the nocturnal part of the sun's circuit; the second is more liturgical, consisting of laudations in invocations of the sun god. But the *Amduat* also integrates, alongside descriptive passages, a great number of hymns and speeches into its cartography. Word and image are very closely related in this genre, the most striking feature of which perhaps being that it presents a vast amount of knowledge about the unknown in the same clear arrangement as the tables of Egyptian bureaucracy. There are no blanks in these maps of the netherworld.

After the Amarna period, other compositions of this type appear in the royal tombs: first the *Book of Gates* (Hornung 1980) and the *Book of the Heavenly Cow* (since Tutankhamun: Hornung 1982), later also the *Book of the Earth* (Piankoff 1953), the *Book of Caverns* (Piankoff 1946), the *Book of Nut* (Neugebauer and Parker 1960) and lesser documents (Hornung 1984). In these books, the descriptive and iconic parts recede in favor of the recitative parts, a distribution which might be indicative of their function as funerary literature (which is primarily recitation or incantation literature). One of these books, however—the *Book of Day and Night* (Piankoff 1942)—is exclusively descriptive but belongs to a recitative type, a cycle of sun hymns for each hour of the day, which occurs independently in contexts related to the solar cult (Assmann: "hourly ritual," *ÄHG* Nos. 1–12). The whole composition appears only in the Ptolemaic temple of Edfu. This proves the affiliation of the entire genre with the solar cult and its pertinent priestly knowledge. A very prominent feature of this literature is its hermetism. These are texts which, until the end of the NK, virtually never occur outside the royal tombs, which were hermetically sealed.

(b) Geographic manuals of the Late Period. It is only in the Ptolemaic period that comparably exhaustive and systematic codifications of knowledge referring to the terrestrial sphere appear. There must have existed manuals of religious geography comprising all the nomes of Egypt and indicating for each of them its capital, reliquiae, god and goddess, priest and chantress, bark and canal, tree and holy hill, dates of principal feasts, taboo, serpent, cultivated land and swamps. These manuals must have served as sources for the various processions of nomes and related compositions which appear with striking uniformity in many of the great Ptolemaic temples (Osing discovered an exact parallel to parts of the Edfu list on three papyri from Tebtunis, which proves that there existed a uniform and canonized tradition of religious geography for all the temples of Egypt).

There also existed monographs dealing only with particular areas, but in a more comprehensive manner, inserting mythical traditions, illustrations, and the like; the pJumilhac for the 17th and 18th nome of Upper Egypt (Vandier 1962) and the famous papyri of the Fayyum (Lanzone 1896; Botti 1959) are examples. Another document of religious geography in tabular arrangement is the pTanis 2 (Griffith 1889).

Another field of sacerdotal science was time reckoning and astronomy. The dates of most Egyptian feasts were based on astronomical observation and calendaric calculation, which were therefore of prime necessity for the cult and secondarily for the administration. Astronomical tables of the hours of the night occur already in MK coffins (Neugebauer and Parker 1960). Catalogs of temple libraries and Clement of Alexandria mention many titles having to do with astronomy and chronology (Fowden 1986: 58–59), but very little is preserved (Neugebauer and Parker 1960). Festival calendars, which form a regular part of temple decoration already in the NK, may be extracts from those chronologico-astronomical manuals.

Omen literature consists chiefly of oneiromantic (pChester Beatty III 1–11r; see Sauneron 1959; for Demotic sources, Volten 1942) and calendric manuals (calendric papyri with lists of lucky or unlucky days with mythological explanations: nine calendars, from MK onward [see Bakir 1966]; for Lunar omina, Parker 1959). A very typical example of what might be termed oracular literature are the *Amuletic decrees* of Dyn. 21–22, where the oracular decision of Amun-Re, the supreme deity, is recorded to protect any individual against all possible dangers coming not only from evil spirits, but also from major deities like Ptah, Thoth, Hathor, Sakhmet, and even Amun himself; the genre thus reveals a deep-rooted distrust and anxiety typical for this period, which extends even to the divine sphere (Edwards 1960). Security is only to be found in a supreme and transcendent deity far above the world, a deity whom the texts circumscribe in an elaborate panegyrical letterhead with the titles of the instance which issues the decree (*ÄHG* No. 131).

3. Monumental Literature. a. Royal Inscriptions. Inscriptions recording royal deeds begin with the 11th Dyn. They manifest a new concept of kingship wherein the king is no longer a god but the incumbent in a divine office and therefore under continuous need of legitimation. His legitimation is based less on any dogma that the king is the incarnation or son of a god than on his deeds, which he therefore proclaims by inscriptions erected in public space. But the "publicity" is directed more to a divine than to a human public, because it is the divine world whose acceptance matters most. Thus, the new concept of kingship, inherited as it seems from the nomarchs of the First Intermediate Period (whose autobiographies, characterized by the same need for legitimation, mark the very summit of the genre), lies at the root of a literary genre which soon becomes productive of significant and carefully formed texts.

One of the first examples, a building inscription of Sesostris I, was even copied centuries later because of its literary merits (de Buck 1938; Goedicke 1974). The literary form of this text, which became normative until the Late Period, has been termed "Königsnovelle" (royal novella: Hermann 1938). A royal decision of far-reaching consequences and its successful realization is framed by a scene of consultation between king and councillors, where reasons are given for the royal action and the superior insight and providence of the king are demonstrated. But even inscriptions which are not couched in the form of a royal novella often show the same concern for careful substantiation of royal actions as, e.g., the boundary stelae of Sesostris III at Semna and Uronarti (*AEL* 1: 118–19).

Another prominent feature of royal inscriptions are panegyrical amplifications of the royal "protocol" (the canonical sequence of five names and titles of the pharaoh). The earliest example occurs in the literary autobiography of Sinuhe (*ÄHG* No. 227), and hundreds of such "eulogies" occur in inscriptions of the NK. The eulogies develop two major themes: the king as warrior and as lord of temples and cults. During the NK there was a change in the general pattern of interpreting historical events; in the light of the new "theology of will" underlying the "Personal Piety" movement, events tended to be seen as divine interventions. The most striking examples of this new sense of history are the documents recounting the Battle at Kadesh (van der Way 1984; Goedicke 1985; *AEL* 2: 57–72), where the victory of Ramses II is attributed to a personal intervention of Amun in his favor, and the Israel Stela of Merenptah (*ANET*, 376–78; *AEL* 2: 73–78), where the victory over the Libyans represents the execution of divine judgment in a heavenly tribunal.

The summit of this new theology of history is reached in the inscriptions of Ramses III, perhaps the most pious king on the throne of Egypt, who expressed his piety in a beautiful hymn to Amun–Re (*ÄHG* No. 196; Oswalt 1968: 148–54) and numerous inscriptions in the form of interlocutory speeches between god and king (Görg 1975). It is to the piety of Ramses III that pHarris I refers in a post-mortem account of royal actions—especially donations—with lists, invocations, prayers, and a historical review recounting the overcoming of chaos at the turn from the 19th to the 20th Dyn. (Erichsen 1933; *ARE* 4 §§182–412; *ANET*, 260–62). This section is the most elaborate example of an ancient tradition of restoration texts that begins with inscriptions of nomarchs such as Anchtifi of Moalla and Kheti of Herakleopolis, who boast of themselves as having saved their respective territories from starvation and turmoil. The idea of the ruler as savior was adopted in the *Prophecy of Neferty* (*AEL* 1: 139–45) for the royal ideology and subsequently exploited in royal inscriptions, but only when the historical situation actually motivated such an interpretation, as in the expulsion of the Hyksos (Hatshepsut: Speos Artemidos Inscription), the restoration of the cults after the Amarna revolt (Tutankhamen, Haremhab, Seti I), the disturbances at the end of the 19th Dyn. (Sethnakht Stela, Elephantine) and at other turning points (Assmann 1983e).

JAN ASSMANN

EGYPTIAN BIOGRAPHIES

A. Content and Significance

Older than the Pyramid Texts, biography is the first literary genre known from ancient Egypt and the best attested. This must be attributed to the fact that the Egyptian biography was never a purely secular composition, i.e., a narrative produced for the entertainment or edification of the reader. It was, rather, a religious document and was essential to the preservation of a person's soul. Biographies are always found in holy precincts—either funerary or the temple. Even the "autobiographical" story of Sinuhe, a popular literary narration of extraordinary events in an official's life, uses the standard form of a funerary inscription. (For the way genuine biographies function in their religious settings, see below.)

The earliest known biographical inscription was written by a noble, Metjen, in the 4th Dynasty ca. 2620 B.C.E. (See Goedicke 1966: 1–71 for a somewhat whimsical translation and commentary.) From that time forward, virtually every official who could afford a tomb also dedicated a biographical inscription (van de Walle 1975: 815 provides a general bibliography).

An Egyptian biography opened with the deceased's names and titles to show that he had been a man of standing. Then followed a litany of stereotypical epithets (sometimes richly metaphorical) describing his moral virtues. A few highlights from his career might follow, though many Egyptian biographies omit them entirely. Egyptian biographies, in fact, rarely contain information we would consider historically significant. More typically, they record anything about a life which would demonstrate that the person who lived it was of high position and moral character, possessed temporal power, and served his king or god well.

Since the earliest biographies were inscribed at the entrance to the subject's tomb chapel—with the stated purpose of impressing passersby—an appeal to the living to give offerings, to say offering formulas, or simply to repeat the subject's name quite often followed the biographical passages, "for the breath of the mouth is beneficial to a man" who "lives by the repetition of his name." For a discussion of this idea, and of the accompanying notion that saying a formula costs the sayer nothing, see Spiegelberg 1908: 67–71. On the appeal to the living, see also Garnot 1938.

To an Egyptian, then, biography functioned as the prologue to an appeal, and it seemed most natural to appeal in the first person. This was so even in cases where the text specifically states that a pious son or other near relative had dedicated the monument. In most cases, therefore, it is not possible to say with any certainty whether a biographical inscription was written by its subject, for the vast majority of texts were written in the first person and appear to be autobiographical. In some few cases, such as the biography of Metjen, the inscription is written in the third person. Even more rarely, the author will address the subject of the biography, so that the form used is second person: cf. the Old Kingdom biography of Ptahshepses (Sethe 1904) and the two speeches addressed to Petosiris by his sons (Lefebvre 1923–25: no. 61).

B. Biography as a Record of Ethical and Religious Thought

This general pattern obtained in Egypt throughout the 3,000 years that the Egyptian biography as a genre was in vogue. In addition, Egyptians continued to write these texts in hieroglyphs long after that

writing system had been superseded (first by hieratic, then by demotic Egyptian) for all but temple texts or state decrees. Despite the religious function of Egyptian biographies, however, and that people's undeniable respect for tradition, subtle changes crept into them—such as variations in the laudatory epithets or in the choice of deeds recorded. Though small, these modifications reflected the moral and religious climate of the times, making it possible to trace major developments in the intellectual history of ancient Egypt using biographical texts alone.

C. Biographies Inscribed on Tomb Chapel Walls: 2500–1300

Egypt's earliest biographies demonstrate to what degree the state, in the divine person of the king, had power over its subjects. The earliest courtiers were members of the king's own family, yet even the most powerful of them state that they owed everything, including life itself, to royal grace. One Old Kingdom noble proudly records how he was allowed to kiss the king's foot rather than the ground before it (*ANE* 1: 260). Another man relates how he accidentally brushed against the king's scepter during a ceremony, but His Majesty graciously allowed him to live unpunished (Sethe 1904: vol. 1, no. 232). The king is called the "Great God," while other gods are rarely mentioned. Though the troubles which ended the Old Kingdom put an end to such absolute royal power, the religious tenet that the king was the source and guardian of order in the world remained strong and ended only with the fall of the pharaonic system of government.

During the hard times of the First Intermediate period (2134–2040 B.C.E.), local rulers grew powerful in their own right, and their biographies display a whole new range of qualities for nonroyal persons. Nobles now assessed their worth by how well they had acted toward their fellows, and particularly toward their native cities in time of need. Many of the most common epithets with social content originated during the Old Kingdom, but with the coming of the First Intermediate period, a whole range of new laudatory phrases came into use. See Janssen 1952 for a collection of these epithets.

The advent of personal power also brought with it the concept of personal responsibility, and biographies from the Middle Kingdom (2040–1668) laid a new emphasis on the "justification" of a soul in the Judgment which follows death. The newly dead person was led before the Lord of Eternity, where the heart was weighed against the Feather of Truth. If it was found wanting, the heart was devoured by a monstrous beast, but if it balanced true, the person was "justified" and allowed to join the other Excellent Spirits in the hereafter (Yoyotte 1961).

The New Kingdom was a period of empire and wealth for Egypt and shows a new taste for narratives recording historical events. Each man sought to show how his own initiative had brought him favor in the eyes of the king. The fortunes of war also brought a certain democratization to the biographical genre, simple soldiers sometimes becoming wealthy enough to dedicate tombs and inscriptions of their own. One of the most famous early New Kingdom biographies is that of Ahmose, son of Ibana (Vandersleyen 1971). (For biographies from later in the dynasty, see Sandman 1938.)

D. Biographies Inscribed on Statues of Nonroyal Persons and Placed in Temple Courtyards (1350 B.C.E.–50 C.E.)

Toward the end of the New Kingdom, two high officials inscribed statues and placed them in a public courtyard of the Temple of Amun of Karnak. These were the first nonroyal persons whose names and forms were allowed to rest inside a god's house. Crouched like scribes in a public courtyard at the foot of stone images of the kings they had served in life, they urged all who came by to tell them their petitions. These powerful officials would then use their influence with the god (again, as they had done in life) to make sure the petitions were heard. The reward for such service was that those who remained on earth would say offering formulas in their name. The two owners of these statues were the great architect Amenhotep, son of Hapu, who lived during the reign of Amenhotep III (1386–1349 B.C.E.) and the vizier Paramessu, who very likely became King Ramesses I (accession date, 1293). Amenhotep's services were so popular that a deep groove has been worn away by the fingers of the faithful in the hieroglyphic text incised on the stone papyrus unrolled on the statue's lap.

The New Kingdom—like the Old Kingdom and Middle Kingdom before it—ended in a political fragmentation and social unrest. When the last Ramesses died ca. 1070 B.C.E., Egypt fell prey to outside

forces. It was ruled first by Egyptianized Libyans; then by Sudanese, Assyrian, and Persian invaders; and finally by a Macedonian dynasty, the last "Egyptian" pharaohs. In these troubled times, men could no longer trust in isolated necropolis priests and the occasional passerby to remember their souls. In ever increasing numbers, they consigned their personal inscriptions to the courtyards of temples—courtyards protected by strong walls from the depredations of war and frequented by literate priests and officials. Statues dedicated by private people come down to us in ever increasing numbers from the 22d Dyn. (ca. 945) on. Under Ptolemy II Philadelphus (280–250 B.C.E.), high Egyptian officials were still dedicating statues, sometimes of colossal proportions. Only one monumental statue, however, dates from the reign of his successor, Ptolemy III Euegertes, and it would appear that Philadelphus had effectively put a stop to the practice—if only by replacing Egyptian officials with Macedonians or Greeks. The Late period (1070–30 B.C.E.) biography, therefore, is generally inscribed on a statue of the subject. It addresses the god of the temple that housed the statue and records pious acts the subject carried out on behalf of that god. Egyptians were turning their backs on the realities of political chaos and foreign occupation, preferring to ignore the here and now in favor of the more palatable reality of the hereafter.

Occasionally, however, an Egyptian would mention a battle or a conquest if it impinged directly on his own concerns. One Egyptian doctor, for instance, who had found favor in Darius' court, recorded a dream in which his local god ordered him to hurry home. The dream took place when "the Greeks" (led by Alexander the Great) fought and defeated his Persian hosts. Upon arriving in Egypt, he dedicated an inscription to his god, thanking him with a biblical turn of phrase for his earlier successes abroad and his safe return home. He attributes all his good fortune to this local god, and to his own faithfulness to him:

> I am Your servant, my heart being loyal to You (and) I having filled my heart with You. I care for no city except Your city (and) I never cease putting its renown (about) among all peoples, my heart seeking out truth in Your house every day. On millions of occasions you acted for me as they (his pious acts) were good … You distinguished me before millions (though) You had turned your back on Egypt, putting love of me in the heart of the Ruler [of] Asia (Darius I) … You protected me during the battle of the Greeks when you repulsed the Asiatic nation, millions being slain at my sides, yet none raising his arm against me … I reached Heracleopolis (his hometown) with not a hair on my head being harmed (Tresson 1930).

E. Personal Accountability and the Judgment after Death

The longest and most revealing biographical texts to come out of Egypt's Late period are those inscribed on tomb walls of the nobleman Petosiris. Petosiris ruled a large portion of the country around the time that Ptolemy I Soter took the throne, founding the Ptolemaic Dynasty, in 305/4 B.C.E. He was also the high priest of the Thoth of Hermopolis Magna, and his tomb is decorated inside and out with carvings of Egyptians wearing Greek garb and colored with an un-Egyptian palette. The biographical inscriptions are written in several locations throughout the tomb, interspersed with strictly religious texts. These texts display a thoroughly Egyptian theology, but—like the drawings in the tomb—are heavily influenced by Greece in form (Lefebvre 1923–25: vol. 3).

Petosiris' little brother, for instance, offers a characteristically Greek lament for his own premature death. "He who hearkens to my story will be saddened on account of it," says Thotrekh. He stresses that he was seized abruptly from among the living "like a man whom sleep has taken" and sent to the City of Eternity, the harbor of the Blessed Souls." Once there, the child had to undergo Judgment like everyone else, and he describes the experience:

> I arrived at it, before the Lord of the Gods, (though) there was no judgment against (?) me … I arrived at this land of privation and the Lord of the Gods brought men to account, but no sin of mine was found (Lefebvre 1923–25: no. 56, lines 2–3, 7–8).

Petosiris, too, describes his own Last Judgment:

> The West (where the dead go) is the harbor for him who has no sin. Praise God for the man who reaches it! Not every man shall reach it, but only when he is scrupulous in doing right. The poor man is no different from the rich there, but only (the man who) is found (to be) without sin. The scales and the plumb bob are before the Lord of Eternity and there is no one without the pronouncement of his

reckoning. Thot-as-an-Ape sits upon his place to reckon every man ('s Fate) in accordance with what he did upon earth (Lefebvre 1923–25: no. 81, lines 16–22). (Drawings of the Egyptian Judgment after death show a small baboon sitting in the center of the crossbar of the scales.)

The Late period noble was accountable for his acts, but the biographies of this age make it clear that acts toward God counted most in the final accounting. One man, for instance, stresses that he invented a new way to embalm his local god's sacred animal—a feat accomplished under the noses of his Persian overlords. Petosiris' career comes down to us as a litany of services to various temples and gods. The Late period man "adhered to the Path of God," and God rewarded him. (For a discussion of the content of Late period biographies, including personal piety, see Otto 1954.)

Failures in piety, just as surely, led to awful retribution:

> This place, which the wretches were defiling …, the trespasser had trespassed upon it so that disturbance was in the entire land, and nothing was good in Egypt on account of it, because the halves of the Primeval Egg (from which all life came) were buried in it (Lefebvre 1923–25: no. 81, lines 63–68).

F. Development of a Personal Relation to God

Through the Egyptian biography, it is possible to trace attitudes from the earliest times, when the king was the supreme god. Later, as individuals seized the initiative, men began to take both credit and responsibility for their deeds. Both these attitudes carried over into the optimistic narratives of the New Kingdom biography, where a soldier forged his own way beside his king.

By 1070 B.C.E., Egypt was war-torn and chaotic, and neither the state nor the individual was sufficient to hold off invaders or poverty from the land. Men now turned to God and entrusted their biographies to the temples. In this new climate a Late period noble might take credit for his special abilities—like the chief judge and vizier who said he was "piercing of mind like Thoth, so that the laws of the Tribunal were (made) in accordance with his prescriptions" (statue of Ḥr, Staatliche Museen 7737, Berlin, unpublished). He might take credit for his services to society, like the man who claimed he (and his statues) were a cure for snake bite (Sherman 1981). But chiefly, the Egyptian of the Late period sought to show that he had been a pious man, for only the pious were rewarded both in this life and the next:

> For he was one (who adhered) to the Path of God. He carried out his life in happiness, richer than all his peers. He grew old in his city. He was a respected man in his province. All of his limbs were sound—he was like a youth. His children were numerous beside him as rich men among the townsfolk, son inheriting from son. The sight of him was like that of the sun when it sets. Awe of him was in the hearts of men, (while) love of him was in the hearts of women … He was one who was a follower of (the god) Khenty-Imentet, and never was there a complaint of God against him (Lefebvre 1923–25: no. 61c, lines 28–31).

ELIZABETH J. SHERMAN

EGYPTIAN LOVE SONGS

Some 40 love songs, ranging in length from 4 to 140 stichs, have survived from ancient Egypt. These songs are of interest both for their intrinsic poetic value and for the parallels they offer to the Song of Songs. (All references to love songs here are according to the enumeration in Fox 1985: 5–6.)

4. Concept of Love

———

A. Dating and Cultural Background

The extant manuscripts of the Egyptian love songs date from the 19th Dyn. (ca. 1305–1200 B.C.E.) and the early part of the 20th (1200–ca. 1150 B.C.E.). The major manuscripts are: Papyrus Harris 500, the earliest of the group (a collection of twenty-one short songs and a short story, "The Predestined Prince"); Papyrus Turin 1965 (a three-stanza song about trees in a garden); The Cairo Love Songs (two songs of seven stanzas each, written on a vase, now broken); Papyrus Chester Beatty I (a seven-stanza song spoken alternately by a girl and a boy who see each other and fall in love, a three-stanza song spoken by a woman waiting anxiously for her lover, one collection of seven songs, as well as the legend of Horus and Seth). Additionally there are a number of ostraca from Deir el-Medineh with short songs or song fragments.

While it is possible that these love songs were composed earlier and transmitted either orally or in writing before being inscribed in the extant manuscripts, it is most likely that their composition too dates from the Ramesside period. The love songs are in literary Late Egyptian, a written literary language taught as a "second language" in the scribal schools at this time.

B. Selections

The following selections from various poems give a sense of the songs' character: playful, tender, erotic. They include some of the favorite themes of love poetry: description of the feelings of love, "lovesickness," the love trap, praise of the beloved. Note that the lovers refer to each other as "brother" and "sister," terms implying intimacy (the Song of Songs too uses "sister" as a term of affection, e.g., 4:9, 10, 12; 5:1, 2).

A maiden tells her lover of her determination:

My heart is not yet done with your lovemaking,
Your liquor is (your) lovemaking.
I will not abandon it
until blows drive (me) away
to spend my days in the marshes. (no. 4)

In "Alba" theme, a lover complains of the breaking of dawn after a night of love. In the following passage, a girl scolds the dove for heralding the dawn:

The voice of the dove speaks. It says:
"Day has dawned—
when are you going (home)?
Stop it, bird!
You're teasing me.
I found my brother in his bedroom,
and my heart was exceedingly joyful. (no. 14)

Love causes "lovesickness," whose symptoms are lassitude, even a sort of paralysis, and considerable confusion:

When I behold sweet cakes,
(they seem like) salt.
Pomegranate wine, (once) sweet in my mouth—
The scent of your nose alone
is what revives my heart.

Compare Cant 2:5; 5:6b. The phrase "scent of your nose" alludes to the practice of nose kissing; cf. Cant 7:9b.

I will lie down inside,
and then I will feign illness.
Then my neighbors will enter to see,
and then my sister will come with them.
She'll put the doctors to shame,
for she will understand my illness. (no. 6, complete)

The following youth is drunk on the liquor of love:

I'll kiss her,
her lips are parted—
I am merry without beer. (no. 20G)

The "love trap" theme speaks of the girl as a trap, or alternatively, a lasso, whose charms ensnare the willing boy (cf. Cant 7:6a). The following selection uses that theme in a riddle: how can it be that the maiden is skilled with the lasso yet catches no cattle?

How skilled is she—my sister—at casting the lasso,
yet she'll pull in no cattle!
With her hair she lassos me,
with her eye she pulls me in,
with her thighs she binds,
with her seal she sets the brand. (no. 43, complete)

The "Praise Song," which describes the beloved part by part, is found in several Egyptian poems and in the Song of Songs (4:1–7; 5:10–16; 7:2–10a). In the following selection, taken from a more complete description, a youth watches a girl walking past his house and says to himself:

One alone is my sister, having no peer:
Behold her, like Sothis rising
at the beginning of a good year:
shining, precious, white of skin,
lovely of eyes when gazing. (no. 31)

C. Function of the Egyptian Love Songs

We do not know the role the love songs played in Egyptian society, but can only attempt to infer it from their contents. They do not seem to be wedding songs, for they never speak of the couple as presently married or as about to be. Furthermore, none of the songs express the hopes for the couple's future that would be appropriate in wedding festivities. Nor do they show any signs of a religious-cultic function, such as a Sacred Marriage liturgy, which, as the Mesopotamian Sacred Marriage songs show, can be expected to emphasize strongly the connection between the divine sexual union and the fertility of the land. The Egyptian songs show no interest in fertility.

The Egyptian love songs were probably meant simply for entertainment. The headings to three groups state their purpose as "entertainment," lit., "diverting the heart." The same phrase labels scenes of banquets in Egyptian tombs, scenes that frequently include musicians and singers. While no love songs have been found in such scenes, the type of occasion they portray—banquets on both holidays and ordinary days, when family and friends would come together to eat, drink (sometimes to excess), and enjoy musicians and dancers—would be most suitable for listening to songs about love.

D. View of Love

The extant love songs come from different times and places. They do not present a unified concept of love. It is, nevertheless, possible to summarize the main attitudes and concepts they share and to sketch the way love and lovers appeared to the ancient Egyptian poets. We should keep in mind that the love songs present an ideal of love and not necessarily a social reality.

1. Personae. The lovers portrayed seem to be quite young and all unmarried. While many of the songs do not give hints about the lovers' age and social situations, those that do show us young people living with their parents and under their supervision. Since marriage in Egypt probably took place in the late teens for males and the early or middle teens for females, we may surmise that the love songs show us young people in the short time between childhood and marriage.

2. Sex Roles and Distinctions. The relationship portrayed in the Egyptian love songs is essentially egalitarian. The songs do not show a rigid conception or strict stereotype of the ways the sexes behave. The behavior of the sexes differs from one song to another, with males being the more active and assertive in some, females in others.

For the most part, however, the girls are more intent on love and more sexually assertive than the boys. In poems with the love trap theme, which compare falling in love to being trapped or lassoed (e.g., no. 43, above), the girl is always the trap or trapper. On the other hand, the love trap theme does not embrace a "femme fatale" stereotype (although the "femme fatale" is prominent in Egyptian stories). In general, the boys are awed by the powerful effect their girls have on them, but they do not try to affect them in return. They see themselves as "captured," their hearts as "taken."

3. Sexual Relations. The Egyptian love songs are deeply erotic without dwelling on the details of sexual activity. The songs treat sexual intercourse with restraint and indirection, but not with embarrassment, coyness, or apology. The sex act is never described, even euphemistically, though certain motifs allude to genitals or intercourse, such as the "cave" of the beloved (nos. 40, 41) or the "seal" with which she "brands" him (no. 43, see above).

Although sexual intercourse, in the view of the Egyptian love songs, is not restricted to marriage, the lovers often look forward to marriage, and their relation is almost never a mere dalliance. (One poem, in contrast [nos. 41–42], seems to describe activities in a brothel). The lovers sometimes say that they will possess each other forever. In the following, their lying together is the start of a life together:

> How lovely is my hour (with you)!
> This hour flows forth for me forever—it began when I lay with you.
> In sorrow and in joy,
> you have exalted my heart.
> Do not (leave) me. (no. 17)

In general, the intensity of the lovers makes us feel that they are intent on a lifetime together, even when this is not said explicitly. Yet marriage is never the focal point of the songs. The lovers concentrate on their immediate experience, which, when it is a happy one, they expect to continue throughout their lives.

4. Concept of Love. The love poets show young love as a great force that creates a moral order of its own, for love demands—and engenders—total commitment. Obedience to its demands overrides other considerations. One stakes all for it and shares in its power, or hesitates to obey its dictates and so feels the pangs of hopeless desire.

The effects of love's power are shown as diverse and paradoxical. Love is the dominant force in a lover's life, giving illness or health, weakness or power, pain or pleasure. In fulfillment, love gives a delight that only a concatenation of sweet images can even start to convey. In the absence of the beloved, love's power agitates and disturbs, confusing tastes and nullifying normal pleasures. The presence of the beloved restores life and health. The imagery of the Egyptian love songs thus implies a general state of being: love fulfilled is harmony, wholeness, health, life.

Much of the energy of the poems goes into a description of love's feelings. This concern gives the Egyptian love poems an introspective focus. Moreover, none of the Egyptian love poems are dialogues. In poems where two lovers speak in alternating stanzas, they do not speak to each other, but to an indefinite audience, or in their hearts, in two separate soliloquies. This absence of communication distinguishes the

Egyptian poems from the Song of Songs, which is largely composed of interlocking dialogue. The Egyptian poets create a variety of personalities and study each one in isolation, painting a picture of love as a state of emotion more than a relationship between individuals. It seems important to the lovers (and the poets behind them) to communicate just what is going on inside. In contrast, the urgency of the lovers in Canticles is to tell what they see in each other. They display their emotions rather than reporting on them, for it is the relationship that arises from the emotions of love, more than the emotions themselves, that concern the poet of the Song.

EGYPTIAN WISDOM LITERATURE

Egypt's reputation for wisdom was extolled by biblical writers (1 Kgs 4:30—Heb 5:10; Acts 7:22) as well as classical authors. Nevertheless, the designation "wisdom literature" was borrowed from OT scholars, who coined the term for those books which dealt primarily with the personified figure of the preexistent Wisdom so intimately associated with the "fear of God." The Egyptian expressions for "wisdom" lack this connotation of the Hebrew word *ḥokmâ.* The central concept in the Wisdom Literature of Egypt was *maʿat,* a word variously rendered as "truth," "righteousness" or "justice," but also meaning "order," especially the divinely ordained cosmic order.

Egypt shared with her neighbors in the cultural continuum of the Near East. Like them, her understanding of the nature of the universe found expression in mythology; like them, she enshrined the experience of generations in sentential sayings or proverbs. Her reflections on life—its meaning and the ways by which its demands might be met—eventually became what we call "wisdom literature." However, there is no unanimity on a fixed body of texts comprised under this heading. The "wisdom" tradition is an attitude to life and conduct, and may be found to permeate many works which are not properly regarded as wisdom texts, e.g. biographical inscriptions and the Coffin Texts.

The mistaken view that Egyptian wisdom was predominantly nonreligious and utilitarian, especially in its early stages, has been conclusively refuted (de Buck 1932). Throughout its history, this literature had a religious basis, although there is a steady and significant development perceptible (Schmid 1966: 8–84).

A. Instructions

The earliest known wisdom compositions were compiled by high court officials for the training of the young who were being groomed for government service in scribal schools. The writer addresses his son (i.e. pupil), offering advice regarding such topics as courteous behavior, moral conduct, obedience, and felicitous and effective speech. These treatises were entitled *sbōyet,* a term which has the twofold sense of instruction, both mental and moral, as well as chastisement.

1. Old Kingdom Texts. In the Old Kingdom (ca. 2686–2181 B.C.) such writings were attributed to royal persons or viziers, and were intended for the children of the aristocracy. The earliest, according to later tradition, was the work of Imhotep, the illustrious vizier of Djoser, but no trace of it has survived. The *Teaching of Hordjedef*, a son of the 4th Dyn. ruler Cheops, was also renowned in later ages. This has been partially reconstructed from 17 ostraca of Ramesside date (Dyn. 19–20) and a much later wooden writing board (Dyn. 26). Only the beginning has so far been recovered (*AEL* 1: 58–59).

The concluding portion alone of the *Teaching for Kagemni* (*AEL* 1: 59–61) is preserved on a single manuscript of Middle Kingdom date, so that the author is unknown. We are informed that the recipient, Kagemni, was appointed vizier under Huni and Sneferu, rulers of Dynasties 3 and 4 respectively. However, the only vizier of this name served under Teti of the 6th Dyn. Scholars are inclined to regard the work as pseudonymous, originating in the 6th Dyn. or slightly later. The writer advises against gluttony and urges self-control.

The first complete example of this type occupies the same manuscript as the preceding work. This is the *Teaching of Ptahhotep* (*AEL* 1: 61–80), described as vizier under Isesi of the 5th Dyn., although no evidence for such a historical person has been found. This treatise too may be pseudonymous, and arguments for a date in the 6th Dyn. have been made. A lengthy prologue is followed by 37 maxims and an epilogue. The sage counsels proper conduct on all occasions and recommends such virtues as obedience, self-control, honesty, patience, and generosity. Copies of the text on three other fragmentary papyri, one writing board, and three ostraca dating from both Middle and New Kingdoms reveal that at least two editions were extant. The enduring popularity of this composition is evident from both allusions and citations in later texts, some perhaps as late as the 7th century B.C.

2. First Intermediate Period Texts. The collapse of the Old Kingdom was followed by a series of weak, ephemeral rulers during the First Intermediate Period (ca. 2181–2040 B.C.). Rival dynasties arose at Heracleopolis and Thebes. The *Teaching for Merykare* (*AEL* 1: 97–109) is represented by three 18th Dyn. papyri, but the beginning is damaged. Ostensibly composed by a ruler of the 10th Dyn. at Heracleopolis, probably Achthoes III, for his son and successor, Merykare, it is likely to have been commissioned by Merykare as a work of political propaganda in the form of a royal testament (Williams 1964: 15–19) and ascribed to his deceased father. Advice is given concerning the appropriate attitude toward subjects and enemies and how to select adherents and foster their loyalty. The earlier confidence in material success as a reward for good conduct had been severely shaken and such recompense is now projected into the afterlife. The whole text maintains a high moral tone and lauds the beneficence of the creator god in a hymn.

3. Middle Kingdom Texts. The reunification of Egypt by Mentuhotpe II inaugurated the Middle Kingdom (ca. 2040–1786 B.C.). All the instructions from this period have political overtones. The *Teaching of Ammenemes* (*AEL* 1: 135–39), like the previous document, is cast in the form of a royal testament. In it Ammenemes I of the 12th Dyn. vividly describes an attempt on his life and warns his son, who will succeed him as Sesostris I, to beware of court conspiracies. The view of many scholars that this too is a pseudepigraph written after the assassination of Ammenemes to legitimize the accession of Sesostris is supported by ostraca which have recently come to light (Foster 1981). An encomium on ancient authors written 500 years later identifies the revered scribe Khety as the author of this tractate. The complete text is provided by 6 scrolls, 3 writing boards, and 197 ostraca, all of New Kingdom date. A tiny scrap of papyrus from the 26th Dyn. or later testifying to yet another copy shows that the work was read and copied for fourteen or more centuries.

Another example of a political document has been given the modern title of the *Loyalist Teaching* (*AEL* 1: 128). It probably originated early in the Middle Kingdom and contains a panegyric of the ruler, followed by an exhortation to be loyal subjects. An abbreviated version of the first part of the text was later incorporated in the biographical stela of Sehetepibre, an official of Ammenemes III. Later New Kingdom copies on three papyri, one writing board, and sixty-five ostraca have assisted in the restoration of the second half of the text, which describes the conduct a master should exhibit toward his serfs (Posener 1976, with complete translation). The author's name is not preserved.

The *Teaching of a Man for His Son* is the anonymous title of a similar composition which is still being pieced together from fragments of one leather roll, five papyri, and some eighty ostraca, all from the New Kingdom. It is clearly of Middle Kingdom origin, and begins with a long prologue, followed by a section devoted to the same theme of loyalty to the sovereign (translation in Kitchen 1969). A further section treats the subject of daily conduct between individuals (Posener 1979; translation of part in Kitchen 1970). A writing board contains what appears to be an excerpt from another Middle Kingdom production on the theme of allegiance to the king (Barns 1968). The copy dates from the late 16th century B.C.

4. New Kingdom Texts. The didactic treatises of the New Kingdom (ca. 1567–1085 B.C.) were no longer concerned with political affairs, nor were they written by or for members of the aristocracy. The 18th Dyn. witnessed the establishment of an extensive Egyptian empire which may have aided the rise of the national god Amon-Re to universal status. Although polytheism continued, a certain tendency toward syncretism was developing and moving in the direction of henotheism. The period also witnessed a gradual growth of personal piety. In the Old and Middle Kingdoms the concept of the ideal person as "silent," i.e. self-controlled, disciplined, and modest, became increasingly prominent, and by the New Kingdom also implied an inner calm and repose.

A minor official was responsible for the *Teaching of Any* (*AEL* 2: 135–46) which was probably composed in the 18th Dyn. Five papyri (none complete) and nine ostraca preserve this text, but the introduction has been lost. However, a writing board bears the opening title in both Middle and Late Egyptian. The work consists of a prologue, some thirty maxims, and an epilogue which takes the form of an argument between Any and his "son" over the varying abilities of persons to comprehend instruction. A manuscript from the 19th or 20th Dyn. exhibits a later recension of the composition.

It is likely that the *Teaching of Amennakhte* is contemporary with the preceding text. The beginning alone remains, partially reconstructed from 6 ostraca. The writer addresses his apprentice Harmin, urging him to pursue his scribal studies. It has been suggested that the contents of Papyrus Chester Beatty IV, verso, 1:1–7:2, may be a later part of this work (translation of the latter in Gardiner 1935: 37–43).

Another New Kingdom text has been restored in part from 7 ostraca. It is unique in consisting only of prohibitions and appears to be an anthology. A limestone flake bears the words: "Instructive teaching … according to ancient writings," which could be the title of this intriguing collection.

The *Teaching of Amenemope* (*AEL* 2: 146–63) is the best-known representative of this period because of the likelihood that it was the inspiration for Prov 22:17–23:14 and Jer 17:5–8 (see Bryce 1979). It has survived complete on a papyrus of the 26th Dyn. with excerpts on three equally late writing boards. One sheet of a papyrus duplicate from the 21st or 22d Dyn. and a single ostracon of the same date (which is a schoolboy copy) imply, however, that the original must go back at least to the 12th century B.C. A long prologue is followed by 30 numbered chapters, the last of which serves as an epilogue. Great emphasis is laid on honesty and concern for the disadvantaged, and personal piety is stressed. The dominant theme is that of the "silent" man who is self-controlled and, above all, modest. He is contrasted with the "passionate," i.e., quick-tempered man.

5. Late Period Texts. From the Late Period the earliest work of this type so far known is written on a long and very fragmentary papyrus, probably of the 4th century B.C., although the original may well have been older (Posener and Garnot 1963). When published by Dr. R. Jasnow, valuable light may be shed on this obscure period. A novel feature of the text is the high regard expressed for the farmer and his importance to the economy.

Some insight into the pervasiveness of wisdom thought in this period, however, may be gleaned from some passages occurring in the biographical texts on the walls of the family tomb of Petosiris, who served as high priest of Thoth at Hermopolis during the late 4th century B.C. The priest now appears as a sage. For instance, the conventional appeal to passersby to make funerary offerings to the deceased also requests them to profit from the words of advice (Barucq 1961). Expressions like "way of God," "fear of God" and "will of God" are frequent. The close kinship between these texts and the biblical Psalms, Proverbs, and Ecclesiastes is a noteworthy feature.

Beginning in the mid 7th century B.C. the vernacular form of the Egyptian language was written in a simplified, cursive script called by Herodotus "Demotic." The didactic treatise still continued to flourish in the Demotic era, but with a significant structural difference: the couplet used in the maxims of earlier ages has given way to the "aphoristic monostich" (Lichtheim 1983: 1–12), a short prose sentence of one line. Another important feature is the impact on Egyptian sages of other cultures, notably Aramaic and Hellenistic.

The *Teaching of Ankhsheshonqy* (*AEL* 3: 159–84) was discovered on a long papyrus scroll written in the late 1st century B.C. The beginning of the text and the top lines of all twenty-eight columns are lost. The citation of lines, some in sequence, on two papyri of 2d century B.C. date suggests that the original goes back to the early Ptolemaic period. The maxims are embedded in a narrative framework which recounts Ankhsheshonqy's imprisonment on a charge of plotting against the pharaoh's life. This recalls the story of the wise Ahiqar which was current in Egypt not only in a 5th century B.C. Aramaic text from Elephantine, but also in a Demotic version (Zauzich 1976). There are striking parallels between some maxims in the two compositions (Lichtheim 1983: 13–65). The most significant themes concerning the wise man versus the fool and the certainty of retribution, together with two formulations of the Golden Rule.

A papyrus of the 2d century B.C., now in the Louvre, contains a short work of only three columns: the *Teaching of Pordjel.* This is one of the texts which quotes lines from Ankhsheshonqy; it appears to be a collection of aphorisms with no thematic arrangement (translation in Lichtheim 1983: 94–98). Such random compilations are known from several fragmentary papyri and an ostracon of similar or slightly later date.

The most familiar document is *Papyrus Insinger* (*AEL* 3: 184–217) which preserves thirty-four columns virtually intact. However, a number of papyrus fragments belonging to the missing first nine or so columns are dispersed in several museums and still await publication. This manuscript is to be dated to the 1st century A.D. Five more papyri, all incomplete, provide further copies and are also of Roman date. These show great variation in wording and in the order of lines and sections. The maxims are divided into twenty-five numbered "teachings" arranged by subjects. Some of the topics dealt with are: the wise or godly man versus the fool or impious man; moderation in all things; Fate and Fortune, now clearly in the developed Hellenistic sense of *anankē* and *tychē* (Lichtheim 1983: 107–96). The author's name is lost, unless the mention of Phibhor at the end of the text is a reference to him.

Still more Demotic treatises are known, e.g., a text of considerable length in Berlin is now being prepared for publication by Dr. U. Kaplony-Heckel.

B. Speculative Works

Under this heading are included those compositions which display a reflective attitude toward life and the universe. They may take the form of a discourse or a prophecy by a sage, or occasionally a dialogue. Frequently pessimistic and skeptical, they question accepted beliefs and customs. Many include the theme of national disaster which was to become a mere literary topos (*AEL* 1: 149–50; Junge 1977).

The *Admonitions of Ipuwer* (*AEL* 1: 149–63) occupy a single manuscript of 19th Dyn. date. The beginning and, therefore, the setting are lost. In its present form it can be no earlier than the late 13th Dyn. (Van Seters 1964). A penetrating study suggests that the main body of the work was produced probably between 2180–2130 B.C. (Fecht 1972). The first half of this may be the "Prophecy of the Court" referred to in *Merykare* (line 71); the second part takes the form of a dialogue between the sage Ipuwer and the creator god. The deity is held responsible for the current ills of the land. A later editor is credited with additions which reflect the conditions of the 17th century B.C.

The *Tale of the Eloquent Peasant* (*AEL* 1: 169–84) survives on four fragmentary papyri of the late Middle Kingdom. Between them they render the text virtually complete. The scene is set in the reign of Achthoes II (ca. 2100–2050 B.C.). A humble oasis dweller (not a "peasant") is robbed on a flimsy pretext by a tenant farmer. When he complains to the high steward, the latter is so impressed by his eloquence that he contrives to delay the sufferer's defense until he has made nine long speeches of complaint full of wit and extravagant metaphor. In this work the Egyptian love of fine speech is apparent, but of far greater importance is the cry for the rights of the common man which is the focal point.

For the *Prophecies of Neferty* (*AEL* 1: 139–45) we possess one papyrus and two writing boards, all from the 18th Dyn., as well as twenty-one ostraca. The composition is attributed to a lector priest during the reign of Sneferu in the 4th Dyn. Summoned to display his rhetorical abilities before the ruler, he foretells the accession of Ameny, who will restore the troubled land to order. This Ameny is none other than Ammenemes I, who inaugurated the 12th Dyn. Clearly we have yet another tractate designed as propaganda to give divine approval to this king who was a usurper.

Only one 18th Dyn. writing board and one ostracon represent the *Lament of Khakheperresonb* (*AEL* 1: 145–49). This priest of Heliopolis strives for original and novel expressions with which to decry the lamentable state of the nation. No purpose other than a display of rhetoric is apparent, but this may be only the beginning of a longer work. It was produced during or soon after the reign of Sesostris II.

The *Dispute of a Man with His Ba* (*AEL* 1: 163–69) is known only from one 12th Dyn. papyrus for which the beginning is lacking. The text is unique in depicting an argument between a man and his *ba*. This term, usually rendered as "soul," actually designates the vital forces, both mental and physical, which are released at death and by means of which the deceased continues his existence. The work is a vigorous assault on the traditional costly material provision for the afterlife (see EGYPTIAN RELIGION).

One very fragmentary Middle Kingdom papyrus is the only source for the *Discourses of Sisobk.* The beginning and ending are lost. The speaker in the narrative, a scribe named Sisobk, is apparently a prisoner. His release is announced and he delivers a series of counsels. The text is too damaged for connected translation (Barns 1956: 1–10).

The *Harpers' Songs,* carved on tomb walls and funerary stelae and depicted as sung by a blind harpist, number about two dozen. A few may fittingly be grouped with these reflective compositions. The best known one is introduced by the words: "A song which is in the tomb of (King) Inyotef," most likely referring to one of the rulers of the 11th Dyn. It was discovered complete on a papyrus of the 19th Dyn. as well as in a damaged duplicate on the wall of an 18th Dyn. tomb at Saqqara. Like the *Dispute of a Man with His Ba,* this text expresses skepticism with respect to expensive mortuary preparations and advocates a hedonistic attitude to life. In a Theban tomb of the 18th Dyn., two other songs are inscribed, one attacking the skepticism of the earlier song and the other attempting to moderate its hedonistic and unorthodox views (translations in *AEL* 1: 194–97; *AEL* 2: 115–16).

C. Scribal Literature

Teachers produced a rich and variegated literature for the edification of their pupils. In addition to providing models of correct speech and patterns for letter writing, they emphasized the development of character and social behavior.

Kemyt, "compendium," is not strictly a title, but rather the description of a manual produced during the early Middle Kingdom for the use of beginning students. Its contents include a selection of epistolary formulae, a model letter, and an assortment of suitable sentences. It was widely used in New Kingdom schools, as the great number of copies attest. The introduction was found on an 18th Dyn. writing board; the remainder was reconstructed from a large mass of later ostraca. Despite the date of these copies, the pupils were taught to write the text in vertical columns in accordance with the Middle Kingdom custom.

This work was later quoted in the *Satire on the Trades,* the creation of the famous scribe Khety early in the 12th Dyn. pseudonymously attributed to an unknown minor official. Attested by 4 papyri, 2 writing boards, and some 250 ostraca, it clearly outstripped all other texts in popularity. Its theme was new: a glorification of the scribal craft to the disparagement of any other occupations (translation in *AEL* 1: 184–92). Later centuries saw a flood of variations on this topic, and citations from the original work appeared as late as 264 B.C. The theme also inspired Jesus ben Sira, ca. 190 B.C., to compose Sir 38:24–39:11.

Papyrus Lansing is a 20th Dyn. manuscript of one of a dozen or more "miscellanies" which were compiled by teachers. This example includes model letters, a pupil's eulogy of his teacher, praise of the scribal profession, and echoes of the *Satire on the Trades,* with advice to the pupil regarding work habits (translation in *AEL* 2: 168–75).

The so-called *Scribal Controversy* or *Satirical Letter* has been preserved virtually intact on Papyrus Anastasi I and in fragments or excerpts on four other papyri and seventy-three ostraca, all of Ramesside date. The original was probably composed during the reign of Ramesses II. In it a military scribe is mockingly interrogated on his knowledge of subjects such as mathematics, geometry, geography, and military logistics (translated in Erman 1927: 214–34).

Lexicographical lists which we call *Onomastica* were produced in Egypt as in Mesopotamia, differing mainly in their order. They were compiled during the period from the late Middle Kingdom down to the Ptolemaic era, and included meteorological and geographical terms, plants, animals, titles, professions, etc. A New Kingdom example bears the title: "The teaching in order to enlarge the mind and instruct the ignorant to know all that exists." It has been suggested that these lists lay behind biblical passages such as Job 38–39 or Prov 30:24–31 (von Rad 1955).

D. Fables

Literary evidence of fables in Egypt, unlike Mesopotamia, is lacking until the New Kingdom. It is probable that, since fables were primarily an element of folklore, they were transmitted orally and only later began to assume a written form. Support for this view derives from the numerous sketches on papyri and ostraca which depict animals acting as humans, often in satirical situations. These probably represent both beast fables and animal epics. The earliest pictorial evidence begins just before the start of the 3d millennium. Fables were an important medium of entertainment and instruction (Williams 1956; Brunner-Traut 1959).

A wooden label of the 18th Dyn. belonging to a lost papyrus roll bears the legend: "Book of the Sycamore and Moringa." From this we may deduce that plant or tree fables of the contest type were current in Egypt as in Mesopotamia. However, the earliest written fable from Egypt is that of the *Dispute between the Head and the Stomach.* It appears on a very fragmentary writing board of the 22d Dyn. and was clearly for schoolboy use. The protagonists argue their respective merits before a tribunal of thirty judges (see Brunner-Traut 1963: 126, 278–79).

The *Tale of Truth and Falsehood* is inscribed on a 19th Dyn. papyrus. This work, which lacks its introduction, was doubtless originally in oral form. It is an allegorical folktale, and this is the first time that personified abstract concepts were thus employed in Egyptian literature. Truth is blinded by his younger brother Falsehood as the result of a quarrel. Eventually, through the efforts of Truth's son, Falsehood is convicted by a tribunal, blinded, and sentenced to servitude. Thus good triumphs over evil (translation in *AEL* 2: 211–14).

The *Myth of the Sun's Eye* is a lengthy Demotic text with both beginning and ending lost. For it we are dependent on three papyri, one still unpublished, all from the 2d century A.D. An ostracon of the 14th century B.C. offers an unmistakable illustration of the contents and shows that the original form of the work was much earlier. Indeed, after it was rendered into Demotic there must have been several versions or editions, for the scribe provides variant readings and editorial glosses. The mythological frame-story recounts the search for the Eye of Re (i.e. his daughter Tefnut) who had fled south to Nubia. Re's envoy is Thoth, in the guise of a baboon, whose task is to persuade the goddess to return to Egypt. This he does by a series of arguments and blandishments, in the course of which he relates six fables. Two of these turn up in the Aesopic corpus (translation of two fables in *AEL* 3: 156–59; of all in Williams 1956: 19–23). A papyrus of the 3d century A.D. preserves a Greek version of the Demotic text.

A few other Demotic fables survive on scraps of papyrus and potsherds as school exercises. One pottery jar of the 1st or 2d century A.D. records the fable of the *Swallow and the Sea* which has a parallel in Sanskrit literature (translation in Williams 1956: 18–19).

EGYPTIAN RELATIONS WITH CANAAN. The following article is a presentation of the relation of Egypt with Canaan between the Early Bronze Age and the Persian Conquest.

———

A. Introduction
B. The Early Bronze Age (ca. 3200–2000 B.C.E.)
C. The Middle Bronze Age (ca. 2000–1550 B.C.E.)
D. The Late Bronze Age (ca. 1550–1200 B.C.E.)
E. The Iron Age up to the Persian Conquest (ca. 1200–525 B.C.E.)

———

A. Introduction

"Canaan" is used here in its broadest sense to include the Levantine coast as far north as Ugarit (modern Latakia), southern Syria, and all of Lebanon and Palestine. Throughout its ancient history, the normal political structure within Canaan was the city-state, an autonomous unit with its own government, based on an agricultural economy. There were scores of such city-states in Canaan, political unity among them being achieved only by military conquest, usually be foreign powers. Some cities became larger and more powerful than others through trade, treaties, or cultural domination, but the essentially independent city-state remained the rule. Egyptian political structure was the opposite. Forced into cooperation by a single water source, Egypt maintained a united state from the Mediterranean south to Aswan, down the narrow corridor of rich agricultural land fertilized annually by the Nile Flood. The deserts to the east and west of the Nile Valley were, like Canaan, foreign territory. Political unity in Egypt collapsed from time to time, but by and large, the united state existed through most of its ancient history.

Cultural, economic, and political contacts were thus between a united Egypt and the individual independent city-states of Canaan. When the time came, around 1550 B.C.E., for Egypt to create an Asiatic empire, it was created swiftly. The city-states of Canaan had little stomach for unity; the very independence they craved made them easy prey to a whole series of conquerors who came from all

directions. Before 1550 B.C.E., however, relations between the two regions were largely commercial. Egypt normally had an excess of foodstuffs, which Canaan did not. Egypt also had control of the gold mines of the eastern mountains and of the land and sea routes to the Sudan and Ethiopia whence came ebony, spices, and other luxuries. Canaan supplied raw materials Egypt did not possess and, through the Levantine cities, made possible Egyptian participation in international trade.

The chronology of these relations must be given in general terms until the early 1st millennium B.C.E., when written documents are numerous enough to correlate more than isolated events or rulers. Egyptian chronology, upon which that of Canaan depends, is less certain before 2000 B.C.E. than after. At the beginning of the 3d millennium B.C.E., the margin for error is rather large (Hassan 1980; Shaw 1984) but grows much smaller as one approaches the 2d millennium. The Egyptian chronology adopted here is generally that of Trigger et al. (1983).

B. The Early Bronze Age (ca. 3200–2000 B.C.E.)

Contacts between Egypt and Canaan can be discerned in the Chalcolithic Age but were too few and sporadic to be meaningful (Ben-Tor 1982: 4; Kantor 1965: 6–7). Reliable evidence begins to appear in the Egyptian Late Predynastic period and 1st Dyn. (ca. 3200–2890 B.C.E.), contemporary to the Canaanite EB I Age. At this time, there was a rather sudden change only recently defined by new excavations.

Egyptian material, mainly pottery, has been found at several EB I–II sites in southern Palestine, and Palestinian pottery of this period has long been known from Egyptian tombs (Ben-Tor 1982: 4–6; Helck 1971: 33). Of special interest is the site of ʿEn Besor (Gophna 1976), where Egyptian material is more abundant than Canaanite and includes a substantial number of Egyptian Protodynastic cylinder seal impressions (Schulman 1976; 1980). Also new is a series of sites along the northern coast of Sinai, where again Egyptian material is dominant (Oren 1973). Since the Egyptian pottery at both ʿEn Besor and the Sinai sites includes ordinary household ware, it is generally felt that Egyptians resided there.

The interpretation of this and related material varies between Egyptian domination and control over southern Canaan and northern Sinai and the more moderate claim that this is evidence of trade. The much-discussed theory of an Egyptian invasion of Canaan at the beginning of the 1st Dyn. does not seem likely (literature in Ben-Tor 1982: 9). But some kind of military activity against Asiatics in this period is evidenced by small ivory labels portraying Asiatic prisoners and the entry "smiting the Asiatics" for two 1st Dyn. kings on the Palermo Stone (Helck 1971: 15–16; Drower and Bottéro 1971: 357). The location of this military activity was within the Delta itself (Smith 1967) or anywhere east of the Delta. The word *s<u>t</u>.tyw*, "Asiatics," used in these texts may be derived from *S<u>t</u>.t*, an old border town of the Delta, so that the term could mean all foreigners beyond Egypt's eastern Delta frontier, not specifically Canaan. At any rate, it is tempting to relate this Egyptian material to the swift growth of the numerous settlements in northern Sinai noted above.

It is difficult to say what products were involved in this early commercial contact. The seal impressions from ʿEn Besor were used to seal sacks, indicating that Egypt was already exporting grain and other dry products. The Canaanite pottery found in Egypt is of a kind used for transporting liquids, perhaps wine and oil. As for technology, metallurgy must have been brought into Egypt from the metal industry of the Wadi Arabah, active already before the Early Bronze Age (Rothenberg 1972). The long-held view that at least some agricultural techniques were also imported is given support by Conti's study (1978) of Egyptian agricultural terms, many of which are loanwords from Semitic.

The close commercial ties with Palestine during the Protodynastic period apparently ceased before the beginning of the Old Kingdom (ca. 2700–2185 B.C.E.), and, on present evidence, were not resumed during that period (Ward 1963: 20, 25–26; Ben-Tor 1982: 6). The only Old Kingdom contacts with Palestine now suggested are a few military incursions of a temporary nature (Helck 1971: 17–21), and even these may rather have taken place in the eastern Delta or the Sinai coast (Goedicke 1963). This rather surprising situation can be explained by the shift of Egyptian commercial interests during the Old Kingdom to Byblos and southern Sinai, where valuable raw materials could be obtained.

Byblos, already in contact with Egypt before this time, became the focus of Egyptian trade in western Asia from the Old Kingdom on (Helck 1971: 21–24). From here came the coniferous woods of the

Lebanese mountains as well as the oils and resins they produced. The wood itself was in great demand as building timber and for making coffins, chests, statues, and the like. The oils and resins were used in mummification, for perfumes, and in medicine. Through Byblos, Egyptian commercial interests spread indirectly to inland Syria and the Aegean world.

The copper and turquoise deposits of southern Sinai provided another source of wealth not available in the Nile Valley. These mines were first worked by colonists from southern Canaan from the Chalcolithic period to EB II times (Amiran, Beit Arieh, and Glass 1973) and were then exploited by Egyptian mining expeditions from the early 3d to the mid-6th Dyn. (Gardiner, Peet, and Černý 1955). The primary Egyptian interest in Sinai was turquoise, there being no evidence that they ever worked the copper mines there. They may well have traded for copper ingots with the local inhabitants, who had long experience in that industry, but copper was more readily available in the Eastern Desert both in Egypt and Nubia. The latter may have been exploited as early as the Old Kingdom, but this remains uncertain. The mines of the Wadi Arabah were not exploited by anyone after the Chalcolithic period until the late 2d millennium B.C.E.

Hence, the apparent cessation of contact with Palestine seems largely due to the need for raw materials by a swiftly expanding and wealthier Egyptian economy. Palestine, with far less to offer, could not compete and was thus seemingly ignored. But in spite of the lack of direct evidence, it is difficult to believe that all trade contacts were broken. At the very least, Egyptian grain and other foodstuffs must still have been imported since Palestine was a natural market for such products all through Egyptian history.

By the late Old Kingdom, however, most commercial contacts were terminated for some time, due to far-reaching events that overtook both Egypt and Canaan in the period ca. 2300–2000 B.C.E. This period, traditionally designated EB IV and MB I, is being intensively studied through the wealth of new discoveries in Palestine and Syria (Dever 1970; 1980; Gerstenblith 1983).

In Egypt, the gradual transfer of power from the state to the provincial governors and an increasing economic strain brought on the collapse of the central government (Trigger et al. 1983: 175–77). Symbolic of this decline is the fact that the last datable Old Kingdom inscription in Sinai is ca. 2250 B.C.E. By the end of the 6th Dyn., the disintegration of the Egyptian state was complete. There followed a period of over a century of internal strife and competing dynasties until ca. 2050 B.C.E. when unity was again established under the Middle Kingdom. During this same general period, all the known towns and cities of Palestine were destroyed or abandoned. Urban culture disappeared and was replaced by a kind of modified nomadism for over two centuries. Then, roughly contemporary with the rise of the Egyptian Middle Kingdom, urbanism slowly revived in the early Middle Bronze Age. A similar disruption occurred in coastal Syria, though to a lesser degree. There is some evidence that at least a sporadic trade contact was maintained between Byblos and the western Delta (Ward 1971: 49–58).

Until recently, it was generally felt that these events were historically related, the catalyst being an Amorite invasion that brought a new culture to Palestine and coastal Syria and was partially responsible for the fall of the Egyptian Old Kingdom. Both the Egyptian and Canaanite evidence for this hypothesis has been challenged and the whole theory of an Amorite invasion seriously undermined (Dever 1980; Liverani 1973; Ward 1971). The breakdown of urban culture in Canaan is now seen more as a result of climatic change, which brought on a period of desiccation from ca. 2300 to ca. 2000 B.C.E. (Crown 1972). This also affected Egypt, though to a lesser extent (Trigger et al. 1983: 179–83), internal political and economic weakness being the prime causes for the collapse of the Old Kingdom.

C. The Middle Bronze Age (ca. 2000–1550 B.C.E.)

For the period of the Middle Kingdom (ca. 2050–1650 B.C.E.) there is considerable evidence of extensive contacts between Egypt and western Asia, though this is largely restricted to the 12th Dyn., 1991–1785 B.C.E. (Posener 1971; Helck 1971: chaps. 5–10). Both archaeological and textual material of this dynasty attest to Egyptian exploitation of the Sinai mines, a strong cultural and commercial presence at Byblos, and a growing Asiatic population resident in Egypt in various capacities. Egyptian objects, from royal statues to amulets, have been found throughout Canaan, including statuettes and seals of

several Egyptian officials. The archaeological documentation is far more extensive than before, and it is evident that Egypt was very much a part of the east Mediterranean world.

But the nature of the role Egypt played eludes us. The evidence, which is extensive and includes datable texts and objects, remains inconclusive. There is still a wide difference of opinion as to whether Egypt actually ruled Canaan during the 12th Dyn. or only had a commercial interest there. The cautious assessment of Kemp (Trigger et al. 1983: 137–47) is perhaps the best approach.

The problem is both chronological and interpretive. The end of the Middle Bronze Age is fixed by the initial military moves of the 18th Dyn. into western Asia around the middle of the 16th century B.C.E. (Weinstein 1981). But the dates for the beginning of this period and the transitions from one archaeological phase to another are still debated. Lacking a generally accepted solution, the position adopted here is that of Dever, Yadin, and others. The key date in the present context—the transition from MB IIA to IIB—occurred ca. 1800 B.C.E., though different scholars propose this date for different reasons. Thus, the MB IIA period, characterized by small unfortified settlements in Palestine and large urban centers in Syria, was contemporary with the 12th Dyn. The MB IIB period, characterized by large fortified towns in Palestine and major Syrian cities such as Ebla and Mari, falls roughly contemporary with the Egyptian 13th Dyn. (ca. 1785–1650 B.C.E.).

Egyptian literary evidence tends to confirm this. The wanderings of the fugitive Sinuhe in Palestine and southern Syria toward the beginning of the 12th Dyn. finds him among seminomadic tribes in regions which were at least partially sedentary (Posener 1971: 553–54). The Execration Texts, which divide into two collections of the later 12th and early 13th Dyn., are often interpreted as representing political changes in Palestine. The earlier group names only one-third as many Palestinian towns as the later, and this may reflect growing Egyptian trade interests as well as the increasing number of fortified settlements in the late MB IIA and early MB IIB periods (Weinstein 1975: 13). While the import of these texts is still uncertain, they at least prove that Egypt was well aware of events in Palestine and kept rather close track of its northern neighbors.

The interpretive aspect of the problem centers around the statuary and scarabs naming kings of the 12th and 13th Dyn. found in Canaan. There are half a dozen royal monuments, mostly from Syrian sites; half a dozen inscribed private statuettes, mostly from Palestine (Helck 1971: 68); and a little over a dozen scarabs each of kings and officials of these dynasties (Tufnell 1984: pls. 51–53). Very little of this material can be proved to have arrived in western Asia at its time of manufacture: a multiple seal impression of Senwosret I from Gezer (Giveon 1967: 31), possibly scarabs of Senwosret I and II from Ruweisé near Sidon (Tufnell 1984: 152), and three pieces of statuary from Ugarit (Ward 1979). Opinion is divided as to whether all this material should be considered positive evidence of Egyptian control or at least contact during the Middle Kingdom or whether it arrived in Asia at a later date as booty or *objets d'art* (Helck 1976). At present, neither position can be adopted without question. Indeed, far too much has been made of certain of these objects, such as the statuette of the Nomarch Thuthotep found at Megiddo. This, like all other statuary found in Palestine, was discovered in a later archaeological context and is therefore of no use in interpreting foreign relations of the Middle Kingdom.

In spite of modern attempts to defend an Egyptian empire in Canaan at this time, the only hint of military activity is the long known statement of Khusebek that he raided in the district of Shechem in the reign of Senwosret III. The military activity of Nesumontu in the reign of Amenemhēt I is not specifically located but was probably in the desert region east of the Delta (Helck 1971: 42–43). A recently published text (Farag 1980) said to describe Asiatic wars of 12th Dyn. kings is instead a donation stela of the Empire period. Royal annals, the major source for this kind of information, either never existed or have disappeared owing to the dismantling of buildings for later construction. The lack of information on military actions in the north may therefore be due to accidents of preservation.

In attempting to define the relations between the 15th or "Hyksos" Dyn. (ca. 1650–1550 B.C.E.) and the contemporary Canaanite MB IIC Age, one meets similar problems (general survey: Kempinski 1983). There is ample evidence of contact, though the nature of this contact is obscure: was it basically commercial, or was a strong political element involved? Even the origin of the Hyksos rulers is still

debated. Some 18th Dyn. texts and the 3d century B.C.E. Egyptian historian Manetho preserve the tradition of a barbaric invasion of Egypt by northerners at the end of the Middle Kingdom, a view maintained by some modern historians (Helck 1971: 93–94; Giveon 1974; Weinstein 1981: 8–10). However, an alternate view is gaining more general support. The gradual increase in the Asiatic population in the east Delta during the Middle Kingdom created a foreign community of some size. With the weakening of central authority toward the end of the 13th Dyn., these Egyptianized Asiatics usurped political power in the east Delta—as did their 17th Dyn. contemporaries at Thebes—and established the "Hyksos" 15th Dyn. (Van Seters 1966: 121–26; von Beckerath 1964: 123–29; Bietak 1977: cols. 93–94; the 14th and 16th Dyn. never existed). As should be expected, this event was not entirely peaceful, and related groups from southern Palestine may have joined forces with the Asiatics already in Egypt. There is some destruction at Middle Kingdom sites in the eastern Delta, followed by settlements along the Nile fringe with substantial Canaanite MB II Age influence (Bietak 1977: cols. 98–99). In the south, there are hints in contemporary texts of trouble at Thebes (Vernus 1982: 134–35) though this was local and unconnected with events in the Delta.

The geographical extent of 15th Dyn. domination is unknown. Various theories propose anything from an empire stretching from Nubia to Syria to a small east Delta kingdom with vassal states. A contemporary text, if taken literally, places the boundary between the 15th and 17th Dyn. at Cusae, near Assiut. Less sure is the idea that the 15th Dyn. ruled over southern Palestine, a theory supported principally by the numerous scarabs of Hyksos-period kings and officials discovered there (Giveon 1974; Weinstein 1981). These scarabs have a chronological value, but there are many explanations as to why they and hundreds of ordinary ones should find their way to Palestine; they need not be political documents. However, it seems logical that Egyptian rulers of Asiatic origin might find natural allies in Canaan. The character of this alliance remains to be determined.

One factor is significant. Apart from the MB II material along the east Delta fringe, Egyptian culture remained Egyptian and Canaanite culture remained Canaanite. The term "Hyksos" applies only to the 15th Dyn. kings and the contemporary kinglets with Semitic names. There was no "Hyksos people" nor a "Hyksos culture," even though the word is often used in this manner. The "Hyksos period" means only the time of the 15th Dyn. in Egypt and the MB IIC Age in Canaan; the phrase has no ethnic, political, or cultural connotations. A large amount of Egyptian material has been found in Canaan, in particular the ubiquitous scarab, and Canaanite material other than that from the east Delta sites has been found in Egypt (Kantor 1965: 22–23); all this, however, represents only the normal residue of trade.

The major items said to have been imported into Egypt are the Canaanite fortifications typical of the period, the so-called Tell el-Yahudiyeh pottery style, and the horse and chariot. Though statements are still made to this effect, the theory was effectively challenged over thirty-five years ago (Säve-Söderbergh 1951). It is now generally felt, though not without some opposition, that the "Hyksos fortifications" at Tell el-Yahudiyeh and Heliopolis are temple foundations, the Yahudiyeh pottery was introduced before the 15th Dyn., and the horse and chariot do not appear in Egypt until the very end of this period (Helck 1971: 102; Van Seters 1966: 184; Dever 1985). The only really new element in Egypt at this time is the introduction of Semitic deities, chiefly Baal, who was identified with the Egyptian god Seth (Van Seters 1966: chap. 12). Other than this and their Semitic personal names (Ward 1976), the Hyksos rulers maintained the native Egyptian civilization. It has been proposed that a new political form standard in western Asia, the overlord and vassal, was introduced into Egypt at this time (Van Seters 1966: 162–70). However, hints of this political pattern always appeared in Egypt in times of disunity, so it seems more a natural process, dictated by historical necessity, than one that needed foreign inspiration (see HYKSOS).

It is around this time that many scholars place the biblical Patriarchs, though this problem is still being intensively examined and argued with no consensus of opinion. Three recent works which have analyzed the evidence all conclude that the historical setting of the patriarchal narratives is the 1st millennium B.C.E. rather than the 2d as commonly believed (Redford 1970: 241–43; Thompson 1974: 324–26; Van Seters 1975: 309–12). But this is still not a solution, since this does not place the Patriarchs themselves in a specific historical context, only the postexilic version of their lives.

A third chronological possibility is based on a significant point which seems to have been obscured by the very mass of literature on the OT: Joseph lived to see his great-grandchildren (Gen 50:23), and Moses was the great-grandson of Joseph's brother Levi (Gen 46:11; Num 26:58–59). Hence, Joseph could still have been alive when Moses was born, an event which occurred in the fifth generation after Abraham. Now the Hebrews are said to have been associated with construction at Pithom and Ramesses, which Uphill (1968–69) has plausibly identified with Heliopolis and Pi-Ramesse, the latter a new city in the eastern Delta (modern Tell ed-Dab‹a–Qantîr) built primarily by Ramesses II (1289–1224 B.C.E.). It would thus appear that Moses lived during the reign of that king and that the lives of the Patriarchs from Abraham to Joseph spanned the 14th century B.C.E. Again, there is no consensus.

Unfortunately, there is not one unequivocal episode, event, or detail in these narratives which proves when the Patriarchs lived, when Joseph served in the Egyptian court, or when Moses led his followers out of Egypt. Nonbiblical sources provide no certain point of reference prior to the period of the divided monarchy. Even Egypt, with which the Joseph and Moses traditions are so intimately connected, is totally mute with regard to the existence of the Hebrews or any event in which they were involved. The earliest clear Egyptian reference to biblical history is the mention of "the land of the Hebrews" in a Demotic papyrus of the mid-1st millennium B.C.E. (Redford 1970: 201). The appearance of "Israelites" on a stela of Merneptah is almost universally accepted as the sole Egyptian reference to earlier biblical events, but this translation of the term involved is debatable.

On the other hand, there is no reason not to accept an underlying historicity in these narratives. Much has been written, for example, concerning the Egyptian background of the Joseph stories (Vergote 1959; Redford 1970; etc.), and it is quite clear that this background is accurate. The names of Joseph's wife and father-in-law are good Egyptian names. The ring, linen garments, and gold collar given to Joseph when he took office (Gen 41:42) are precisely the gifts bestowed by Egyptian kings on deserving officials, and his approximate Egyptian titulary as Minister of Agriculture can be reconstructed (Ward 1960). That foreigners, even those of low station, could ultimately achieve important positions is confirmed by other documents. Dream omina are well known in Egyptian texts, Joseph's age of 110 when he died is an Egyptian idiom meaning a ripe old age (Gen 50:22), and the embalming and mourning periods of forty and seventy days (Gen 50:3) conform to Egyptian custom. The basic issue, then, is not whether the Patriarchs lived, but when. In spite of decades of intense scholarly endeavor, the question still remains to be answered.

D. The Late Bronze Age (ca. 1550–1200 B.C.E.)

Two new features characterize Egyptian relations with Canaan during the Empire period (1552–1069 B.C.E.): Egypt's political and military domination of the area, and the confrontation with the Hittite and Mitanni Empires. Furthermore, we need to depend less on archaeological material since written records are abundant, including Egyptian royal annals and archives from several Asiatic capitals. While the old commercial ties between Canaan and Egypt continued, the connection is now more a political one, with Canaan of the Late Bronze Age caught between the imperial aspirations of its neighbors.

From the beginning of the 18th Dyn. to the battle of Megiddo (ca. 1468 B.C.E.), Egyptian policy in Canaan was twofold. The initial thrust into Palestine in the mid-16th century was to break the power of the Hyksos allies in that area (Weinstein 1981; Vandersleyen 1971: 30–41), and the succeeding campaigns of Ahmose, Amenhotep I, and Thutmose I in the Byblos area must have been to secure the old center of Asiatic trade (Redford 1979: 274–77). Probing expeditions went down the Orontes Valley and toward the Euphrates, but little territory was actually held. These initial military moves into Syria took place in a period when momentous events were reshaping the historical orientation of that area.

The catalyst was probably the Syrian campaign of the Hittite king Muršiliš I, who, sometime in the 16th century B.C.E., destroyed the important city of Aleppo and went on to sack Babylon as an ally of the Kassites. The latter, tribal groups from the Zagros Mountains, then established their own rule over Mesopotamia which would last over four centuries. This was not the first Hittite incursion into north Syria, but certainly the most decisive (Gurney 1973: 243–51). Internal troubles forced the Hittites off the stage for another century, but the north Syrian kingdom of Yamḫad and the 1st Dyn. of Babylon had

disappeared. The new political power in north Syria became the Hurrians, a people originating in the Caucasus who had been filtering into the region for centuries. By the 16th century, the Hurrians formed a large population group from east of the Tigris to the Mediterranean. Under the rule of an Indo-Aryan aristocracy, they were a dominant element in the Mitanni Empire (Drower 1973: 417–23). The western border of the latter reached to the upper bend of the Euphrates; from there to the sea stood the allied kingdom of Mukiš with its capital at Alalaḫ.

The relation between the campaign of Muršiliš I, the subsequent events in north Syria, and the Egyptian move into western Asia is bound up in the long-standing controversy over the chronology of the period. According to the "middle chronology" adopted in the latest edition of *CAH*, the Hittite campaign took place in 1595 B.C.E., contemporary with the Egyptian 15th Dyn. By the "low chronology," Muršiliš' campaign was in 1531 B.C.E., which would place this major disturbance in north Syria at about the time the kings of the early 18th Dyn. were gaining their foothold in the Byblos region (Helck 1971: 111; Redford 1979: 277–79). The latter date is the more attractive but cannot be proved.

The true beginning of the Egyptian Empire in western Asia came with the reign of Thutmose III (1490–1436 B.C.E.). Having finally thrown aside the "regency" of his mother-in-law Hatshepsut, this king led his army northward, defeated a large coalition of Canaanite cities at Megiddo (1468 B.C.E.), and effectively took control of Palestine. This and subsequent campaigns established Egyptian rule in western Asia up to the borders of the Hurrian states of north Syria and the Mitanni Empire. This Egyptian Empire remained more or less intact until the reign of Ramesses III (1184–1153 B.C.E.). Even during the troubled times described in the Amarna letters of the second half of the 14th century B.C.E., when a new Hittite move into Syria fomented rebellion among Egyptian vassals, only the northern provinces were lost. The Egyptian military response was not negligible (Redford 1973a) and Egyptian garrisons were still maintained at important towns (Pintore 1972).

During the Amarna period (1364–1333 B.C.E.), the aggressive policies of the Hittite king Šupiluliumaš brought about the end of the Mitanni Empire and the rise of Hittite sovereignty in northwest Syria. This policy was continued by his successors so that until the mid-13th century the major power with which Egypt had to contend in the north was Hatti (Spalinger 1979b). Much of the Empire was regained by Sety I (1303–1289 B.C.E.) in a series of campaigns which consolidated Egyptian rule once again throughout Palestine and southern Syria. He fought at least one war with the Hittites but did not achieve his goal of dislodging Hittite forces from the key fortress city of Kadesh. This city roughly marked the boundary between the two powers (Faulkner 1975: 218–21; Spalinger 1979a).

The troubles with Hatti came to a head in the 21st year of the reign of Ramesses II (1289–1224 B.C.E.) when, after sixteen years of warfare, the two powers fought their last battle at Kadesh. The result was a draw, and both nations realized there was little use in further hostilities. A long nonaggression and mutual assistance pact was agreed to, and Egypt and Hatti remained allies until the fall of the latter around 1200 B.C.E. (Faulkner 1975: 226–29; Kestemont 1981).

Still, Ramesses II had to subdue revolts among his Palestinian vassals, as did his successor Merneptah (1224–1204 B.C.E.), indicating that the Asiatic provinces were less easy to control than before. This was but symptomatic of a slowly gathering unrest around the east Mediterranean. Both kings had to repel Libyan tribes attempting to force their way into the western Delta. And at the battle of Kadesh the Egyptian and Hittite armies included mercenaries from the west, the vanguard of a storm which would end both empires and the Late Bronze Age in Canaan.

This was a group of tribes known as the Peoples of the Sea in Egyptian records, though only some were actual seafarers (Sandars 1978). Originating in western Anatolia, the Greek Islands, and perhaps as far away as Sardinia, these tribes moved eastward into the Levant, destroying every state in their path. Their move across Anatolia and the final collapse of the Hittite Empire is described in the archives from Boghazköy. They then moved through Syria and into Palestine and, in the reign of Ramesses III (1184–1153 B.C.E.), they tried but failed to invade Egypt. From Cilicia to Gaza these invaders destroyed the coastal cities, some tribes settling there. The last documents written at Ugarit, actually found in the baking ovens, describe the land and sea war in which that city was engaged just before its fall (Astour 1965).

Cyprus fell to these invaders, and one group, the Pelset, settled on the coast of Palestine, thus giving this region its modern name.

Ramesses III, the last Egyptian conqueror, may have had to deal with a successful rebellion in the Asiatic provinces which had occurred just prior to his reign (Goedicke 1979). He made a valiant effort to delay the inevitable by military campaigns in Palestine and by reinforcing or establishing garrisons there. The pressure from the new invaders and the collapse of effective resistance in the north left Egypt as the only major power to contend with the situation. But internal problems had weakened the state so that with the reign of Ramesses III Egypt ceased to be an international power, its Asiatic empire gone (Faulkner 1975: 244–47).

Weinstein (1981: 12–22) has shown that Egyptian administration in the Asiatic provinces differed somewhat after the Amarna Age from what had been before. During the 18th Dyn., it was sufficient to maintain small token garrisons and resident ambassadors in key cities. In the 19th and 20th Dyn., military occupation was much more evident, and Egyptian temples may have been built at various sites. Royal and private monuments of the Ramesside age are far more numerous than previously. The reason for this change in policy may have been the rise of Hittite power in the north. The 18th Dyn. had had to contend with the Mitanni Empire and its allies, but this was not a difficult problem to overcome. With the Hittite invasion of north Syria during the Amarna period and constant Hittite interference within the boundaries of Egyptian vassals, a stronger Egyptian presence among those vassals was necessary.

Throughout the Empire period there was an intense commercial and cultural exchange. Foreigners came to Egypt in large numbers in many capacities: merchants, prisoners of war, mercenaries, etc. From the time of Horemheb at the end of the 18th Dyn., Egyptian kings often appointed foreigners to high government posts. Children of vassal princes were brought to Egypt to live at court and be educated in Egyptian culture. Temples to foreign deities appeared in Egypt, and a few of these deities gained minor positions in the Egyptian pantheon. A large number of foreign words were borrowed into the Egyptian language, and Egyptian scribes had to learn Akkadian, the international language of the time. Translations were made of Canaanite literary works, and there is some Asiatic influence in art and in craft work.

Contacts went the other way too, of course. Egyptian expeditions regularly went to the turquoise mines of Sinai and the copper mines of the Wadi Arabah, now worked again for the first time since the Chalcolithic period (Rothenberg 1972 chap. 3). The craft of ivory carving, a well-developed industry in Canaan, was strongly influenced by Egyptian originals (Kantor 1956) and Canaanite artists may even have studied in Egypt. Numerous Egyptian words were borrowed into the Canaanite languages, and Egyptian influence has been suggested in the Proto-Sinaitic and Byblos syllabic scripts (Lambdin 1952; Albright 1966; Mendenhall 1985).

E. The Iron Age up to the Persian Conquest (ca. 1200–525 B.C.E.)

From the collapse of the Egyptian Empire in Asia ca. 1150 B.C.E. to the fall of Babylon in 539 B.C.E., the precise political relations between Egypt and Canaan are difficult to define. In Canaan itself, the Lebanese maritime cities maintained a semi-independence though they paid tribute to Assyria and Babylonia from the 9th century on. Coastal Philistia under its Indo-European rulers, the Hebrew state in the hill country, and the kingdoms of Edom and Moab in Transjordan represent the new political structure in Palestine. All these states were subject to conquest from the east and, to one degree or another, were absorbed into the Neo-Assyrian Empire (early 9th century to 605 B.C.E.) and the Neo-Babylonian Empire (605–539 B.C.E.). While the Egyptian state was not passive, for much of this period it was internally divided and played a minor political role in Canaan. Egypt itself was subject to invasion by both the eastern empires as well as its powerful new southern neighbor, the kingdom of Napata in Nubia. At those times when Egypt was a united sovereign state, its foreign policy was basically defensive, and there was an increasing dependence on allies among the Greek cities (Trigger et al. 1983: 337–43).

The old ties between Egypt and Byblos seem to have been greatly weakened. Around 1065 B.C.E., the Egyptian official Wenamon went to Byblos to purchase timber and the rude treatment given him by the Byblian ruler is symbolic of a new attitude toward Egypt (Leclant 1968). Datable Egyptian objects of the period are rare at Byblos, the most notable being statues of three 22d Dyn. kings who ruled in the period

950–850 B.C.E., two of which were further inscribed with Phoenician texts by local kings. Whether these statues represent political, cultural, or commercial relations is still debated (Kitchen 1973: 292, 308–9, 324; Redford 1973b: 15–16).

Egyptian ties elsewhere in Canaan were characterized by interference in local affairs rather than direct action. The only successful military campaigns in Canaan were temporary ventures prior to the appearance of the Assyrians on the scene. From then on, the few Egyptian military raids in the north ended mostly in defeat. It is of interest that the sparse Egyptian records are concerned with Philistia and ignore the Hebrew states. Egyptian connections with the latter are noted only in Assyro-Babylonian and biblical sources, with less trustworthy statements by classical authors.

Egyptian policy toward the Hebrew monarchy vacillated as the situation required. When King David (ca. 1010–970 B.C.E.) conquered Edom, Hadad, the crown prince of that kingdom, sought refuge in Egypt, where he was welcomed and eventually married to a member of the royal family (1 Kgs 11:14–22). This gave Egypt an ally east of the new Hebrew state. Early in the reign of Solomon (970–930 B.C.E.), the Egyptian king Siamon invaded Philistia, sacked Gezer, and gave that city as the dowry of his daughter, whom he married to Solomon (1 Kgs 9:16). Such diplomatic marriages sanctioned treaties between states so that the Hebrew kingdom, now at its strongest, became an Egyptian ally. Toward the end of Solomon's reign, Jeroboam, another fugitive from Hebrew justice, took refuge in the court of Shoshenq I of Egypt (945–924 B.C.E.), the first of the new line of Libyan kings of the 22d Dyn. Like Hadad of Edom, Jeroboam was welcomed and eventually returned to his country to lead a rebellion against Solomon's successor (1 Kgs 11:26–40). This turnabout in Egypt's policy toward Solomon was due to the long militaristic tradition of the Libyans and their desire to help break up the strongest state in Palestine.

In spite of his gesture of friendship to Jeroboam, shortly after the Hebrew monarchy was replaced by the smaller states of Israel and Judah, Shoshenq I embarked on the first major invasion of Canaan in over two centuries (1 Kgs 14:25–26; Kitchen 1973: 294–300). The biblical statement and Shoshenq's own record of this campaign show that his armies went through Philistia, Israel, and Judah. Jerusalem was not taken, as often stated, but paid heavy tribute, including the temple treasury.

During the following two centuries, Egypt was torn by the internal divisions of the 22d to 24th Dyn. and the domination of the kingdom of Napata which placed the Nubian 25th Dyn. on the throne (780–656 B.C.E.). Most of western Asia was absorbed into the Assyrian Empire. Some events of this period—about which Egyptian records are silent—are found in Assyrian and biblical sources. A minor Egyptian campaign into Canaan in 897 B.C.E. was defeated by King Asa of Judah (2 Chr 14:8–14—Eng14:9–15); a small Egyptian contingent joined the coalition defeated by the Assyrians in 853 at Qarqar; in 726 B.C.E., Hoshea of Israel attempted an alliance with "So, king of Egypt" against Assyria (2 Kgs 17:4; Kitchen 1973: 372–75); and in 701 B.C.E., Egypt and Hezekiah of Judah were again defeated by the Assyrians (Kitchen 1973: 385).

For the next fifty years, Assyria and Napata waged war for control of Egypt (Spalinger 1974). The Assyrians invaded Egypt twice with the intent of crushing Nubian control over Egypt, not to occupy the land themselves. These troubles were the impetus for the rise of a native dynasty, the 26th (663–528 B.C.E.), which ceased sending tribute to Assyria, now more concerned with the growing power of the Babylonians and Medes. Egypt regained a measure of influence over Philistia for a while and allied itself with Assyria against Babylon (Spalinger 1977). In the later 7th century B.C.E., with Assyrian power waning, Egyptian campaigns in the upper Euphrates region were beaten back by Babylonian forces. After the campaign of 610 B.C.E., Necho of Egypt was confronted by Josiah of Judah, who was enlarging his territory by absorbing the towns of Samaria. At the resulting battle of Megiddo, Josiah was killed (2 Kgs 23:29). Necho's final Euphrates campaign ended in another defeat in 605 B.C.E. at Carchemish (Jeremiah 46; 2 Chr 35:20), which opened the way for Babylonian moves into Canaan. Ezek 29:19–20 and later sources record Babylonian invasions of Egypt, but the one contemporary cuneiform source which notes an encounter between Babylonians and Egyptians is ambiguous as to the location of these hostilities (Spalinger 1977: 237–38). It is possible that the Babylonians were unable to actually invade the Nile Valley.

Two major events effectively ended Egyptian-Canaanite relations at the political level: the disastrous invasions of Canaan by the Babylonians in the earlier 6th century B.C.E., and the subsequent takeover by Persia, which invaded and annexed Egypt in 525 B.C.E. While the Phoenician cities continued to thrive under Persian rule (Elayi 1980), much of Palestine had been laid waste and, save for a brief period in the early 4th century B.C.E., pharaonic Egypt was finished as an independent power.

Throughout the Iron Age, trade and commerce played a major role in the political and military policies of the larger powers. The cities of the Levantine coast were in the geographical center of the sea and land routes which tied the ancient world together commercially from Europe to Persia and Arabia. As kingdoms and empires were formed, the growing demands of these states required more luxury products and raw materials. The empires came into being to protect these trade routes, capture the sources of raw materials, and collect extensive tribute from conquered territories.

Through all these centuries, the coastal cities of Syria and Palestine were the middlemen between East and West. By the 9th century B.C.E., Phoenician fleets opened up the routes to the west, the ultimate goal being the tin mines of Spain and the rich new markets of western Europe. As the focal point in the international trade between East and West, these cities were a rich prize for whatever empire controlled them. Just as important were their merchant fleets and navies and their expertise as shipbuilders and sailors. None of the oriental empires were really seafaring nations. Control of the trade cities thus meant indirect control of the whole Mediterranean trade structure, as well as experienced naval fleets when war at sea was necessary.

Even though Egypt was a weaker state in the Iron Age, it still attempted to maintain some contacts with the Phoenician harbor cities to the extent that the Assyrians forbade the latter to trade with Egypt. At the same time, Assyria, whose policy was to plunder rather than occupy foreign territories, maintained regular trade connections with Egypt. A desert separated Egypt from Assyrian vassals in Canaan, so the Philistine cities and the nomad sheiks of northern Sinai became the channel through which much-desired Egyptian exports—gold, linen, grain, papyrus—flowed into Assyrian hands (Tadmor 1966; Elat 1978).

Egyptian political influence in Canaan may have been sporadic during the Iron Age, but its artistic influence remained strong. This represents both the continuation of artistic influences begun much earlier and new contemporary ones. The ivory-carving tradition, already prominent in the Late Bronze Age, maintained its Egyptianizing character and was far more widespread (Barnett 1957). Scarabs and seals—imported or copied locally—were still common but with some differences. For example, hard stone was used far more often than previously, and new designs appear: scenes from the Osiris legend on seals made throughout the Mediterranean, and four-winged serpents on a small group of Hebrew seals, both designs of Egyptian inspiration. Such Egyptian or Egyptianizing objects spread from the Levant to Spain via Phoenician trade as well as from as yet unspecified manufacturing centers in Europe (Culican 1968: 50–54). Furthermore, a case can be made for the plundering of Egyptian cemeteries and temples in antiquity with the result that many objects were taken abroad outside the normal channels of trade. Also of Egyptian inspiration are the designs on Phoenician metal bowls, which were likewise a popular item of export to the whole ancient world.

A great deal of study has gone into the search for Egyptian parallels or origins for OT ideas and literary motifs. For example, Psalm 104 is said to be related to the Amarna sun hymns. Further parallels with Egyptian thought are claimed for Job, Ecclesiastes, and Canticles. Some aspects of the Hebrew kingship, including the coronation ritual, the position of the king relative to the temple, and the titles of Hebrew court officials are thought to be of Egyptian inspiration (Grieshammer 1972–73 cols. 163–66). However, such parallels are often illusory. Hymns and prayers to different deities may express similar ideas not through cultural borrowing but because of basic religious patterns common to all ancient cultures. And as Redford (1970: 191–92) has observed, one need look no further than Palestine itself for the origin of the titles of court officials of the monarchy. That there are Egyptian terms in the OT indicates nothing more than the fact that Hebrew shared in the general linguistic interchange of the age. The long-held view that Hebrew monotheism was somehow influenced by Egyptian ideas is incorrect since monotheism was

never part of Egyptian religious thinking until the advent of Christianity. In short, the Egyptian influence in the OT is not nearly as extensive as has been supposed.

Foreigners had long come to Egypt for various reasons, largely economic, but the foreign population was larger and more varied in the Iron Age. A main reason for this was the use of mercenaries in the Egyptian armed forces. This practice began in the 3d millennium B.C.E. and grew proportionately more pronounced as the army expanded. Libyans, Nubians, and Asiatics, many captured in war, provided the bulk of the mercenary forces, but in the Iron Age, Anatolians, Carians, and Greeks were also hired. Many of these foreigners were garrisoned in national groups within Egypt and, on retirement from active service, settled there permanently (Helck 1980).

Greeks were especially welcome and established a large trading colony at Naukratis in the Delta. When Egypt came under Persian rule, a Jewish military colony was set up on the island of Elephantine, opposite modern Aswan. This colony included a temple to Yahweh, the god of the OT. This growing foreign population, centered in the major cities especially in the Delta, helped set the stage for the cosmopolitan age which followed the taking of Egypt by Alexander of Macedon. This event brought on the Ptolemaic period, when Egypt once again became a world power, but that is part of a different story.

WILLIAM A. WARD

EGYPTIAN RELIGION. The religion of ancient Egypt may be viewed in terms of the following categories:

———

A. Polytheism
B. Communal Ritual
C. Divine Revelation

D. Personal Piety
E. Myth and Sacrament
F. Ethics
G. Afterlife
H. Anthropology of "The Soul"

———

A. Polytheism

Though there have been repeated attempts to discern an underlying belief in a monotheistic god behind Egypt's pantheon, the worship of many gods was, with the exception of Akhenaten's reformation (ca. 1350 B.C.E.), never abrogated until the pagan culture ended with the gradual spread of Christianity and the final closing of the Isis temple at Philae in the 6th century C.E. While Egyptian texts occasionally appear to describe a monotheistic god, such instances belong to the phenomenon of henotheism, i.e., reliance is placed on a particular deity. Already at an early date, wisdom texts speak of "the god," thereby creating the impression that there was a sole god; but since these same texts may also name more than one deity, the term "the god" must be understood as an attempt by the writer to make the "instructions" acceptable to a broad audience in various parts of Egypt, where the identity of the major god varied from one locale to the next. Thus the neutral designation "the god" was used, permitting readers to supply for themselves the name of the particular deity whom they deemed supreme (Hornung 1982: 33–65).

The Egyptians organized their deities hierarchically, with the creator assuming the role of king of the gods. According to the Heliopolitan, or solar, version of creation, the Sun God emerged on the primal mound from Nūn, the abyss, and by masturbation or spewing forth created the first pair of deities, Shu and Tefnut (air and moisture). In turn this couple produced Geb and Nūt (earth and sky), from whom issued two pairs of deities, Osiris and Isis, and Seth and Nephthys, whose natures were less elemental and more political-cultural. At Memphis the role of creator was assigned to Ptah, and a spiritual mode of creation by thought (heart) and word (tongue) was stressed. A further elaboration of the solar version was developed at Hermopolis, where attention was given to four pairs of primordial elements that, lying dormant in Nūn, were activated in the production of the Sun God, who emerged on a lotus.

In the New Kingdom, Amon of Thebes was the king of the gods par excellence by virtue of the prominence of this city that gave rise to the 18th Dyn. line of pharaohs. In order to substantiate Amon's primary position, it was customary to link his name with that of the Sun God Re in the syncretistic form Amon-Re. Such "hyphenated" names express the notion that one god was in the other without conveying true unity, since the independent existence of each deity was still maintained. Throughout Egyptian history there was a tendency to produce syncretic deities like Ptah-Sokar-Osiris, but this in no way led to monotheism. There are texts, however, that occasionally treat lesser deities as hypostases of the creator.

In discussing Egyptian religion, some scholars (e.g., Morenz 1964; Assmann 1979) have often distinguished between the immanent and the transcendent in attempting to trace a trend away from the immanence of a god toward an emphasis on the god's transcendence, a trend believed to have come into prominence after the Amarna period (14th century B.C.E.). However, this dichotomy is very much a modern construct and does not necessarily correspond to the realities of a religion which was primarily a cult, not a book, religion (Hornung 1982: 194–96; Finnestad 1985: 104–07, 143–45). If there was anything that provided unity to Egyptian religion, it was not a set of written dogmas but rather the actions of ritual, for basically identical rituals were celebrated daily in temples throughout the land as we know from papyri, scenes, and texts of the ritual in various temples. These rituals, concerned with the care and feeding of images of the gods in the temple cellae, survived to the end of the pagan religion. The primary emphasis on the action of ritual is graphically conveyed in scenes of ritual activity where the liturgist precedes the lector priest, whose recitations accompanied the ritual (Morenz 1973: 224–25).

B. Communal Ritual

An important characteristic of Egyptian religion was its communal nature, which allowed very little room for the convictions of an individual (with the exception of Akhenaten) to affect the faith. In this connection the distinction between a state religion of the temples and popular religion (e.g., David 1982:

143), as though the common people did not participate in the same religion as the elite, deserves reconsideration. The notion that the temple bore only a loose connection with the populace has been fostered by the survival of large temples, such as Karnak and Luxor, without proper recognition that the Egyptian landscape was dotted with myriads of small temples, often only of mud brick, which have largely disappeared in the Nile alluvium and whose existence is only attested by their names recorded in papyri. In small village temples, the cult was performed daily by officiants who had a closer relationship to the community than did the clergy of a huge temple like Karnak. Any Egyptian temple, large or small, housed an image of the deity in whose honor the temple was built, while in the larger temples additional chapels for associated deities provided a sort of family residence. The sanctuary, called "the doors of heaven," frequently was said to rest on the primal mound of creation. Indeed the temple was the image of the cosmos, and what took place within its walls was of cosmic import. According to the dedicatory inscriptions of the New Kingdom, even a king's mortuary temple served as a place of community worship and prayer.

In theory the pharaoh was the sole liturgist in all temples, but in practice this role was delegated to priests functioning as royal deputies. In depictions of cultic activities it is the king who is universally shown officiating, and it is to him alone that the recorded speeches of the gods are directed. As the theoretical high priest, the king acted as the corporate personality of the society. The purpose of the ritual was to ensure the god's continued presence on earth, thus guaranteeing the bounty of the land and success in state endeavors, both at home and abroad. Tutankhamen's (Amemophis IV) restoration inscription claims that, under Akhenaten, when the cult images were destroyed, neither gods nor goddesses could respond to people's prayers and even the army could achieve no success abroad.

The actual performance of the cult in the holy of holies, to which only the initiated had access, did not involve large segments of the community, except insofar as subordinate personnel of the temple estates provided a continual supply of foodstuffs for the offerings. Once these provisions had been ritually offered to the deity, they were consumed by the priests and temple staff. A provision in the ritual sanctioned this form of remuneration. Whereas men of the community had their secular occupations to perform, their wives often served as chantresses, singing hymns at the temple service each day. Women's participation in religion and religious education at home was perhaps more significant than the average man's, for the doxology of the hymns they sang served to define the nature of the deity.

During the New Kingdom there was a trend away from traditional hymns that expressed the god's activities in highly symbolic language (such as the daily course of the Sun God and his vanquishing the demon of chaos, Apophis) toward hymns that describe the deity in more rational terms as an almost transcendent creator and sustainer of the world. After the Amarna period, greater stress was placed on the supreme god as a controller of time and human destiny. Nonetheless, the older liturgical hymns, full of imagery, continued to be used in conjunction with the celebration of the cult. There was no either/or proposition demanding that a decision be made in favor of the god's transcendent or immanent nature.

C. Divine Revelation

For the New Kingdom there is considerable information on the participation of the community in temple religion. The Egyptian week was of ten days' duration, with the last day being the day off from work, thus providing the opportunity for people to participate in religion at the temple. On this feast day, as well as on other designated festivals of the year, the populace assembled either in the area before the temple pylon or within the courtyard of large temples to witness the public epiphany of the deity, whose image was housed in a shrine on board a portable bark or in a palanquin provided with carrying poles. The lavishly embellished bark of the god, who for nine days had rested in his dark sanctuary, was carried forth into the forepart of the temple in an "appearance." It is significant that the Coptic Christian word for religious feast, *ša,* was identical to the ancient word for this divine epiphany. While the bark was in procession, people rendered adoration to the god. The decade feast was also the occasion when individuals submitted petitions to the divine bark demanding positive or negative responses, which were indicated by motions of the bark as it was borne on the priests' shoulders. In such oracular proceedings a broad range of issues were decided, including the divine appointment of the king at Karnak, as well as

judicial and even mundane economic matters, such as the purchase of a goat. What is important to note about this divine intervention into the human world is that the proceedings took place within the context of community and not in the inner sanctum of the temple. Indeed the priests who carried the god's bark were not professional priests but lay priests, men of the community who periodically served a tour of duty in the temple for one month each of the three seasons.

Another, more personal, manner in which the divine might become manifest was through the medium of a dream. From several surviving accounts of such dreams, the deity seems to appear in the form of a cult image, who issues commands to carry out some project. In the pharaonic period these dreams occurred by chance, but in the Greco-Roman period people would sleep within the temple compound in order that a deity might appear to them in a dream.

D. Personal Piety

Although Egyptian religion was strongly communal, a degree of personal piety is attested at a very early period, when personal names like "He whom I have begged for" and "Praised be Ptah" bear testimony to a deity's response to a person's prayer for a healthy child (Brunner 1983: 105). Shortly before the Amarna period there is increased evidence for human submission to a god as a controller of destiny in requests for divine aid, and the Ramesside Age provides abundant testimony for the ethical instant when individuals acknowledge to a deity that their bodily suffering is due to a transgression against the god, to whom they beg for mercy. While it has been surmised that this brand of personal piety owed its origin to the presence of Canaanites in Egypt (Vandier 1949: 215, 233), it is more plausibly linked with indigenous developments regarding the nature of god and human dependence on the god's will.

E. Myth and Sacrament

The position of narrative or epic myth in ancient Egypt is somewhat peculiar. For the pharaonic period, the rarity of mythos in the strict sense of a narrative account and the unmythological nature of many of the deities is striking. In contrast to ancient Mesopotamia and Greece, mythical events were rarely depicted in art, and the ancient Greek historian Herodotus dwells more on Egyptian festivals than mythos. In fact, mythos appears to be a latecomer into Egyptian religion, not really taking form until the collapse of the Old Kingdom and the weakening of the divine kingship, at a time when the concept of a mythical past developed. To narrate the actions of gods demands a linear concept of the past, whereas divine time in Egyptian thought was predominantly cyclic. The oldest body of religious texts, the Old Kingdom Pyramid Texts, are not myth, nor do they even need be considered as based on underlying narrative myths. Rather, they are sacramental in nature, in that the ritual actions were, through the accompanying words, identified with actions in the divine world. There was thus an ontological, not temporal, distinction between the human realm and the realm of gods. This sacramental quality of religious ritual continued to remain important even after narrative myth made its appearance at a time when a deterioration of social conditions enabled one to view the past as distinct from an altered present. The germs for the development of a narrative myth such as that of Horus and Osiris, can be discerned in the Pyramid Texts; with the end of the Old Kingdom the formulation of episodes of a mythical story was taking place. For a good part of Egyptian history, myth remained in the realm of what was orally related about the gods, as distinct from what was written down. When we do find stories about the gods, especially from the New Kingdom, the accounts are episodic and lack clear, consistent motivation of character. In the pharaonic period, myth tended to be more closely associated with the world of the sorcerer's curative spells, which were based on mythological precedent, than with temple religion (Assmann 1977; 1982).

Much of what is loosely described as myth in ancient Egypt is really more a mode of iconic thought, not involving mythical events set in the past but ever repeating cosmic events, where beginning and end concur ad infinitum. Such is the nature of the Sun God's diurnal voyage by boat across the sky and through the underworld, where his daily death results in a union with Osiris, god of the dead, to achieve revivification and rebirth. Scenes and texts in the New Kingdom royal tombs dwell at length upon the activities of the Sun God in the twelve hours of the night.

F. Ethics

While Egyptian religion was very much a nationalistic one with no attempt made to proselytize, there existed a tolerant attitude toward foreign deities. Despite repeated assertions in royal inscriptions concerning foreigners being ignorant of god, in actuality Asiatic deities, such as Astarte, Baal, Rešep, and Anat, were accepted in Egypt in the course of the New Kingdom. An image of the goddess Astarte of Nineveh was sent to aid the ailing king Amenhotep III, and full testimony to the power of Asiatic deities is evident in Rameses II's treaty with the Hittites. In Egypt, Asiatic deities were worshiped by Egyptians in accordance with Egyptian cult practices. In the New Kingdom a universal concern for the well-being of foreigners is ascribed to gods like Amun-Rē or Akhenaten's Aton, and quite remarkable is the blessed afterlife granted to Egypt's traditional enemies in the Book of Gates, a theological composition inscribed in royal tombs after the Amarna period.

In considering the problem of ethics in ancient Egypt, it should be stressed that the wisdom texts were not regarded as sacred literature. Although portions of the biblical Proverbs betray the influence of the Wisdom of Amenemōpe, the Egyptians did not include Wisdom Literature in the category of "god's word." What they regarded as divine in the ethical realm was the concept of Maat, which encompassed the notions of truth, harmony, and world order as it should be. A principle of cosmic dimensions, regulating the functioning of nature, society, and an individual's life, Maat was the daughter of the Sun God and, being a goddess, even possessed a cult. The king's offering of the icon of Maat to the creator was a symbolic expression of the king's role in preserving the harmony of nature and society. Imbued with Maat, writers of wisdom texts articulated a principle that gave rise less to laws than to the resolution of contention.

Ethical behavior entered into the judgment of the dead, where one's good qualities were assessed against one's wrongs. In the Book of the Dead, the heart is shown being weighed against the feather of Maat, while a negative confession was recited by the deceased before a tribunal of netherworld judges. The heart scarab, placed on the deceased's chest, was designed to prevent the heart from adducing adverse testimony or, in other words, to prevent one from being overburdened by a heavy sense of guilt. It would be wrong to reduce Egyptian religion to the realm of ethics or to magical practices designed to circumvent the consequences of sin, for Maat was a gift of the god, instilled in people's hearts to enable them to lead a good life. Participation in religion by the community on the last day of the ten-day week and during other feasts that stressed renewal was one means whereby Maat was revealed, as hymns expressed the god's triumph over the forces of evil and chaos that menaced the world order.

G. Afterlife

A remarkable feature of Egyptian religion was its complex system of beliefs regarding the afterlife. Since Egyptians gods were themselves subject to death and rebirth, and some even possessed cemeteries in the parts of Egypt, the fate of humanity had a powerful precedent. One aspect of the afterlife was the simple continuation of existence in the tomb. Already in archaic times natural dehydration of the body in a shallow grave suggested the permanent existence of the deceased, but as tombs became more elaborate and natural desiccation of the corpse ceased to be effective, mummification was developed as a means of preserving the body. Initially only the king and elite had their bodies mummified, but after the Old Kingdom mummification was gradually extended. The superstructure of the tomb contained a cult place where offerings could be made to the deceased's spirit, which was believed to emerge from below through a false door. Sometimes elaborate contracts were drawn up with mortuary priests to ensure the perpetuity of the cult. In the absence of real offerings, the recitation of an invocation offering was considered a valid means for satisfying the deceased's needs.

But there was more to the afterlife than continued existence in the tomb. In the Old Kingdom the king's afterlife involved his spiritual participation in cosmic processes such as the course of the Sun God or the motion of the stars. At first only the dead king became identified with Osiris, lord of the netherworld; but with the collapse of the Old Kingdom, royal funerary prerogatives were gradually extended to deceased commoners, whose names were preceded by the epithet Osiris. Funerary texts that had been for the dead king's use now became the domain of a broader segment of the population. Many new spells were composed, inscribed in the interior of coffins or, later, on rolls of papyrus, known as the Book of the

Dead. Included in this funerary literature were spells effecting the deceased's identification with some of the highest gods, such as Rē, Atum, and Horus. The myth of Osiris's murder, the finding of his body and revivification by Isis, and the posthumous procreation of their son Horus had an especial appeal. At Abydos, the burial place of archaic kings and Osiris, cenotaphs were erected along the processional route of the god Osiris, enabling the commoner to participate in the celebration of the god's triumph and renewal.

H. Anthropology of "The Soul"

The anthropology of the deceased's being was complex. Besides the mummy resting permanently in the tomb, there were several spiritual elements. The *ka* was a dynamic vital force, formed at one's birth. After death it rejoined the body in the tomb and emerged through a false door to receive offerings. It was that element of the personality that related to society, for statues of the deceased in tomb chapels or even temples served to invoke within the beholder's mind the *ka*-image of the deceased. The *ba* was a manifestation of power, sometimes rendered by "soul," which seems to have existed in one's lifetime but after death became that portion of the psyche capable of participating in broad cosmic processes. As a human-headed bird it flew up the burial shaft from the mummy to enjoy the little garden pool outside the tomb, or it could ascend to the sky and travel with the Sun God. The *akh* was a spirit, something like a ghost, that came into being only after death and could exert influence upon a living person. In response to malevolent actions by an *akh,* the Egyptians frequently wrote letters to the *akh* of a deceased person urging it to desist. The netherworld tribunal was composed of many *akh*s presided over by a high god like Rē, and legal action against an offending *akh* could be taken in such a court.

The question arises why the Egyptians, who were keenly aware of the plundering of tombs and the destruction of mummies, continued the practice of mummifying the dead. Since mummification and interment were ritual acts, it may be that the performance of the rites of embalming was of paramount importance in making the deceased person an Osiris and that what eventually happened to the mummy in the context of human linear time was of secondary consequence. The deceased Egyptian, from the religious point of view, survived less in human time than in two types of divine time: the *ba* in divine cyclic time and the corpse in the realm of *djet*-eternity, a sort of area of timelessness and no change.

It has generally been maintained that the religion of pharaonic Egypt lacked the mystical element discernible in Hellenized Egyptian cults. However, there are certain indications that at least some spells of the Coffin Texts and the Book of the Dead were available to the living for their use. The theological texts from the New Kingdom royal tombs contain indications that knowledge of these texts permitted the living person to participate in the Sun God's journey through the netherworld (Wente 1982). Such evidence together with the probability that priestly initiation did exist in pharaonic Egypt suggests that there may be a genuine Egyptian basis for the later Hellenistic mystery cults.

EGYPTIAN THEOLOGY. See MEMPHITE THEOLOGY.

EGYPTIAN, THE (PERSON). A revolutionary leader for whom the Apostle Paul was mistakenly identified (Acts 21:37–39). This person is mentioned only once in the NT, and twice by Josephus. Although the man's name remains unknown, it is noteworthy that the Roman tribune interrogating Paul—Claudius Lysias (Acts 23:26)—recalls "the Egyptian" as the man "who recently stirred up a revolt and led the four thousand men of the Assassins out into the wilderness" (Acts 21:38). Doubtless reflecting a Roman view of the Egyptian's activities, Lysias' comment about him is coupled with Paul's request that he be allowed to address those who had just been trying to kill him (Acts 21:30–32). The tribune's response, "Do you know Greek?" (v 37), indicates that at least in his estimate the Egyptian was uneducated and therefore to be reckoned among barbarians.

Whatever his native tongue, the Egyptian could evidently communicate with the common people in Palestine since he had aroused interest to such a pitch that at least 4,000 followed him into the desert. An allied issue is whether he was really a person whose home was Egypt or whether he was a native of Palestine who had returned to stir up trouble. While the matter cannot be settled conclusively either way, it is noteworthy that, on the whole, Jews from Egypt lived either in Alexandria or in one of the other major Hellenistic cities and thus were not limited to speaking the common Egyptian dialect. Whatever his national home, the man must have been a Jew, since it is highly unlikely that contemporary Judeans would have given ear to a non-Jew. Further, Paul's insistence that he himself was "a Jew from Tarsus" (v 39), as distinct from Egypt, may support the notion that the Egyptian was also Jewish.

Of equal interest is the association—at least in Lysias' view—of the Egyptian with the Sicarii or "knife men," so called because of the Latin term (*sica*) for the knife that they used in assassinations (Foakes-Jackson and Lake 1933: 277). In a relevant passage in which Josephus discusses not only the rise of the Sicarii before the Jewish War (A.D. 66–70) but also the flourishing of false prophets and the activities of an unnamed Egyptian (*JW* 2.13.3–5 §254–263), there is no connection made between the "Egyptian false prophet" and the knife men. However, Josephus' description is sufficiently close to the one of Lysias reported in Acts to allow the rather firm conclusion that the same Egyptian was meant. In this connection, it is necessary to discount assessments that have deduced a dependency of the Acts account on Josephus' report (Foakes-Jackson and Lake 1922: 357–59).

It is essential to note the points of agreement between Acts and the *Jewish War* passage of Josephus: these include references to (1) the Egyptian himself, (2) the insurrection which he led, (3) the Sicarii within the context of the discussion, and (4) the desert. To be sure, not all details agree, and Josephus offers more information. For instance, in Acts, Lysias mentions 4,000 followers of the man; Josephus puts the umber at 30,000 (possibly explained by the difference between the Greek letters *delta* [=4] and *lambda* [=30]). In addition, the account in Acts says that the Egyptian led his adherents "into the desert" whereas the report in the *Jewish War* claims that he led them "out of the desert." Josephus alone recorded that they ascended the Mount of Olives, evidently traveling through the Judean wilderness and climbing the hill from the east. Moreover, he recounted that this host was about to attack Jerusalem and subdue it, liberating it from the Romans. He then explained that the procurator Felix (A.D. 52–60 [?]), anticipating the Egyptian's moves, sent a contingent of infantry which scattered and slaughtered his followers, although allowing him to escape.

Josephus wrote another narrative about this Egyptian and his activities approximately 20 years later (*Ant* 20.8.6 §169–72). In this report, Josephus adds that, rather than taking Jerusalem by storm from the Mount of Olives, the Egyptian's followers were supposed to enter the city after their leader had miraculously brought down its walls at his command. Even though this detail is not mentioned in either Acts or the *Jewish War,* it fits with what is implied in both: namely, that the insurrection instigated by the Egyptian had strong ties to religious motives (Horsley and Hanson 1985: 160–72). First, the mention of the desert as the region of the man's operations conforms to the widely shared notion that the desert was a place of

spiritual renewal and manifestation. Second, in both passages from Josephus, the immediate context is formed by notations about the rise of "deceptive" prophets in the years just before the war with Rome. While Josephus' obvious purpose was to discredit these persons as panderers of false and misleading hopes to the Jewish populace, it is significant that he used the Egyptian as his principal illustration of the practical failures of this sort of prophetic movement. Third, the belief of the Egyptian's followers that he could miraculously bring down the walls of Jerusalem—much as Joshua and the Israelites had done at Jericho (Joshua 6)—exhibits a further link to religious sentiments. Fourth, according to Josephus, one of the major purposes of such prophetic pretenders was to demonstrate to believing followers the "tokens of deliverance" from Roman rule (*JW* 2.13.4 §259) which had grown in its oppressive character under Felix. These signs or tokens of freedom were doubtless understood to have come about by divine assistance (cf. the mention of "marvels and signs that would be wrought in harmony with God's design" in *Ant* 20.8.6 §168). Sixth, the spiritual roots of this concept of deliverance were likely planted in their most enduring form by Judas the Galilean, whose principal rallying cries were those of freedom and zeal, ideas based in the Bible and promulgated by him in the aftermath of the taxation census conducted by Quirinius in A.D. 6 or 7 (*HJP²* 1: 381–83; 2: 602–6; Hengel, 229–50).

It is clear, then, that the unnamed Egyptian Jew had won a wide following among Judeans, who believed him to have prophetic powers, had led followers from the desert to the top of the Mount of Olives with the intent of capturing Jerusalem, and had then been driven into hiding by Felix's troops, who crushed his army. Following this defeat, the tribune Lysias apparently mistook Paul for this Egyptian revolutionary who, seeming to have returned to the scene of his activities, had been seized by people who knew him and were bent on killing him to avenge the deaths of his followers.

At this point, one final issue must be addressed: why did the author of Acts believe it necessary to record the dialogue between Lysias and Paul? Would it not have been sufficient merely to narrate Paul's rescue from the mob? The answer doubtless lies in Luke's interest in dissociating Christians from Jews and Judaism, especially in the aftermath of the Jewish War (Hänchen *Acts* MeyerK, 622). He took great pains both throughout his gospel and in Acts to demonstrate that anyone associated with the movement inaugurated by Jesus was a strict adherent to social and religious norms and, moreover, was never an instigator of public or political disorder, as were many Jews both inside and outside Palestine (Luke 1:6; 2:22, 24, 39, 51; etc.; Acts 13:45, 50; 14:2, 19; 17:5–8; etc.). The fact that Paul was absolved of charges against him (Acts 23:29; 25:25–27; 26:31–32) serves to buttress this point. Furthermore, in contrast to those who participated in the Jewish War against Rome, this last observation implicitly affirmed Paul's loyalty as a Roman citizen. Additionally, Paul was to be distinguished from the Egyptian, whose character was insinuated by Lysias to be uncivilized, underscoring the implied compatibilities of Christian norms with Roman law and society, particularly as they were personified in Paul. Moreover, as every Christian reader of Acts was aware, Paul was the true representative of the Lord; others who represented different spiritual interests, including the Egyptian, were to be understood as somehow misled and misleading.

EGYPTIANS, GOSPEL OF THE (NHC III,*2* and IV,*2*). This gnostic tractate bears no relationship to the encratite *Gospel of the Egyptians,* of which a few quotations survive in the writings of Clement of Alexandria. The gnostic *Gos. Eg.* is extant in two independent Coptic translations from Greek found among the Nag Hammadi codices (see NAG HAMMADI [CODICES]). Both versions survive only in fragmentary form. The one in NHC III originally comprised pp. 40,12 to 69,20, but pp. 45–48 are now lacking while others in the first part of the tractate suffered lacunae. NHC IV,*2* covers pp. 50–81, which are all in a poor state of preservation. Its value lies in supplementing NHC III,*2* where it is fragmentary or

corrupted. More than 90 percent of *Gos. Eg.* survives in one or the other version. Both versions are preceded by a copy of *The Apocryphon of John* (NHC III,*1* and IV,*1*).

There are no indications that the Gk text behind the two Coptic versions differed significantly, but IV,*2* appears to reflect the original Greek more accurately than III,*2*. Both are written in Sahidic with IV,*2* conforming more closely to the standardized form of this Upper Egyptian dialect. See also LANGUAGES (COPTIC).

The title *Gos. Eg.*, by which the tractate has become known, is taken from the colophon which is attached to III,*2* but absent in IV,*2*. More appropriate is the title found in the subscript and at the end of the colophon: *The Holy Book of the Great Invisible Spirit.* This title was derived from the opening line of the tractate. The colophon existed already in Greek. Its author, a scribe whose spiritual name was Eugnostos and fleshly name Gongessos, Christianized the title using the word "gospel" for holy book. It appears that the Egyptian attribution was also based on the opening line; the uncertainty is due to a lacuna. The colophon is far more Christian in character than the tractate and appears to have a monastic setting.

Gos. Eg. does not conform to any established literary genre. It is an esoteric writing which treats themes typical for mythological Gnosticism. Its content can be divided into four parts. The first (III 40,12–55,16 = IV 50,1–67,1) presents the origin of the heavenly world. From the great invisible spirit emanate a trinity of powers—the Father, the Mother Barbelo, and the Son. To each of these an ogdoad of powers is attached. Then follows a description of the Doxomedon aeon, the heavenly throne room, in which the thrice-male child of the great Christ resides. Other prominent figures in the Pleroma are the male virgin Youel, Adamas, the great Seth, and the four lights Harmozel, Oroiael, Davithe and Eleleth.

The second part (III 55,16–66,8 = IV 67,2–78,10) describes the origin, preservation, and salvation of the race of Seth. Because of the hostility of Saklas and his evil archons, Seth comes from heaven and puts on Jesus as a garment in order to save his race. Baptism has a prominent place in the salvation of the gnostics.

The third part (III 66,8–67,26 = IV 78,10–80,15) is hymnic in character; it is followed by a brief section (III 68,1–69,17 = IV 80,15–81,end) which tells how the book was written by Seth and was hidden in the mountain Charaxio until the time of the latter-day gnostics.

Gos. Eg. bears obvious similarities to such other representatives of mythological Gnosticism as *Ap. John, The Hypostasis of the Archons* (NHC II,*4*), *On the Origin of the World* (NHC II,*5*), *The Sophia of Jesus Christ* (NHC III,*4*), *The Three Steles of Seth* (NHC VII,*5*), and *Trimorphic Protennoia* (NHC XIII,*1*). Though these writings share various themes and mythologumena, the very different use they make of these makes it doubtful that they come from the same sectarian background. The assumption of the ancient heresiologists that such writings represent the teachings of gnostic sects can no longer be taken for granted. It is more likely that they are part of a literary rather than a sectarian phenomenon. Such speculative literature is best placed on the fringes of Christianity among heterodox ascetics who long remained outside of the control of orthodoxy.

The scholarly interest in *Gos. Eg.* focuses on the hymnic material scattered throughout the document and on the role of baptism. This has given rise to the claim that it represents a gnostic "baptismal service book" (Layton 1987: 101). However, there is no hint in the text that it was meant for cultic purposes and it is hard to imagine that it would lend itself to this. The references to baptism and the use of hymns and glossolalia are not out of place in such an esoteric, mystical writing. There is no need to pose a sectarian, cultic setting for which there is no corroborating evidence.

Since III,*2* and IV,*2* are to be dated shortly before 350 C.E., and are copies of Coptic archetypes, the Gk text is most likely earlier than 300 C.E. Certain traditions incorporated in *Gos. Eg.* were known already to Irenaeus in the late 2d century. Nothing in the tractate betrays its actual author and original provenance.

FREDERIK WISSE

EHI (PERSON) [Heb *ʾēḥî* (אֵחִי)]. The sixth in a list of ten sons of Benjamin, according to one Benjaminite genealogy (Gen 46:21). It is widely agreed that the four names "Ehi, Rosh, Muppim, and Huppim" evidence a mechanical corruption of "AHIRAM, Shephupham, and Huppim," the third, fourth, and fifth sons of Benjamin in Num 26:38–39 (e.g., Speiser *Genesis* AB, 343).
SIEGFRIED S. JOHNSON

EHUD (PERSON) [Heb *ʾēhûd* (אֵהוּד); *ʾēḥûd* (אֵחוּד)]. **1.** Second of the "saviors" or "major judges" in the book of Judges (3:12–30; 4:1; see also 1 Chr 8:6). The narrative portrays Ehud as a military man, trained in left-handed combat (Judg 3:15; 20:16; cf. 1 Chr 12:2), who escorts Israel's tribute to EGLON, the corpulent Moabite king, at Jericho. Dismissing his detachment after one such payment, Ehud sneaks back to the court and promises Eglon a confidential revelation. Eglon in turn dismisses his attendants, who leave him alone with Ehud in the audience hall. Thereupon, Ehud springs up the steps of Eglon's throne-platform (*ʿăliyyat hammĕqêrâ,* "the chamber atop the joists," 3:20), and he locks its double doors behind him. From his right thigh, not his left, where the retinue and the king would normally expect to see it, Ehud plucks a sinister shaft—short, without a crossbar, tailored to his task. Declaring that his revelation is in fact a divine one, he punches the dagger into the king's ample belly. The fat enfolds the haft (v 22). Death is instantaneous; no blood seeps out. And the king's anal sphincter releases the contents of his intestines onto the floor (v 22).

Ehud escapes from the locked throne-platform by some extraordinary route, denoted by the *hapax legomenon, misdĕrôn.* Possibly, this is the loggia of the throne-platform; more likely, it is the space *beneath* the joists (cf. Ar *sadira,* "to blind"). In the latter case, his egress would have been the hole, used for excretion, that led to the space below the throne-platform. Ehud then negotiates his way back into the area of the vacant audience hall that lies outside the throne-platform and its structure. His emergence through the doors of this chamber signals to the retinue that the audience is at an end. They resume their stations in the hall while Ehud makes for the hills. (For this reconstruction see Halpern 1988a: 45ff. or 1988b: 37ff.) Other translations of *misdĕrôn* favor an architectural term meaning simply "porch," "portico," or "vestibule" (see, e.g., Moore *Judges* ICC, 99; Kraeling 1935: 208).

Eglon's courtiers deduce from the fact that the throne-platform doors are locked (from inside) that the king must be relieving himself. The odor of his excrement perhaps encourages them in their conviction; they wait, at all events, a considerable time (vv 24–25). Eglon's overlong occupation, however, engenders consternation. In the end, they fetch the keys to the throne-platform, and discover their liege, expired on the floor. Meanwhile, Ehud has had time to rally Israel's forces, seize the fords of the Jordan, and engage the Moabites. The latter, fleeing homeward across the river, are cut down to a man.

The name Ehud ("where is the glory?") follows the pattern of Ichabod ("where is the glory?" 1 Sam 4:21), Jezebel ("where is the exalted [one]?" if this is not a collapsed form of Ish-zebel, "the exalted one is present!"), and perhaps Ayyah (2 Sam 3:7; Gen 36:24). Names compounded with the element *-hûd* are common in the Benjaminite genealogies (1 Chr 7–8). The patronym Gera is in fact the name of a clan (1 Chr 8:3, 5, 7). Indeed, one Benjaminite clan may have taken its name from Ehud himself (1 Chr 7:10). If so, this was presumably the community in which the memory of his exploits was most conscientiously preserved.

2. Son of Bilhan and a descendant of Benjamin through Jediael (1 Chr 7:10). The description of the Jediael clans as skilled in warfare (v 11) may indicate a connection between this Ehud and the famous

judge (see #1 above). The inclusion of the Benjaminite genealogy in vv 6–12 appears out of place considering its fuller treatment in chap. 8. In addition, the exclusion of Zebulun and Dan from the genealogies in 1 Chr 2:1–9:1 has led to the suggestion that their omission is due to textual corruption, having perhaps originally occupied the place of Benjamin's list in chap. 7. (See the discussion in Williamson *1 and 2 Chronicles* NCBC, 47–8, 77–8.)

JOHN KUTSKO

EIN EL-JARBA. See JARBA, ʿEIN EL-.

EIN YAEL PROJECT. See REPHAIM, VALLEY OF.

EKER (PERSON) [Heb *ʿeqer* (עֶקֶר)]. The son of Ram, the grandson of Jerahmeel, and a direct linear descendant of the patriarch Judah by some five generations (1 Chr 2:27). Noth (*IPN*) has suggested that the solitary noun form may suggest "offshoot" or "member" of a stranger's (*ger*) family (Lev 25:47), and therefore the proper name should reflect something of the social debasement discoverable in such names as Jathom (orphan), Machir (sold), Acubah (forsaken), and Jerushah (adopted). It is true that both Hebrew and Sumero-Akkadian names (Holma 1914; Rasmussen 1981: 435, 479–80; Stamm 1939: 248, 264–68) embrace those that reflect a demeaning social rank or physical liability, but the case is less than clear in interpreting the meaning of the name Eker. Nothing suggests anything irregular in his genealogy except a contested etymology of the Hebrew root *ʿqr*.

———

A. Biblical and Extrabiblical Sources

Ekron was one of the capital cities of the Philistine Pentapolis, and is first mentioned in the Bible as part of "the land that yet remains" to be captured by the Israelites (Josh 13:2–3). Subsequently, Ekron is cited as defining the N border of the territory of Judah (Josh 15:11) and as one of its cities (15:45–46). In Judges (1:18), Judah is accredited with taking the areas awarded it in Joshua, including Ekron and its territory. However, it is also stated in Judges (1:19) that "Judah took possession of the hill country, but could not drive out the inhabitants of the plain, because they had chariots of iron." Apparently, based on this later verse, the LXX of Judg 1:18 makes the correction that Judah did *not* conquer the Philistine cities. The assignment of Ekron to Judah may indicate a late addendum in the time of Hezekiah. Another source lists Ekron in the territories of the tribe of Dan as marking its S boundary (Josh 19:43). This may reflect the tribal boundary system of the time of David and Solomon. After the ark of the covenant was captured by the Philistines, they passed it through the Pentapolis members, including Ekron (1 Samuel 5–6). Israel later recaptured the cities which the Philistines had taken (1 Sam 7:14); it also was part of the battle scene following the David and Goliath epic (1 Sam 17:52). In the 9th century B.C.E., Ahaziah, king of Israel, sent ambassadors to "Baalzebub the god of Ekron" to inquire regarding the prospects of

recovery from his illness (2 Kgs 1:2–3). In the 8th century B.C.E., the prophet Amos threatened Ekron and its sister cities with destruction (1:8).

Extrabiblical references to Ekron—*ʾam-qa- (ar)ru- (na)*—first appear in the 8th–7th century B.C.E. records of the Neo-Assyrian kings. Sargon II's 712 B.C.E. siege of Ekron is depicted on a wall relief in his palace at Khorsabad. The royal annals describe the capture of Ekron and the restoration of Padi as king of Ekron in 701, in the course of Sennacherib's suppression of the rebellion led by Hezekiah, king of Judah. In the first half of the 7th century B.C.E., the annals mention Esarhaddon calling upon Ikausu, king of Ekron, together with his other vassals, to provide building materials and their transport to construct his palace in Nineveh. In 667 B.C.E., Assurbanipal required his vassal Ikausu, king of Ekron, among others, to support his military campaign against Egypt and Ethiopia.

Apparently, in the second half of the 7th century B.C.E., the Philistine Pentapolis became a Tetrapolis, as inferred from the prophetic forecast of the destruction of Ekron together with Ashdod, Ashkelon, and Gaza (Gath is no longer mentioned; Jer 25:20; Zeph 2:4; Zech 9:5–7). This imminent destruction of the Philistine cities is supported by the late-7th-century Aramaic Saqqarah Papyrus or Adon Letter, in which Adon, the king of one of the Philistine city-states, appeals to the Egyptian pharaoh for military aid against the forces of Babylon. A recent interpretation of a demotic line on the letter suggests that Adon was king of Ekron (Porten 1981). The actual destruction of Ekron may be indicated in the Babylonian chronicle that describes a 603 B.C.E. campaign by Nebuchadnezzar against a city in Philistia.

Ekron is not mentioned again until the Hellenistic period, when, in 147 B.C.E., Alexander Balas grants Ekron (Accaron) and its toparchy to Jonathan the Hasmonean as a reward for his loyalty (1 Macc 10:89; *Ant* 13.4.4). The toparchy of Ekron is also cited as being torn from Ashdod (1 Macc 14:34). The latest references to Ekron are in the 4th century C.E. by Eusebius, who records a village of Gallai near Accaron (*Onomast.* 11.6–7) and a large village of Jews who lived at Accaron near Azotus (*Onomast.* 11.9–10).

B. Identification

Ekron is identified with Tel Miqne (Khirbet el-Muqannaʿ; M.R. 135131) 35 km SW of Jerusalem and 4.5 km E of Kibbutz Revadim. The tel is situated on the W edge of the inner Coastal Plain, the natural and historical frontier zone that separated Philistia and Judah, overlooking the ancient network of highways leading NE from ASHDOD to GEZER and inland via the Nahal Soreq to BETH-SHEMESH. One of the largest Iron Age sites in Israel, Tel Miqne is composed of a 40-acre lower tel and a 10-acre upper tel. See Fig. EKR.01. The lower tel is flat, almost square, and at its N end has a 2.5-acre mound-shaped acropolis. A 10-acre settlement exists off its NW slope. The tel's low profile rises 108.25 m above sea level, only 7 m above the surrounding plain. The true height of the tel is masked by a heavy buildup at its base of post-Byzantine alluvium from the downflow of the Nahal Soreq.

Khirbet el-Muqannaʿ, probably deriving its name from the nearby wadi, first appears in Conder and Kitchener's survey (*SWP* 2: 425) as Khirbet el-Mekennaʿ, and in Ch. Clermont-Ganneau's *Archaeological Researches in Palestine* (1896: 195) as el-Muknaʿ. In 1924, W. F. Albright (1924: 8; 1925: 5–6), the first to survey the site in modern times, identified Muqannaʿ with biblical Eltekeh in the territory of Dan, based on his view of the site as a small ruin. In 1951, the Circle for Historical Geography reaffirmed Albright's identification. As a result, in 1953 the Israel Government Names Committee officially designated the site as Tel Eltekeh. In 1964, the same committee changed the name to Tel Miqne, a neutral designation in which the consonants of the Arabic Muqannaʿ were transcribed into Hebrew letters. This was done in the light of new evidence from J. Naveh's 1957 survey of Muqannaʿ, and his conclusion that its identification as Eltekeh, one of the less important towns in the region, was inconsistent with the large size of the site, which included the previously unrecognized 40-acre lower section of the tel. Also, in the same year, B. Mazar identified Eltekeh with Tel esh-Shalaf, based on the survey of that site by J. Kaplan. Naveh's survey of Muqannaʿ, and his analysis of the architectural, ceramic, biblical, extrabiblical, and topographical evidence, led him to conclude that Muqannaʿ should be identified as Ekron. Subsequent discussion in the literature and the recent excavations support Naveh's conclusion.

C. Excavations

In 1981, a long-term joint American-Israeli interdisciplinary research project was initiated at Tel Miqne under the direction of T. Dothan and S. Gitin. The main focus is on the process of urbanization and the interaction between Philistines and Israelites during the Iron Age.

To establish the stratigraphic profile of the site, two pilot seasons of excavation were conducted in 1981 and 1982. From 1984, when the first of the five major seasons of the Phase I excavations was initiated, through 1988, the major emphasis was on the investigation of the Iron Age town plan, its fortifications, industrial zones, and inner city. In 1985, a survey of industrial installations and architectural remains was conducted by D. Eitam and N. Aidlin.

1. Chalcolithic through Middle Bronze Age. The Chalcolithic, EB I–II, and MB I–III periods are only attested by ceramic evidence in mixed fills and mud bricks from occupation phases of the LB and Iron Ages. MB I sherds form the largest group within this sample. While sherds from all of these periods were found in every field of excavation, the majority were from the sondage on the NE acropolis, which has provided the most complete stratified profile of the tel (Field I).

2. Late Bronze Age. A sequence of three LB strata was exposed only in the sondage on the NE acropolis. As a result, the extent of the LB city has yet to be determined. However, LB sherds have been recovered from every field of excavation, suggesting that the city may have extended over most of the tel.

The earliest stratified remains, stratum IX, are dated to the 15th–14th centuries B.C.E., based on the high percentage of imported wares, including Base Ring I, Monochrome, and White Slip II. A two-room structure, containing a substantial industrial installation in the final phase of this stratum, was destroyed by fire. Above it, stratum VIIIB of the 14th–13th centuries B.C.E. produced domestic areas with a large plastered vat and a burial site with a faience seal, an Egyptian 19th Dyn. scarab, and an Egyptian-style calacite tazza (footed goblet). The pottery, in addition to local Canaanite wares, included Mycenaean IIIB and Cypriot imports, and an Egyptian-style "beer bottle" and bowl.

Stratum VIIIA included a sequence of four mud-brick structures which are associated with the culmination of the LB at the end of the 13th century B.C.E. The main room of one of the structures contained tuyeres, indicating industrial bronze activity. Krater fragments of Anatolian Grey Polished ware were found in this area. This ware hints at the establishment of new cultural connections at the end of the LB. The international character and wide-ranging trade and cultural contacts of the Canaanite city during the LB are indicated by the diverse group of ceramic imports found in these strata.

3. Iron Age IA–B. *Field I.* See Fig. EKR.02. In the first third of the 12th century B.C.E., an abrupt transition occurred in stratum VII. Fortifications, industrial and elite areas, and new material culture elements appear, the latter suggesting a new ethnic element—the Philistines, one of the Sea Peoples—with an inclination to recreate the environment of their Aegean home.

The stratum VII city was fortified by a 3.25-m-thick mud-brick wall, found along the slope of the NE acropolis. Adjacent to it were a number of different types of kilns, of which the best preserved had a unique square shape. Associated with it was a large quantity of locally made Mycenaean IIIC:1b pottery and several Aegean-type figurines. The Myceneaen IIIC:1b pottery assemblage, which made up at least 50 percent of the ceramic sample, included monochrome decorated bell-shaped bowls, kraters, stirrup jars, beer jugs, and the plain-ware kalathos.

The dating of the stratum VII city wall is based on a chain of stratigraphic and ceramic evidence. The wall, cut into the last LB phases, was built of mud bricks and the latest pottery in evidence was LB II. The earliest possible floors that could be associated with the wall, although the connections were disturbed, were those of stratum VII, dated by the Myceneaen IIIC:1b pottery to the first quarter of the 12th century B.C.E. The latest pottery of the stratum VI revetment, built up against the city wall, was Philistine Bichrome ware. The slope wash from the stratum VI revetment, in which the Iron II strata III–I mud-brick city wall was founded, contained no post–Iron I pottery.

Stratum VI, in which the first Philistine Bichrome ware appeared, is dated to the last two thirds of the 12th century B.C.E. New kilns appeared, and next to one was an ivory iron-knife handle with a ring-shaped pommel, one of four found on the site. A new building complex was built, remaining essentially unchanged through the next stratum. One of the rooms had an architectural plan associated with cultic

traditions, including a stone pillar base, a pit with a large kalathos, and a bovine scapula. This room, which was on the periphery of the city, may have been one of the first shrines to be established in Philistia by the Sea Peoples/Philistines. In stratum V, the first half of the 11th century B.C.E., the shrine room had a plastered floor with installations, votive vessels, kernoi, and several incised bovine scapulae, known from contemporary shrines in Cyprus. An adjacent area yielded Ashdoda-type figurines and a lion-headed rhyton. Stratum IV was identified by floor fragments and red-slipped-pottery forms of the 11/10th century B.C.E.

Field III. In stratum VI, the mud-brick city wall was extended to the S crest of the tel as part of a massive fortification system which included an offset platform and revetment. The latest pottery from the mud bricks of the city wall and on the floors which ran up to the inside face of the city wall was Philistine Bichrome ware, dating the fortifications like the revetment in Field I to the last two thirds of the 12th century B.C.E. The fortifications continued in use in stratum V, and one room built up against the city wall produced a spiral gold ring. The thick white plaster which covered the fortifications and the rooms built behind them was typical of all the buildings on the tel of the late 12th century through the 11th century B.C.E. No doubt in this period the Iron I city covered the entire 50 acres of the site. In stratum IV, the 11/10th century B.C.E., the fortifications were strengthened with stone towers. The city wall was cut back, and a new series of rooms were built up against it. One of these, containing a crucible with traces of silver, was found in a large installation lined with *hamra,* a red, sandy plaster, suggesting the existence of a metal industry on the periphery of the city. An ivory knife-handle with a ring-shaped pommel, similar to the one in Field I, was found in the debris above this installation.

Field IV. In stratum VI, a large, well-planned mud-brick building (4112) was constructed, dated by its Philistine Bichrome pottery to the 12th century B.C.E. In stratum V (the first half of the 11th century), another monumental building (4111) was built on huge stone foundations, 1–2 min height, and was set into building 4112. Possibly a palace with two shrine rooms, it measured 15 m × 16 m and was part of a larger complex. The building's plastered mud-brick walls were preserved to a height of 3 m and a width of 1.20 m. The main entrance from the N led into a large, partially covered hall (D), with benches along its S wall and two stone pillar bases flanking a round, well-constructed hearth with a pebble base. Hearths are an important feature in the Aegean and on Cyprus, particularly in the megaron plan, in which they are central architectural elements. They are rare, however, in Canaan. The only other hearth of this type was found at Tel Qasile, also a Philistine site with Aegean connections.

Three rooms of approximately equal size opened onto the hall (D). The northern room (A) contained three superimposed floors, the upper with a plaster installation, the middle with a wall bench and round, conical, and pinch-shaped unperforated loom weights, and the lower with a gold-leaf object and an ivory earplug. The central room (B) seems to have been the focus of the building. Opposite the entrance was a plastered mud-brick *bamah* (altar), which continued in use throughout all phases of the building until it was abandoned at the end of stratum IV. The room contained a rich assemblage of Philistine Bichrome pottery, an ivory knife-handle similar to the ones in Fields I and III, three bronze eight-spoked wheels, and a frame fragment originally belonging to a wheeled stand of the type known from Cyprus in the 12/11th century B.C.E. The southern room (C) had a small mud-brick *bamah,* on which was found a large iron implement, 16.5 cm in length. The associated floor contained Philistine Bichrome pottery, and a complete iron knife with bronze rivets and an ivory handle with a ring-shaped pommel similar to the ones in room B and in Fields I and III. The knife has cultic connotations and Aegean and Cypriot parallels (Dothan 1989: 154–63). It is part of an assemblage of iron objects found throughout the site in the Iron Age I period that represents the largest concentration of iron objects at any one site in Philistia. On the floor of room C there were also an Aegean-type bronze cauldron handle, a bronze spear butt, and a unique, double-human-headed bronze peg. The cultic character of rooms B and C reflects a continuation of the local Canaanite tradition and also the tradition known from Cyprus at Enkomi and Kition, and in the Aegean at Phylakopi and Mycenae.

In stratum IV, the architectural plan of building 4111 continued in use with some minor changes. The floors of the building's final phase were covered with red-slipped bowls stacked one upon the other,

flasks, chalices, and miniature vessels of a votive character, including pomegranate-shaped vessels and kernos fragments. The Philistine ceramic tradition is represented only by debased bichrome decoration and forms, accompanied by red-slipped and Cypro-Phoenician wares of the late 11th/early 10th centuries B.C.E. In room A, a cache of unique objects, including a stone baboon statuette, earplugs, faience pendants and rings, a decorated ivory lid, and a beautifully carved human head of ivory, link Ekron to the 21st Egyptian Dyn. The peak of the early Iron Age city, reached in stratum IV, was accompanied by the loss of the uniqueness of its material culture, as Egyptian and Phoenician influences had their effect on art and cult practices. In the last phase of stratum IV, the large well-planned and well-fortified urban center of Ekron, featuring industrial and elite areas, and a material culture with international affinities, came to a sudden end. With it also came an end to the early period of Philistine occupation. Afterwards, most of the city was abandoned and not settled again until the 7th century B.C.E. The reasons for this abrupt transition probably relate to Egyptian and Israelite military campaigns, which drastically affected the geopolitics of the region and altered the occupation pattern of Philistia.

4. Iron Age IC–II. *Fields I and VII.* At the beginning of the 1st millennium B.C.E., Ekron shrank from 50 to 10 acres and was restricted to the upper city, leaving the lower city unoccupied. This radical change reflects the United Monarchy's ascendancy over the Philistines in the 10th century B.C.E. and Ekron's diminished status in the Iron IC and IIA periods. The reduction in size of the city is supported by extensive stratigraphic data from the upper and lower cities. However, the evidence for the upper city from the 10th through 8th centuries B.C.E. is based on a limited sample from the sondage on the NE acropolis. Thus, while the excavated data are secure, the following conclusions based on that data are only tentative.

In accordance with the city's smaller dimensions in the post–stratum IV, 11th/10th century B.C.E. period, perhaps as early as the 10th century, a new mud-brick city wall was built at the bottom of the slope of the acropolis. Attached to the wall was a 7-m-wide mud-brick tower faced with large blocks of ashlar masonry, in a header-and-stretcher construction. On top of the acropolis, a stratified sequence of floors and ceramic evidence assigned to strata III–IIA seems to indicate continuous occupation from the 9th through the 8th centuries B.C.E. The main ceramic forms are coastal, with some typical Judean types, like the late shallow cooking pot, the everted-rim bowl, and the plain-rim small hole-mouth jar. In stratum IIA, which may be dated to the second half of the 8th century B.C.E., a citadel tower built of boulder-sized stones and a stone-lined drain were constructed. Two *lmlk*-stamped jar handles that were found on the slope—one with the inscription *lmlk hbrn*, "belonging to the king of Hebron"—can be ascribed to stratum IIA, the period during which Hezekiah, king of Judah, probably took control of Ekron.

It was only at the very end of the 8th century B.C.E., when Philistia came under the control of the Neo-Assyrian empire, that Ekron experienced new physical growth and again became an important city-state. At the beginning of the 7th century B.C.E. in stratum IC, the mud-brick city wall was rebuilt and a new citadel tower was constructed, as well as an industrial zone of olive oil installations. The upper city continued to be occupied through stratum IB until the end of the 7th century B.C.E., when it was destroyed and abandoned.

Fields II, III, IV, and V. In the lower city, the broad sample of evidence and identical stratigraphic profile in all fields of excavation provide a sound basis for the conclusions that follow. In stratum I, in addition to occupying the upper city, Ekron expanded onto the lower city and beyond the limits of the mound itself. After a long gap in occupation of ca. 270 years, stratum IC, a fortified urban industrial center, was founded in the 7th century B.C.E. directly on the Iron Age I fortifications and buildings of stratum IV. Stratum IB, continuing the general plan of stratum IC, had an enormous quantity of restorable pottery, sealed below a massive destruction debris. It was distinguished from stratum IC by architectural alterations, the narrowing of the city gate entrance, and superimposed floors. This stratigraphic division is further defined by the reuse of elements of stratum IC oil installations, by large perforated stone weights, in the construction of stratum IB buildings, and by the discarding in stratum IB of stratum IC industrial equipment. For example, a huge olive-crushing basin and an olive press were buried in a pit beneath a stratum IB olive oil installation. These phenomena, which also indicate some reduction in oil production

in stratum IB, can be associated with the end of Assyrian rule and the reinstatement in Philistia of Egyptian hegemony at about 630 B.C.E., the date suggested for the division between strata IB and IC. It is assumed that the diminution in oil production was caused by the transition in political authority, resulting in a loss of Assyrian and Assyrian-controlled Phoenician markets and their extensive distribution system. The dating of the stratum IB destruction to the 603 B.C.E. campaign of Nebuchadnezzar to Philistia is supported by ceramic evidence, which includes the En Gedi V metallic ware and Mesad Hashavyahu types of cooking pots, the flat-based mortarium, the balloon bottle, and the East Greek skyphoi, which first appeared in the last quarter of the 7th century B.C.E. Stratum IA, found only in the lower city, was built in part over the destruction debris of stratum IB and also coexisted with its exposed remnants. It was a random, unfortified settlement with at least one structure similar to an "Assyrian" open-courtyard building. Stratum IA is dated to the early 6th century B.C.E., based on the ceramic evidence which continued the stratum IB coastal tradition and exhibited post–7th century forms, like the cyma-shaped, pointed-base sausage jars. Following stratum IA, the entire tel was abandoned until the Roman period. Evidence for the Roman, Byzantine, and Islamic periods was found only in the small, mound-shaped acropolis isolated at the N end of the lower city (Field V). This acropolis was formed solely by the occupation levels from these periods, the earliest of which was built directly over the stratum IB 7th century B.C.E. destruction.

The town plan of the 7th century strata IB-C city was well conceived and well constructed in a system of stepped-down terraces. Its best-preserved features belong to stratum IB. Designed in four zones, the city had specific districts for fortifications (Fields II, III), industry (Field III), and domestic and elite living areas (Fields IV, V).

The fortifications include a double stone-wall system—the upper wall on the crest of the slope and the lower wall at its base—with a long line of stables running between them. In the SE corner of the tel, a series of insets/offsets were connected to the upper wall, apparently the foundation for a bastion. The city gate, located in the center of the S face of the tel, consisted of a tower, three piers, and two cells, and was protected by a large gatehouse. The gate has much in common with Judean examples from Gezer and Lachish, as well as Philistine Ashdod.

The industrial zone, used primarily for olive oil production, was composed of a series of buildings located in a belt extending around most of the tel behind the fortifications and in an area off the NW slope of the tel. In the main excavation area (Field III), this zone had two major subdivisions located on either side of a well-constructed street. The rectangular-shaped industrial buildings had a tripart division with an olive oil production room, a storage/work room, and an anteroom which opened onto the street. The most complete building, immediately adjacent to the gate, contained in the oil production room an olive oil installation with a large, rectangular crushing basin, two pressing vats, carbonized remnants of a woodbeam, eight perforated stone weights, 108 restored pottery vessels, and 34 conical ceramic storejar lids, as well as a bronze juglet, a cosmetic palette, and a Phoenician-type figurine. See Fig. EKR.03 The work/storage room of this building contained 88 restored vessels, among which were large jars with circular holes used in the olive oil separation process. A storejar hidden below the floor contained a cache of eight large, well-preserved iron agricultural tools. This room also had a stone niche with a four-horned altar. The anteroom contained a large number of loom weights and pottery vessels for food preparation. In the industrial zone, more than 600 vessels have thus far been restored from the excavated areas, and at least one four-horned altar has been found in each industrial building.

The olive oil industry was the dominant feature and the chief stimulus for the phenomenal physical and economic growth of Ekron in the 7th century B.C.E. Initially established in stratum IC, the oil industry was probably created as a direct result of the stability produced by the *Pax Assyriaca* and the commercial interests of the expanding Assyrian empire. The 102 olive oil installation units thus far excavated or found on the surface of the tel, and associated with stratum IB, indicate that in antiquity Ekron was the largest olive oil industrial center in the ancient Near East. These installations, representing only a part of the potential sample, had the capacity of producing at least 1,000 tons of olive oil annually, one fifth of Israel's current level of export production (see Eitam and Shomroni 1987).

The extensive evidence of loom weights found throughout the industrial zone suggests that a second industry existed at Ekron for the production of textiles. Since olives could be pressed for only four months a year, a second industry probably existed to make efficient use of the large industrial plant during the remaining eight months of the year.

The domestic district was just N of the industrial zone. Here, buildings, courtyards and floors produced installations and pottery associated with domestic activities. The elite zone, continuing the Iron Age I tradition, was located in the center of the lower city (Field IV). It consisted of a large complex of at least four buildings, with a different plan than that of the industrial zone. So far, fifteen rooms have been excavated, including courtyards, storage areas, and living quarters, with no indication of industrial activity. Only this zone had Assyrian ceramic forms and East Greek skyphoi, as well as the highest percentage of decorated vessels and small closed and open ceramic forms. It also contained two unique large caches of silver jewelry and two small, well-worked four-horned altars.

The material culture of Ekron in the 7th century B.C.E. belongs primarily to the Philistine coastal tradition. Just over 83 percent of the ceramic evidence is coastal, 7 percent is Judean, 9 percent is common to the entire S, and 0.5 percent represents N ceramic forms. Typical of the coastal tradition are pointed-base juglets, hammer-head rim kraters, and small, incised and carinated bowls. The ceramic assemblage also includes twelve chalices—three with painted, triangle decoration, only paralleled at Tel Batash–Timnah, a daughter city of Ekron—and nine chalices with relief leaf decoration, not usually found in Judah. Another type of artifact, the four-horned incense altar, usually associated with Israelite religious practice of the Iron IC–IIA period, is unique to Ekron in the 7th century B.C.E. Ten examples have thus far been found. They do not exist elsewhere in Philistia, nor in Judah in the 7th century B.C.E. (Gitin 1989: 52–67). The three inscribed stone *shekel* and *bekah* weights from Ekron, while characteristic of Judah, are also known in Philistia. The same is true of the two words in paleo-Hebrew letters found on two storejars in the elite zone: *bt,* indicating volume, and *dbl,* possibly referring to figs. Only two Judean-type female figurines were found in stratum IB. Among the rich assemblage of small objects of ivory, faience and shell amulets, and figurines, many were Egyptian or showed Egyptian influence. Especially significant are the inscribed limestone sistrum (a musical instrument) and a scarab of the 26th Egyptian Dyn. This phenomenon is consistent with the coastal tradition in this period when Philistia was under Egyptian control.

The current excavations at Tel Miqne have demonstrated that the site was settled before the founding of Philistine Ekron at the beginning of the Iron Age; the urban center of Ekron evolved through a four-stage process of growth, contraction, regeneration, and partial abandonment, reflecting its changing role as a border city on the frontier separating Philistia and Judah; and the material culture of the Philistine coastal tradition was maintained throughout Ekron's 600-year history.

EL-PARAN (PLACE) [Heb *ʾêl pāʾrān* (אֵיל פָּארָן)]. Place "on the border of the wilderness" reached by Chedorlaomer and his allies after they crossed (from the N) Mount Seir (Gen 14:6). From there they turned back and came to "EnMishpat, that is, Kadesh" (Gen 14:7). These data make it certain that El-Paran corresponds to Elath on the Gulf of Aqabah (Sinus Aelaniticus) in the southernmost point of Edom (Seir) bordering on the wilderness of Paran. This leg of the itinerary of the four kings reproduces, in reverse order, the route of the Israelites from Kadesh to Moab according to Num 20:22; 21:4, 10–13; and Deut 1:46–2:8 (note "in the direction of the Red Sea," 2:1, "turn northward," 2:3, and "away from the Arabah road from Elath and Ezion-geber"). The term *ʾêl (ʾyl)* in the composite name El-Paran—QL Gen Apocryphon, *ʾyl prn*—is a masculine variant of *ʾêlāh* or *ʾêlat* and means a large tree, like an oak or a terebinth, often a landmark and an object or reverence. LXX translated it *tereminthos tu pharan* "the terebinth of Paran." Because of Jewish opposition to the adoration of sacred trees, Targum Onkelos rendered *ʾêl pāʾrān* by *mêšar pāʾrān* "the plain of Paran," and the Palestinian Targum (Cod. Neofiti) by *gbwlʾ dprʾn* "the border of Paran." This was followed by Vg: *campestria Pharan.*

ELA (PERSON) [Heb ʾēlāʿ (אֵלָא)]. The father of Shimei, the governor appointed by Solomon over the administrative district of Benjamin (1 Kgs 4:18). The name Ela, which is also found in the Samaria Ostraca (Reisner, Fischer and Lyon 1924: 236), is formed from the common Semitic term for deity *(ʾēl)* with a vocalic ending, perhaps serving as a vocative (*IPN,* 38). The Massorah Parva on 1 Kgs 4:18 is keen to point out that this is the sole instance in the Bible where *ʾēlāʿ* appears with a final *ʾalep.* The homonymous name written with a final *he* (RSV Elah) probably has a different etymology.

DAVID A. GLATT

ELAH (PERSON) [Heb ʾēlâ (אֵלָה)]. One of the eleven "tribal chiefs" *(ʾallûpîm)* of Esau/Edom (Gen 36:41; 1 Chr 1:52). This list of chiefs is probably an addition originating with the Priestly source, while the 1 Chr 1:51b–54 list represents a shortened version of it. Six out of the eleven (Timna, Alvah, Jetheth, Oholibamah, Kenaz, and Teman) are already recorded in the older geneological tradition of Genesis 36 prior to the list of vv 40–43 (cf. 1 Chr 1:36–41). Although the names Magdiel and Iram cannot be classified with certainty, Pinon and Mibzar are likely place names. Elah may, of course, be understood as a hypocoristic personal or tribal name, but it is more probable that it is a place name analogous to Pinon and Mibzar. It is probably identical to Elath and ought to be sought near present-day ʿAqaba.

ULRICH HÜBNER

ELAH, VALLEY OF (PLACE) [Heb ʿēmeq hāʾēlâ (עֵמֶק הָאֵלָה)]. The place where the Israelites under the command of Saul were encamped in the face-off with the Philistines which resulted in David's slaying of Goliath. This event is recorded in 1 Samuel 17, and the place name is mentioned in 17:2 and 17:19. The valley of Elah is later recalled as the place where these events occurred in 1 Sam 21:9, when David is fleeing from Saul and requests help from Ahimelech, the priest of the city of Nob. At David's request, Ahimelech gives him the Bread of the Presence and Goliath's sword. That these mentions of the valley of Elah, along with David's first display of heroism, occur at the beginning of David's relationship with Saul and as David is fleeing Saul, is an example of the artistry of the compiler of these stories about the rise of David and the early days of kingship in Israel. The name Elah means "Terebinth," a kind of deciduous tree noted for its longevity (*BDB* 18). It is often translated as "oak" (so RSV, Gen 35:4, for instance). The name of the place where David slew Goliath, then, is "the Valley of the Terebinth." It is identified with modern Wadi es-Sant ("Valley of the Acacia"), about 15 miles WSW of Bethlehem (see *IDB* 2: 70; McCarter *1 Samuel* AB, 290).

JEFFRIES M. HAMILTON

ELAM (PERSON) [Heb ʿêlām (עֵילָם)]. 1. The first of five "sons" of Shem (Gen 10:22). Elam appears as a personification of the land of Elam in the Table of Nations. See ELAM (PLACE). The appearance of the name Elam among Israelites in the following occurrences may be related to the international nature of the periods when the name is used, the time of David (if occurrence 2 is to be dated from that time) and that of the return from the Exile. Especially for the latter, it might not be surprising to find figures bearing the name of their place of Exile (cf. however Clines *Ezra Nehemiah Esther* NCBC, 49).

2. Fifth son of Meshelemiah of the Korahites, one of the gatekeepers appointed by David (1 Chr 26:3).

3. A son of Shashak, son of Elpaal, son of Shaharaim and Hushim in Moab, of the tribe of Benjamin (1 Chr 8: 24). This Elam may be identified with Elam (4) below. Rudolph (*Chronicles* HAT, 77) has

suggested 1 Chronicles 8 to be a list of various families of Benjamin dating from the reign of Josiah or from the postexilic period.

4. The head of a clan from which 1,254 people returned from the Exile to Jersualem with Zerubbabel (Ezra 2:7; Neh 7:12; 1 Esdr 5:12). A group of seventy males from this clan returned with Ezra under the leadership of Jeshaiah son of Athaliah (Ezra 8:7; cf. 1 Esdr 8:33, where Jeshaiah is the son of Gotholios). A member of this family, Shecaniah son of Jehiel, was the first to confess to the sin of marrying foreign wives after Ezra's speech and a group of six men from the family of Elam are named among those who made sacrifice and expelled their foreign wives (Ezra 10:2, 26; 1 Esdr 9:27). Elam is also named among the heads of the people who make covenant with God (Neh 10:15—Eng 10:14).

5. The head of a clan from which 1,254 people returned from the Exile to Jerusalem with Zerubbabel (Ezra 2:31; Neh 7:34). Described as the "other Elam" to distinguish him from the Elam of Ezra 2:7 and Neh 7:12; the fact that the number of returnees is the same for both families has led to the identification of the two figures (Gunneweg *Ezra* KAT, 60). However, the combined number of returnees from the families of both (the other) Elam and Ono is 725 in 1 Esdr 5:22.

6. One of the priests involved with Nehemiah in the thanksgiving celebration at the dedication of the walls of Jerusalem (Neh 12:42).

RICHARD S. HESS

ELAM (PLACE) [*ʿêlam* (עֵילָם)]. ELAMITES. The Elamites called their country *Haltamti* (or *Hatamti*), a word that means "the country (of the) lord," from which is derived the Akkadian word *Elamtu.* The Sumerians designated this region by the ideogram NIM, which means "high" or "raised." This name is rendered in Hebrew by *ʿêlām* and in Greek by *aylam,* whereas in Achaemenid inscriptions composed in Old Persian, this province is called *Hujā* (or *Huvjā*), that is to say Susiana. It is mentioned in several late biblical texts (Isa 21:2; Jer 25:25; 49:34–39; Ezek 32:24; Dan 8:2; Ezra 4:9; Acts 2:9).

A. Geography

The site of Susa, in the modern Iranian province of Khuzistan, furnishes the major part of our documentation of the Elamite civilization; Elam was thus for a long time confused with Susiana. Today recent research permits us to better define the geography of this country, whose boundaries varied over the course of the three millennia of its history. This confusion was even easier, given that the word Elam had for the ancients two different meanings. In the strict meaning of the term, Elam corresponded more or less to the present province of Fars and had Anšan (Tell-i Malyân, in the area of Persepolis) for its capital. In a larger sense, the word designated a large part of the Iranian plateau to which Susiana had been politically attached during certain epochs. At the end of the 3d millennium and at the beginning of the 2d, when cuneiform inscriptions (found for the most part in Mesopotamia and in Susiana) become explicit, Elam appears as a federation of different geopolitical entities that successively assume domination over the whole (Awan, Šimaški, Anšan). At this time, Elam stretched to the E of Mesopotamia from the Caspian Sea to the Persian Gulf, and seemed to have for its eastern limits the great deserts of Kavir and Lut. It is only in the 1st millennium, when Medes and Persians invaded the Plateau and when the

autochthonous population took refuge in Susiana, that this latter region took the name of Elam. It is to this later situation that the Assyrian annals, the Achaemenid inscriptions, and the biblical books allude.

B. History

Today, the history of Elam remains one of the least known of the ancient Near East despite real progress made during the last decades. And it is still the Mesopotamian texts that give us the principal points of reference for an absolute chronology. The three millennia of its history are characterized, in our written documentation, by constant contacts, friendly or aggressive, with Mesopotamia, because Elam, with its natural riches (metals, stone, wood, etc.) and by its position en route toward the sources of certain highly sought-after materials (lapis lazuli, tin, etc.) was often indispensable to the Mesopotamian economy. But it is only from archaeological finds that one discovers the contacts that the Elamites had with their oriental neighbors, whether from the N (Central Asia), from the E (Afghanistan, Sistan, Pakistan) or from the S (the Persian Gulf, Arabia). However, this history, which begins around 3200 B.C.E. when the first Proto-Elamite documents appear, and ends arbitrarily in 331 B.C.E. when Alexander the Great put an end to the Achaemenid Empire, can be divided into five distinct periods.

1. Proto-Elamite Period (ca. 3200–2700 B.C.E.). When Elam enters into history around 3200 B.C.E. with the appearance of the first written documents, the country is heir to a long tradition. The Iranian Plateau's prehistory was already closely associated with Mesopotamia's and Susa's. Since its foundation around 4000 B.C.E., the city oscillated between its two large neighbors, sometimes dependent on the Plateau and sometimes under the influence of the Mesopotamians. Thus, in the first half of the 4th millennium Susianan ceramics, of a remarkable aesthetic quality, have no equal in Mesopotamia; whereas, in the second half of this millennium, the archaeological material discovered on Susa's acropolis is interchangeable with that of Uruk, the Mesopotamian site of reference.

It is at the end of this period (called the Uruk period in Mesopotamia) that the Susians employed a system of reckoning by means of clay tokens enclosed in a clay envelope upon which cylinder seals were rolled. There arose at a later stage the idea of symbolizing, on the surface of the bulla, by means of different circles and notches, the tokens that the envelope contained. These last became *ipso facto* useless. Thus only the part inscribed on the bulla was conserved. This was the birth of the clay tablet, which became the graphic medium for a large part of the ancient Near East for several millennia. During this early period, only the quantities of merchandise exchanged were noted, not the nature of the goods. The creation of ideograms called Proto-Elamite—which despite all attempts have remained undeciphered—were probably the work of people from the Iranian Plateau. They were used in Elam until about 2700 B.C.E. Susa during this period lived under the influence of the Plateau. Similar tablets have been found at Sialk near Kachan, at Anšan in the Fars, at Tepe Yahya in the Kerman, and as far as Shakr-i Sukhte in the present province of Sistan, on the Afghanistan border. And it is during a still obscure period from 2700 to 2400 that there is the first mention of Elam (NIM) in an inscription by the Sumerian King of Kiš, Enmebaragesi. But it is only at the beginning of the Agade period that Susa and Elam truly enter into history, thanks to cuneiform texts that make numerous allusions to the relationship that existed between these two countries.

2. Old Elamite Period (ca. 2400–1500 B.C.E.). This period sees three dynasties succeed each other in Elam, that of Awan, that of Šimaški and that of the *sukkalmah,* corresponding in Mesopotamia to the Agade, Ur III, Old Babylonian, and the beginning of the Kassite periods. Constant conflicts arose between the two great rivals, conflicts that alternated occasionally with matrimonial alliances created by economic exchanges.

During the Awan period (ca. 2400–2100), the Mesopotamian sovereigns of the Agade dynasty made Susiana one of their provinces. It was governed by their representatives of whom Ešpum and Ilišmani are the best known. It is even likely that they wielded, for a certain time, their power over Anšan as their title leads one to suppose. With the forays by Sargon (2334–2279) and his successor Rimuš into the Plateau as far as the Kerman, the kings of Awan, Luh-išan and Hišiprasini became rivals. But these expeditions seem more like raids than real conquests. Naram-Sin even had to sign a treaty with one of the Awanite rulers. This document is the first text drawn up in Elamite and written in cuneiform characters.

But it is the last king of the Awan dynasty, Puzur-Inšušinak—a contemporary of Ur-Nammu (2112–2095), the founder of the 3d dynasty of Ur, according to a text recently found at Isin—who seems to have realized the first historic unification of Elam. King of Awan, he first subjugated the whole of the Plateau, then conquered Susiana. But this unity illustrated by the title "King of Awan," vice-king of the country of Elam, governor of Susa, did not last long. It is, however, in Susa that monuments by Puzur-Inšušinak have been found that have the oddity of carrying bilingual dedicatory inscriptions, in Akkadian and in linear Elamite whose symbols are the heirs of the older Proto-Elamite script.

While the Šimaški dynasties (2050–1860) were in power on the Plateau, Susiana once again became a Mesopotamian province dependent on the kings of the 3d dynasty of Ur. With the military forays into Elam came dynastic marriages between Mesopotamian princesses and Elamite princes against a background of commercial exchange. But in 2004, under the conduct of Kindattu, the 6th king of the Šimaški dynasty, Elamites and Susianans invaded Mesopotamia and put an end to the prestigious empire of Ur. Its last king, Ibbi-Sin (2028–2004) was even taken prisoner in Elam where he died. During several decades after this Elamite victory—victory which will long leave marks in the memories of Mesopotamians, as is seen in the *Lamentations of Ur*—the situation remained confused and it was not until around 1970 that the Elamites were definitively installed in Susiana.

It is interesting to note that it is at the end of the 3d millennium and at the beginning of the 2d, and particularly during the Šimaški period, that the Elamites maintained extremely tight ties with their oriental neighbors. No text makes mention of the fact, but the archaeological material shows that certain cultural themes were diffused over a vast area including the N of Iran, from Turkmenia to Afghanistan, Pakistan to the Baluchistan and the Persian Gulf. In each of these regions identical documents to those found in Susa, in Anšan, or in Shahdad bordering the Lut, probably ancient Šimaški, are vouched for. One can also mention the axes, the staff, the disk, symbols of power, the clothing for the kaunakes, the representations of snakes (sometimes androcephalic, sometimes with dragon heads), the ceramics, different objects out of steatite or metal, buildings with different levels or their representations, etc.

3. *Sukkalmah* Dynasty (1970–1500 B.C.E.). When Ebarat or Eparti, the 9th king of Šimaški came to power in Susiana, he gave himself the title of "King of Anšan and of Susa" that his immediate successors will abandon for that of *sukkalmah,* a word that can be translated as "Grand Regent," a legacy from the empire of Ur III. The *sukkalmah* was sometimes helped by two *sukkal,* "regents," the *sukkal* of Elam and of Šimaški who oversaw the oriental part of the empire while the *sukkalmah* spent the winter in Susa, and the *sukkal* of Susa (sometimes called *šarru,* "king") who had the responsibility for Susiana when the *sukkalmah* lived in either Anšan or Šimaški. With respect to the division of power in Elam, it is henceforth appropriate to renounce the theory according to which the king's nephew was associated with the management of affairs. This interpretation results from the incorrect translation of the expression "son of the sister" that one should understand to be "son that the king had with his own sister"—an illustration of royal Elamite incest—and not "nephew."

This definitive installation of people of the Plateau does not accompany any important changes in the civilization of Susa which then became the principal capital. The Elamite kings—no more than they imposed their title—did not impose their language or their religion. Thus economic and judicial texts, those of daily life, were always drawn up in Akkadian. The few royal inscriptions written in Elamite scarcely pass the half-dozen mark and not all of them come from Susiana. As to the pantheon, it remained essentially Suso-Mesopotamian with Inšušinak at its head. Šamas and Išmekarab continued to be influential. The *sukkalmahs* constructed or restored the temples of the acropolis which were all dedicated to non-Elamite deities. They seemed thus to have "semitized" themselves. This period is relatively well documented by several hundred tablets and dedicatory documents found at Susa and by some precious synchronisms with Mesopotamian history. The oldest concerns Attahušu, contemporary of Idadu-napir, 11th king of Šimaški and of Sumuabum (1894–1881), first sovereign of the 1st Babylonian dynasty. This synchronism permits first of all, to suppose that the reign of Attahušu truly began following a raid that Gungunum, 5th king of Larsa (1932–1906), led in Susiana around 1927. It then implies that the reign of Ebarat, 9th king of Šimaški and founder of the new dynasty, must be dated around 1970. In fact, between

Attahušu and Šilhaha, son of Ebarat, one can henceforth place different *sukkalmah*s and *sukkals:* Palaiššan, Kuk-sanit, Kuk-Kirmaš, Tem-sanit, Kuk-Nahundi and Kuk-Našur I.

Next, we know that the *sukkalmah* Širuktuh was a contemporary of Šamši-adad I of Assyria (1813–1781). His name is cited in a letter to the Assyrian king, a letter which explains the presence of an Elamite army in the S Zab region. Later, the Mari tablets mention Siwepalarhuppak (sometimes under the name of Šeplarpak) and Kuduzuluš: they show that during the years 7 and 8 of Zimri-Lim, ties that were at first amicable and perhaps founded on the tin commerce, disintegrated rapidly and Zimri-Lim allied himself with Hammurabi (1792–1750) against the Elamites. Finally, a last synchronism with Mesopotamia, the Babylonian king Ammi-ṣaduqa (1646–1626) probably reigned at the same time as the *sukkalmah* Kuk-Našur III. Between these two chronological points of reference, there are twelve *sukkals* and *sukkalmah*s who succeed each other in Susa and among them, the most important are, in order: Kutir-Nahhunte I, Temti-agun, Kuk-Našur II, Kuduzuluš II, Tan-Uli and Temti-halki. We know little about the successors of Kuk-Našur III. This dynasty died out under unknown conditions at the end of the 16th or the beginning of the 15th century.

4. Middle Elamite Period (ca. 1500–1100 B.C.E.). This period had three successive dynasties: The Kidinuides, the Igihalkides, and the Šutrukides. It seems to be one of the most brilliant in Elamite history and is characterized by a progressive "Elamitization" of Susiana.

The period of the Kidinuides is still poorly known and the term dynasty is probably improper since the different rulers do not seem to be linked by ties of parentage: the mention of a father is never documented in the titles which, however, come from the old tradition of the "kings of Susa and of Anšan" in the Akkadian texts, an expression which will transform itself into "king of Anšan and of Susa" in Elamite texts. It is to these kings that we owe the great period of Haft Tépé, the former Kabnak located 20 km to the SE of Susa. The texts found on this site show that the king Tepti-Ahar had partially abandoned Susa. It seems that an end was put to this dynasty at the very beginning of the 14th century by a military campaign of Kurigalzu I. And it is likely that from the disorder created by this war, a new dynasty was born, that of the Igihalkides who adopted with respect to the Kassites, new political alliances. A recently published text puts into question the image that we have had of this dynasty. It consists of a letter probably sent by the king Šutruk-Nahhunte to the Kassite court to demand sovereignty over Babylonia, the throne to which it claimed the right through matrimonial ties. The Elamite ruler thus enumerates a series of marriages between kings of Elam and Kassite princesses. Pahir-iššan, son of Igihalki, married the daughter of Kurigalzu I whereas Untaš-Napiriša took for his spouse, the daughter of Burnaburiaš II (1359–1333), which leads one to believe that this Elamite dynasty reigned much earlier than had previously been thought.

The Elamitization of Susiana during this period is marked by two facts: the Elamite language replaced Akkadian and the pantheon of the Plateau imposed itself over Suso-Mesopotamian divinities. This political change is particularly well illustrated by the politico-religious complex of Tchogha Zanbil. In fact, Untaš-Napiriša, at an earlier time, constructed a temple surrounding a square tower associated with a little ziggurat. The whole thing was dedicated to the great god of Susa, Inšušinak. But later, the king took down the first ziggurat and, using as a base the temple that surrounded the courtyard, built a large ziggurat which has come down to us. He dedicated it conjointly to Napiriša, the principal divinity of the Elamite pantheon and to Inšušinak. It is thus with Untaš-Napiriša, that the Elamite gods (Awanites, Šimaškians, or Anšanites) profited for the first time in Susiana from a cult on a grand scale. All, or almost all, had a temple in the *Siyan kuk* (sacred area) of Tchogha Zanbil. Timidly introduced by the Kidinuides, the Elamite gods henceforth enjoyed in Susiana the same prerogatives as the Suso-Mesopotamian deities. The construction of the Tchogha Zanbil ziggurat, the temples, and palaces that surround the interior of the three concentric enclosures illustrate the mastery of Elamite architects; the reservoir which brings water to the site from over 40 km away gives an idea of the technical abilities of the Elamites which were often superior to those of the Mesopotamians.

But relations with Kassite Mesopotamia worsened and a great-grandson of Untaš-Napiriša, Kidin-Hutran III, revolted against Enlil-nadin-šumi (1224) and then against Adad-šuma-iddina (1222–1217)

whom he deposed after having sacked Der, Nippur, Isin, and Marad. And once again the dynasty died amidst what seemed to be general confusion since Tukulti-Ninurta I was assassinated in Assyria during this same period.

With the reign of Šutruk-Nahhunte, son of the founder of the new dynasty, that of the Šutrukides, relations with Kassite Mesopotamia deteriorated even further. It is possible that he is the author of the letter in the Berlin Museum which demands the Babylonian throne. His attitude toward his neighbors makes it likely. He had, in effect, led many campaigns into Mesopotamia where he put an end to the reign of Zababa-šuma-iddina (1158) and from where he brought back to Susa numerous trophies, among which one must mention the Naram-Sin stele, the statue of Maništušu, and above all the famous Code of Hammurabi. On each monument, he had engraved an inscription that reminded one that it was indeed he who had brought back these works as spoils of war. It is perhaps also the riches that these raids procured for him that permitted him to acquire the fortune necessary to build the temples that he had constructed on Susa's acropolis. He even claimed to have been the first to have used enamaled brick, a very costly building material, in the building of certain monumental doorways.

His son Kutir-Nahhunte continued the same politics of conflict with Mesopotamia. By deposing Enlil-nadin-ahi (1157–1155), he put an end to the Kassite dynasty. His reign does not seem to have lasted very long. For some, it is possible that the biblical episode of CHEDORLAOMER, in Elamite Kudur-Lagamar (Genesis 14) can be attributed to him. This hypothesis would suggest confusion between two Elamite divinities: Lagamar and Nahhunte. For others, the incident would be contemporary with Hammurabi. It is, however, probable that he occupied, for a short time, the Babylonian throne. After his death, of which we do not know the circumstances, he is replaced by his brother Šilhak-Inšušinak who appears as one of the major figures in Elamite history. His reign can be characterized by two essential points: the construction and restoration of temples and the pursuit of war against Mesopotamia. Šilhak-Inšušinak left us numerous dedicatory inscriptions of which the greater part report that the temples, all over the empire (constructed out of raw brick), were torn down and rebuilt with fired brick. In his restorations, he does not forget to mention his predecessors who had left their own dedicatory inscriptions in the foundations. One stele recounts the reconstruction of more than twenty temples all over Susiana. The other aspect of his reign is equally illustrated by a stele which narrates numerous campaigns to the W. Some of these expeditions (against Akkad, Nippur, and Sippar) are also related in recently discovered inscriptions which are still unpublished.

His successor, Hutelutuš-Inšušinak followed an identical policy but with less success since he found himself opposed by a powerful ruler, Nebuchadnezzar I (1125–1104). This king, in fact, handed a defeat to Hutelutuš-Inšušinak, but a defeat less severe than had been thought, due to the incorrect interpretation of a text. It appears that after having taken refuge in Anšan where he profited from his brief exile by building a temple, he came back to Susa where he continued to build. However, his reign marked the end of a great Elamite period. Two kings succeeded him before our sources dry up for almost four centuries.

One cannot, however, omit mention of the most surprising personage of this dynasty; the queen Nahhunte-utu whose destiny seems out of the ordinary. Daughter of Šutruk-Nahhunte, she married successively two brothers, Kutir-Nahhunte then Šilhak-Inšušinak, and it seems probable that Hutelutuš-Inšušinak was born from a union between Šutruk-Nahhunte and Nahhunte-utu, his own daughter. This would explain the strange title Hutelutuš-Inšušinak adopted, when he called himself son of Šutruk-Nahhunte, Kutir-Nahhunte and Šilhak-Inšušinak. Rarely in Elamite history will a queen be so closely linked to royal power and she is the only woman to be so often cited by name in inscriptions.

5. Neo-Elamite Period (ca. 1000–539 B.C.E.). The slow disintegration of the Elamite Empire which characterized this period had essentially two causes: to the W, the interference of Elam in the interminable conflict between the Assyrians and the Babylonians; to the N and E, the continued pressure of the Indo-Europeans, Medes and Persians who inhabited the Plateau, pushing the indigenous Elamites toward the Low-Country.

Of the first Neo-Elamite period, which began at the beginning of the 1st millennium and continued up until the reign of Šutruk-Nahhunte II, we know almost nothing, if only that an Elamite king, Mar-biti-

apla-usar, reigned over Mesopotamia from 984–979. And it is possible that the economic tablets discovered at Tell-i Malyan, the former Anšan, date from this period. The written sources are silent until 743, the date beginning with which the Neo-Babylonian chronicles begin to give us abundant information of the participation of Elam in the Assyrio-Babylonian conflict. One must note, however, that for this period the archaeological material is relatively plentiful and numerous tombs have been found, mostly in Susa.

In 720, the first king of this second phase, Humban-nikaš (743–717) confronted Sargon II (721–705) near Der. The Elamites went to help the Chaldean Merodach-Baladan, who will ask later still for the help of Šutruk-Nahhunte II (716–699) against the same Sargon. The Assyrian king finally conquered the N and W of Elam and his son Sennacherib (704–681) finished by dethroning Merodach-Baladan and installing his own son on the Babylonian throne. The defeat of the Elamites provoked the fall of Šutruk-Nahhunte II who was deposed by his brother Hallušu-Inšušinak (698–693). He occupied Babylonia for a very short time before he, too, was killed and replaced by Kudur-Nahhunte (693–692). The latter did not reign in Susa but in Madaktu, the second of the three Elamite capitals (with Susa and Hidalu) of this troubled period. He also seems to have suffered a violent death. His successor Humban-nimena (692–689), despite the setbacks of his predecessors, recruited a new army to give help to the Babylonians and in 691 the uncertain battle of Halule took place that saw a true coalition of Babylonians, Elamites, and Persians confront the Assyrians, who ended up losing Babylonia in 689. Humban-haltaš I (688–681 and Humban-haltaš II (680–675) took part in the internal struggles in Babylonia and Assyria, struggles that ended with the assassination of Sennacherib and the assumption of the throne by his son Esarhaddon (680–669). Curiously, Esarhaddon kept up good relations with the new Elamite ruler Urtak (674–665). This relative calm lasted just until the reign of Assurbanipal (668–627). But in 665, after an attack against Babylonia, Urtak was pushed back by Assurbanipal into Elam where he died. Tepti-Humban-Inšušinak (664–653) who appears in Assyrian under the name Te-umman, son of Šilhak-Inšušinak II, succeeded him. After a period of calm, Assurbanipal undertook a campaign against Elam in 653 and confronted Te-umman on the river Ulaï. The latter was killed after having been betrayed by the Elamites. Assurbanipal thus installed the sons of Urtak on the Elamite throne, who, after the assassination of their father, had taken refuge at the Assyrian court: Humban-nikaš in Madaktu and Tammaritu in Hidalu. Susa was perhaps still in the hands of Atta-hamiti-Inšušinak.

After a confused period in which the Elamites took the side of Šamaš-šum-ukin and then Nabu-bel-šumati against Assurbanipal, in 647, the Assyrian troops invaded Elam where puppet kings succeeded each other, but it was in 640 that the city fell into Assyrian hands. In the narration of this campaign, Assurbanipal gives forceful details of the ferocity with which he avenged generations of Mesopotamians: the treasure is pillaged, the tombs are violated in the sacred groves, the kings' ashes are thrown to the winds, statues of gods are brought back to Mesopotamia and Susa and destroyed. Some of the inhabitants are even deported to Samaria (Ezra 4:9–10). The reality must have been a little different since after this terrible sack, a new royalty was installed in Susa (the Neo-Elamite III Period) where the Elamite element was clearly predominant. In a documentation henceforth exclusively Elamite, even Akkadian proper names are rare. The Elamites of the Plateau, pushed back by the Medes and the Persians, flourish in Susiana.

6. Achaemenid Period (539–331 B.C.E.). While the Susianans were mixed up with Mesopotamian problems, the Medes and the Persians discretely took root on the Plateau that had thus become Iranian. On his cylinder, Cyrus the Great (559–530) demanded the prestigious royalty of Anšan, not only for himself but also for his predecessors Cambyse, Cyrus I, and even Teispes, which implies that the double kingdom of Anšan and Susa had existed for a long time. Whatever it may be, it is likely that Susiana, in turn, fell into Persian hands when Cyrus prepared to conquer Babylonia in 539. There were still several vague impulses toward independence that Darius put down, in particular against Ummanuš and Hašina. But since this time, Elam, under the name of Susiana in inscriptions written in Old-Persian, is no more than a province of the empire, an important province to be sure, since the Achaemenids inherited many characteristic traits of the Elamite civilization.

With Darius (521–486), Susa regained its faded greatness, becoming one of the principal capitals of the Achaemenids, if not the most important. It is, in fact, curious to note on the economic tablets found at Persepolis, voyages of long distances toward Arachosia, Greece, or Egypt, were begun and completed in Susa, and not in Persepolis where these documents were found. Whatever it may be, from the beginning of his reign, Darius undertook the construction of a palace of which certain important details were only recently discovered. Thus, the excavations that have allowed the unearthing of the palace complex, have not permitted, for example, the tracing of Esther's itinerary, who, from the doorway where Mordecai stood, would go join Ahasuerus. This doorway, for which a generation of archaeologists had searched to the S of the palace, was finally discovered to the E of the palace complex. Since then, the book of Esther took on new meaning and one can be practically certain that the writer or writers had visited if not lived in Susa. Darius was not content with just reconstructing Susa or with building a new capital at Persepolis, this one, more symbolic, was linked, it seems, with the celebration of the Iranian New Year (March 21). He succeeded in affirming an empire which stretched "from India to Sardis, the Saces who are further than Sogdiana, to Egypt" according to his own expression. He organized a remarkable chancellery, heir of a long Elamite tradition, of which the Bible is an echo.

In Darius' trilingual inscriptions (Old-Persian, Elamite and Akkadian), one can note an interesting peculiarity. When the king enumerates the countries he has conquered, the province called Elam in Elamite and Akkadian texts, has the same Susiana (*Huǰa* or *Huvǰa*) in versions written in Old-Persian. The Bible thus inherited the Akkadian tradition as the book of Daniel indicates (8:2): "… I was in Susa, the capital, which is in the province of Elam …" or the book of Ezra (4:9): "The men of Erech, the Babylonians, the men of Susa, that is, the Elamites, …" Elsewhere the bible confirms an organized chancellery. It is again in the book of Esther (6:1) that one reads: "On that night, the king could not sleep; and he gave orders to bring the book of memorable deeds, the chronicles, and they were read before the king." The book of Nehemiah (7:64) talks of people who do research in geneological registers, while Ezra (6:1) gives other details: "Then Darius the king made a decree, and search was made in Babylonia, in the house of the archives where the documents were stored. And in Ecbatana, the capital which is in the province of Media, a scroll was found on which this was written …" But the clearest summary of the administration of Elamite origin, is again given in Esther (8:9): "The king's secretaries were summoned at that time, … and an edict was written according to all that Mordecai commanded concerning the Jews to the satraps and the governors and the princes of the provinces from India to Ethiopia, 127 provinces, to every province in its own script and to every people in its own language, and also to the Jews in their script and their language."

At this period when Aramean replaced Akkadian in international exchanges, it is interesting to note that almost all the tablets found at Persepolis were written in Elamite (two are in Akkadian and one in Greek, a few rare documents are in Aramean), legacy of the "kings of Anšan and Susa."

Under the Achaemenids, the province of Elam, tightly associated with Persia, Persian avatars would live. And, *in fine*, Susa, like Persepolis, would see Alexander and his generals within her walls. During the Seleucid, Parthian and Sassanid periods, neither Elam (under the name of Elymaïde), nor Susa would recapture its past grandeur. It is with difficulty that at the beginning of the Islamic period, Susa becomes a center of some importance. A mosque and a conventual building adjoin the bazaar. But the commercial centers are displaced and in the 14th century C.E. the city fell into oblivion, until archaeologists from the 19th and 20th centuries discovered a part of its history that is several millennia old. Thus Elam, son of Shem (Genesis 10:22), saw, on several occasions, Jeremiah's prophecies come to pass (49:35–39).

C. Language

The Elamite language does not belong to any known linguistic group. It is an agglutinate language that uses prefixes on mono- or dissyllabic roots. Its evolution can be traced from the Paleo-Elamite period up to the Achaemenid period.

ELASA (PLACE) [Gk *Elasa* (Ἐλασα)]. The site of Judas Maccabeus' last stand against the army of Bacchides in the year 160 B.C.E. (1 Macc 9:5). The major proposals for identifying the site have located it either at Khirbet Il‹asa (Loewenstamm *EncMiqr* 1: 371–72), which lies between Upper and Lower Beth-horon, or at Khirbet el-‹Aššì (M.R. 169144), by modern Ramallah. Although both identifications have been questioned on strategic grounds, each of them lies in close proximity to el-Bireh (M.R. 170146), the most likely location of Bacchides' encampment. However, significant complications still remain. One is the possibility, based on a tradition in Josephus, that the Seleucid army may have been stationed not at el-Bireh, but at Birzeit (M.R. 168152), about seven km to the NW. In such a case, one would expect the Jewish camp to have assembled further N as well, unless Birzeit is mentioned only as the starting point for Seleucid troop movements. A further complication is prompted by another remark of Josephus, namely that Judas met his death not at Elasa but at Akedasa. This discrepancy might reflect a confusion with the site of Judas' previous victory over Nicanor, namely Adasa between Jerusalem and el-Bireh (1 Macc 7:39–45). For a text-critical explanation, see Goldstein *1 Maccabees* AB, 374.

DAVID A. GLATT

ELASAH (PERSON) [Heb *›el‹āśâ* (אֶלְעָשָׂה)]. The name Elasah consists of the common Semitic term for deity *(›ēl)* and the root *‹śh,* forming the nominal sentence "God has made, wrought."

1. A Judean diplomat in the time of Jeremiah (Jer 29:3). Along with Gemariah son of Hilkiah, Elasah was sent by the Judean king Zedekiah on a mission to Babylon, at which time the two messengers carried a letter written by Jeremiah to the Judean exiles. Elasah was the son of Shaphan, a well known scribe in the days of Josiah (1 Kgs 22:8). Shaphan's offspring maintained close ties with Jeremiah (cf. Jer 26:24; 36:25), and evidently sided with his preaching of nonresistance toward the Babylonians (cf. Jer 40:5).

2. One of six descendants of the priestly family of Pashhur who were implicated at the time of Ezra's purge of foreign wives (Ezra 10:22). The variant Greek forms of the name found in the versions of 1 Esdr 9:22, Salthas and Saloas, appear to be corruptions.

DAVID A. GLATT

ELATH (PLACE) [Heb *›êlat* (אֵילַת)]. Var. ELOTH. A settlement on the N coast of the Gulf of Aqaba, closely associated with Ezion-geber, and a port for trade with Arabia, Africa, and India (1 Kgs 9:26).

The origins of the settlement are obscure. It may be the El-paran mentioned in Gen 14:6 as the southernmost point reached by the four kings of the East on their raid through Canaan (*LBHG,* 55, 140, 142), though this is disputed (Simons *GTTOT,* 214). Elath may be connected with Elah, listed as one of

the chiefs of Edom in Gen 36:40 and 1 Chr 1:51. Elah here is probably a region as it appears in the list immediately before Pinon, probably the Punon in the Arabah (Num 33:42–43). The Israelites departed from Elath in order to circle around Edom and not violate its territory (Deut 2:8). Egyptian mining expeditions to Timna continued at least into the reign of Rameses III (ca. 1150; Rothenberg *EAEHL*, 1188–1201). Since these expeditions probably came by ship, it is possible that Elath's origin was as a transshipment point for the Egyptian copper industry.

Elath stood at the end of two important land routes. It was the terminus for the S extension of the King's Highway which ran the length of Jordan's inland plateau (*LBHG*, 56), and also for travelers journeying S along the Arabah, the biblical Way of the Red Sea (Num 14:25; 21:4; Deut 1:40; 2:1; *LBHG*, 36, 58).

After David's crushing victory over the Edomites (2 Sam 8:13–14; 1 Chr 18:12–13) Solomon built his fleet of ships for trade with Ophir at Ezion-geber, "which is near Eloth on the shore of the Red Sea, in the land of Edom" (1 Kgs 9:26; 2 Chr 8:17). If Ezion-geber can still be identified with Tell el-Kheleifeh (M.R. 147884; Pratico 1985: 1–32), it is as a fortress guarding Israelite interests on the gulf by keeping a watchful eye on predominantly Edomite Elath, and perhaps by providing temporary storage facilities.

It is unknown how often Solomon and his successors dispatched fleets from Elath/Ezion-geber. Jehoshaphat lost the ships which he sent to Ophir (1 Kgs 22:48). During the reign of his son Joram, Edom revolted and Elath was lost to Judah (2 Kgs 8:21–22). Amaziah defeated Edom (2 Kgs 14:7), and his son Azariah/Uzziah was able to rebuild Elath (2 Kgs 14:22; 2 Chr 26:2). Though no reason for this is given, Uzziah probably intended to revive the Red Sea trade. Elath was finally lost to Judean control during the reign of Ahaz when the king of Edom recovered it after Judah was weakened by a war with Aram and Israel (2 Kgs 16:5–6).

Elath's history does not end with its loss to Edom. Under the name Aila it is mentioned in many classical sources when it was an important port for trade with India, the home of *Legio X Fretensis*, a bishop's seat, and the residence of an at least partially Jewish population (Robinson and Smith 1841: 251–253, and *GP* 2: 311 summarize these sources). After the Moslem conquest it was an important stopping point for pilgrims from Cairo on their way to Mecca and Medineh (Robinson and Smith 1841: 252). The Crusaders held it briefly before it was regained by the Moslems. After A.D. 1300 it dwindled until it was largely deserted by the 19th century (ibid.).

Most commentators (Robinson and Smith 1841: 241; *GTTOT*, 342; *GP* 2: 311; *LBHG*, 434) locate Elath/Aila about 1 km NE of Aqaba (M.R. 150882), about 4 km from Tell el-Kheleifeh.

ELCHASAITES. An early Jewish–Christian sect with gnostic traits.

———

A. The Sect and Its Founder
B. Sacred Book of the Elchasaites
C. Significance of the Elchasaites

———

A. The Sect and Its Founder

The Elchasaites were named for their founder Elchasai, whose name is found in the following variants: *Ēlchasai* (Hippolytus *Haer.* 9.13.1 and elsewhere), *Ēlxai* (Epiphanius *haer.* 19.1.4 and elsewhere), *Ēlxaios* (Epiphanius *haer.* 30.3.2; 53.1.2, and elsewhere), *Ēlchasaios* (Methodius, *symp.* 8.10), *Ēlkesai* (Theodoretus *haer.* 2.7), and *Ēlkesaios* (Methodius *symp.* 8.10, v 1). He was active primarily between A.D. 100 and 115: the first date stems from Hippolytus' comment (*Haer.* 9.13.1) that Elchasai appeared in the third year of the reign of Trajan (98–117); the second is based on a quotation from the *Book of the Elchasaites*, in which Elchasai predicted that an apocalyptic war between the Angels of the North would take place in the third year after the subjugation of the Parthians by Emperor Trajan (Hippolytus *Haer.* 9.16.4). This prediction would have been recorded in 115 when significant areas of the empire were freed

from Parthian control. Elchasai presumably was active in the border regions between Syria and Parthia. Apart from the aforementioned prophesy, Hippolytus' comment that Elchasai received the sacred book "from the Seraeans in Parthia" (*Haer.* 9.13.1) points to this region. His bilingual facility and the fact that Elchasaites were living in Syrian Apameia as early as 200 (Hippolytus *Haer.* 9.13.1) make the border area of Hellenistic Syria more likely than Parthia itself.

In subsequent centuries the sect spread in all directions. Not only Hippolytus, as described above, but also the Ps.-Clementine source *Kerygmata Petrou* (*Ps.-Clem.*, Cont., 2.1; 4:1), which contains Elchasaitic material, indicates the presence of Elchasaites in Greek-speaking Syria ca. 200. Furthermore Hippolytus was aware of the appearance in Rome of the Elchasaite Alcibiades from Apameia (*Haer.* 9.13.1), indicating that the group tried to establish in Rome as early as 220.

The missionary efforts of the sect in the vicinity of Caesarea in Palestine are apparent from a comment by Origen in his exposition of Psalm 82, written ca. 247. East of the Jordan and the Dead Sea (in Peraea/Moab) Elchasaites lived under the name "Sampsaeians" ("People of the Sun"; Brandt 1912: 120–23) in the middle of the 4th century, as Epiphanius reports (*haer.* 53). Epiphanius' comment that Jewish Essenes had joined the Sampsaeians (*haer.* 20.3.2–4), is doubtful—apparently Epiphanius' inclination to describe expansively the extent of Elchasaite activity led him to transfer Sampsaeian information to the Essenes. Connections between Elchasaites and Nazarenes, Nazorenes, and Ebionites must likewise be viewed as secondary relationships (particular references in Strecker, *RAC* 4: 1174–76).

On the other hand the existence of a group of Elchasaite Sabaeans is conceivable. The personal name *Sobiai* appears in Hippolytus *Haer.* 9.13.2. It is probably a Gk circumlocution for the Aram *sebî›ayyā›*, meaning "the bathed ones" (Brandt 1912: 42) and referring to the original Elchasaite community. Finally, Sabaeans are mentioned in the Qu'ran (Sûrah 2.59, 5.73, 22.17) and by the bibliographer Ibn an-Nadîm, who, in his *Kitâb al-Fihrst* (987/988), was aware of the "Sabaeans of the Swamp-Regions" as a group of Mugtasila living on the lower Euphrates and Tigris. This group cannot simply be taken as identical with the original Elchasaites, but, besides the name "Sabaeans," such practices as ablutions and worship of the stars make a connection to the older Elchasaites likely. The Cologne Mani Codex offers a parallel—Manichaeanism undoubtedly had Elchasaite roots (cf. Cirillo 1984: 85ff.). See also MANDAEISM and MANICHEANS AND MANICHAEISM.

B. Sacred Book of the Elchasaites

The Elchasaites derived their doctrine from a sacred book that has not survived. Its contents are in large part discernible in the quotations transmitted by Hippolytus and Epiphanius, although the organization and scope of the work as a whole can no longer be reconstructed. The book was presumably available to these Church Fathers in Greek; only the secret phrase included by Epiphanius (Epiphanius *haer.* 19.4.3) and the personal names Elchasai and Sobiai, not the work as a whole, might hint at the existence of an Aramaic original.

The source of the teaching, according to the sacred book, was a revelation to Elchasai in the form of a masculine being (called "Son of God"; "Christus") and his feminine companion (referred to as the "Holy Spirit"), both assuming gigantic proportions (Hippolytus *Haer.* 9.13.2–3; Epiphanius *haer.* 19.4.1–2; 30.17.6–7; 53.1.9). Presumably this is an example of the metamorphosis motif, according to which Christ was repeatedly born and, in the process, exchanged births and bodies (Hippolytus *Haer.* 9.14.1; cf. 10.29.2). Revealed to Elchasai was the possibility of a new forgiveness of sins through a second baptism in the name of the highest and greatest God and in the name of his Son, the great king (Hippolytus *Haer.* 9.13.1; 9.15.1–2). Besides baptism, frequent ritual ablutions to bring healing from diseases were encouraged (Hippolytus *Haer.* 9.15.5–6). In general, Jewish law was valued. Prayer offered in the direction of Jerusalem (Epiphanius *haer.* 19.3.5–6) and circumcision (Hippolytus *Haer.* 9.14.1) were expressly required, and vows and Sabbath observance were encouraged. On the other hand, sacrifices were rejected (Epiphanius *haer.* 19.3.7). Indeed, the book warned against fire in general. Recantation under persecution was to be viewed as an indifferent matter, when it occurred "with the mouth rather than with the heart" (Epiphanius, *haer.* 19.1.8; Eusebius *Hist. Eccl.*, 6.38). Moreover, an imminent war of apocalyptic dimensions between the godless Angels of the North was predicted; one could escape this

endtime event only with the aid of a secret phrase. Transliterated from the Aramaic original into Greek (all but the last word), *Selam,* must be translated from the middle backwards in both directions) it reads: *abar anid mōib nōchile daasim anē daasim nōchile mōib anid abar selam* (Epiphanius *haer.* 19.4.3), meaning, "I shall be a witness over you on this great (judgment) day" (Levy 1858: 712). The book was not to be read to everyone. Further instructions, e.g., abstinence from eating meat and praise for marriage, are, to be sure, not found explicitly in Hippolytus' and Epiphanius' literal quotations, but may have been taken by them from the sacred book.

C. Significance of the Elchasaites

Elchasaitism had Judaeo-Christian origins. To Judaism it owed its requirements based on Mosaic law (circumcision, Sabbath); from Christianity it derived its expectation of an imminent eschatology and the metamorphosis motif, including the virgin birth theme. Above all the Elchasaite view of baptism as a second act of repentance through which major sins are forgiven assumes as a prerequisite Christian baptism as a rite of initiation. Additional Jewish characteristics are Scripture criticism and rejection of Pauline teachings.

Alongside these, such characteristics as the metamorphosis motif and worship of the "greatest and highest God" point to gnostic influences. Thus Elchasaitism is best characterized as "syncretistic–gnostic Jewish Christianity" (Uhlhorn *RE,* 314).

ELDAAH (PERSON) [Heb *ʾēldāʿâ* (אֶלְדָּעָה)]. A son of Midian (Gen 25:4; 1 Chr 1:33). Midian's five "sons" as listed in Gen 25:4 comprise the clans, tribes, or people inhabiting the country of Midian. The list antedates 716 B.C. (Knauf 1988: 84–86). Eldaah means "God called." The verb *daʿâ* "to call" is specific to Arabic and ancient S Arabian. Eldaah belongs to the large group of clan or tribal names that are structured like personal names (Knauf 1988: 84).

Bibliography

Knauf, E. A. 1988. *Midian.* Wiesbaden.

ERNST AXEL KNAUF

ELDAD (PERSON) [Heb *ʾeldād* (אֶלְדָּד)]. One of the seventy elders chosen to assist Moses in administration in the wilderness of Sinai (Num 11:26–27). These elders were appointed to alleviate Moses' burden in judicial and spiritual matters relating to the nation. At the request of Moses, the elders assembled before the door of the tabernacle. There they received the spirit of prophecy from God to validate their appointment. Eldad and Medad received the same gift, although they were not with the others in the tabernacle court, but in the camp. Although the nature of this prophecy is unknown, three primary views are held. Gordon Wenham (*Numbers* TOTC, 109) maintains that the prophetic element was an unintelligible ecstatic utterance. George Gray (*Numbers* ICC, 113–14) concludes that the utterance was a prophetic frenzy or excitement, which he considered to be a common feature of Semitic religions; however, he offers no explanation as to whether the prophecy was intelligible or not. Leon Wood (1970: 157), on the other hand, points out that 1 Chr 25:1–3 presents "praise" as the meaning of Heb *wayyitnabbĕʾû.* The seventy had joined in a chorus of praise to God, and these two elders, Eldad and Medad, had moved their praises as far as the camp. Whatever the case, according to the MT it is clear that prophecy did not continue, as indicated by the phrase in Num 11:25, Heb *wĕloʾ yāsāpû* (root *ysp*), "they did not add" or "continue," which is supported by the LXX (see Budd *Numbers* WBC, 130). The Targum of this text *(psqjn)* reflects an alternate pointing from the Heb *wĕloʾ yāsupû,* "they did not cease" (from

the Heb root *swp*). In this translation, the prophecy did continue, as is exemplified by Eldad and Medad in the following verses. A pseudepigraphon purporting to be the prophecy of Eldad and Medad is cited in the 2d century C.E. text *Herm. Vis.* 2.3.4. See also ELDAD AND MODAD.

Bibliography

Wood, L. 1970. *A Survey of Israel's History.* Grand Rapids.

JOEL C. SLAYTON

ELDAD AND MODAD. Sometime prior to the compilation of the Mishnah, around 200 C.E., someone, probably a Jew, composed an apocryphal story about Eldad and Modad, the two prophets who prophesied in the camp during the wanderings in the wilderness after the Exodus (Num 11:26–29; MT Medad). The biblical text does not indicate the content of their prophecies, but the apocryphal book, which according to the Stichometry of Nicephorus contained 400 lines, filled in the missing details. The only extant part of this lost pseudepigraphon is a short quotation in the mid-2d century work titled the *Shepherd of Hermas* (*Vis.* 2.3.4): " 'The Lord is near to those who turn (to him),' as it is written in the (Book of) Eldad and Modad (var. Modat), who prophesied to the people in the wilderness." Although possibly only an allusion to the biblical account, it is likely that *Tg. Ps.-J.* on Num 11:26 also quotes from the pseudepigraphon, because the excerpt quoted is similar to the one found in Hermas: "The Lord is near to those in distress." This Targum also indicates that Eldad and Modad predicted the attack upon Jerusalem, and that at the endtime there would be a war in which the royal Messiah would defeat all evil. See also *OTP* 2: 463–65.

ELDER. See PALESTINE, ADMINISTRATION OF (POST-EXILIC JUDEAN OFFICIALS); FAMILY.

ELDERS, TRADITION OF THE. See TRADITION OF THE ELDERS.

ELEAD (PERSON) [Heb *ʾelĕʿād* (אֶלְעָד)]. Elead was a son or descendant of Ephraim. According to 1 Chr 7:21, Elead and Ezer were killed by the men of Gath in an attack upon that city (further discussion on Gath, see Mazar 1954: 227–35). The usual designation for "his son" is missing with Elead and Ezer, suggesting that they were not sons but descendants. Perhaps the narrative dealing with Elead and Ezer (vv 21b–23) is an independent fragment. Its location in the middle of the Joshua genealogy (v 27) has led some to combine it with Exod 13:17 and Ps 78:9 and suggest a reference to an early and unsuccessful Ephraimite exodus from Egypt (Williamson *Chronicles* NCBC, 80). However, the incident could be an etiological explanation of Beriah (v 23) since affixing the Hebrew preposition "in" to *rāʿa,* "evil," approximates the sound of Beriah (Braun *1 Chronicles* WBC, 115).

M. STEPHEN DAVIS

ELEADAH (PERSON) [Heb *ʾelʿādâ* (אֶלְעָדָה)]. Son or descendant of Ephraim (1 Chr 7:20) whose name means "El has adorned." The phrase "sons of Ephraim" in this passage is best understood as descendants. 1 Chr 7:20–27 gives a vertical genealogy of Joshua, the son of Nun, v 27, the hero of the Conquest. Eleadah is found nowhere else in the OT. Numbers 26 contains the only other listing of the Ephraimite clan but makes no mention of Eleadah. It lists three sons of Ephraim, namely Shuthelah, Becher, and Tahan who compare favorably to Shuthelah, Bered, and Tahath of 1 Chr 7:20. The omission of Eleadah from the Numbers passage and its similarity to other names in the Chronicles list, i.e., Elead (v 21) and Ladan (v 26), would suggest that the Chronicles list is a combination of other lists and that Eleadah is a later addition to the Ephraimite genealogy (Braun *1 Chronicles* WBC, 114).

M. STEPHEN DAVIS

ELEALEH (PLACE) [Heb *ʾelʿālēh* (אֶלְעָלֵה), *ʾelʿālē* (אֶלְעָלֵא)]. A town in Transjordan's tableland, always mentioned with Heshbon in the OT. Elealeh was rebuilt by the Reubenites and assigned to their territory (Num 32:3, 37). Although it is not named in the Mesha inscription among towns taken by Mesha, Elealeh, along with other settlements in the tableland, fell under Moabite control. Isaiah (15:4; 16:9) and Jeremiah (48:34) included Elealeh in their oracles against Moab. Ancient Elealeh is usually identified with Khirbet el-ʿÂl (M.R. 228136), located 1.5 miles NE of Tell Hesban (ancient Heshbon?). Excavations at both sites have demonstrated that their occupational histories were similar, with neither yielding significant remains antedating Iron Age I.
GERALD L. MATTINGLY

ELEASAH (PERSON) [Heb *ʾelĕʿāśâ* (אֶלְעָשָׂה)]. A Benjaminite listed among the descendants of Saul and Jonathan (1 Chr 8:37; 9:43). The name seems to derive from the verb *ʿāśâ*, "to make," and the divine component *ʾēl*, "God," thus, "God has made." Eleasah represents the 10th generation after Saul, included in a list (1 Chr 8:29–38) which continues for fully twelve generations after Saul. This family list is repeated almost exactly in 1 Chr 9:35–44. Peter Ackroyd (*Chronicles Ezra Nehemiah* TBC, 42) has suggested that the continued knowledge of Saul's line might indicate the existence of support for Saul's descendants well into the monarchical period. He suggests that, while this support is largely obscured in the biblical narrative due to its focus on the legitimacy of the Davidic line, this preservation of such a family list could hint at traditions which assigned a greater importance to the Saulide line. H. G. M. Williamson (*Chronicles* NCBC, 93) sees no reason to attach any such inference to this remembrance of Saul's line. He suggests that the Chronicler's inclusion of these lists in no way negates his concern to show that "Saul's dynasty was judged, and was therefore to all intents and purposes at an end. Its death-throes were in irrelevance, as was the fact that part of the family survived."
SIEGFRIED S. JOHNSON

ELEAZAR (PERSON) [Heb *ʾelʿāzār* (אֶלְעָזָר)]. Eleven persons in the Bible bear this name, which means "God has helped."

1. Third son of Aaron and Elisheba (Exod 6:23), the husband of a daughter of Putiel (Exod 6:25) and the father of Phinehas (Exod 6:25), consecrated as priest (Exod 28:1; Num 3:3–4) and designated as Aaron's heir (20:25–28; Deut 10:6) after the deaths of Nadab and Abihu (Leviticus 10; see ITHAMAR). He is the supreme chief of the tribe of Levi (Num 3:32), in charge of all affairs pertaining to the transportation of the tabernacle (Num 4:16). The Zadokite priests of Jerusalem traced their descent from Aaron through Eleazar (Ezra 7:1–5; 1 Chr 5:29–41 [—Eng 6:3–15]; 6:35–38 [—Eng 6:50–53]; 24:3). In the story of Korah (Numbers 16–17), which legitimates the primacy of the priesthood of Jerusalem, Eleazar gathers up the censers of the slain Levites and plates the altar with them as a warning against future Levitic usurpers (Num 17:1–5). Subsequently he performs the newly instituted red heifer rite (Numbers 19), perhaps to purify the camp after the events of Numbers 16–17. Eleazar assumes an important role in the administration of the nation, especially in the enumeration of the clans of Israel in preparation for the apportioning of Canaan (Numbers 26). Between the deaths of Aaron and Moses the people are led by Moses and Eleazar (Num 27:1–11; 31:12, 13, 25–31); Joshua is elevated to be Moses' successor, but under the supervision of Eleazar (Num 27:18–23). To Eleazar are attributed certain ordinances pertaining to purification of the spoils of war (so Num 31:21–24 in the MT, but the Samaritan Pentateuch attributes these laws to Moses). Using the priestly lots, Eleazar later presides at Shiloh over the settlement of the Israelite tribes (Num 34:17; Josh 14:1; 19:51; 21:1). Eleazar's grave was believed to be in Gibeath Phinehas in the hills of Ephraim. Since Benjamin and Ephraim shared these hills, it may be that Eleazar's tomb was near Gibeon, Geba, Anathoth or Almon/Alemeth, cities assigned to the house of Aaron (Josh 21:17–18; 1 Chr 6:45 [—Eng 6:60]). According to the Chronicler, in David's time there were sixteen families of the house of Eleazar (1 Chr 24:4, 7–14).

The name Eleazar resembles that of Eliezer, the son of Moses (cf. the similarity of Gershom and Gershon), and it is possible that the clan of Eleazar/Eliezer was split between the descendants of Moses and Aaron, though ordinarily this would have been expressed by making Eleazar/Eliezer the father of Moses and Aaron.

2. Son of Abinadab of Kiriath-jearim, or perhaps Gibeah (1 Sam 7:1; 2 Sam 6:3–4), custodian of the ark and presumably the ancestor of Uzzah and Ahio (unless *ʾḥyw* is to be interpreted "his brothers"), who surrender it to David (2 Sam 6:2–7).

3. Son of Dodo the Ahohite, one of the Three, an elite category of David's warriors (2 Sam 23:9; 1 Chr 11:12). He earned this rank with persistence in battle against the Philistines even though weary from fighting (2 Sam 23:9–10). 1 Chr 11:12 refers to his participation in a battle in a barley field at Pas-dammim, called Ephes-dammim in 1 Sam 17:1, where the Israelites under Saul faced the Philistines. The Three are said to have made a raid upon Bethlehem when the Philistines occupied it and brought water from its well to David in the cave of Adullam (2 Sam 23:13–17; 1 Chr 11:15–19). See DAVID'S CHAMPIONS.

4. Levite of the house of Mahli in David's time who had no sons, and so his daughters married the sons of his brother Kish (1 Chr 23:21–22; 24:28).

5. Son of Phinehas, a Levite of Ezra's day, a custodian of the treasures contributed to the second temple (Ezra 8:33). He might be the same as No. 6 below.

6. Temple singer of Nehemiah's day (Neh 12:42).

7. Israelite, a descendant of Parosh, who put away a foreign wife at Ezra's instigation (Ezra 10:25).

8. Senior scribe tortured to death under Antiochus IV Epiphanes (2 Macc 6:18–31) for refusing to eat sacrificial pork or to even pretend to do so.

9. The 4th son of Mattathias, also called by the nickname of Auaran (1 Macc 2:5), perhaps meaning "paleface" (Goldstein *1 Maccabees* AB, 231). He was crushed to death at Beth-zechariah by the corpse of an elephant which he slew in battle against Lysias (1 Macc 6:43–47). See AVARAN.

10. The father of Jason, Judas Maccabeus' emissary to Rome (1 Macc 8:17).

In addition, 1 Esdr 8:43; 9:19 refer to individuals called Eleazar, but MT has Eliezer (Ezra 8:16; 10:18). The former is an envoy sent to Casiphia to fetch some Levites, and the latter is a priest who had married a foreigner.

WILLIAM H. PROPP

11. The son of Eliud and father of Matthan, according to Matthew's genealogy tying Joseph, the husband of Mary, to the house of David and Solomon (Matt 1:15). The name does not appear in any other genealogy or list of Jesus' ancestors, although Albright and Mann (*Matthew* AB, 4–5) believe the name is characteristic of names used in the last two centuries B.C. Gundry (1982: 17) posits that Eliezer in the similar place in Luke's genealogy (3:29) "reminded Matthew of the well-known high priest Eleazar. As a result, the evangelist's thoughts turned to the priestly genealogy" of 1 Chr 6:3–14 (MT 5:29ff.). According to Gundry, changes which Matthew makes can be accounted for by his intention not to give physical descent and by his lack of interest in priestly Christology. Gundry's theory is intriguing but difficult to prove, since Matthew's dependence on 1 Chr 1:13–15 is difficult to establish.

STANLEY E. PORTER

ELECT LADY [Gk *eklektē kyria* (ἐκλεκτη κυρια)]. The phrase "Elect Lady" is found only in the salutation of 2 John 1 as the designation of the addressees (cf. v 5 where *kyria* recurs). There has been considerable debate whether "elect lady" should be taken literally of an individual, or figuratively of a particular Johannine church.

The literal interpretation partly assumes that since 3 John is addressed to a specific individual (Gaius), so is 2 John. Clement of Alexandria *(Hypotyposes)* assumed that the addressee was a Babylonian woman named Electa, hence "lady Electa." However there is insufficient evidence to assume that *electa* was a proper name. Clement is probably not dependent upon historical tradition, but instead on 2 John 1 in light

of 1 Pet 5:13 where he found reference to a *syneklektē* ("chosen together") in Babylon. The concluding greeting from the children of an elect sister (2 John 13) would necessitate that the supposed Electa had a sister by the same name.

Athanasius called the addressee "noble Kyria." *Kyria* is attested as a personal name and there are early Christian examples of *eklektē* modifying a proper name (Rom 16:13; Ign. *Philad.* 11.1). A related proposal suggests that the identity of the woman is unknown, "elect lady" being equivalent to the expression of courtesy "dear lady." Ruling against literal interpretations is the fact that if it is a name, the phrase would be *kyria tē eklektē,* not *eklektē kyria* (cf. v 13; 3 John 1; Rom 16:13).

The figurative interpretation assumes that the "Elect Lady" is a personification, possibly of the Church universal (Jerome, Oecumenius). The lack of a definite article preceding the address is inferred to indicate that 2 John is a Catholic letter. However this leads to the implausibility of the children of an elect sister (v 13) greeting the Church universal. This implausibility can be circumvented if the broader church context is limited to a group of Johannine churches which is greeted by an individual Johannine church.

By far the most widely held view is that the Elect Lady is a personification of an individual Johannine church whose identity is unknown. Groups of believers are described as the elect (Matt 24:22; Rom 8:33; 16:13; Col 3:12; 2 Tim 2:10; Titus 1:1; 1 Pet 1:1; Rev 17:14). In the body of the letter the alternation from singular to the plural with reference to the addressees is more easily explained if a collectivity is involved. The content of the letter is more appropriate to a church than an individual (esp. vv 1–3, 5–6, 8). The admonition (v 10) suggests a house church, and the greeting (v 13) is best thought to be from a Johannine church from which the Elder is writing, rather than a sister's children greeting their aunt.

As personification, "Elect Lady" stands in the Jewish–Christian tradition of referring to the covenant people of God using feminine imagery. Israel and Jerusalem are portrayed as Yahweh's bride (Isa 54:1–8; 62:4–5; Jer 2:2; Hos 1–3) and as mothers (Isa 54:1–3; Bar 4:5–5:9; Gal 4:26–27). The Church is portrayed as a woman (1 Pet 5:13), the bride of Christ (2 Cor 11:2; Eph 5:21–33; Rev 19:6–8; 21:2), and as a mother (1 Pet 5:13; Rev 12:1–2, 17). This feminine imagery is carried through 2 John with the address of the church members as children (vv 1, 4) and the sending church as sister (v 13). For further discussion see *Epistles of John* AB.

ELECTION. This term is used in biblical and theological discourse to refer to the idea that God chooses a people or individuals to belong to him in a unique way.

OLD TESTAMENT

In the Hebrew Scriptures, it is the people of Israel that is the object of God's choice, and groups and individuals within this people.

G. Election and the Canonization of Scripture

A. Scholarly Discussion

The concept of election has had its stock rise and fall in 20th century biblical interpretation. The generation of OT scholars which set the agenda of the discipline before, during, and after WW II was virtually unanimous in according it an essential role in the conceptual structure of the OT. It was the subject of several monographs—by H. H. Rowley (1950), T. C. Vriezen (1953), and H. Wildberger (1959)—and was discussed in every OT theology written during the era. One of the leaders of the "biblical theology movement" in America, G. E. Wright (1952: 55) spoke for the generation when he declared that "the chief inference from this view of history as revelation was the mediated nature of God's action in history: that is, his election of a special people through whom he would accomplish his purposes."

The theological constructions of that generation came under severe criticism in the 1960s. The most telling criticism was of the concept of "revelation in history." J. Barr (1966) demonstrated that both "revelation" and "history" were used equivocally in virtually all biblical theologies of the era, and that concentration on "history" (by whatever definition) distorted the witness of the OT. Since the concept of election was an inference from and interpretation of Israel's history with YHWH, this critique of the slogan "revelation in history" undercut the importance of election as an organizing concept for biblical theology.

Barr (1961; 1966) also subjected the presuppositions of Bible dictionaries to serious scrutiny. His thesis, simply stated, is that words are not concepts. The actual meaning of a word in a given passage is as dependent upon the context as it is on its general semantic value. It is, therefore, highly misleading to construct a developed concept or doctrine from the various uses of a word, then import this concept into any passage in which the word is found.

In the aftermath of the assault on the "biblical theology movement" by Barr, Childs (1974), and others, it became common to deny that any comprehensive, synthetic concept like election, covenant, or kingdom of God was ubiquitous in Scripture. One must restrict the study of such concepts to their explicit appearance in specific texts. The witness of the OT is radically pluralistic, and to generalize a concept from one text to others is to impose an essentially alien conceptual framework on the latter.

A salutary effect of the demise of the biblical theology movement was the revival of interest in OT texts and traditions which were not "history." Wisdom, in particular, had been pushed to the margin of Scripture by the theologians who located its center in the "sacred history"; the 1960s and 1970s saw an explosion of creative work on this body of literature. This interest in wisdom further undercut the theological claims of such a synthetic theologoumenon as election, because the wisdom tradition built upon the universals of human experience and belonged to an international culture; the particularism of election was not only inapplicable to it, but in opposition.

Another trend in biblical interpretation began to gain momentum in this period. There was a turn toward the poetics and rhetoric of biblical narrative and poetry. During the earlier era, much of this literature would have come under the rubric, "revelation in history." This new set of methodologies, however, ignores both "revelation" and "history" and eschews subsuming texts under comprehensive theologoumena like election and covenant. These scholars desire to give the text, which usually means the extant text rather than the reconstructed "core," a close reading—a reading more concerned with the text's artful features and effect upon an audience than on any doctrine which might be abstracted from it.

This sketch of the last 75 years of OT scholarship and theology is decidedly impressionistic. It is intended only to give the reader a sense of where we have come from and where we are at on the discussion of "election." As one may surmise, after a period in which election was the center of theological discussion, it has fallen to a relatively minor subject within OT studies. Articles have appeared now and then in scholarly and theological journals, but the last three decades has seen nothing of great significance or interest. The relatively few attempts at theological synthesis in this period have found their center elsewhere (e.g., Terrien 1978).

Despite the demotion of the concept of election within the guild of biblical scholars and theologians, it has burst upon the theological scene with renewed vigor in recent years. The theological movements among Black and Latin American theologians (e.g., Cone 1975; Gutierrez 1973; Miranda 1974) have offered a new, bold interpretation and application of the concept of election: the God of Israel identifies with the poor and oppressed against the rich and powerful. This God is known solely by his will for justice (Miranda 1974), and he proposes to achieve justice through the empowerment of the powerless.

The reading of the Scriptures by liberation theology deserves the serious attention of biblical theologians. The Bible is *not* the property of academic scholars, but the Holy Book of Jews and Christians. It has become an effective text, a text with transforming power, within these radical movements, and biblical interpreters should appropriate as well as criticize these transactions between text and reader. Significant insights are to be gained by listening in on them (see especially Gottwald 1979 and 1985; on election, see Patrick 1976).

Of course, biblical scholars and theologians cannot allow movements in the religious communities or secular culture to dictate their agenda. Any rehabilitation of the synthetic concept of election must answer the criticisms of synthesis and proceed in a chastened manner. Barr's criticism of the creation of concepts from vocabulary items is valid. It is imperative that the study of election *not* import a complete concept into every passage in which a term or even several associated terms occur. Particular Hebrew words may be an index of a theological concept only when they occur in conjunction with other words and phrases which together enunciate the concept or some aspect of it.

The emphasis on the diversity of Scripture, though initially liberating, has become too nominalistic. The wisdom tradition, for example, was in fact incorporated into a canon in which YHWH's history with Israel is the center (Torah and Prophets). The shape of the canon should be a necessary, if not sufficient, component in the interpretation of particular texts (see Goldingay 1987); especially since the authors and editors of Scripture intended that their works be interpreted synoptically (see Patrick and Scult 1989).

Consequently, it is not necessary to limit the discussion of the concept of election to those passages which assuredly communicate it. It should be possible to work out its "fit" with narratives and utterances of various sorts. Let the interpreter admit that the concept, in such cases, is being used to synthesize the diverse texts of Scripture. The concept was not necessarily in the mind of the author, but what was in the mind of the author (as articulated in the text itself) fits within the conceptual scheme.

Another way to state this position is to reflect on the logical status of concepts. Election is a concept which was implicit in the stories Israel told of its origins and vocation. When a story does not answer all the questions that it raises, discursive thought begins to raise its implicit concepts and principles to consciousness. Election is an abstract concept meant to account for and justify the story of YHWH, the one Creator and Sovereign, and Israel. What explains and justifies the narrowing of the story, after the primeval period, to the people of Israel? How can Israel claim to know the universal God when no other people does? Why was Israel the beneficiary of such marvelous events? What distinctive identity must Israel maintain to be the people the text portrays? (See also Jacob 1958: 201–209; *IDB* 1: 76–82; *TDNT* 4:145–68; *ROTT;* Zimmerli 1978: 43–48.)

In the rest of this essay, we proceed from explicit statements of the concept of election to texts which can be read productively within its framework. We begin with the rather late document, Deuteronomy, which gives the concept its classical formulation. Then we trace applications of the concept from Deuteronomy back into the narrative traditions. The narrative order is followed, disregarding the purported date of the sources. After treating the narratives we venture into the prophetic applications of the concept, and conclude with the effect of the concept in the canonization of Scripture.

B. The Classical Formulation

The credit goes to the author of Deuteronomy for the classical formulation of the concept of election. Pondering the story of Israel's origins and calling, and the mounting crisis to its existence produced by the prophetic word and the course of human events, this author portrays Moses as defining its essential identity for all time. "For a holy people are you to YHWH your God; in you chose YHWH your God to be to him a people of treasured possession out of all the peoples which are upon the surface of the earth"

(Deut 7:6). The Hebrew word *bḥr* is the key word for our concept; YHWH chose out" *(bḥr)* this one people from all the peoples and "set it apart" *(qdwš)* as his own, bestowing upon it a "unique value" *(sglh).* According to Deuteronomy, there was nothing about Israel that made it more worthy of YHWH's favor than other nations; it was hardly impressive in size (7:7) so that YHWH might symbolize his power by being represented by a mighty nation. Asshur had elected Assyria so that his rule might be extended over the earth by conquest, but YHWH showed forth his power in weakness. Under the power of YHWH's blessing, Israel would multiply in numbers and increase in might, but this too would manifest YHWH's power in weakness. Nor was Israel of superior moral character, for their disposition is in fact recalcitrant (9:4, 6); if they do show forth his righteousness nevertheless, it will be a sign of YHWH's power to transform the human heart. The only reason for Israel's being chosen is to be found in YHWH's own will, in his incomprehensible "love" *(ʾhb)* for this people.

1. The Term *bḥr* in Hebrew Usage. At the time when Deuteronomy was composed, the word *bḥr* had currency in everyday Hebrew for the human act of choosing or selecting. It could be used of the mundane act of selecting an object for use (1 Sam 17:40; 1 Kgs 18:23, 25) or a place to reside (Gen 13:11; Deut 23:16). The criterion for choice appears to be fitness for the chooser's purposes. The verb could also be used of possible courses of action (2 Sam 15:15) and suffering (2 Sam 24:12). Persons, too, could be chosen for the purposes of the chooser: men are selected for military service (1 Sam 13:2; 2 Sam 10:4; 17:1), and individuals for leadership (Exod 18:25; 1 Sam 8:18; 12:13). When Saul charges Jonathan with choosing David (1 Sam 20:30), this may indicate that it was normal to speak of *bḥr* in the context of friendship, but given the general tenor of the evidence one should probably hear overtones of a political alliance. (See *TDOT* 2: 78–87; *THAT* 1: 275–300.)

The term *bḥr* was used of human decisions within the moral and religious discourse of ancient Israel as well. Isaiah describes a child's attaining the age of discretion as learning to "refuse the evil and choose the good" (Isa 7:15–16). It is noteworthy that one does not choose *between* evil and good; one always chooses *something.* Deut 30:19 sets out two modes of existence, obedience leading to life and disobedience leading to death, and urges Israel to "choose life." The deity—either YHWH or other gods—could also be the object of choice (Josh 24:15, 22; Judg 5:8; 10:14). To choose a deity means to rely upon (Judg 10:14) and serve that god (Josh 24:15, 22).

The term *bḥr* could be employed theologically. Long before Israel stepped upon the stage of history, the idea of a god choosing a human was in circulation. Within Hebrew Scripture, YHWH is the subject of *bḥr* with both persons and places as objects. As in the case of human choices, YHWH's choice of individuals is for official positions: he chose Saul to be king (1 Sam 10:24), then David to take Saul's place (1 Sam 16:8–10, 12; 2 Sam 6:21). Perhaps by chance, we do not find David's dynasty as an object of *bḥr,* though there are numerous passages which speak of it as "established," "covenanted," etc. (e.g., Ps 89:19–37; 2 Sam 7:11–16; 23:1–7). On the other hand, there are a number of references to chosen priestly dynasties (1 Sam 2:28; Deut 18:5; Ps 105:26). Finally, YHWH is said to have chosen Zion, or Jerusalem, as his dwelling place (Ps 132:13); the Deuteronomic tradition prefers to describe the holy place as the dwelling place of the name (Deut 12:5, 11, etc.; and 1 Kgs 14:21).

2. The Rhetorical Purpose of the Deuteronomic Formulation. Whether or not the author of Deuteronomy was the first to speak of YHWH's choice of the people of Israel, this work contains the most thorough and penetrating reflection on the concept of election within Scripture. In Moses' preaching, YHWH's free act of choosing this people accounts for the divine favor they have experienced, and the vocation and destiny they have inherited. The purpose of his homilies was to recapitulate the events of sacred history in an explicitly persuasive mode in order to enlist the identification of the audience with the "Israel" which was created and governed by the only God the people had ever "known" (Deut 13:2, 6, 13). The concept of divine election made explicit the unique value of belonging to this people. No other nation had been so favored by the one universal God (Deut 10:14–15, etc.); thus, it would be foolish, even suicidal, to renounce one's obligations to the relationship.

C. Election in the Acts of the Biblical Drama

Aspects of the concept of election can be drawn out of reflection on each act of the biblical drama. The creation of the world establishes YHWH's claim upon all creatures: "Behold, to YHWH your God belong heaven and the heaven of heavens, the earth with all that is in it" (Deut 10:14). Yet, among all the creatures under heaven this universal Lord selected one family to belong to him in a special way: "Yet YHWH set his heart in love upon your forebears and close their descendants after them—in you—above all peoples" (10:15). Belonging to YHWH is a great gift which can only be explained by reference to his mysterious will. YHWH had simply "fallen in love" with Israel's ancestors, choosing them over every other people.

1. The Call of Abraham. This special favor for one family is by no means a form of favoritism inappropriate to a just God! God, our author affirms, plays no favorites: "For YHWH your God is God of gods and Lord of lords, the great, mighty and terrible God, who is not partial and takes no bribes. He executes justice for the orphan and widow, and loves the sojourner …" (10:17–18). The favor shown Israel is an unfair favoritism because the people are called to embody in their life the very divine justice that justifies YHWH's favor toward them: "You shall love the sojourner, for you were sojourners in the land of Egypt" (10:19). The passage then enunciates the underlying principle of election, that the God who has shown them favor expects not only justice toward those who are below them, but devotion and obedience to the One who raised them from below: "YHWH your God you shall fear; him you shall serve and to him you shall cleave, and by his name you shall swear; he it is who is your praise and he it is who is your God, the very one who has done you these great and wonderful deeds which your eyes have seen" (10:20–21). It is not so much that Israel pays back God's concern by showing gratitude as it is that Israel fulfills the purpose of election by embodying a God-centered life.

Why did the universal God not show the same favor to other peoples? Why did he not fall in love with their forebears as well as with Israel's? To answer this question, we must go back to the Genesis narrative recounting the choice of Abraham. While the promise given to Abraham (Gen 12:2–3) and repeated to him (18:18; 22:18), to Isaac (26:4), and to Jacob (28:14) does not use the word "to choose," it does depict YHWH's singling out one person and people for a special destiny. The key word in these passages is "blessing" *(brk),* which is the receiving of supernatural favor or power to achieve that which makes life worth living. Abraham and his descendants are promised the power of fecundity and renown (12:2) and divine support in their competition with other peoples for existence (12:3a). These blessings might be said to equip Abraham and his descendants to fulfill their destiny. The nature of that destiny is stated in the cryptic expression, *wnbrkw bk kl mšpḥt hʾdmh* (12:3b), which can be translated either, "all the families of the earth will bless themselves by you," or, "in you all the families of the earth will be blessed." The first of these would mean simply that other families and nations would be so impressed by Israel's success and happiness that they would say, "May you be blessed like Abraham/Israel." The second would mean that Israel's very existence would mediate a "blessing" to all the families on earth. While both are linguistically and conceptually possible, as elsewhere in the Bible, the ambiguity of the text may be there for a reason. However, we prefer the latter because it provides the most comprehensive, consistent, and cogent possible interpretation (see Dworkin 1985 for a discussion of the criteria employed here). In it we have an explanation of how the story of the universal God can be narrowed from universal history (Genesis 1–11) to the history of one people (from Genesis 12 to the end of history): God is achieving a universal purpose in Israel's history. How that purpose is to be achieved, and how all peoples will receive a blessing through Israel, is left for the future to unfold.

There is a passage within the Abrahamic narrative which does chart the direction of election history: Gen 18:17–21. YHWH is pondering whether he should reveal his impending judgment of Sodom and Gomorrah. He decides to tell him "because I have known (Heb *ydʿ*) him in order that he may command his children and his household after him to keep the way of YHWH by doing righteousness and justice in order that YHWH might bestow on Abraham all that he promised" (18:19). While this enunciation of the reason for election does not explain how the attainment of righteousness and justice by Israel will benefit the world, it does indicate how Israel is expected to fulfill its role. It must be remembered that election

does not imply proselytizing other peoples; thus, the text leaves open how other peoples will benefit from Israel. In the story that follows, one way is exemplified: Abraham intercedes for them.

2. The Exodus from Egypt. YHWH's election of Abraham and his descendants is manifested in his great deeds for them, particularly his deliverance of Israel from Egyptian bondage. Deut 7:7–8 draws out this connection: "It was not because you were more in number … that YHWH became attached to you and chose you … but out of YHWH's love for you and his fidelity to his oath which he swore to your forebears he brought you out with a mighty hand, freed you from the house of slaves, from the power of Pharaoh king of Egypt." YHWH was true to the solemn promise he had made to the patriarchs, confirming his election by a great deliverance. The Exodus was the moment in Israel's history in which God's loyalty to the people he had attached to himself coincided with his justice for the oppressed. "I have witnessed the affliction of my people who are in Egypt, and their cry I have heard in the face of their slave drivers, so I know their pains, and I have come down to deliver them out from under the power of Egypt …" (Exod 3:7–8). YHWH owns this suffering mass of slaves and enters sympathetically into their condition, and is thereby moved to rectify the injustice they have experienced. Since YHWH is the Creator and Lord of history, one could logically infer that the power structures which produce injustice are the creation of his providence, but here in the Exodus we see that his power is manifested in overturning unjust power. It is precisely because all human power derives from God that he has the authority and capacity to empower the powerless.

3. The Conquest of the Land. YHWH's military support of Israel in their conquest of Canaan has a similar logic. Deut 7:17–24 makes this connection: "If you say in your heart, 'These nations are greater than I; how can I dispossess them?' you shall not be afraid of them, but you shall remember what YHWH your God did to Pharaoh and to all Egypt …" (v 17). YHWH will overturn the odds in Israel's struggles against enemies of superior strength, just as he did in Egypt. The same theme reappears numerous times in Hebrew Scripture. For example, Ps 44:3 confesses that

> Not by their own sword did (our fathers) gain nor did their own arm give them victory;
> but thy right hand, and thy arm, and the light of thy countenance;
> for thou didst delight in them.

The term "delight" *(rṣh)* carries the same weight as "love" and "choose" in Deuteronomy. The power to conquer the land was a gift of the God who had graciously taken it under his care.

The justice of this love is less clear in the Conquest than in the Exodus. In the accounts of the book of Judges, we do hear of the oppression of Israel by its enemies (3:8–9, 12–15; 4:1–3; etc.). This theme is not only present in these rather late frameworks of the deliverances, but in the stories themselves—even in the very old Song of Deborah (Judg 5:6–8). One has to admit, however, that these peoples were defending their own territory against the encroachment of land-grabbers. The old narratives simply do not justify YHWH's decision to dispossess the peoples of Canaan in order to give Israel a land. Of course, one could appeal to YHWH's ownership of the land (e.g., Lev 25:23) and his right to dispose of it however he pleases (cf. Exod 19:5). This arbitrariness, however, endangers YHWH's claim to be a just God of all nations. The author of Deuteronomy sensed the need to provide an additional justification: "It is because of the wickedness of these nations that YHWH is driving them out before you" (Deut 9:4, 5, etc.). The fate of nations depends upon the character of their common life; this is a warning to Israel that they should obey the divine law by which they shall attain righteousness in the eyes of the universal Judge (Deut 6:24–25), or they will go the way of the nations that preceded them (Deut 8:17–20; 28:1–68, and *passim*).

D. The Distinctive Identity of Israel

YHWH's election of Israel is manifested in the people's distinctive identity as well as God's deeds. This distinctive identity is articulated in two allusive expressions in Deut 7:6: "you are a *people holy* to YHWH your God"—"… a *people of unique value* to Him." In the phrase "holy to Yahweh," one hears allusions to cultic personnel, places and utensils which are set apart from the everyday to be in the immediate vicinity of the divine and to perform mediating functions. Israel itself, the expression suggests, is to be a people with God in its midst, called to witness and perform his works. Moses once prays at

Sinai: "If now I have found favor in thy sight, O Lord, let the Lord … go in the midst of us, although it is a stiff-necked people, and pardon our iniquity and our sin, and take us for thy inheritance" (Exod 34:9). To which YHWH replies: "Behold, I strike a covenant. Before all your people I will do marvels, such as have not been wrought in all the earth or any nation; and all the people … shall see the work of YHWH; for it is an awesome thing I will do with you" (Exod 34:10). Israel will stand out from other nations by the marvel-working presence of the holy God in its midst.

The other expression derives from the language of ownership. The distinctive word *sglh* is used outside of our formula for the private wealth of a king, in distinction from wealth held in trust for the people (see 1 Chr 29:3; Eccl 2:8). From this we can infer that Israel is YHWH's private treasure, in distinction from the peoples of the earth; it is, as suggested in the translation (above), a "unique value" to him. Other texts use another word from the semantic field of "ownership," *nḥlh* ("inheritance"), for Israel's unique position of belonging to YHWH (so Exod 34:9; Deut 4:20; 32:8–9, etc.). Israel is being compared to a plot of land that belongs to a family in perpetuity, passed on from generation to generation by inheritance. Perhaps this is meant to intimate that Israel is YHWH's "stake" in the world, his inalienable parcel of territory among the nations.

When the covenant is offered to Israel on Mount Horeb/Sinai, YHWH initially recalls his demonstrations of power and concern for Israel in the deliverance from Egypt (Exod 19:4), then offers them the opportunity to choose to be a "holy nation" and "unique value" to YHWH by agreeing to "obey my voice and keep my covenant" (19:5). The best interpretation of the conditional structure of this passage is to construe it as a condition that can be met in the course of the ritual, for the covenant arrangement is put in force in this very event. That is to say, Israel *becomes* YHWH's people by formally pledging to obey him (as they do in 19:8 and 24:3, 7–8). Of course, if they go back on their pledge to recognize YHWH as the focus of loyalty and locus of authority in Israel, the stated condition could come into force as judgment; but then it would be judgment of the *chosen* people.

Exod 19:5–6 uses the expressions found in Deut 7:6. There is a slight difference in wording, however, for in Exod 19:6 Israel is called a holy *nation*, and this is paired with "kingdom of priests." A nation, unlike a people, is a political entity, and the matching term *kingdom* reinforces this political import. Both phrases combine a political and a religious term, suggesting the idea of theocracy: a nation ruled by God. The election, it would seem, establishes Israel as a political state with a divine sovereign. This is in fact simply the reverse side of the pledge to obey YHWH, for sovereignty is defined as the authority to command and the duty of the sovereign's subjects to obey.

The use of the term "priests" in the one phrase may allude to a role of mediation between God and the nations. The priesthood performed such a role within Israel, so by analogy Israel as a priesthood would perform this role for the nations. Such an allusion is justified by its nice fit with the promise to Abraham that he and his offspring will be a blessing to the nations.

In these passages, election is so bound up with COVENANT that the conceptual structure associated with the one can be transferred to the other. Hence, Israel's unique status entails the obligation to obey YHWH's will; that will is enunciated in the commandments and laws which are delivered to the people (in Exodus 20–23) as a part of the act of covenant making, and which the people agree to obey in the ritual ratifying it (24:3–8). It is quite understandable, then, that virtually every passage in Deuteronomy which speaks of YHWH's choice of Israel is juxtaposed to admonitions to obey him (7:6–8, 9–11; 10:12–13, 14–15, 16, 17–18, 19–20; 14:1, 2; 28:1a, 1b; cf. 26:17–19).

E. Election in the Message of the Prophets of Judgment

Amos 3:1–2 constitutes a powerful commentary on the responsibility entailed in being YHWH's elect: "You only have I known among all the families of the earth; therefore I will visit upon you all your iniquities." This passage does not contain the key word *bḥr*, yet it does speak of a unique relationship established at YHWH's initiative. Being "known" *(yd‹)* by YHWH is indeed tantamount to having been chosen (see Gen 18:19, and for an individual, Jer 1:5). Amos here appears to be refuting a natural, but spurious, extrapolation from the concept of election: YHWH will side with his people in their conflicts with enemies and show indulgence toward their iniquities. To the contrary, YHWH says through Amos,

since I have chosen you and revealed my law by which my people can preserve a righteous and just community, I will especially hold you responsible for your corruption. Other nations could plead for mercy because of their ignorance, but Israel could not. In another passage (Amos 9:7), Amos actually denies that Israel is special to YHWH: The Ethiopians are equal to God's concern, and his providence has been demonstrated in the history of other nations as well as Israel's. To square this with Amos 3:2 is difficult because they appear to be contradictory, but it is noteworthy that both argue to the same conclusion: Israel is at least as vulnerable to judgment as any other nation.

Although biblical scholars find virtually no other references to election in the preexilic prophets, a close reading of the texts does turn up passages which resonate with election ideas. For example, the name of Hosea's third child, Lo Ami ("Not my people," 1:9), negates the unique status election claims for Israel. Israel's apostasy has violated the mutually exclusive relationship between the people and YHWH, so the bond is nullified. The very identity of this people was defined by the relationship, so when the relationship was ruptured, the people "lost" that which distinguished them from other peoples. Likewise, when they pursue the game of international power politics, "Ephraim mixed itself with the peoples … Aliens devour its strength" (7:8–9); "Israel is swallowed up; already they are among the peoples like a useless vessel" (8:8). They must undergo the suffering consequent upon their deeds (2:2, 9, 10–13; 8:9–10; etc.) before they can be reconstituted as YHWH's people and reverse the negation in the name (2:14–23).

The book of Deuteronomy was in all probability composed after the 8th century prophets and was responding to their message. The author seeks to motivate the people to practice justice and be loyal to their God in order to avoid the dire consequences of injustice and apostasy announced by the prophets. The Conquest of Canaan is a central symbol in the author's presentation. The previous inhabitants were being driven out because of their wickedness, particularly their religious and cultic abominations. It is imperative, Moses says, that these peoples and their religion be eradicated to avoid their corrupting Israel (e.g., 7:1–5, 25–26). Moreover, once the people of Israel are in control of the land, they must be on guard to purge their own people when they "revert" to the religion of their predecessors or anything like it (12:29–31; 13:2–19—Eng 13:1–18; etc.). A similar viewpoint is expressed elsewhere in the Torah; for example, the portion of Leviticus known as the Holiness Code has admonitions like: "And you shall not walk in the customs of the nation which I am casting out before you; for they did all these things and I abhorred them" (Lev 20:23).

In the history of Israel, movements to purge the people of polytheism broke out now and then. Probably the most violent outburst occurred during Jehu's rise to power (2 Kgs 9–10). He not only killed the king, Joram, and his Judean ally, Ahaziah, and the hated queen mother, Jezebel, but every member of the royal family and its political allies and, in addition, several thousand worshippers of Baal whom he had assembled under false pretenses. The narrative approves of this massive bloodletting in the service of national purgation (2 Kgs 10:28, 30). However, about a century later Hosea condemned the house of Jehu for this butchery (Hos 1:4–5). He offers no explanation for YHWH's change of mind, but his overall message would support the idea that the political enforcement of orthodoxy held no prospect of transforming the people, and simply masked the will-to-power of rulers. Hosea saw no redemptive possibilities in power politics, only violence, betrayal, and self-salvation (cf. 14:3; 5:8–6:6; 7:1–7, 8–10, 11–13, and *passim*). To use a somewhat anachronistic expression, Israel could come to its true identity only by a "conversion of the heart" after power politics and lust had brought them to ruin.

F. Election in Prophetic Promises of Salvation

The classical prophets, beginning with Hosea, not only pronounced judgment on the people of God, but promised that the passage through divine judgment would prepare the people for a new beginning. This new period would not be like the history that resulted in judgment, it would break out of the self-aggrandizement, violence, and suffering which had characterized human existence hitherto. Some of the depictions of the new age involved the breakdown of national distinctions, including the division between Israel and the nations. Others looked forward to the eternal separation of the righteous and the wicked, the result of which would be the cessation of the victimization of the righteous by the wicked. Alongside

these transcendent hopes we find more practical policies of communal leaders designed to preserve the identity of the people of YHWH amid the exigencies of history.

1. The Expansion of Election. Occasionally we receive hints in the classical prophets and in anonymous prophecies within their books that the distinction between Israel and the nations is only provisional, and that at the denouement of history the nations will be incorporated into the people of God. One such passage (Isa 19:19–25) speaks of the conversion of Egypt and by implication Assyria, the two great powers of Isaiah's day, to YHWH, concluding with an explicit reference to election language: "In that day Israel will be the third with Egypt and Assyria, a blessing in the midst of the earth, whom YHWH of hosts has blessed, saying, 'Blessed be Egypt my people, and Assyria the work of my hands, and Israel my heritage' " (19:24–25). The language once used to set Israel apart from the nations will be addressed to them; the election of Israel reaches its true end in the election of all nations.

The anonymous prophet of the Babylonian exile, known as Second Isaiah, also announces the conversion and incorporation of all peoples into Israel in Isa 45:20–25. In Cyrus' conquest of all the known world, the nations will discover that their gods are impotent and that it is YHWH who rules human destiny (vv 20–21). Once YHWH wins his "debate" with the gods of the nations, he offers his salvation to the peoples and insists that they will all accept it (vv 22–23). They will become the "offspring of Israel" (vv 24–25).

Some scholars maintain that Second Isaiah envisages the subordination of all nations to Israel. There are, for example, promises that the nations will give their wealth to Israel and serve them (e.g., 45:14). However, the interpretation of our text that renders the most comprehensive, consistent, and cogent message (see Dworkin 1985) would find a genuinely universalistic message in it. There is no hint in Isaiah 40–55 that Israel will become a world power in any but a religious sense, so the references to receiving the wealth and service of the nations are best understood as freely given gifts to YHWH's sanctuary.

The language of election is repeated frequently in Isaiah 40–55. The exiled people of YHWH are called his chosen (*bḥr* in verb and adjective forms) no less than seven times (41:8, 9; 43:10, 20; 44:1–2; 45:4). Of these, all but 43:20 pair it with the term "servant." Israel has been chosen out by YHWH to be his servant. Their suffering is due to their failure to "walk in his ways and obey his law" (42:24, cf. v 21; also 43:24), in a word, to serve YHWH. However, he intends to revive them and make them messengers (42:19) and witnesses (43:10) to the nations. Alongside these passages designating Israel as YHWH's chosen servant are several which speak of an individual in that role (42:1; 49:7). Of course, there is an unresolved debate among scholars as to whether the Servant Songs (42:1–4 [5–9]; 49:1–6 [7–13]; 50:4–9 [10–11]; 52:13–53:12) depict a real or ideal individual or a corporate figure representing Israel. In any case, they give the servant a rather specific task, to "bring forth justice from the nations" (42:1, cf. v 4) without the use of force; the performance of this prophetic task (49:1–6; 50:4–9) leads to suffering, and finally to a sacrificial death (52:13–53:12). Here we have one answer to the question of how Abraham and his seed will be a blessing to the nations.

2. The Division of the People into Elect and Reprobate. When Israel was chosen out from the nations to be YHWH's people, the other nations were not so much rejected as simply passed over, to be the beneficiaries of election at the denouement of history. Only once in the OT is it actually said that YHWH chose Israel and rejected someone else (Esau/Edom in Mal 1:2–3). As seen in the Isaiah passages, the very logic of election tends toward universalism.

However, there is a countervailing development in postexilic prophetic literature: the people of God themselves are divided between righteous and wicked, the elect and the reprobate. In a number of passages deriving from Second Isaiah's disciples, known as Third Isaiah, we find the beginnings of the reconception of election on a nonnational basis. Isaiah 65 thrice speaks of a group within Israel as "my chosen" (vv 9, 15, 22), parallel with another title of election, "my servants" (vv 8, 9, 13–15). Over against this group is another which has proven faithless and arrogant (65:1–7); the entire chapter threatens the latter group with judgment, while promising salvation to the elect. The chosen servants will "inherit" YHWH's land and be blessed with the blessings promised Abraham, while the rejected "shall leave your

name to my chosen people for a curse, and Lord YHWH will kill you, but his servants he will call by a different name" (v 15). It is within such passages, which grew out of concrete conflicts within the restoration community (see Hanson 1975), that the beginnings can be found of the eschatological drama of a great day of judgment when some are saved, and some damned (as, for example, we find in Dan 12:1–3).

3. Fencing Off the People of God. It should not be concluded from the above that the concept of Israel's own election ceased to play a central role in Israelite thought after the Exile. At the very time when prophets were envisioning the opening up of Israel to the peoples of the earth, the reformers Ezra and Nehemiah were demanding a strict separation of the "holy seed" (Ezra 9:2) from the peoples of the land. Intermarriage would result in apostasy and "pollution" (Ezra 9:10–12), so these men exacted pledges from the people to marry only other Jews and to divorce their foreign wives (Ezra 10; Nehemiah 10, 13). Coupled with ritual laws which reinforced segregation, the postexilic Jewish community provided for the maintenance of its distinct identity and traditions among the peoples of the ancient world. While this "fencing off" the people of God ran counter to the universalistic visions of the prophets, and provoked their protest, it was a sober, realistic policy for life within the bounds of history.

G. Election and the Canonization of Scripture

The concept of election played a largely hidden, but very active role in the emergence of the doctrine of divine revelation in Scripture. Before the concept of election was formulated by the author of Deuteronomy, those who passed on Yahwistic traditions were apologists for a view of Israel defined by the calling of YHWH. The Deuteronomic Moses raised this calling to a full-fledged theologoumenon. Israel has been called out from the nations to know the true and living God and to be his obedient subject among the peoples of the world. The story told by the Yahwists was not a national record, but an account of events and communications which constituted Israel as a holy people, and of the course of the history lived under this regimen. This history reached a certain closure in the Exile of Judah. The religious community that survived and was reconstituted after the Exile, shaped its identity around the texts deriving from the time when the people of God was originally constituted—the Torah—and lived under that regimen—the Prophets. Other tokens of its life as the people of God were finally incorporated in the sacred text.

It may be that a version of the hermeneutical circle exists at the basis of this doctrine of Scripture. The literature that recounted the story of Israel, the people of YHWH, is revelation because the people were chosen to be his own possession, his holy people, among the nations, and Israel is the people of God because the story—now in text form—so constituted it. To belong to this people is to appropriate this text as one's own story, and to recognize this text as true is to enter into the community for whom it was written. The text and its interpretive community are in symbiotic relationship: the meaning of the text is to be found in its power to constitute the community in its true identity, which in turn is to be measured by its faithfulness to the text which constitutes it.

There is a temporal aspect to the interaction of text and community. The community lives in a specific moment in political and cultural history. For the text to perform its function of community formation, it must be interpreted to meet the exigencies in the life of the community. To use the contemporary expression, the text must be "relevant" to the community, translated into its forms of thought and applied to its modes of life. There is a reverse process as well: the text must challenge the community's forms of thought and modes of life. While the text legitimates the community simply by being read within it, the text must call the community out from the "world" to be revelation. There will remain a permanent conflict within the interpretive community regarding how the community should be distinguished from those outside: by its eschatological passion, by its ritual separation, by its theological doctrine, or by some dialectical synthesis of these divergent readings.

DALE PATRICK

NEW TESTAMENT

Election in the NT is understood as God's selection in the distant past of those (whether angels or human beings) who will form the eschatological community of the holy. It is also God's choice of those who will serve him in special ways.

———

A. Terminology

A range of terms is used in the NT to describe divine election. Common are *eklogē* ("election") and *eklektos* ("elect," it denotes being the object of God's choice, except for Rom 16:13); there are also

eklegomai ("to choose"), *suneklektos* ("likewise chosen," only in 1 Pet 5:13). Three verbs which are used one time each for election are *hairetizo* ("to choose," in Matt 12:18), *haireo* ("to choose," in 2 Thess 2:13), and *tasso* ("to ordain," in Acts 13:48).

B. God's Choice of Individuals for Special Service

There are a handful of NT references of God choosing an individual for a particular ministry. This choice for ministry has a rich OT background; God would show his choice for leaders (Num 16:5; Hag 2:23), priests (Deut 18:5; 21:15), kings (1 Sam 15:28), and prophets (Jer 1:5).

The apostle Paul had a firm sense of God's choice of him to be the apostle to the gentiles (Acts 9:15; 13:47).

C. Jesus as the Elect Servant

According to the NT, Jesus was chosen to fulfill the divine plan, that the Messiah would suffer and die, rise again, and rule over creation (e.g., see Acts 3:20; Eph 1:9–10; 1 Pet 1:20; Rev 13:8). 1 Peter 2:4 refers to Christ as the Stone rejected by men, but "in God's sight chosen and precious." Some mss of the Gospels refer to Christ as the "Chosen One" *(eklektos)* in connection with God's approval of him as the "beloved Son" (in John 1:34 and Luke 9:35); this change probably reflects the link between election and the language of kingship in the early Church. Jesus' taunters accused him of claiming to be "the Christ of God, his Chosen One" according to Luke 23:35.

The title derives either directly from the servant passages of Isaiah 41–42 or indirectly through other sources, such as the *Similitudes of Enoch,* in *1 En.* 39:6 and 48:6, one who is variously called the Son of Man and the Righteous One is also designated the Elect One. The work plainly reflects traditional terminology, regardless of the possible Christian theological influence.

It is more likely that the Chosen Servant motif stems directly from Isaiah. The Servant Songs contain language of election and calling when speaking of the Servant Israel and of an individual servant (cf. Isa 41:8–9 with Isa 42:1). Matthew 12:18 contains the Christian paraphrase of Isa 42:1: "This was to fulfill what was spoken by the prophet Isaiah: 'Behold, my servant whom I have chosen, my beloved with whom my soul is well pleased.' " The early Church read the Servant Songs as predictions of Jesus (Cullmann 1963: 51–82); their conviction that God had ordained him as the servant is found in Matt 8:17; Isa 53:7–8; and Acts 3:13; 4:25, 27, 30; 8:32–33.

D. The Elect Angels

Only in 1 Tim 5:21 does the NT speak of elect angels. *"Eklektos"* here means "chosen," not "elite" or "choice," since Paul was calling on all angels to witness. The designation of "elect angels" is quite rare. Schrenk and Quell *TDNT* 4:144–92 cite *1 En.* 39:1 and Tob 8:15 (contra the RSV) as parallels, but neither reference is unambiguous (*TDNT* 4:185). This election is not to service (since again that would limit the number of angelic witnesses to Paul's oath) but to retain their holy status. The elect angels contrast with those who fell from their first estate (Jude 6). The elect and holy angels will participate in the judgment (Matt 24:31; 25:31; 2 Thess 1:2–8), while the wicked angels will be judged (1 Cor 6:3).

E. The Corporate Election of Israel

Particularly in Deuteronomy, Israel as a national whole is the "chosen" people of God, as in Deut 7:6 "For you are a people holy to the Lord your God; the Lord your God has chosen you to be a people for his own possession, out of all the peoples that are on the face of the earth" (see Deut 10:15; 14:2; Ps 105:6, 43; Isa 41:8). Election is coupled with the demand for holiness, since the elect nation must reflect the divine character.

It is an oversimplification to say that the older idea of corporate election gives way to individual election in NT theology. In the OT too, there is progression toward a doctrine of individual election for members of the "remnant" (*ROTT* 2: 21–22). Even in the days of the prophets it was clear that "not all Israel is Israel." The doctrine of individual election developed out of the hope of the holy and elect remnant. In Isa 65:9, "my chosen" form a distinct group within greater Israel who will find eschatological blessing (cf. also Isa 10:20–23 and Isa 14:1—God "will again choose Israel").

Paul bases his pivotal discussion in Romans 9–11 on the dismissal of the Gospel by the majority of Jews. Paul has to explain why the "chosen people" are rejecting Jesus Christ. He thus reaches back to the

remnant concept: history and revelation disclose that within the nation Israel there exist two classes: the unbelieving descendants of Abraham, and the elect believing remnant which God spares from downfall. Paul argues that the remnant of Israel (of which he is a part, Rom 11:1–2) is now turning to Christ in belief through the preaching of the Gospel (Rom 11:7). This remnant is "chosen by grace" (Rom 11:5) and was foreknown (Rom 11:2).

Paul asserts that after the gentile elect enter into salvation, "all Israel will be saved" (Rom 11:26). His quotation from Isa 59:20–21 indicates that he is thinking of the eschatological redemption (see the commentaries, esp. Cranfield *Romans II* ICC, 574–77). Paul is following the line of reasoning found in the OT that salvation is for the elect remnant. Probably the best interpretation of Rom 11:26 is that the "natural branches" of the end time will be beloved and thus elect for the sake of their fathers (Rom 11:28–29). Alternatively, he is enunciating that all believers are elect, whether Jew or gentile, and all the elect shall be saved.

In Pauline thought, the OT doctrine of the remnant points to personal election, that God has elected both Jews and gentiles to be saved. One may therefore adduce the statements of Romans 9–11 as data for the doctrine of individual election.

F. The Corporate Election of the Church

The NT does not thoroughly expound the corporate election of the Church, but the idea is not absent. In 1 Pet 2:9 the Church is called "a chosen race … a holy nation, God's own people," reminiscent of biblical titles for the nation of Israel. The connection between God's choice, holiness, and corporate mission is unmistakable.

Although "the elect" are spoken of collectively, emphasis is usually placed on the sum total of elect individuals, the *eklogoi,* not on the Church as a chosen group.

Christian congregations are possibly called "elect" in 2 John: the "elect lady" of 2 John 1 and "elect sister" in 2 John 13 (see the commentaries). These are isolated occurrences, but cf. the inscription to Ignatius' *Epistle to the Ephesians* in which he speaks of the "elect" church of Ephesus.

G. The Election of Individuals to Salvation

In the apocalyptic literature and the literature of the Qumran community (especially CD) individual election comes to the fore more than it does in the OT; this was in order to distinguish the true saints from "false" Israel (*TNDT* 4: 170–71). But in the NT there is a bridge to the new nation, composed of Jews and gentiles. The election of gentiles is only broadly foreshadowed in the OT (see Amos 9:12, in which the "nations" are called by God's name).

1. "The Elect" in the Synoptic Tradition. There are a cluster of references in which Jesus speaks of "the elect" (from *eklektos*), usually in connection with the tribulation (Matt 24:22, 24, 31; Mark 13:20, 22, 27; Luke 18:7). In its present setting, Luke 18:7 claims God's general protection of his own. Nevertheless, eschatological events uncover whether an individual is elect (Pannenberg 1977: 55): although "many will fall away" (Matt 24:10) the elect will not be deceived by false Christs and false prophets (Matt 24:24). Then at his coming, the Son of Man will "gather his elect" (Matt 24:31). The fact of being elect is eschatologically revealed: "For many are called, but few are chosen" (Matt 22:14).

2. Election in Pauline Theology. In the Synoptic Gospels it is seldom explicit that it is God who chooses individuals. But Paul (with the Fourth Evangelist) develops the concept of election from a more theocentric standpoint. Here *eklegomai* and its synonyms have God as their subject: "God chose you from the beginning to be saved through sanctification by the spirit and belief in the truth" (2 Thess 2:13).

In 1 Cor 1:27–28, Paul analyzes the composition of the Church and makes it clear that the appeal of the Gospel to the lower classes is not merely sociologically defined. While this passage could be taken to refer to corporate election (*TDNT* 4:174), individual election is logically demanded in 1:24, 26. The fact that the socioeconomic makeup of the Church is under God's control, is not accidental. And control over the Church's composition demands control over its parts.

Paul develops the doctrine of election further in Rom 8:28–38. God's choice of the individual is typically underscored in times of persecution. In 8:29–30 Paul sets forth an *ordo salutis,* and illustrates graphically and grammatically that God does not lose any men or women between his choice in eternity

past to their glorification (the "elect" first appear in 8:33). He seems to make election synonymous with "foreknew" in 8:29. Meanwhile, predestination is the next logical step, God's determination that the elect shall be Christlike. Paul speaks of "us" as those who are truly elect, not those who merely profess faith and then tend to fall away from Christ, but those who persevere through tribulation to the end. Paul's emphasis on perseverance as well as preservation by God dovetails nicely with the promise of Matt 24:24.

The modern trend is to read Romans 9–11 as a treatise on the nature of Israel rather than a theology of election (Kümmel 1973: 232). But the passage must be read in the light of its two connects, both with the issue of Jewish salvation, and with his treatment of soteriological election in Rom 8:28–38. Far from being limited to one idea in Romans 9–11, the context indicates that Paul is speaking both of Israel's destiny and election to salvation.

Paul seldom theologizes out of context. So following his description of God's election, he applies the doctrine to the problem of Jewish unbelief. He shows that the reason Jews are not turning to Christ as a nation is that God has not elected all the Jews to belief in Christ (Rom 9:11). The Scriptures teach that God's choice is prior to one's own existence (Rom 9:1–18) and that election is divine prerogative (Rom 9:19–24). With the prophets, Paul defines Israel as the sum of elect Jews (for him, the Jews elect in Christ), who with the elect gentiles share the blessings of Abraham. While divine election is chronologically prior to faith in Christ, the apostle Paul emphasizes the vital importance of justification by faith—the elect come to light only as they believe in Christ (Romans 10).

When Paul speaks of the basis for God's election, he refers to divine grace (Rom 11:5; according to 2 Tim 1:9 Christians are called by God's purpose and grace determined "ages ago"). He clearly spells out that election cannot be attained either through sincere effort (Rom 9:30) nor through works (Rom 11:6) nor through high social status (1 Cor 1:27–28).

Ephesians 1:4 and Col 3:12 both indicate that the end of election is holiness (see Rom 8:29); in fact, Ephesians is in part a treatise on the destiny of the Church from prehistory to its eternal witness to the love of God.

Paul's theology of election was not developed in a vacuum; it was shaped by his own experiences. He was aware of his own unworthiness as a former persecutor of the Church (Phil 3:2–7; 1 Tim 1:15–16). Thus in Gal 1:13–16 he must say that "he who had set me apart before I was born, and had called me through his grace, was pleased to reveal his Son to me." So also in Acts 22:14: "And he said, 'The God of our fathers appointed you to know his will, to see the Just One and to hear a voice from his mouth.' " These two passages cannot be reduced to a mere "missionary call," since his call to faith and his call to mission cannot be separated (see also Acts 13:47). Paul knew he was given both salvation and apostleship through God's gracious purpose.

Paul's missionary experiences also reinforced the theology of divine sovereignty. This fact may be the reason why he closely links election to the "call" of God (evidenced by conversion). He tells the Thessalonians that the evidence for their election (1 Thess 1:4) is the fact that the Spirit powerfully called them from idols to God (1 Thess 1:5–10).

Paul links election with God's foreknowing *(proginosko)* in Rom 8:29 and 11:2 (cf. 1 Pet 1:2). While Arminian theologians take foreknowledge as prescience of individual faith, it is significant that the object of divine foreknowledge is never specified. It is perhaps the person himself who is foreknown (Rom 8:29 "whom he did foreknow"). Foreknowledge as attributed to God has the flavor of ordaining the future rather than merely knowing the future (*TDNT* 1:715); this is the meaning it most certainly has in regard to Christ in 1 Pet 1:20. Thus 1 Pet 1:2, which in the original speaks of election "according to the foreknowledge of God," is well rendered as "chosen and destined by God the Father."

3. Election in the Gospel of John. John emphasizes the Son's role in election. The Father is said to have "given" the elect to the Son (John 6:37; 17:2, 6, 9), and Jesus states in John 6:44 that the Father "draws" them to eternal life. The latter concept seems to be equivalent to the Pauline idea of the "call" of God to saving faith.

In John 15:16 Jesus contends: "You did not choose me, but I chose you and appointed you that you should go and bear fruit …" (see also 15:19). While this might be read as the call to apostleship, the

previous context indicates that he is speaking of "bearing fruit" with those who abide in the True Vine (see the commentaries). This choosing is therefore soteriological and makes the Son the chooser of the elect along with the Father.

4. Election in Other NT Literature. Acts 13:48 contains the striking statement, that "as many as were ordained to eternal life believed." Grammatically it is next to impossible to make the foreordination contingent upon individual faith; rather, Acts postulates with Paul (as in 2 Thess 2:13) that the decision to believe the Gospel follows from God's choice of the elect.

While Jas 2:5 gives a clear picture of election based on the Beatitudes of Jesus, it is remarkably similar to 1 Cor 2:27–28: "Has not God chosen those who are poor in the world to be rich in faith and heirs of the kingdom …?"

1 Peter mentions the concept of individual election in 1:2: "chosen and destined by God the Father and sanctified by the Spirit for obedience to Jesus Christ and for sprinkling with his blood."

In Rev 17:14 Christ's people are said to be "called and chosen and faithful." Prominent, too, is the traditional Book of Life, containing the names of the true saints (Rev 3:5; 13:8; 17:8; 20:12, 15; cf. Luke 10:20).

In all these references to individual election, it is particularly noteworthy that election and faith or faithfulness are linked together. Election is known through its fruit of conversion and perseverance.

5. Individual Election in Christian Theology. Biblically distinct, election and predestination are often interchangeable terms in theological parlance. The meaning of the biblical doctrine of election has been disputed throughout history, particularly in the clashes over Pelagianism in the 5th and 6th centuries and during the Reformation (Berkhouwer 1960: 28–52; Jewett 1985: 5–23). The common denominator is an anthropological question: does fallen humankind yet possess the freedom to turn to salvation apart from elective grace and an efficacious call of the Spirit, or does natural depravity preclude such "freedom of the will"?

Pelagianism taught that the human will was not fatally damaged, and that whatever God commanded, humankind must be free to fulfill. This enabled people to be righteous apart from God's grace, and removed the need for election. The Council of Orange (529) condemned Pelagianism and semi-Pelagianism, according to which the human decision to choose Christ preceded God's special grace. Election was understood as divine prescience of belief, which led to the predestination to Christlikeness. The western Church generally followed a version of Augustine's doctrine of double predestination—of the elect to salvation and of the reprobate to damnation. Election is based solely on God's own grace and will.

The Reformation brought about a reassessment of election within Protestant circles, and defined the terms of the debate to this day. The Reformers seem to have universally held to unconditional election (inexactly known as the "Calvinist" view). In accordance with an Augustinian anthropology, God's choice of individuals to salvation was the first step in salvation, and not contingent upon any faith or work in the elect: "God once established by his eternal and unchangeable plan those whom he long before determined once [and] for all to receive into salvation, and those whom, on the other hand, he would devote to destruction. We assert that, with respect to the elect, this plan was founded upon his freely given mercy, without regard to human worth" (Calvin 1960, 2: 931).

Arminianism turned out to be the major reaction to unconditional election. Being semi-Pelagianism, it taught that election was conditional, i.e., it was God's choice of those whom he saw would respond to the Spirit's general call. Conditional election has been widely disseminated through the Wesleyan movement. The Five Points of Calvinism highlight differences with Arminianism on the points of depravity, election, the scope of the atonement, calling grace, and the perseverance of saints.

A third alternative is Universalism, according to which all are elect and will be saved in the end.

Karl Barth's theology of election is the most important recent development. It is his position that election is christological, that is, that not a group of individuals but Christ himself is the elect one, and that he is the only man rejected by God. Thus reprobation, being predestined to damnation, falls only on Christ, while election to salvation goes to man.

6. Summary. Christians have long felt the tension between calling on people to believe and at the same time harboring the thought that only the elect will believe and be saved. The doctrine of unconditional election might lead one to fatalism, but it seeks to do justice to the sovereign freedom of God to choose whom he wills. Conditional election might lead to anthropocentricity, since divine choice is conditioned by God's foresight of faith in the individual; while this system by definition deprives God of actual choice, it seeks to approach election pastorally, knowing that without repentance and faith there is no salvation.

GARY S. SHOGREN

ELEMENT, ELEMENTAL SPIRIT [Gk *stoicheion* (στοιχειον)*; stoicheion tou kosmou* (στοιχειον του κοσμου)]. In most of its uses, element denoted an elementary or fundamental principle in a subject or discipline. Thus, it could designate a letter of the alphabet, a part of speech, a geometrical proposition, or a basic mathematical unit, such as a point or line. Heb 5:12 aptly displays this typical usage when it refers to rudimentary Christian teachings as the "first principles" of God's words.

An important term in Greek philosophy, the plural elements denoted the four basic components thought to constitute the entire physical world: earth, air, fire, and water. So widespread was this usage that all three occurrences in the OT apocrypha reflect this understanding. According to Wisdom of Solomon, part of the wisdom that God imparts is knowledge of what exists in the world. Insight into the cosmic order includes knowing "the structure of the world and the activity of the elements" (7:17), evidently a reference to the four fundamental constituents of the universe. The author of Wisdom of SolomonSolomon is also aware of the Greek philosophical notion that the four elements underwent alteration and exchanged properties; as the book closes he describes the miraculous events of Exodus in terms of change in the properties of earth, water, and fire (19:18–21). *4 Maccabees,* too, shows acquaintance with the philosophical usage of the term. According to 12:13, cruelty to one's fellow creatures has no justification because both torturer and victim share the same human feelings and are composed of the same elements.

Except for Heb 5:12, the meaning of elements in the NT is debated. When, in the closing chapter of 2 Peter, the author assures his readers that the day of universal destruction and renewal will inevitably come, he relates the fate in store for the distinguishing features of the cosmos: the heavens will pass away, the elements will be dissolved with fire, and the earth consumed (3:10, 12). The destruction of the cosmos would entail the dissolution of the four basic constituents of the physical world, an event detailed in Stoic eschatology. But since he mentions the heavens and the earth, the author might be referring instead to other essential features of the universe, namely, the stars or planets. By the 3d century C.E. and possibly as early as the composition of 2 Peter, the elements were associated with such celestial bodies. The 3d-century writer Diogenes Laertius, for example, applies the term to the signs of the zodiac (6.102).

Especially controverted are references to the elements in Galatians. Paul introduces the phrase "elements of the world" in drawing a contrast between those under the yoke of the Law and those free in Christ (3:19–4:31). He argues that custodianship under the Law is little more than enslavement to the elements of the world (4:3), so that by conforming to the Law (specifically, by adopting the Jewish legal calendar), Gentile Christians surrender their freedom to the elements (4:9–10). In doing so, they return to their former condition; as pagans they worshiped the elements as gods (4:8). Given the relationship Paul sees between the Law and the elements and his description of both as weak (4:9; cf. Rom 8:3), a plausible case could be made for understanding the elements as rudimentary religious observances and ordinances (presumably both Jewish and pagan). Detracting from this reading, however, is v 8, where Paul

acknowledges that some mistake the elements for gods, an unlikely statement if the elements are mere regulations.

The importance of astral determinism in Greco–Roman piety has promoted two other interpretations of the elements of the world in Galatians: (1) the elements are celestial bodies that dictate a sacred calendar and inspire worship; and (2) the elements are the demons or spirits, often connected with the stars and planets, that control human destiny and demand human devotion. The latter interpretation is reflected in the RSV's translation of the phrase as "elemental spirits of the universe" (Gal 4:3). Encumbering both these readings is the relatively late date at which the term elements came to have either astral or demonic associations. Even though the *Testament of Solomon* (3d century C.E.?) links the elements with demons, spirits, and stars (8:1–4) the identification falls well after the composition of Galatians.

A fourth interpretation is least susceptible to criticism; here, the elements are understood as the four constituents of the universe. In Gal 4:8, where Paul chastises his readers for their spiritual ignorance, he depends upon the Hellenistic Jewish critique of idolatry as the misguided worship of air, fire, and water as gods (Wis 12:2–3). By ascribing enslaving power to the elements (Gal 4:3, 9), Paul understands them to be active cosmic forces, which was the contemporary understanding of the four elements. Philo, for example, regarded the four elements as forces (*dynameis; Aet* 21.107–8), while the early Christian writer Hermas noted that they governed the world (*Herm. Vis.* 3.13.3). Paul's placement of the four elements among the powers of the present age led him to view them in a negative light.

The two occurrences of the elements of the world in Colossians have produced interpretations similar to those in Galatians: (1) the elements of the world are principles or rudimentary teachings of the human tradition adhered to by the philosophy (2:8; cf. 2:22) or they are its regulations (2:20); (2) they are the elemental spirits of the universe who rule as the principalities and powers of this world (*archai kai exousiai;* 1:16; 2:10, 15) and whom the philosophers at Colossae identified as angels and worshiped (2:18); or (3) they are the four cosmological forces that define the world (2:20) and provide the bases or guiding principles of the philosophy (2:8). This third reading in particular allows the interpreter to grasp the meaning of Col 2:20—especially the sense of the prepositions in it—in which the letter writer describes death with Christ as parting *from* the elements. The cosmic elements appear to define a sphere of existence or arena of activity that one can part *from* or live *in.* Believing that they still live *in* the world (2:20), the philosophers live according to its key principles (2:8) (see Lohse *Colossians* Hermeneia, 96–98).

The first of these interpretations would be more attractive had the letter writer used the word elements without elaboration. In that case, rudimentary teachings or regulations would very likely have been denoted by Colossians. But the use of the phrase elements *of the world* in 2:8 and the repetition of it in v 20 emphasize the importance of this qualification, an emphasis which should not be ignored. When Philo attached that qualification to the term elements, for example, he referred invariably to the four constituents of the world.

The second interpretation suffers, like its counterpart in Galatians, from the relatively late date of the evidence connecting elements with celestial bodies and with cosmic spirits or demons. It may be anachronistic to equate the elements with angels and conclude that the philosophers of Colossae worshiped them (2:18).

A. Introduction

Elephantine (Aram *yb;* Eg *ʾibw, ʾbw;* Gk *ieb*) is an island in the Nile opposite Aswan (ancient Syene = Aram and Eg *swn*) just N of (= downstream from) the first cataract. It has yielded papyri in Egyptian (Zauzich 1971), Aramaic, and Greek (Rubensohn 1907). It is the Aramaic material which is of direct interest for biblical studies and Jewish history. They are listed first according to their year of discovery and publication and then studied according to their category. Other sites besides Elephantine have yielded papyri and are also noted. Sigla used to designate the papyri are those employed by Porten and Yardeni (*TAD* A; *TAD* B; *TAD* C).

Throughout the 19th century, isolated pieces of papyrus were discovered at intervals and frequently not published until years later, if at all. The earliest recorded acquisition was made by Giovan Battista Belzoni at Elephantine between 1815 and 1819. It consisted of two letters (*TAD* A3.3–4) and fragments of a third, housed now in the Museo Civico di Padova (Padua) and first published by Edda Bresciani (1960). The 3d decade of the 19th century yielded five pieces, none of which is known to have come from Elephantine: (1) a fragment of a letter (*TAD* A5.3) acquired by the Museo Egiziano di Torino (Turin) as part of the first Bernardino Drovetti collection (1824), first noted by Michelangelo Lanci (1827: 20) and only understood by Adelbert Merx (1868); (2) a fragment of a literary text that may be designated "The Tale of Ḥor, Son of Punesh" bought by the Duc de Blacas in 1825, published by Lanci (1827: 7–26) and later acquired by the British Museum (*TAD* C1.2 = *CAP* 71); (3) a fragment of wine accounts (*TAD* C3.12 = *CAP* 72) acquired by the Louvre in 1826 as part of the second Drovetti collection and published by Jean Joseph Bargès (1862); (4) a fragmentary list acquired by Stefano Borgia, first noted by Lanci (1827: 20), published by E. Ledrain (1884: 30–32), and later acquired by the Biblioteca Apostolica Vaticana (*TAD* C4.9 = *CAP* 74); (5) and a fragmentary sheet of accounts (*TAD* C3.19 = *CAP* 73) stemming perhaps from the Salt collection acquired by the Museo Egizio Vaticano, first noted by Lanci (1827: 20), and published by Charles Jean Melchior de Vogüé (1869: 25–31). These five pieces came to be known by their Latin designations indicating either the private collector (Papyri Blacasiani, Papyrus Borgianus) or the museum or library where they were housed (Papyrus Taurinensis, Papyrus Luparensis, Papyrus Vaticanus). Ten pieces are known to have been acquired during the second half of the 19th century before 1893, though

the circumstances of acquisition sometimes remain obscure. Seven of these are held by the Egyptian Museum in Cairo, one by the Staatliche Museen in Berlin, one by the Harrow School Museum in London, and one by the Niedersächische Staats- und Universitätsbibliothek in Göttingen. Three of the seven Cairo pieces were found by François Auguste Mariette at the Memphis Serapeum and published by Julius Euting (1885: 670+Pl.VI; 1887: 408–9+Pl.VII); two are letter fragments (*TAD* A5.4; *CAP* 77) and one is a fragment of accounts (*TAD* C3.21 = *CAP* 75). Two fragments were discovered in 1888 at Abusir near Saqqarah but were never properly published (Ricci 1906: nos. 13 and 14). One fragment of accounts from an unknown site was published as No. 153 in the monumental *Corpus Inscriptionum semiticarum* (1893; *TAD* C3.25 = *CAP* 78); the final piece, a fragment of accounts, was said to have been found near the tomb of Ptahhotep at Saqqarah and was published by Mark Lidzbarski (*Ephem* 3: 128–29). The one text (*TAD* B8.5) acquired by the Staatliche Museen, a record of legal proceedings, was published only with photograph by Karl Richard Lepsius (1859: pl. 124). A sheet of accounts was part of the Gardner Wilkinson collection acquired by the Harrow School Museum, cataloged by E. A. Wallis Budge (1887: 79), and published without photograph by Arthur Ernest Cowley (1903; *TAD* C3.27 = *CAP* 83). Finally, there is a fragment (of accounts?) given by Prof. Wilhelm Fröhner of Paris to the Niedersächische Staats- und Universitätsbibliothek in Göttingen in 1884, transcribed by T. Nöldeke in 1894, and published 80 years later by Rainer Degen (1974a).

All told, then, eighteen items came to light during eight and one-half decades of the 19th century and none was a wholly intact piece. Only three (the Padua papyri) were from Elephantine; most, and probably all, of the others were from Memphis-Saqqarah. The Elephantine papyri clearly concerned Jews; the others concerned only non-Jews. Ten of the eighteen were brought together in *CIS* (1889 [Nos. 144–48]; 1893 [Nos. 149–53]), which marked the end of almost a century of random discovery.

It was during the next quarter century (1893–1917), ending during World War I, that the great finds were made, mostly at Elephantine but also at Saqqarah. In the very year that *CIS* II/1 fascicle 2 appeared, the American Egyptologist Charles Edwin Wilbour acquired at Aswan as many items as had been acquired during the preceding eight and one-half decades. These waited sixty years before their publication by Emil G. Kraeling (*BMAP* 1953). This Brooklyn Museum collection included four unrelated fragmentary texts, among which were two letters (*TAD* A3.9; *BMAP* 16), a document of wifehood (*TAD* B6.1), and one of accounts (*BMAP* 17). But the prize was a family archive of a dozen documents, most of which were fully intact with cord and seal (*TAD* B3.2–13). In 1898, Wilhelm Spiegelberg acquired for the (now-named) Bibliothèque Nationale et Universitaire of Strasbourg a fragmentary letter (*TAD* A4.5) published by Euting (1903). The Bodleian Library in Oxford soon came into possession of three papyri acquired by Archibald Henry Sayce and published by him and/or Cowley—an almost fully intact loan contract (*TAD* B4.2) rescued from the hands of diggers for *sebakh* at Elephantine in 1901 and published in 1903; a multicolumn roll of accounts (*TAD* C3.29 = *CAP* 81) acquired at Luxor in January, 1906 and published in 1907 (by Sayce and Cowley); and a fragmentary letter (?) acquired at the same time and published in 1915 (by Cowley = *CAP* 82). A fourth papyrus acquired by the Bodleian is the first of a ten-document family archive. The other nine contracts, all intact but two (*TAD* B2.4,6), were acquired at Aswan in 1904 by Lady William Cecil (*TAD* B2.2, 6, 7, 11) and Mr. (later Sir) Robert Mond (*TAD* B2.3, 4, 6, 8–10) and at the insistence of Howard Carter, Inspector of Antiquities for Upper Egypt, made over to the Egyptian Museum of Cairo. They were published by Sayce and Cowley (1906). Stimulated by the random finds and dealer acquisitions, French and then German archaeological teams undertook excavation of the mound at Elephantine with the specific goal of discovering papyri. On January 1, 1902, Gaston Maspero found several fragments, which were deposited with the Académie des Inscriptions et Belles-Lettres in Paris and published by Melchior de Vogüé (*RES* 1. 246–47 = *CAP* 79–80) and Bezalel Porten (1986; *TAD* A5.5). That same year Maspero found some fragments at Saqqarah that were published in stages by Charles Clermont-Ganneau (1905: 255–60; 1917), Maurice Sznycer (1971) and Porten (1983; *TAD* A5.1). The greatest discovery was made in 1906–1908 by Otto Rubensohn. In addition to the significant Greek and demotic papyri he uncovered, he unearthed the largest collection of Aramaic papyri ever found. These included nineteen letters (*TAD* A3.1–2, 5–8, 10; 4.1–4, 6–10; 5.2; 6.1–

2), among which were nine that belonged to the communal archive of Jedaniah b. Gemariah (*TAD* A4.1–4, 6–10); eighteen contracts (*TAD* B3.1; 4.1, 3–6; 5.1–2, 4–5; 6.2–4; 7.1–4; 8.5); nine lists and accounts (*TAD* C3.3, 13–15; 4.4–8); the Darius Bisitun inscription (*TAD* C2.1), the Words of Ahiqar (*TAD* C1.1) as well as numerous fragments and inscriptions on potshards, wood, and stone. Following the preliminary publication of a few items (Sachau 1907; 1908 = *TAD* A4.7–9; Sachau 1909 = *TAD* B4.6), this remarkable find was soon published in elegant fashion by Eduard Sachau (1911). A few major pieces and some thirty fragments waited decades for their publication—by Zuhair Shunnar (1970; *TAD* A3.10), Rainer Degen (1974b, 1978), and Porten (1988; *TAD* C3.15). Most of these documents were deposited in the Egyptian Museum in Cairo and only a few were kept by the Staatliche Museen zu (East) Berlin (*TAD* A4.1, 4, 7, 9; B3.1; 4.4, 6; 5.1–3; 6.4; 7.1–4; 8.5; C1.1; 2.1; 3.13, 15). Those documents published in the 1970s and ’80s are held by the Agyptisches Museum in (West) Berlin while one fragmentary contract held by the Staatliche Museen (P. 13607) was published by Porten and Ada Yardeni (*TAD* B5.3). Finally, from Saqqarah there came two pieces, a fragmentary list found by James E. Quibell in December, 1913 (*TAD* C4.1) and a fragment of accounts found by him on May 27, 1917 (*TAD* C3.5). Both were published by Noel Aimé-Giron (1921) and are held by the Egyptian Museum, Cairo.

Some hundred years after the discovery of the first Aramaic papyri almost all the published pieces were brought together in a small volume by one of the main contributors to the decipherment and publication of these texts, A. E. Cowley (CAP). For thirty years, until the publication of the Brooklyn Museum Aramaic papyri (BMAP), the name of Cowley was virtually synonymous with Aramaic papyri.

All but one of the following five decades saw the discovery, uncovery, or acquisition of Aramaic accounts, letters, and a contract. They are associated with the names of Aimé-Giron, Bauer and Meissner, Bresciani and Kamil, Driver, Dupont-Sommer, and Segal. None was found at Elephantine. In 1924–25 Gustave Jéquier found three fragments of accounts at Maṣṭabat-Fara῾un in S Saqqarah (*TAD* C3.26) while the following year (1926) Cecil M. Firth uncovered at Saqqarah some seventy fragments from the Memphis arsenal (see *TAD* C3.7; 4.3). These were deposited in the Egyptian Museum in Cairo and published by Aimé-Giron along with several fragments of unknown origin (1931). About the same time Giorgio Levi Della Vida received as a gift from Giulio Farina a papyrus of accounts of unknown origin (*TAD* C3.28), later published by Edda Bresciani (1962). It is now in the Museo dell’Istituto di Studi del Vicino Oriente, Università di Roma. One and possibly two pieces came from el-Hibeh. The first was a fragmentary letter (*TAD* A3.11) discovered in excavations by Evaristo Breccia (1934–1935), published by Bresciani (1959) and held by the Museo Archeologico di Firenze (Florence). The second, allegedly from el-Hibeh, was a joint venture agreement, acquired by Bruno Meissner, published by him and Hans Bauer (1936), and now held by the Bayerische Staatsbibliothek in Munich. Two discoveries by Zaki Saad at Saqqarah in 1940 and 1942 were turned over to the Egyptian Museum in Cairo. The first consisted of a few fragments later published by Bresciani (1971). The second was a letter appealing for military assistance addressed to Pharaoh by King Adon, probably of Ekron. It was published by André Dupont-Sommer (1948) and received expanded treatment by Porten (1981a), who was the first to notice a demotic line on its verso. The most exciting finds of this period were two collections of letters. The first was an acquisition from a dealer in 1933 by Ludwig Borchardt of a batch of intact official letters on parchment (*TAD* A6.3–16) which passed into the hands of the Bodleian Library in Oxford in 1943–44; thirteen letters and twelve fragments were published by Godfrey Rolles Driver (1954; 3d ed., 1965). The second was a discovery made by Sami Gabra in 1945 of eight private letters (seven intact with cord and seal [*TAD* A2.1–7]) destined for Luxor and Syene but left deposited in an ibis jar at Tuna el-Gebel (West Hermopolis). They were deposited in the Department of Archaeology at the University of Cairo and published by Edda Bresciani and Murad Kamil (BK). At that time Walter Bryan Emery (1966–67) discovered numerous fragments in the course of excavations at N Saqqarah. Further discoveries there were made by Geoffrey Thorndike Martin in 1971–72 and 1972–73. These fragments are now held by the Egyptian Museum in Cairo and 202 items were published by Judah Benzion Segal (1983; see *TAD* B4.7; 5.6; 8.1–4, 6–12; C3.6, 18, 21–24; 4.2).

If the first hundred years of discovery could be condensed in the small volume by Cowley, the next fifty years had yielded texts scattered in some ten different publications. New collations and a new corpus were in order. A preliminary edition of fifty-one texts including contracts, letters and lists, bringing together the major Cowley texts and all the Kraeling documents, was put out by Bezalel Porten (1974). A new edition of the Bisitun Inscription was published by Greenfield and Porten (1982). A four-volume *Textbook of Aramaic Documents from Ancient Egypt, Newly Copied, Edited and Translated into Hebrew and English* is being produced by B. Porten and A. Yardeni (*TAD* A–D) with the support of the Israel Academy of Sciences and Humanities. It includes letters (vol. 1), contracts (vol. 2), literature and lists (vol. 3), fragments and inscriptions on potshard, stone, and wood (vol. 4).

B. Letters

Aramaic letters on papyrus number 35, not all fully intact, and many fragments. Twenty-eight belong to Elephantine (*TAD* A3.1–10; 4.1–10; 5.2, 5; 6.1, 2) or Syene (*TAD* A2.1–4) and seven elsewhere (el-Hibeh [*TAD* A3.11], Luxor [*TAD* A2.5–7], Saqqarah [*TAD* A5.1], unknown [*TAD* A5.3, 4]). Almost all were written by persons resident at Elephantine–Syene who were away from home. Four are drafts of letters sent from outside of Elephantine (*TAD* A4.5, 7, 8, 10) and one is strictly speaking a memorandum, probably written in Judah or Samaria (*TAD* A4.9). Like the contracts, the letters span the 5th century, perhaps extending back to the late 6th (*TAD* A2.1–4) and down into the early 4th (*TAD* A3.10, 11). Unlike contracts, they were usually written on both sides of the papyrus (except *TAD* A3.4, 9; 4.4; 5.2), the scribe writing first on the side perpendicular to the fibers, turning the piece bottoms-up and concluding on the side parallel to the fibers. Occasionally, the piece was turned sideways (*TAD* A3.9). One unique piece, unfortunately fragmentary, contains a letter written on the side parallel to the fibers and to the join, with the reply begun on the other side, parallel to the fibers and perpendicular to the join, and concluding in the right and left margins of the first letter (*TAD* A3.1). Unlike contracts which were rolled up and folded in thirds, letters were rolled up and folded in half, addressed on one of the exposed bands with the name of the sender and the recipient (and sometimes the destination [*TAD* A2.1–7]), and then tied and sealed just like the contracts. Two official letters have a second entry on the other exposed band recording scribe and date (*TAD* A6.1, 2). Evidence of tears and folds shows that some letters may have been (secondarily, after having been opened and read?) folded in quarters (*TAD* A3.4–11; 4.3–4; 5.2; 6.1–2; Porten 1980). Contracts were meant to be stored for an extended period and so a top blank sheet was insurance against external damage obliterating any part of the opening lines. Letters were meant to be opened and read immediately and so there was no need for an upper blank sheet. Curiously, one fragmentary draft of a letter was written, like literary texts and lists, in two parallel columns on the recto and then concluded on the verso, being turned only 90°, i.e. again parallel to the fibers (*TAD* A4.5). Two other brief pieces, one a draft and the second a memorandum, were written parallel to the fibers, vertically (*TAD* A4.9, 10). A letter was shorter than a contract, running between five lines (*TAD* A2.7; 3.11) and fifteen or so (*TAD* A2.1–4; 3.2, 3, 8; 4.2) with the average length being ten or so lines (*TAD* A2.5, 6; 3.5, 9, 10; 4.1, 3, 4). Official letters dealing with matters of weighty importance (*TAD* A4.7–8) or requiring detailed enumeration (*TAD* A6.2) would run to 23 or 29–30 lines.

The letter began, not with a date like the contract, but with an address. If the two parties were peers or if the recipient was the superior the usual formula would be "To my brother/sister/mother/lord PN^1 (from) your brother/son/servant PN^2" (*TAD* A2.1–7; 3.1, 4–11; 4.1–4, 7–8; 5.3; 6.1). If the sender was the superior, the formula would be "From PN^1 to PN^2" (*TAD* A6.2–16). Four private letters prefaced the address with a greeting to a local temple, whether of Bethel, the Queen of Heaven, Nabu or Banit at Syene or YHW at Elephantine (*TAD* A2.1–4; 3.3). Following the address there usually appeared a blessing or greeting. The more important the recipient and/or the more serious the matter at hand, the weightier would be the greetings (cf. *TAD* A4.3, 7–8; 5.3). The writer dispatched wishes for welfare, strength, and life (*TAD* A2.7; 3.3, 4, 8; 6.3–7). The usual greetings used the name of the deity and took the form, "May DN/(all) the gods seek after the welfare of my brother/lord (abundantly) at all times" (*TAD* A3.5–7, 9–11; 4.1–4, 7–8; 6.1). The blessing used repeatedly by the scribe of the Hermopolis letters was "I have blessed you by Ptaḥ that he may show me your face in peace" (*TAD* A2.1–6). The greetings or blessings might

also mark an ilclusio to the letter as the writer concluded with the statement "I have sent this letter (to inquire) about your welfare" (*TAD* A2.1–7; 3.4) or something like "Greetings to your house and your children until deity shows me [your face in peace]" (*TAD* A4.4; cf. A3.5). The letter occasionally bore a date, and this came either on the outer band as noted above (*TAD* A6.1,2) or at the end of the letter itself (*TAD* A3.3, 8, 9; 4.7, 8; 5.1). The structure and internal formula of the letters as well as parallels in the Bible, West-Semitic, Babylonian, Egyptian and Greek epistolography have been intensively studied (Fitzmyer 1962; 1974; Whitehead 1974; Porten 1978; 1982; Alexander 1978; Dion 1979; 1982a; 1982b; 1982c; see also LETTERS [ARAMAIC]).

1. Private. At least eighteen letters may be assigned to this category (*TAD* A2.1–7; 3.1–11). Of the parcel of family letters discovered at Hermopolis, probably dispatched from Memphis, the center of worship of Ptaḥ, four were destined for Syene, three for Luxor (*TAD* A2.5–7). Six were written for the Aramean stepbrothers Nabushezib and Makkibanit by the same scribe, probably one after the other on the same papyrus roll, sealed with the same Egyptian seal and addressed to different women all designated as "sister" and to Psami designated by Makkibanit alternately as "my lord" and "my father" (*TAD* A2.3, 4). No letter is addressed to a wife; it is likely that one or another of the "sisters" was a wife of the senders. The letters communicate items of personal interest to the parties concerned. They request the dispatch of objects such as castor oil, containers, and garments and they report upon the purchase of oil and cloth, awaiting a reliable traveler for dispatch. They issue instructions about the management of affairs and the arrangement of purchases, e.g., receiving wool and buying beams. They are particularly fulsome in sending greetings and showing interest in other individuals' personal welfare. A letter sent to Luxor complains passionately, "And what is this that you have not sent a letter to me?! And as for me, a snake had bit me and I was dying and you did not send (to inquire) if I was alive or if I was dead." It then concludes with the standard formula, "I have sent this letter (to inquire) about your welfare" (*TAD* A2.5). The only intimation as to the occupation of these Arameans located at Memphis, Luxor, and Syene is the statement, "And now behold, salary *(prs)* has been given to them here and it will be taken ahead of them at Syene" (*TAD* A2.3). This statement recalls the complaint of the Jew Osea writing from Migdol to his son Shelomam at Elephantine, "Now, from the day that you left (Lower) Egypt, salary *(prs)* has not been g[iven *to us/you here.* And when we] complained to the officials about your salary *(prskm)* here in Migdol we were told thus, saying: 'About this [*you must complain* before] the scribes and it will be given to you' " (*TAD* A3.3). Salary is clearly government allocation (*TAD* B4.2:6) and the Jew based in Migdol and traveling to Elephantine and the Arameans moving between Memphis, Luxor, and Syene were doubtlessly soldiers.

In their personal concerns and preoccupation with household affairs and the sending and receiving of objects, the Elephantine letters of the Jews are no different from the Syenian letters of the Arameans. The letter writers are Hoshaiah b. Nathan (*TAD* A3.6), perhaps the same as Hosea b. [PN] (*TAD* A3.7–8), and, judging from the handwriting, the scribe Mauziah b. Nathan (*TAD* A3.5), perhaps the brother of Hoshaiah. A sample of the economic activity of these soldiers may be found in the letter of Hosea to Ḥaggus, "And write for them (= the creditors) a document about them (= the money). And if they will not [*give*] *all* [*the*] silver at interest or will not [*gi*]ve it to you, saying: 'Give a pledge' (i.e., a loan on security), sell the house of Zaccur and the house of *Ašn.* [And] if they (i.e., Zaccur and *Ašn*) will not sell them, seek a man who will buy the [b]ig house of Hodo and give it to him for the silver that is fixed upon it" (*TAD* A3.8). Persians and Egyptians also wrote to each other in Aramaic. Spentadata and Armantidata owned a boat which was being run by Ḥori and the former wrote to instruct the latter about loading, purchasing, and hauling (*TAD* A3.10; Porten 1988). Occasionally a private letter contains a significant piece of historical information such as the succession to the throne of Nepherites in Epiph (Sept 27–Oct 6, 399 B.C.E.) reported to "my lord Islaḥ" from "your servant Shewa b. Zechariah" (*TAD* A3.9).

2. Jedaniah Communal Archive. Historically, these ten documents (*TAD* A4.1–10) are the most significant of the Elephantine texts. The leading personality is the communal leader and perhaps chief priest Jedaniah b. Gemariah. In 419/18 he received a letter, now fragmentary, from Hananiah b. [PN] informing him of a directive (now lost) from Darius II to the Egyptian satrap Arsames and instructing him

on the observance of the Passover. In addition to provisions known from the Torah, such as abstention from work on Nisan 15 and 21 and abstention from the consumption of leaven during the seven days of the feast, the letter announces regulations that may have been part of the developing oral law, e.g., obligation of purity during the week, prohibition of fermented drink, and authorization of the storage of leaven in sealed chambers during the festal week (*TAD* A4.1; Porten 1979: 88–92). Hananiah's identity and the thrust of Darius' directive may only be conjectured. But it is clear from another letter that the arrival of Hananiah in Egypt aroused the animosity of the Khnum priests of Elephantine against the Jews. That second letter is a recommendation by the scribe and communal leader Mauziah b. Nathan writing from Abydos to Jedaniah that he look after two Egyptian servants of the scribe and chancellor Anani; those servants had secured his release from arrest in the matter of a stolen dyer's stone (*TAD* A4.3). A third letter, only the right half of which is preserved, shows the Egyptians offering bribes and acting "thievishly" while the Jews appear in conflict with the Persian authorities in Memphis (*TAD* A4.2). In a fourth letter, Islaḥ b. Nathan, perhaps the recipient of the news on Nepherites, informs [PN] b. Gaddul of the arrest at the gate in Thebes of Jedaniah and other communal leaders as well as of several women. If correctly restored, the letter reported that the Jews were withdrawing from the houses which they had occupied and plundered. There was also talk of a heavy fine of 120 karsh (= 1200 shekels) (*TAD* A4.4).

These four letters are preliminary (though the last may be subsequent) to the destruction of the Jewish temple by the Khnum priests in connivance with the local Persian governor Vidranga in the summer of 410 B.C.E. when the satrap Arsames had left the country to report to King Darius. Of the six documents that deal with that crisis four are fragmentary (*TAD* A4.5, 6, 8, 10) and they obscure certain details. The first is a petition to a high official designated "our lord," perhaps Arsames himself, reporting the Egyptian bribe to Vidranga allowing them to destroy a royal storehouse and erect a wall. The priests also stopped up a well used to supply the garrison's needs. The missing part of the letter must have reported the destruction of the Jewish temple because the verso of the document appears to be a petition for its reconstruction (*TAD* A4.5). The second text is pieced together from a half dozen fragments and reports the names of two Egyptians, the enchainment of the petitioners' colleagues, and something "prior to Cambyses" (*TAD* A4.6). As the next letter reports, it is Cambyses on whom the Jews relied for the legitimacy of their temple. It was built under the Egyptian pharaohs and when Cambyses "entered Egypt" he reportedly destroyed all the native temples but did not harm the Jewish temple. The document makes it plain that the temple was a handsome structure (cedar roof, stone pillars, five great gateways of hewn stone) wherein animal sacrifices, meal offerings, and incense were regularly offered. Upon its destruction the Jews went into mourning. They eventually saw the punishment of their enemies but permission to rebuild the temple was not granted. An earlier petition to the Jerusalem authorities, the governor Bagohi, the high priest Jehohanan and Ostanes of the nobility, went unanswered. The present petition was written on November 25, 407 B.C.E. to Bagohi with a copy to the sons of Sanballat governor of Samaria. It opened with a fourfold blessing and concluded with a threefold promise of spiritual benefits if he would write a letter interceding on their behalf for the reconstruction of the temple (*TAD* A4.7). A stylistically revised version of this letter is also preserved (*TAD* A4.8). Not wanting to say no but unable to say yes to their earlier petition, the Jerusalem authorities remained silent. The second petition evoked not a written but an oral response, given jointly by Bagohi and Delaiah b. Sanballat, recorded in a memorandum. It accepted the Jewish version of the event, condemning Vidranga as "wicked," and authorized reconstruction of the temple "on its site as it was formerly," but omitted permission to offer animal sacrifices (*TAD* A4.9). Blood on the altar was to be the exclusive prerogative of Jerusalem. The Jews at Elephantine accepted the limitation and in a further petition to "our lord," perhaps Arsames, offered him rich reward if he would allow reconstruction of the temple (*TAD* A4.9). It is from the last contract of the Anani archive, dated December 13, 402 B.C.E., that we learn of the continued presence of the temple of YHW (*TAD* B3.12:18–19), indicating that if it had not yet been rebuilt, its place had not been taken by another structure (see Porten 1978, 1982).

3. Official. All five letters in this category are fragmentary (*TAD* A5.1–5). Only two are from Elephantine and both concern a hereditary land lease, in one case held by the garrison (*TAD* A5.5) and in

the other perhaps by a military detachment *(dgl),* between 441 and 434 B.C.E. (*TAD* A5.2). The latter names various administrative and judicial officials and seeks rectification of an "injustice." The former is an order from a Persian official Mithradates to the judges concerning rebels (Porten and Szubin 1985).

4. Arsames Correspondence. He was the satrap of Egypt in the last quarter of the 5th century B.C.E. and over a dozen letters on leather were found in Egypt at an unknown site, written by him and other Persian senior officials (*TAD* A6.3–16). Two letters of his on papyrus turned up at Elephantine, one addressed to him by a long string of officials—heralds, judges and scribes (*TAD* A6.1)—and the other sent by him to the Egyptian Waḥpremaḥi of unknown title (*TAD* A6.2). Both were dated on the outside band of the folded roll, the first to November 6, 427 B.C.E. and the second to January 12, 411 B.C.E. The first concerns a "share" *(mnt),* probably of land, and its unusually long external address allows for clarification of the address formula in two of the Aramaic letters in the book of Ezra (4:8–11, 17; Porten 1983b). The second, originally 23 lines long, is a masterful illustration of the bureaucratic procedure necessary to repair a boat held in hereditary lease by two Egyptian "boatholders of the Carians." They reported the matter to the Persian boatholder Mithradates. He ordered an inspection by the treasury accountants, the foremen headed by Shamashshillech and the carpenters headed by the Egyptian Shamou. They drew up a precise inventory of all the materials necessary for repair. All this information must have been sent to Arsames (in Memphis?) and turned over to his chancellor, the Jew Anani, who instructed his scribe Nabuaqab to write the long letter at hand. It recorded all the procedures followed and the inventory of materials to be used and instructed Waḥpremaḥi to act "as order has been issued." Upon receipt, he scribbled something at the bottom in a nearly illegible Aramaic script and then further notations were made in demotic.

C. Contracts

Elephantine has yielded forty-three items, most intact, and numerous fragments. These span the period from 495 to 400 B.C.E. They are written usually on only one side of the papyrus with the writing running perpendicular to the fibers and parallel to the joins. Only rarely was a piece written on both sides (*TAD* B2.3, 4; 4.4) or an additional entry made on the verso (*TAD* B3.3). Four pieces from the end of the century were written parallel to the fibers and perpendicular to the join (*TAD* B4.6; 7.1–3). In the vertically written pieces, the height varied according to the number of lines and whether or not the scribe had left a blank sheet at the top and cut off too much from the original scroll so that there was also a blank space at the bottom. Thus a small-sized document of 14–15 lines with no blank space at the top or bottom would measure between 27.5 (*TAD* B3.3) and 32.7 cm (*TAD* B3.2) while a long document of 45 lines with blank space at the top and bottom would be almost a meter tall (*TAD* B3.8). Upon conclusion, the scribe usually rolled his document bottoms-up to just below the top, turned down a fold or two, wrote a single-line summary on the exposed band ("endorsement"), folded the roll in thirds, tied and sealed it. The few preserved epigraphic bullae are Egyptian or Persian. On occasion, the document was rolled from the top down (*TAD* B2.7; 5.1 and perhaps 3.7). The horizontally indited documents were folded from left to right and no endorsement has been preserved on these. During the course of the 5th century, there appears to have been an increase in the size of the rolls. In a dozen dated documents written by eight different scribes from the 1st half of the century, the width of the scroll is 25.5–28.5 cm and the mean height of the individual sheets is ca. 10 cm (*TAD* B1.1; 2.1–6; 3.1–2; 4.2–4). Eighteen documents from the 2d half of the century, also written by eight different scribes, show an increased width of 28.5–34 cm with the mean height of the individual sheets rising to ca. 14 cm (*TAD* B2.7–11; 3.3–13; 6.1, 4).

Like other legal documents, the Aramaic contracts have been studied according to their schema (Yaron 1957; *ArchEleph,* 189–99, 334–43; Porten 1981b). The most common document in our collection is the conveyance (*TAD* B2.1–4, 7–11; 3.2, 4–7, 9–12; 5.1–6) and it follows a seven-paragraph structure wherein the central paragraph asserts the purpose of the contract—affirmation of the recipient's right to the object. The opening and closing paragraphs are objectively formulated; the central paragraphs are subjectively formulated. The order of elements is:

1. Date
2. Parties (and place: optional)

3. Transaction: Past
4. Investiture: Present and Future
5. Guarantees: Future
6. Scribe (and place: optional)
7. Witnesses

Prior to 483, contracts bore only an Egyptian date (*TAD* B4.3–4; 5.1; cf. B4.2) and after 413 most contracts again bore only an Egyptian date (*TAD* B3.12–13; 4.5–6; 5.5; 7.1–2). In the seventy-year interval, and occasionally thereafter (*TAD* B3.10–11), all documents bore a double, synchronous Babylonian–Egyptian date. Of the twenty-two double dates, only eight have exact synchronisms (*TAD* B2.1, 6 [restored], 9 [only month]; 3.5, 6, 8 [only month], 11; B6.1 [restored]). In seven documents, the Babylonian date is one day later than the Egyptian date, probably due to the fact that the contract was drawn up at night (*TAD* B2.2, 8, 10, 11; 3.2, 4, 10). In seven documents the deviation is greater—two days (*TAD* B2.7; 3.3), four days (*TAD* B3.1), a month (*TAD* B3.9), fifty days (*TAD* B2.3, 4), or a year (*TAD* B3.7). Various explanations have been offered for these incongruous synchronisms (Horn and Wood 1954; Parker 1955; Porten 1990).

The parties regularly (except for Egyptians), and witnesses and neighbors occasionally, were identified by ethnicon (Aramean, Babylonian, Caspian, Jew, Khwarezmian), occupation ([member] of [a military] detachment, builder, boatman, [temple] servitor), and usually by residence (Elephantine, Syene) as well. One of the parties (alienor) was presented as speaking to the other (alienee), e.g., "Esḥor son of Ṣeḥa, a builder of the king, said to Mahseiah, an Aramean of the detachment of Varyazata" (*TAD* B2.6:2–3). The document was drawn up by a scribe skilled in legal terminology "upon/at the instruction of" the alienor and occasionally of the alienee as well when he or she was one of the speakers (*TAD* B3.8; 6.3–4). There are thirteen known scribes at Elephantine, six with Hebrew names and seven with non-Hebrew ("Aramean") names. Jewish scribes, with but one exception (*TAD* B7.1), drew up their documents at Elephantine (*TAD* B2.9–10; 3.6, 8, 10–12) while Aramean scribes, with but one exception (*TAD* B2.11), drew up theirs at Syene (*TAD* B2.2–4; 3.9, 13).

Witnesses usually appeared in groups of four (*TAD* B2.6, 8–9, 11; 3.1, 4–6, 12–13; 4.2, 6; 5.5; 6.4), eight (*TAD* B2.1–2, 10; 3.2, 9–11; 5.1[?], 3; 6.3) or twelve (*TAD* B2.3–4), though occasionally there are multiples of three (*TAD* B3.3), six (*TAD* B2.7; 3.8 [though last line is torn]), and nine (*TAD* B3.3–4). In most cases the witnesses signed themselves and in one case a party to the contract also signed as a witness (*TAD* B2.7:17–18).

The subjective clauses in the center proceed in chronological order. The transaction paragraph recalls an act that has taken place; the investiture paragraph confirms ownership/possession and future right of transfer; the guarantee paragraph promises not to interfere with the new owner/possessor's rights. To paraphrase: I sold you a house; it is yours and you may give it to whomever you wish; I shall not be able to sue you regarding that house. The transaction paragraph contains subclauses, sometimes as many as four. A sale or bequest, for example, would include reference to title (previous owners), description, measurements, and boundaries (*TAD* B3.10, 12). The guarantee paragraph is always threefold, a main clause and two subclauses: waiver, penalty in case of violation of promise, and reaffirmation of the original investiture ("clausula salvatoria"). Variations in terminology and formula characterize the investiture and guarantee paragraphs and certain terms or phrases were favored by a particular scribe. The investiture clause had two variant formulas: "It is yours (from this day) (forever)" (*TAD* B2.1, 3) and "You have right over it from this day (and) forever" (*TAD* B3.7; cf. B2.4). Certain clauses occur only on occasion. The "document validity" paragraph appears also in deeds of obligation and affirms the power of "this document" to ward off suit or complaint (*TAD* B2.3; 3.1) and its priority over any other ancient or recent document (*TAD* B2.3, 7; 3.10–11; cf. B3.12). When a prior document was available to reinforce title, the alienor passed it on to the alienee and added a "document transfer" paragraph (*TAD* B2.3, 7; 3:12).

1. Mibtahiah Archive. It contains eleven documents and spans three generations (471–410 B.C.E.). The first four documents constitute a small archive concerning a house-plot bequeathed by Mahseiah to his

daughter Mibtahiah. The first of these deals with a wall built on the property by a neighbor Konaiah. "That wall is yours," he says to Mahseiah, and "I shall not be able to restrain you from building upon that wall of yours" (*TAD* B2.1:4–6). The wall ran along Konaiah's own wall and may have been intended to give him the necessary two-wall thickness to erect an upper story. But in 464 Mahseiah's possession was challenged by his Khwarezmian neighbor and a judicial oath was imposed upon him by the court. He, his son, and wife swear by YHW the God "that it was not the land of Dargamana, mine, behold I," whereupon the plaintiff was obliged to draw up a document of withdrawal (*TAD* B2.2:4–7). Indeed, in the deed of bequest to his daughter at the time of her marriage (460/59 B.C.E.), Mahseiah omits mention of pedigree but identifies himself as *mhḥsn,* "hereditary property-holder" (*TAD* B2.3:2; Szubin and Porten 1982: 4). The fourth document, written on both sides and made out by Mahseiah simultaneously with the third, grants her husband Jezaniah, also a neighbor to the property, a life estate of usufruct to the house in exchange for his building it up (*TAD* B2.4; Szubin and Porten 1987: 47–48).

The second set of four documents introduces Mibtahiah's spouse(s), presents her Egyptian connection, and shows her property expanded. A fragment of a betrothal contract drawn up by an unknown groom with Mahseiah may have been for Mibtahiah (*TAD* B2.5). The damaged date in the document of wifehood drawn up between her father and her second husband, Esḥor b. Ṣeḥa, may have been either October 27, 458 B.C.E. or November 2, 445 B.C.E. (*TAD* B2.6). Esḥor presents Mahseiah with a modest *mohar* (bride-price) of 5 shekels which he incorporates into her handsome dowry of 651/2 shekels. As was the practice at Elephantine both parties have equal rights of divorce. In case of death, however, if there are no children, Esḥor *inherits* Mibtahiah's property, but she only has right *(šlyṭh)* over his. Three special clauses, reinforced by heavy penalties, protect her rights to his property, both during his lifetime and after his death, and make provision for their children (*TAD* B2.6). In 446 Mahseiah granted Mibtahiah a house in exchange for fifty shekels worth of goods she had earlier given to him. The fourth deed in this set is a document of withdrawal drawn up in 440 by the Egyptian Pia in settlement of a "litigation *nprt* about silver and grain and raiment and bronze and iron—all goods and property—and the wifehood document" (*TAD* B2.8:3–4). The newly hypothesized chronology for *TAD* B2.6 excludes the possibility that the wifehood document had been drawn up by Pia and that he was Mibtahiah's husband prior to Esḥor. The document referred to must have been her contract with Esḥor. The litigation was not a divorce settlement but probably a dispute over deposited property including the document (Porten 1989b: 534–35).

The last three documents in the archive cover a decade (420–410 B.C.E.) and deal with problems arising out of the estate of the deceased parents. The brothers Menahem and Anani drew up a document of withdrawal for Jezaniah and Mahseiah from goods allegedly deposited by the formers' grandfather Shelomam with Esḥor but never returned (*TAD* B2.9). Similarly Jedaniah, the nephew of Mibtahiah's first husband Jezaniah, probably as part of a probate procedure, drew up a document of withdrawal from Jezaniah's house (416 B.C.E.) which must have passed to Mibtahiah upon the death of Jezaniah and to her sons upon her death (*TAD* B2.10; Porten and Szubin 1982a: 654). Finally, the two brothers divide between themselves ownership of two of their mother's four slaves, leaving the other two, mother and child, for future allocation (*TAD* B2.11).

2. Anani Archive. It contains thirteen documents, touches upon two interrelated families, and spans two generations (456–402 B.C.E.). It may be presumed that the four shekel loan taken by the woman Jehoḥen from Meshullam b. Zaccur (456 B.C.E.; see *TAD* B, 53–57) was never repaid and that he simply seized part of her property as security in accordance with the provisions of the contract (*TAD* B3.1) and he or his son Zaccur subsequently passed the seized property and contract on to Anani son of Azariah or his daughter Jehoishma. In 449 Anani drew up a document of wifehood for Meshullam's handmaiden Tamet (*TAD* B3.3). The erasures and corrections in the document are evidence of considerable haggling over the sum of the dowry and the terms of the settlement in case of death or divorce (Porten 1971). Surprisingly, the document attests to the presence of a child belonging to the couple by the name of Pilti (Pelatiah) over whom the master Meshullam still had rights. In 437 Anani bought a piece of abandoned property from the Caspian couple Bagazushta and *ʾwbyl* (*TAD* B3.4). Unable to provide the purchaser with clear title to the "house of *ʾpwly,*" the sellers attach a defension clause obligating them to clear the property of third-party

suit within thirty days or provide an identical replacement. Only if an heir of the original owner/possessor *ʾpwly* should make good his claim to the house, would the present sellers not have to provide a replacement but merely refund the relatively modest purchase price of fourteen shekels plus improvements (Porten and Szubin 1982b). Improvements were not slow in coming and after three years (434 B.C.E.), perhaps on the occasion of Tamet's bearing a daughter, Jehoishma, Anani bestowed upon her "in affection" half of "the large room and its chambers … new, containing beams and windows" (*TAD* B3.5). As appropriate to a gift in contemplation of death, the contract limits the succession of the property to the couple's children Pilti and Jehoishma.

A new stage in women's status was reached in 427 B.C.E. when the aging Meshullam drew up a testamentary manumission for Tamet and Meshullam. He "releases" them at his death as "free" persons. They are "released from the shade to the sun, released to God" with the obligation to serve the master and his son Zaccur "as a son or daughter supports his father" (*TAD* B3.6). This implicit adoption is given concrete expression when Jehoishma marries in 420 B.C.E. Her father Anani gave her a room in his house as a life estate of usufruct (*TAD* B3.7; Szubin and Porten 1988) but it was her adoptive brother Zaccur who presented her with an elaborate dowry of $78^{1/8}$ shekels registered in her document of wifehood drawn up jointly by him and the groom Anani b. Haggai (*TAD* B3.8). In addition to the customary death and divorce clauses, the contract forbids Jehoishma to "acquire another husband besides Anani" and Anani "to take another woman besides Jehoishma." Should either do so, "it is hatred" and "the law of hatred" is applied. Presumably, the circumstances under which Jehoishma would acquire another husband would be the extended and inexplicable absence of Anani. The term "hatred," frequently taken to mean divorce, is still subject to further clarification. In 404 Anani b. Azariah converted his life estate of usufruct to a gift in contemplation of death in consideration of old-age support (*TAD* B3.10; Porten and Szubin 1987a) and in 402 he further upgraded it to an "after-gift" to her dowry, effective immediately and protected against future "reclamation" by himself or "removal" by a third party (*TAD* B3.11; Porten and Szubin 1987b). Final disposition of the estate comes at the end of 402 when Tamet and Anani sell the remaining parts of their house to their son-in-law Anani for thirteen shekels (*TAD* B3.12). Perhaps as a result of the purchase Anani is forced to take a loan of grain, two *peras*, three seah of emmer. The loan is to be repaid interest-free from Anani's (monthly?) ration. If it is not, a twenty-day grace period ensues, after which a ten-shekel penalty falls due (*TAD* B3.13). Here the archive comes to an end. We should but mention the earlier document of withdrawal, following suit-countersuit (451 B.C.E.; *TAD* B3.2; Porten and Szubin 1982a), and a document of adoption and emancipation of a slave Jedaniah who belonged to Jehoishma's adoptive brother Zaccur (416 B.C.E.; *TAD* B3.9).

3. Obligation Documents. Eight texts spanning the century from beginning to end ([*TAD* B4.1–6] including two in the Anani archive [*TAD* B3.1, 13]) are obligation documents. The documents are drawn up by the obligor/debtor and their shema is more varied than that of the conveyances. It includes four subjective main clauses, variously formulated, and optional subclauses: (1) loan/debt (with compound interest [*TAD* B3.1; 4.2]); (2) repayment from allotment/ration (*TAD* B3.13; 4.2 [with receipt]) or due date (*TAD* B4.5, 6); (3) penalty upon default (*TAD* B3.13; 4.2, 6 [with seizure of security (*TAD* B3.1, 13; 4.6)]); (4) obligation of heirs (*TAD* B3.1, 13). Two documents were written without dates (*TAD* B4.3; Porten 1985). Two documents appear to be parallel and concern the obligation to deliver grain to the garrison (*TAD* B4.3, 4). The others are private obligations for varying amounts of money or grain: two (*TAD* B4.6), three-and-one-half (*TAD* B4.2), four (*TAD* B3.1) and fourteen shekels (*TAD* B4.5); and two *peras*, three seah of emmer (*TAD* B3.13). Three are actual loans (*TAD* B3.1, 13; 4.2); two are IOUs for payment on a house (*TAD* B4.5) and restitution of dowry (*TAD* B4.5); and one is either a receipt or a cancellation of a debt (*TAD* B4.1). The payment period was either less than a month ("payday" [*TAD* B3.13]), one month (*TAD* B4.6), nine months (*TAD* B4.5), perhaps a year (*TAD* B4.2) or longer (*TAD* B3.1). A straight money loan cost 5 percent monthly (*TAD* B3.1; 4.2) whereas a grain loan might initially be interest-free (*TAD* B3.13). Charges varied in case of default of payment, whether of interest or capital (Porten 1989a).

4. Conveyances. Five texts (*TAD* B5.1–5) in addition to those in the two family archives are conveyances, none fully intact. The first document is the earliest from Elephantine (495 B.C.E.; *TAD* B5.1) and concerns an exchange of inherited shares of realty. The share of the sisters Salluah and Jethoma came through probate while that of Jehour resulted from a division among the heirs themselves (Porten and Szubin 1982). In the last quarter of the century the hereditary property of Jethoma and Salluah was mentioned in a suit by Mattan son of Jashobiah (*TAD* B5.2). From the same period is a text which may be plausibly restored as a mutual quitclaim between the two sisters Miptahiah and Isweri in which the former renounced claim to payment made and the latter to payment received (Porten 1989a). The other two documents are fragments from the first half of the century (*TAD* B5.3, 4).

5. Documents of Wifehood. In addition to the three relatively intact documents in this category found in the two family archives (*TAD* B2.6; 3.3, 8) there are four more fragmentary texts (*TAD* B6.1–4), making seven in all. Because of the formulaic nature of these texts, each may be restored with high probability (Porten 1989b). The document was drawn up by the groom (*TAD* B2.6; 3.3), sometimes in conjunction with the parent or proprietor of the bride (*TAD* B3.3; 6.3, 4). It defined the change in status of a woman becoming a wife. The groom usually gave the parent/proprietor a *mohar* (five or ten shekels [*TAD* B2.6; 3.8]) and she brought in a dowry (22.19 shekels [*TAD* B3.3], 38.125+ [*TAD* B6.2], 60.5 [*TAD* B2.6], and 68.125 shekels [*TAD* B3.8]), to which was usually added the *mohar.* The document set forth potential contingencies that could affect the status of the wife, such as repudiation ("hatred"), divorce, and death. One document had been considered a conveyance but on the basis of terminology has been restored as a document of wifehood (*TAD* B6.3).

6. Judicial Oaths. All four are fragmentary (*TAD* B7.1–4); one is merely the endorsement on the verso with the recto showing a largely unintelligible text in demotic (*TAD* B7.4). Two are drawn up as regular contracts. In the first an unknown party pledges to Mahseiah b. Shibah to take an oath by YHW denying charges of theft of fish (*TAD* B7.1); in the second Malchiah b. Jashobiah pledges to [Ar]tafrada b. A[rvastah]mara to make a declaration before Ḥerembethel the god denying charges of assault and theft (*TAD* B7.2; but cf. van der Toorn 1986). The third is the actual statement of an oath sworn by one Menahem to Hodaviah "by Ḥ[erem?] the [god?] in/by the place of prostration and by Anathyhw" affirming his rights to dispose of a she-ass and denying the plaintiff's charge that his father had acquired half ownership (*TAD* B7.3).

D. Literary Texts

The *Words of Aḥiqar* is the only literary text discovered among the Elephantine papyri. Eleven sheets containing fourteen columns are preserved (*TAD* C1.1). The first five columns are narrative, relating the story of the "wise and skillful scribe … counselor of all Assyria and [kee]per of the seal" for Kings Sennacherib and his son Esarhaddon who adopted his nephew Nadin, instructed him in wisdom, and had him appointed to succeed himself. Nadin slandered his father before the king who ordered the officer Nabusumiskun to kill Aḥiqar. Aḥiqar talked the officer out of it and here the narrative breaks off. Later versions of the story (Syriac, Armenian, Arabic) recount in detail the restoration of Aḥiqar and his exploits on behalf of the king of Assyria against the king of Egypt. These versions divide the proverbs into two groups, one set uttered before the betrayal and the other after the restoration. Though the order of the nine columns of proverbs in our edition is not certain, papyrological considerations rule out interspersing any of the columns in the narrative.

There is no intimation in the Aramaic text that Aḥiqar was Jewish but the book of Tobit makes Aḥiqar the nephew of that worthy (Tob 1:21–22). The Aramaic Aḥiqar was extensively studied, both at the time of publication and in more recent years (Ginsberg *ANET,* 427–30; Grelot 1972: 427–52; Lindenberger 1983; Kottsieper 1989). Only one of the five narrative columns is fully intact and Cowley's restorations have become virtually canonical. Yet the resulting line length in columns 2, 3, and 5 falls short of the average column line length of 27 cm and must be corrected accordingly. Similar criticism needs to be leveled at his restoration of col. 14. The frequently quoted proverb "[Do not sh]ow an Arab the sea or a Sidonian the st[eppe], for their occupations are different" (line 208) must be expanded in the middle and corrected at the beginning. Most of the proverbs are pithy one-liners that are meant to instill discipline,

caution, restraint, obedience, and industriousness. A marginal stroke at the beginning of the line often separates one proverb from another and if the proverb ran over into a second or third line, then an archaic *ʾalep* was inscribed to mark separation between it and the proverb immediately following on the same line. Deity plays a significant role in the proverbs, both in the generalized sense of "gods" and of Shamash and El in particular. The apparent hypostatization of wisdom (lines 94–95) recalls Prov 8:22–31.

E. Historical Texts

The one historical text is a late 5th century copy of the original Bisitun inscription despatched by Darius I to centers throughout the Empire recording his victory over nineteen rebels in one year (*TAD* C2.1). The text published by Sachau consisted of two papyrus sheets with three columns on the recto and one on the verso as well as thirty-six fragments. Cowley issued a text running to 63 lines. Extensive papyrological and textual work has made it possible to place most of the fragments and restore a text of 79 lines. The original Aramaic text must have consisted of eleven columns of 17–18 lines each, yielding a total of ca. 190 lines. Restoration of fragmentary text is possible because the Aramaic and Akkadian versions match almost verbatim. Each campaign was introduced by the formula, "Thus says King Darius" and the space following the last sentence was left blank. The nine preserved paragraphs correspond to eight campaigns with separate paragraphs for individual battles in the two Armenian campaigns. The tenth and final paragraph is a composite piece, with part corresponding to the last paragraph of Darius' Naqš.i Rustam b. inscription (Greenfield and Porten 1982).

F. Accounts

These four documents are very different from one another. One comes from the end of the 6th or the beginning of the 5th century, has some kind of narrative text in the fragmentary first column, and a list of Hebrew names in the second column. Most of these names have some sort of check mark in front of them (*TAD* C3.3). The others all came from the end of the century; each bears a date but omits the name of the king (*TAD* C3.13–15) so we cannot be certain regarding the year. Two appear to have been written by the same scribe. One is an accounting of barley rations allocated to members of the Syenian garrison (*TAD* 3.14 = *CAP* 24). The other is a list of 128 (mostly Jews) who contributed two shekels each to the God YHW on 3 Phamenoth, year 5 (*TAD* 3.15 = *CAP* 22). The years may be either 419/420 or 401/400. The third account has two year dates, one 6+ and the other 6 and possibly 7. This account is written on the verso of the papyrus containing the Bisitun inscription and is a register of vessels and other objects associated with different individuals known from documents of the last two decades of the 5th century B.C.E. (*TAD* C3.13 = *CAP* 61–63). So this list was inscribed in 418/417 B.C.E. and gives us a date *ad quem* for the copying of the Bisitun inscription.

The Collection List poses problems of accounting and is an enigma for students of religion. The two shekel contributions collected come to 236 shekels, yet the recorded total is 318 shekels. The caption above the first two columns assigns the money to YHW, yet the total at the end divides it up among YHW (126 shekels), Eshembethel (70 shekels), and Anathbethel (120 shekels). The two-shekel difference between 316 and 318 is a mathematical error and the 82 shekel difference between 318 and 236 may be due to a carry-over of a previous balance. Most scholars see in the division of funds evidence for the syncretistic nature of the religion of the Elephantine Jews. But a careful analysis of the onomastic and epistolary material leads to the conclusion that these other deities are part of the cult of the Arameans (Porten *ArchEleph*, 151–86; 1969).

G. Lists

In this category are included five lists of personal names that have no additional notations appended to the names. All come from the end of the century and on the basis of prosopographical considerations, three may be dated more closely (*TAD* C4.4 to 420; C4.5 to 410; C4.6 to 400). Only one of the five lists is fully intact. It contains nine names and a summation, "All (told), nine men" (*TAD* C4.4). Three lists have only the bottom intact (*TAD* C4.5, 7, 8) and one has the bottom and top missing (*TAD* C4.6). Only one was written on both sides with text missing at the top of the recto (*TAD* C4.8). Two have the marginal subtally "10" indicating these were part of longer lists (*TAD* C4.6, 7). In all but one (*TAD* C4.5) the handwriting runs parallel to the fibers. Ethnically, the lists display the cosmopolitan nature of the society

in the Persian period. Three lists consist essentially of Jews, with a sprinkling of Aramean and Egyptian names (*TAD* C4.4–6); one of Persian praenomina only (*TAD* C4.7); and one of mixed Egyptian, Babylonian, and Aramean names with a sprinkling of Jewish names (*TAD* C4.8). The difficulty in reading some of these names (e.g. *nryh* or *pdyh* [*TAD* C4.6:3] *nḥwm* or *pḥnm* [*TAD* C4.6:12]) illustrates the variant readings frequently encountered in parallel biblical lists (e.g. *rḥwm* vs. *nḥwm* [Ezra 2:2 = Neh 7:7]).

BEZALEL PORTEN

ELEUTHERUS (PLACE) [Gk *Eleutheros* (Ἐλευθερος)]. A river in ancient Syria to which Jonathan marched with Ptolemy king of Egypt (1 Macc 11:7). Later, Jonathan routed the forces of Demetrius, but was unable to overtake them before they crossed this river (12:30). Both passages seem to suggest that the river constituted part of a political boundary beyond which Jonathan dare not proceed. The river flowed from the base of the Lebanon mountains into the Mediterranean (cf. Strab. 16.2.12). It has been suggested that the Eleutherus be identified with the modern Nahr el-Kebir, which flows near the Lebanon–Syria border about 19 miles N of Tripoli (*IDB* 2:85; *ISBE* 2:61), although Aharoni and Avi-Yonah apparently identify it with the Nahr Ibrahim, about 30 miles farther S (see *MBA,* map 203).

GARY A. HERION

ELHANAN (PERSON) [Heb *ʾelḥānān* (אֶלְחָנָן)]. **1.** A valiant warrior in David's army, who came from Bethlehem (2 Sam 21:19; 1 Chr 20:5). He was noted for killing a famous Philistine soldier in battle at Gob, an unidentified location in Philistia. There is confusion regarding the identity of Elhanan's father and the Philistine who was slain. In 2 Samuel the patronymic is Jaareoregim whereas in 1 Chronicles it is Jair. There exists a simple textual explanation for this variation. The word "oregim" appears again in 2 Sam 21:19 (the shaft of his spear was like a *weaver's* beam). Consequently, a copying error has occurred in which the word "oregim" has been inserted after Jaare (dittography). The difference between Jaare and Jair is minor, requiring a transposition of the last two letters in Hebrew. The probable name of Elhanan's father, then, is preserved as Jair (Heb *yāʿîr*[Q]) in 1 Chronicles.

The identity of Elhanan's opponent is a more difficult matter. In 2 Samuel the text reads, "Elhanan, son of Jaareoregim, the Bethlehemite (Heb *bêt hallaḥmî*) smote Goliath (Heb *ʾēt golyāt*)." In 1 Chronicles it reads, "Elhanan, son of Jair, smote Lahmi (Heb *ʾet laḥmî*) the brother of Goliath (Heb *ʾăḥî golyāt*)." Since the patronymic in 2 Samuel is corrupt, some scholars feel that 1 Chronicles contains the generally superior text. The reading "the Bethlehemite" was influenced by another text in which it was known of an Elhanan from Bethlehem (2 Sam 23:24). However, the standard solution to this problem is that the Chronicler harmonizes the text with 1 Samuel 17 in which it is stated that David, not Elhanan, killed Goliath.

How then does one explain the contradiction between 1 Samuel 17 and 2 Samuel 21? The usual explanation states that David originally killed an anonymous Philistine, who was later confused with Elhanan's victim. Another, more ancient solution (Targums, Midrash) is that Elhanan and David were the same person, David being a second name acquired later, probably at his coronation. A significant number of modern scholars have lent support to this view, some arguing on the basis of the occurrence of the word *dawidum* at Mari that the name, David, was a title received at coronation (von Pákozdy 1956). Some have postulated that the patronymic in 2 Samuel originally was Jesse (Heb letters *yšy*) instead of Jaare (Heb letters *yʿry*), the consonants *ʿ* and *r* representing a corruption of *š* (Honeyman 1948: 23–24). Although this theory is attractive, it lacks conclusive support. The Mari evidence has now been essentially refuted, and the reading of "Jesse" for "Jaare" is dubious (Stamm 1960; Hoffman 1973: 168–206).

2. One of the distinguished group of David's warriors known as "The Thirty" (see DAVID'S CHAMPIONS) (2 Sam 23:24; 1 Chr 11:26). He came from Bethlehem and his father's name was Dodo. The fact that he is placed second on the list suggests that he was with David at an early stage in his career and thus came from an area close to his original home (Mazar 1963: 318). Consequently, this soldier probably had a high rank.

Some scholars identify this person with Elhanan in 1. above. However, there is no satisfactory explanation of the differing patronymics. Others identify the two Elhanans as both referring to David. An original text in 2 Sam 23:24 is conjectured: "Elhanan, he is David from Bethlehem." Although the word Dodo (Heb letters *dwdw*) and David (Heb letters *dwd*) are similar, such a theory requires major changes in the text. It also fails to explain adequately why David is included in his own list of warriors.

STEPHEN G. DEMPSTER

ELI (PERSON) [Heb *ʿēlî* (עֵלִי)]. The priest at Shiloh (1 Sam 1:9; 2:11) and a judge in Israel (4:18) before and during the days of Samuel's youth. More precisely, Eli's office was probably that of high priest, although he is not specifically given this title in the OT text. Eli's two reprobate sons—

unfortunately also priests of the Lord (1:3)—bore appropriately Egyptian names: Hophni ("Tadpole") and Phinehas ("The Nubian").

On one occasion, while Samuel's mother Hannah was on pilgrimage at Shiloh, she was praying silently that the Lord would give her a son (1 Sam 1:3, 9–11). Eli rebuked her for what he took to be the inaudible mutterings of a drunken woman. When she responded that she was in fact praying, he graciously rectified his mistake (1:12–18). After Samuel had been weaned, his parents brought him to the tabernacle at Shiloh to begin service as a lifelong Nazirite under Eli (1:24–28; 2:11).

The contrast between Eli's young charge and his own two sons could scarcely be more stark and is intentionally highlighted in the text. Hophni and Phinehas "had no regard for the Lord" (1 Sam 2:12), treated with contempt "the offering of the Lord" (2:17) as well as "all the Israelites who came" to Shiloh (2:14), and "lay with the women who served at the entrance to the tent of meeting" (2:22). Samuel, meanwhile, "ministered to/before the Lord" (2:11, 18; 3:1), "grew in the presence of the Lord" (2:21), and "continued to grow both in stature and in favor with the Lord and with men" (2:26). Eli rebuked his sons for their wicked behavior, but they refused to listen to him (2:22–25).

An unnamed prophet came to Eli and told him that the sins of his sons would bring judgment and that his priestly line would be cut off and superseded by that of another (1 Sam 2:27–36). The same basic message was repeated to Eli by Samuel himself who, serving as the conduit of God's word to the aged priest, informed him of the day of reckoning that would come at least partly because Eli had failed to restrain his sons' evil conduct. Eli submissively accepted the inevitable as a sign of the Lord's displeasure (3:11–18).

After a severe military defeat suffered by the Israelites at the hands of the Philistines, Hophni and Phinehas accompanied the ark of the covenant onto the battlefield (1 Sam 4:1–4). The elders had ordered the ark to be brought out of the tabernacle and into battle as a talisman to assure Israel's victory. Although fearful, the Philistines fought bravely and captured the ark. Apparently Eli's two sons were among the casualties who died in the battle (4:10–11; 4QSam[a] omits mention of the sons).

By this time Eli was an obese (1 Sam 4:18; cf. also 2:29) old man, ninety-eight years of age (4:15) and nearly blind (3:2; 4:15). When he heard the report of the death of his sons and the capture of the ark, the shock was such that he fell backward off his chair, broke his neck and died. He had been a judge in Israel for forty years (4:17–18). A tragic figure, Eli had successfully prepared Samuel for divine service but had failed with his own sons.

Eli's ancestry is not clearly outlined in the OT text, and any reconstruction must remain speculative. If the Ahimelech who was Eli's great-grandson and successor (1 Sam 22:9, 11, 20; 14:3) is the same as the one mentioned in 1 Chr 24:3, then Eli was a descendant of Aaron's son Ithamar (see also Josephus *Ant* 5.11.5 §361; contrast, however, 2 Esdr 1:2, where Eli is traced back to Eleazar, another of Aaron's sons). 1 Sam 22:9–20 indicates that Eli's descendants, through Ahimelech's son Abiathar, continued to serve as priests at Nob, at least temporarily. When Doeg the Edomite slaughtered the priests at the command of Saul, Abiathar escaped (22:20) and shared the priesthood with Zadok under David (2 Sam 19:11). The prophecy concerning the demise of Eli's line (see above) was further fulfilled when Solomon relieved Abiathar of his priestly duties (1 Kgs 2:26–27; approximate dates for Eli through Abiathar are given in Albright *ARI,* 200). The sole priesthood then reverted to the line of Eleazar under Zadok (cf. 1 Chr 6:4–8; Josephus *Ant* 5.11.5 §362), to whose house Ezra traced his own priestly lineage (Ezra 7:1–5). (See also the discussion in ITHAMAR.)

The personal name *ʿēlî* is used only of Eli the priest in the OT. But it has long been recognized that it is the hypocoristic of a longer name such as *yḥwʿly* in the Samaria ostraca (Albright *ARI,* 200) or *yhwʿly* (a woman's name, however) in the Elephantine papyri (Noth *IPN,* 245). Recent discoveries have added the names *ʿlyhw,* found on three bullae (Avigad 1986: 45, 93, 94), and *ʿlyw,* inscribed on a seal (Avigad 1987: 200, 207).

M. Noth brought the divine name Elyon into the discussion of Eli and its longer forms (Noth *IPN,* 146), but it remained for H. S. Nyberg to prove that *ʿl/ʿly/ʿlyw* itself was used as a divine name (meaning "Exalted One, Most High") in the OT as well as in numerous extrabiblical texts (see especially Nyberg

1938; cf. also Ginsberg 1946: 47). During the past fifty years, numerous studies have added to the list of occurrences of *ʿl* and its derivatives and/or commented on their significance (e.g., Dahood 1953; *Psalms 1–50* AB, 45; Freedman 1976: 65–67 *et passim*). Especially instructive in the context of the fall from grace of Eli the priest is 1 Sam 2:10 in the Song of Hannah:

ʿlw thunders from the heavens;
yhwh judges the ends of the earth.

RONALD YOUNGBLOOD

ELI, ELI, LAMA SABACHTHANI. Jesus' cry from the cross is recorded in Matt 27:46 and Mark 15:34, in slightly differing forms. That given above is basically a mixture of the two, while yet a further form occurs in Codex Bezae at both places. The two most probable forms, along with that in Codex Bezae, are as follows:

Mark 15:34, *eloi eloi lama* [*lema* Sinaiticus C] *sabachthanei*
Matt 27:46, *ēli ēli lema* [*lama* D^{w} it vg, *lima* A] *sabachthanei*

Codex Bezae (D) in both reads ēlei ēlei lama zaphthanei. From this it is clear that D represents the Hebrew text of Ps 22:1 (apart from the omission of the syllable before *zaphthanei*): *ʾēlî ʾēlî lāmâ ʿăzabtānî.* In the more usually accepted texts in Matthew and Mark, *sabachthanei* reflects the Aramaic verb *sbqtny.* The form *lema* in Matthew is slightly closer to the Aramaic *lmʾ* than is the Markan *lama. Eli* is Hebrew, but has also been found in an Aramaic text from Qumran (11QJN frag. 14, line 1), whereas the Markan form *eloi* seems to reflect best a biblical Hebrew form *ʾlhwhy* ("my God"), although it may possibly represent Aramaic *ʾlhy,* but it does not coincide with the known Hebrew text of Ps 22:1a in that reading.

If Matthew used Mark here, why did he change the *eloi* to *ēli* in conformity with the Hebrew text but leave the rest of the sentence in Aramaic? Actually, if we consult the Targum to Psalms we find that it has not *eloi* but *eli,* so that Matthew's version is in fact precisely that of the Targum. The Bezan variant is equally that of MT. The question becomes even more involved when we look at the Greek translations given respectively by Matthew and Mark and compare them with that in the LXX as we know it. Mark deviates a little from the LXX as we know it. Mark deviates a little from the LXX in reading *eis ti* (literally, "for what?") for *hina ti,* ("why?"), but Matthew's *thee mou thee mou* "my God, my God" (against Mark and LXX, *ho theos mou ho theos mou*) is strikingly independent. Are Matthew and Mark really interdependent here after all? Which of them (if either) is the more likely to have been original? What is the status of the Bezan reading? Is it an attempt to conform them both to one another and to MT, and perhaps also to help explain how the opening word *(ēlei)* came to be mistaken for the name of the prophet Elijah *(ēleias)?*

Apart from the Bezan readings, both Matthew and Mark point to Aramaic as the language in which the cry was uttered. It would hardly be surprising that in such deep distress Jesus should have used his mother tongue. The authenticity of the saying is surely supported by the sheer embarrassment of the words for the early Church.

MAX WILCOX

ELIAB (PERSON) [Heb *ʾĕlîʾāb* (אֱלִיאָב)]. Var. ELIHU; ELIEL. **1.** Prominent man in the tribe of Zebulon, son of Helon (Num 1:9). He represented his tribe's interests as an assistant to Moses in the wilderness. After the census of the tribes, he was Zebulon's leader (Num 2:7–8) and commanded a host of

57,400 (Num 2:8); also, in his capacity as leader he provided an offering for the dedication of the altar (Num 7:24–29).

2. Man from the family of Pallu, of the tribe of Reuben (Num 26:5, 8). He was the father (Num 16:1) of the rebels, Dathan and Abiram, who, with Korah and On, led a mutiny against the authority of Moses and Aaron (Num 16:1–3, 12–4; Deut 11:6).

3. Levite from the family of Kohath (1 Chr 6:7, 12—Eng6:22, 27). He was the great-grandfather of the judge/prophet, Samuel (1 Chr 6:12–13—Eng6:27–28). His name is given also as "Elihu" (1 Sam 1:1) where the lineage is connected with Ephraim and as "Eliel" (1 Chr 6:19—Eng6:34) where the lineage, as with Eliab, is connected with Levi.

4. The oldest son of Jesse and therefore David's oldest brother (1 Chr 2:13). He was the father of at least one daughter, Abihail (2 Chr 11:18). He was most probably the leader of Judah during the time of David's kingship. This is based on the reference in 1 Chr 27:16–18 which states that "Elihu, one of David's brothers," was "chief officer" over the tribe of Judah. The following evidence suggests that, in this passage, "Elihu" is another name for Eliab: (1) the oldest brother would naturally be the leader, (2) the LXX renders "Elihu" as "Eliab" in 1 Chr 27:18, and (3) (less direct evidence) the Eliab in **3.** above is also called Elihu, which establishes that "Elihu" is a variant of "Eliab." But see ELIHU. He was a man of imposing stature, appearance and bearing, qualities which inclined Samuel to identify him, although mistakenly, as Jahweh's choice to be Saul's successor to the throne in Israel (1 Sam 16:6–7). He served in Saul's army during the conflict with the Philistines. During his tenure in Saul's army, his brother David conveyed to him greetings, and supplied him with provisions, from home. When, on one such occasion, David expressed in the camp an interest in meeting the Philistine, Goliath, Eliab asserted himself against David's design: he rebuked David, belittled him and imputed to him a specious motive (1 Sam 17:28–29). He seems, thus, to have been embarrassed by David, jealous of David, or both.

5. A warrior from the tribe of Gad (1 Chr 12:8–9). He was the leader of a troop of either a thousand or a hundred men, and was one of eleven such military leaders who, as a group, transferred their allegiance to David after Saul's demise (1 Chr 12:8–15). This group of eleven leaders aggressively protected Israel's interests against unfriendly people, particularly in the valleys beyond Jordan, and their military exploits and prowess gained them fame. As a member of the group, he possessed the qualities in which the group excelled: he was eminent in battle, skillful with shield and spear; his strong, dauntless character expressed itself through his aspect and demeanor; in military maneuvers he was adroit, nimble and swift (1 Chr 12:8–9).

6. A Levite who played the harp skillfully (1 Chr 15:20). He was a member of a group of musicians under the direction of Chenaniah. David honored this group by appointing them to provide music during the transfer of the ark from the house of Obededom to the tent prepared especially to receive it (1 Chr 15:14–28).

7. A man of the tribe of Simeon, and an ancestor of Judith (Jdt 8:1; 9:2). The genealogy in Jdt 8:1 lists him as the grandson of Salamiel who was the leader of the tribe of Simeon under Moses in the wilderness (Num 1:6). But the list is obviously incomplete (Sarasadai succeeds Israel [Jacob] in the list though he lived several hundred years later), and extensive time gaps could separate persons whose names are successive in the list. If the list is complete at the point at which Eliab occurs, he was the son of Nathanael and the father of Hilkiah.

GERALD J. PETTER

ELIADA (PERSON) [Heb *ʾelyādāʿ* (אֶלְיָדָע)]. **1.** One of 13 sons of David listed as having been born in Jerusalem (1 Chr 3:5–9; 14:3–7; cf. 2 Sam 5:13–16). His mother was among the several wives and concubines whom David took in Jerusalem, but she is not named. His name means "God knows" (2 Sam 5:16 and 1 Chr 3:8). His given name was most likely "Baaliada" or "BEELIADA" (the form found in 1 Chr 14:7), which means "Baal knows" or "the Lord knows." This name change was not necessarily late, since theophoric names with *ʾēl* prefixed were most common during the period of the united monarchy (*TPNAH*, 42–44).

2. Father of the Syrian king, Rezon (1 Kgs 11:23). Rezon was a subject of Hadadezer, who was king of Zobah, an Aramean city-state, and who had been subdued by David (2 Sam 8:3–8); he had fled from Hadadezer, and established himself as leader of a marauding band and as king in Damascus. He was a troublesome presence to Israel throughout Solomon's day (1 Kgs 11:23–25).

3. One of two Benjaminite commanders of large military units stationed in Jerusalem under King Jehoshaphat, along with three Judahite commanders (2 Chr 17:17–19). The large numbers cited in the passage as it stands (200,000 men under Eliada alone) were undoubtedly smaller originally, and have achieved their present status either by inflation or by later misunderstanding (see Dillard *2 Chronicles* WBC 106–7, 135, and refs.).

DAVID M. HOWARD, JR.

ELIAHBA (PERSON) [Heb *ʾelyaḥbā*ʾ (אֶלְיַחְבָּא)]. One of David's mighty men mentioned in 2 Sam 23:32 (= 1 Chr 11:33). On the one hand, his is the seventeenth name in the brief listing of the *gibbôrîm* (23:20–39). On the other hand, 2 Sam 23:32 designates his home as Shaalbon. This city is generally identified as the Danite city, Shaalbim, mentioned in Judg 1:35 and 1 Kgs 4:9, and Shaalabbin, mentioned in Josh 19:42, which is close to Benjaminite territory. Thus, the location of his home town would support Mazar's thesis that the list comes from David's Hebron period (1963: 318). Using Elliger's theory that the first twenty-three names are part of the original group of *gibbôrîm* (1935: 69–70), Eliahba's location in the list would have him included in this group, while the theory that the list is arranged geographically radiating from Bethlehem (1935: 47) would explain Eliahba's name appearing midway within the list. McCarter's argument that the list is arranged according to the power and influence held by the individuals (*2 Samuel* AB, 500–501), would suggest that Eliahba was of medium rank, while Naʾaman's theory of *šālîšîm* being officers of the third rank (1988: 77) would place Eliahba on equal rank with the others listed in vv 20–39. See DAVID'S CHAMPIONS.

R. C. BAILEY

ELIAKIM (PERSON) [Heb *ʾelyāqîm* (אֶלְיָקִים)]. The name is composed of two parts, the theophoric element *ʾēl* (meaning "God," the Canaanite or the Israelite deity), and the verb form *yāqîm* (a *Hipʿil* impf 3ms from *qûm,* with the meaning "to raise, set up, establish"). Thus "God will establish" would seem to be the best translation, though some prefer a jussive "May El establish" (*TPNAH,* 99), which would seem to be obviated by the fact that a *plene* written *yod (yqym)* is used. The jussive of this verb is ordinarily written as *yāqēm (yqm)* in the MT. This name occurs in the Hebrew Bible as well as in several Iron-Age seals (cf. *TPNAH,* 359 for references. For a good discussion of the identification of *ʾlyqm nʿr ywkn* found on several seals from Tel Beth Mirsim, Beth Shemesh, and Ramat Rahel, in the light of some new discoveries, cf. Avigad 1981: 303).

1. The son of Hilkiah, "master of the palace" (Heb *ʾăšer ʿal habbayit,* apparently roughly equivalent to the office of vizier in Egypt, cf. de Vaux *AncIsr* 1: 129–31) under Hezekiah. He was one of three officers (the other two being Shebna the scribe [Heb *hassōpēr*] and Joʾah the herald [Heb *hammazkîr*]) Hezekiah sent out to meet the Assyrian envoy which Sennacherib sent out from Lachish in the fourteenth year of the Judean king's reign (ca. 701 B.C.). Subsequently, he and the other two Judean officers were sent to bring the vexatious words of the Assyrians to the prophet Isaiah (2 Kgs 18:18, 26, 37; 19:2; Isa 36:3, 11, 22; 37:2). These three offices would appear to be paralleled by that of vizier, royal scribe, and herald in ancient Egypt. In an interesting parallel, de Vaux points out, "It is remarkable that in the very serious matter of the violation of the royal tombs under Ramses IX, the three corresponding Egyptian officials, the vizier, the royal scribe, and the herald, are named in the same order as alone presiding over the enquiry" (*AncIsr* 1: 132). One of the other two officers, Shebna the scribe, formerly held the office of

"master of the palace," until he was demoted and replaced by Eliakim, as Isa 22:15–25 prophesied. The same passage describes in poetic language some of his official functions, including being charged with the "key of David," which gives him power over Judah and Jerusalem. As Isa 22:22 indicates, "he shall open, and none shall shut; and he shall shut, and none shall open" (RSV). (Note that Rev 3:7 makes an obvious allusion to this passage.) The Egyptian vizier was second to Pharaoh, to whom he would report daily for instructions. He was in charge of the openine of the "gates of the royal house" and would rule in the name of the Pharaoh. The biblical references to Eliakim and his office would seem to indicate that his duties were similar to that of his Egyptian counterpart.

2. Son of Josiah whom Pharaoh Neco of Egypt made king in place of his brother Jehoahaz around 609 B.C. (2 Kgs 23:34; 2 Chr 36:4). The Pharaoh also changed his name to Jehoiakim, the new name probably being conciliatory to the Jews in Judah at this time, while at the same time demonstrating the power of the Pharaoh over his subject (Gray *Kings* OTL, 751).

3. First of seven priests bearing trumpets mentioned as participating in the dedication ceremony of the restored temple (Neh 12:41).

Bibliography

Avigad, N. 1981. Title and Symbols on Hebrew Seals. *EI* 15: 303–5 (in Hebrew).

H. ELDON CLEM

4. The son of Abiud and father of Azor, according to Matthew's genealogy tying Joseph, the husband of Mary, to the house of David and Solomon (Matt 1:13). Apart from Luke (see below), Eliakim does not appear in any other genealogy or list of Jesus' ancestors, although Albright and Mann (*Matthew* AB, 4–5) state that this name, like those around it, is attested for the postexilic period. Johnson (1969: 179–80) goes so far as to argue that the names between Zerubbabel and Joseph have a basis in later OT documents (e.g. Neh 12:41; Isa 22:19–25). Gundry (1982: 18) is more specific, positing that Matthew saw in Luke's genealogy (3:30) the name of Eliakim (the name given to Jehoiakim in 2 Chr 36:4), whom Matthew earlier omitted in v 11. According to Gundry, Matthew includes Eliakim to "offset his omission of Jehoiakim and inject a bit of Davidic Christology." This theory is intriguing but difficult to prove, since Matthew's dependence on 1 Chronicles in 1:13–15 is difficult to establish.

5. The father of Jonam and son of Melea, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:30). Manuscript D in Luke includes an Eliakim (but in Matthew's sequence [see #4 above]), substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. Apart from Matt 1:13 (see above), this name appears in a list of eighteen ancestors of Jesus otherwise unknown to the biblical documents (Fitzmyer *Luke* AB, 501). Kuhn (1923: 208–9) argues that two seemingly parallel lists of names—Luke 3:23–26 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Eliakim, in the second list, corresponds to ESLI, in the first list. In the NT, however, there are no textual variants for either name to support a confusion of the two, leaving Kuhn's theory with little support.

STANLEY E. PORTER

ELIALIS (PERSON) [Gk *Elialis* (Ἐλιαλις)]. A son of Bani who divorced his foreign wife during Ezra's reform (1 Esdr 9:34). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, Elialis does not appear as a son of Bani in Ezra 10:34–37. Omissions such as this also raise questions about 1 Esdras being used as a source by Ezra or Nehemiah. Furthermore, problems associated with dating events and identifying persons described in 1 Esdras have cast doubt on the historicity of the text.

MICHAEL DAVID MCGEHEE

ELIAM (PERSON) [Heb *ʾelîʿām* (אֱלִיעָם)]. Var. AMMIEL. The father of Bathsheba (2 Sam 11:3) and one of David's mighty men, the son of Ahithophel of Gilo (2 Sam 23:34). See also DAVID'S CHAMPIONS.

While many scholars view these to be references to two separate individuals (Ackroyd *2 Samuel* CBC; *IDB*), more are now arguing that these two references are to one person (Hertzberg *Samuel* OTL; McCarter *Samuel* AB; Wharton 1980). Some of the mighty men mentioned in 2 Samuel 23 were warriors who fought with David, as far back as his outlaw days running from Saul. Others joined him during the Hebron period of his reign (2 Sam 3:5a). It is, therefore, assumed that he knew them well. Similarly, since Eliam's father, Ahithophel of Gilo, was one of David's key advisers (2 Sam 16:23), and since "Giloh" is associated with the Judean hills south of Hebron (Josh 15:48–51), we can assume that Eliam had been with David since the Hebron kingship and that David was familiar with the members of this influential family.

In 2 Sam 11:3, David speculates on the identity of the woman he notices bathing in Jerusalem, as being "Bathsheba the daughter of Eliam the wife of Uriah." This word order for identifying her and the fact that David is the speaker suggest that David is familiar with her, her family, and her marital status. In other words, given the order of the identifying information about this woman, her family ties are more important to him than her marital status (Bailey 1990).

The identification of the Eliam of 2 Sam 11:3 and the Eliam of 2 Sam 23:34 as the same individual would also suggest that the David–Bathsheba marriage was another example of David becoming closely associated with a politically influential family by marrying a woman from that family. Similarly, this would also fit his pattern of marrying women who were previously married to other men (cf. 1 Samuel 25 and 2 Samuel 3:14–16) (Levenson and Halpern 1980).

Interestingly, the Chronicler records the name of the father of Bathsheba (who is called Bathshua—literally, daughter of nobility—in 1 Chr 3:5b) as AMMIEL, which in Hebrew is Eliam with the syllables reversed. On the other hand, the Chronicler omits any reference to Eliam/Ammiel (2 Sam 23:34b) in the redaction of the list of David's mighty men (2 Sam 23:34a = 1 Chr 11:35b and 2 Sam 23:35 = 1 Chr 11:36). These name changes of Eliam and Bathsheba and the omission of Eliam by the Chronicler can be explained as systematic attempts to cover up any references to the David–Bathsheba–Uriah affair, which the Chronicler omits from the story of David's reign, and to mute any association between Bathsheba and the politically powerful southern family of Ahithophel given the latter's support of Absalom in his revolt (2 Samuel 17). This is very similar to the way the Chronicler omits any reference to the Abigail–Nabal connection (1 Chr 3:1).

Thus, it is most probable that both the Eliam of 2 Sam 11:3, Bathsheba's father, and the Eliam of 2 Sam 23:34, David's mighty man, are one and the same.

ELIASAPH (PERSON) [Heb *ʾelyāsāp* (אֶלְיָסָף)]. **1.** Leader of the tribe of Gad, a son of Deuel (or Reuel) as recognized by Moses at the time of the census in the wilderness (Num 1:14; 2:14; 7:42, 47; 10:20). His name, "God has added," was common for that period since it is built from the same Hebrew root as Joseph, the venerated Hebrew leader of Egypt before the era of Hebrew bondage.

2. Prince of the Gershonites and son of Lael during the wilderness wanderings (Num 3:24). His leadership duties included care for the tent, coverings, curtains, altar, and cords of the tabernacle. See ASAPH.

JOEL C. SLAYTON

ELIASHIB (PERSON) [Heb *ʾelyāsîb* (אֶלְיָסִיב)]. The name of several men in the OT.

1. A priest who received the eleventh position in the priestly order of the Temple during the reign of David (1 Chr 24:12). An evaluation of the historical reliability of Eliashib's appearance during the reign of David depends largely upon the literary context of 1 Chr 24:1–19. Though generally agreed that the priestly list originated after the exile, its exact date remains debated. J. Liver (1968: ix, 29–32) associates the twenty-four course priestly organization to the reforms of Nehemiah, while H. G. M. Williamson (1979: 262–68) assigns it to the late Persian period. Due to genealogical connections between 1 Chr 24:7–18 and Hasmonean priestly claims, L. Dequecker (1986: 94–106) dates the list to the Hasmonean era. The stylistic characteristics of the list, however, seem to link it to the time of the composition of Chronicles. This would correspond well with the commonality of the name "Eliashib" in Judah during the Persian period.

2. The high priest of the Jerusalem temple during the governorship of Nehemiah (Neh 3:1). Eliashib actively participated in Nehemiah's refortification of Jerusalem (Neh 3:1) despite the outcry of Sanballat, Tobiah, and others (Neh 4:1–3). The size of Eliashib's house (Neh 3:20–21) indicates the relative wealth and high social standing that he possessed. His family retained the high priesthood at least throughout the later half of the 5th century B.C.E. (Neh 12:28).

3. A priest who oversaw the temple chambers during the time of Nehemiah (Neh 13:4). The favoritism that this Eliashib showed to Tobiah, Nehemiah's nemesis (Neh 13:4–5), suggests that he represents a different individual from Eliashib, the high priest. Yet the intermarriage between the grandson of Eliashib the high priest and the daughter of Sanballat (Neh 13:28) may indicate that Eliashib's cooperation with Nehemiah in the refortification of Jerusalem was a practical matter, independent of the conflict between Nehemiah and Sanballat and Tobiah. The two Eliashibs may therefore represent one individual. This uncertainty over the identity of the Eliashib of Nehemiah 13 contributes to the difficulty of assigning the proper chronological date for the mission of Ezra (see below).

4. A Davidide that lived sometime in the 4th century B.C.E. (1 Chr 3:24). As he belongs to the last generation of Judah's royal line mentioned in Chronicles, Eliashib and his brothers help date Chronicles to the 4th century. Unfortunately, textual problems earlier in the genealogy and the uncertain time span of a "typical" generation do not allow the assignment of Eliashib's life, and the composition of Chronicles, to a more precise date.

5. A singer who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:24). Though a temple official, Eliashib married a non-Judean wife. He consented to divorce her during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple–state.

6. A son of Zattu, who lived in the Persian province of Judah during the mission of Ezra (Ezra 10:27). Eliashib married a non-Judean wife. He consented to divorce her during the reforms of Ezra under the threat of complete ostracism from the Jerusalem temple–state.

7. The father, or possibly grandfather, or Jehohanan, a contemporary of Ezra (Ezra 10:6). The identity of this Eliashib is crucial for the determination of the date of the mission of Ezra. If he is identical with the high priest of the same name in Nehemiah 3 and 12, Ezra's mission must have postdated the governorship of Nehemiah (Rowley 1963: 233–34). F. M. Cross has postulated that this Eliashib was the grandfather of the Eliashib the high priest who lived during the time of Nehemiah on the basis of the practice of papponomy in Judah during the Persian period. Thus he dates the mission of Ezra to its traditional date (Cross 1975: 10–11). The commonality of the name "Eliashib" during this period makes the identification of persons with this name tenuous at best.

JOHN W. WRIGHT

ELIASIS (PERSON) [Gk *Eliasis* (Ἐλιασις)] A son of Bani who "divorced" his foreign wife during Ezra's reform (1 Esdr 9:34). His name is almost identical in spelling to that of another son of Bani, Elialis. See ELIALIS (PERSON).

MICHAEL DAVID MCGEHEE

ELIATHAH (PERSON) [Heb *ʾĕlîʾātâ* (אֱלִיאָתָה), *ʾĕlîyātâ* (אֱלְיָתָה)]. One of the fourteen sons of Heman who were appointed to prophesy with musical instruments under the direction of their father and the king (1 Chr 25:4). Eliathah received the twentieth lot which was cast to determine duties (1 Chr 25:27).

Scholars have long suggested that with only slight modifications the final nine names in 1 Chr 25:4 can be read as a liturgical prayer. For instance, Eliathah can be modified slightly to *ʾēlî ʾattâ*, "My God (art) thou." It would form the second line of the prayer as Myers (*1 Chronicles* AB, 173) reconstructed it:

Be gracious to me, Yahweh, be gracious to me;
My God art thou;
I have magnified, and I will exalt [my] helper;
Sitting [in] adversity I said,
Clear signs give plentifully.

It is unlikely that an editor simply mistook a psalm fragment for proper names. It is more likely that some of the sons of Heman took their names from first lines or key phrases of songs they regularly sang. In any case, it is clear that the final editor understood the words involved as proper names, since nine names are needed to complete the list of the fourteen sons of Heman (1 Chr 25:5). It may be that the present ambiguity is an intentional play on words, perhaps to lend authority to the sons of Heman. It is striking that the final nine names in 1 Chr 25:4 also receive the final nine lots cast to determine duties (1 Chr 25:23–31). One may conclude that the editor responsible for the scheme of twenty-four lots also expanded 1 Chr 25:4 from an original five-name list to a fourteen-name list, again perhaps to indicate the ascendancy of Heman (Petersen 1977: 64–68).

J. CLINTON MCCANN, JR.

ELIDAD (PERSON) [Heb *ʾĕlîdād* (אֱלִידָד)]. The leader of the clan of Benjaminites (Num 34:21), and son of Chislon. He was one of the tribal leaders responsible for managing the distribution of the land of Canaan among the ten tribes who occupied the land W of the Jordan River. The name has been given the meaning of "the deity loves." Others have suggested a meaning based upon the root *dwd,* "beloved," "close friend," and cite names using a theophoric element and the root *dwd* in Egyptian, Akkadian, and Ugaritic. According to Johnson (*IDB* 2: 87), "the meaning of the name Elidad and of the other names in the account (the distribution of the land) underscores Israel's dependence upon God for the new life in Canaan." Others relate the name to Eldad who prophesied in the camp with Medad (see Num 11:26–29) and have suggested that Elidad and Eldad are the same person. Another suggestion is that the name is similar to Bildad, the friend of Job (see Job 2:11ff.). Note also that in the LXX, the Samaritan, and the Syriac, Elidad is rendered as Eldad.

RAPHAEL I. PANITZ

ELIEHOENAI (PERSON) [Heb *ʾelyĕhôʿênay* (אֶלְיְהוֹעֵינַי)]. Two persons bear this name in the OT. The name itself (= "toward Y are my eyes") follows a common pattern of Akkadian names from the Neo-

Babylonian period, as in *Itti-Nabū-īnīa* (Tallqvist 1913: 84), "toward Nabu are my eyes." In 1 Esdr 8:31 (see 2. below) it is rendered in Gk *Eliaōnias.*

1. Gatekeeper from the family of Meshelemiah (1 Chr 26:3), whose Levitical extraction is traced through Korah (1 Chr 26:1) in the Chronicler's (Williamson *Chronicles* NCBC, 169) or perhaps a later (Rudolph *Chronikbücher* HAT, 173) organization of the gatekeepers in the temple at Jerusalem (1 Chr 26:1–19). Eliehoenai was the seventh and last "son" of this family.

2. Son of Zerahiah and head of the family of Pahath-Moab, a lay family, some of whose members returned to Jerusalem with Ezra (Ezra 8:4 = 1 Esdr 8:31). Eliehoenai brought with him a relatively sizable extended family, numbered at two hundred males. It would appear that Eliehoenai was the head of the Jeshua branch of the family of Pahath-Moab (see Ezra 2:6 = Neh 7:11; 1 Esdr 5:11), as the Joab branch is included separately in the same list several verses later (Ezra 8:9 = 1 Esdr 8:35).

J. S. ROGERS

ELIEL (PERSON) [Heb *ʾĕlîʾēl* (אֱלִיאֵל)]. 1. A leader of the half-tribe of Manasseh which settled in Transjordan (1 Chr 5:24). Eliel is among seven Manassites described as "mighty warriors, famous men, heads of their fathers' houses." Several scholars have pointed out the awkward positioning of this brief account of the half-tribe of Manasseh (1 Chr 5:23–24) following the more general account of the two-and-a-half tribes in the previous paragraph (1 Chr 5:18–22), concluding that 1 Chr 5:23–26 is likely an intrusion into the Chronicler's original composition (e.g., Williamson *1 and 2 Chronicles* NCBC, 66). It is probable that the material is drawn from a military census list. Eliel is conjectured to mean "My God is El" or "My God is God."

2. A Kohathite, one of the levitical singers appointed by David for temple service (1 Chr 6:19—Eng6:34). Eliel seems to be variously known in other levitical lists as Eliab (1 Chr 6:12—Eng6:27) and Elihu (1 Sam 1:1).

3. A Benjaminite name appearing twice in the longer Benjaminite genealogy offered by the Chronicler (1 Chr 8:20, 22). These Eliels are among those designated as "chief men" who "dwelt in Jerusalem." This linking of Benjaminites with Jerusalem is emphasized in the longer Benjaminite genealogy (1 Chr 8:28, 32), providing a clue as to why the Chronicler chose to elaborate on the line of Benjamin, which had been treated in its proper place in the earlier list of tribal genealogies (1 Chr 7:6–12).

4. A name mentioned three times, apparently with three separate individuals in view, among the listing of David's "mighty men" (1 Chr 11:46, 47; 12:12—Eng12:11). The lists of David's "mighty men" beginning in 1 Chr 11:10 reveal the accumulating support which David received prior to his ascension to the throne. The Eliel of 1 Chr 11:46 is further described by the gentilic, "the Mahavite." See MAHAVITE, THE.

5. A Levite of the sons of Hebron, prominent in David's transfer of the ark of the covenant to Jerusalem (1 Chr 15:9, 11). Williamson (*1 and 2 Chronicles* NCBC, 123) points out that Hebron is nowhere else listed as a head of a levitical family, but should probably be identified with the family of Kohathites (a conclusion based on 1 Chr 6:18).

6. A Levite of Hezekiah's time (2 Chr 31:13).

SIEGFRIED S. JOHNSON

ELIENAI (PERSON) [Heb *ʾĕlîʿēnay* (אֶלְיְעֵנַי)]. A Benjaminite family listed in the longer Benjaminite genealogy offered by the Chronicler (1 Chr 8:20). Elienai is among those designated as "chief men" who "dwelt in Jerusalem." This linking of Benjaminites with Jerusalem is emphasized in the longer Benjaminite genealogy (1 Chr 8:28, 32), providing a clue as to why the Chronicler chose to elaborate on the line of Benjamin, which had already been treated in its proper place in the earlier list of tribal

genealogies (1 Chr 7:6–12). At least one ms renders the name *ʾĕlyôʿênay* (cf. Alexandrinus, Tg., and Vg). The name may mean "towards Yahweh are my eyes" (*TPNAH* 128).
SIEGFRIED S. JOHNSON

ELIEZER (PERSON) [Heb *ʾelîʿezer* (אֱלִיעֶזֶר)]. Var. ELEAZAR. Name of eleven biblical individuals. The name is composed of the elements *ʾēlî,* "my god," and *ʿēzer,* "aid" or "strength," which accordingly means "My god is aid/strength." The latter element appears in many other biblical and Near Eastern names (Loewenstamm *EncMiqr* 1: 346–7) and is of uncertain translation due to the merger of originally distinct roots *ʿzr,* "to aid," and *ǵzr,* "to be strong" (Ginsberg 1938: 210f.; Driver 1956: 142, n. 17; Dahood *Psalms 1* 210).

1. Servant of Abraham. In Genesis 15:2–3 Abram complains to Yahweh "I go childless; my house is *ben-mešeq,* that is, Damascus Eliezer (alternatively: 'the *ben-mešeq* of my house is Damascus Eliezer') … Since you have not granted me progeny, a member of my household is my heir." The words *ben-mešeq* have not been translated because we do not know what they mean, though at least since Aquila (1st century C.E.) *mešeq* has been regarded as a variant or defective spelling of *mašqe (h),* "cup bearer." Some consider the references to Damascus and/or Eliezer the result of corruption or glossation, and various restorations have been proposed (Skinner *Genesis* ICC, 277–79) but Cassuto (*EncMiqr* 2: 675–77) hypothesizes that the traditional understanding (already in the LXX) of Eliezer as the name of Abram's servant is correct and that he is also called Damascus because he went on to found that Aramean city. The passage is sometimes taken to mean that Abraham has legally adopted his slave Eliezer as his heir, but on the ambiguity of the data and the limited relevance of ancient legal parallels see Thompson (1974: 203–30).

2. Moses' second son (Exod 18:4; 1 Chr 23:15; 26:25). According to 1 Chr 23:17 Eliezer had one son, Rehabiah, while 1 Chr 26:25 lists further descendants Isaiah, Joram, Zichri, Shelomith, the last being the custodian of the military spoils of Samuel, Saul, Abner, Joab and David. It is possible that the clan of Eliezer is a branch of the Aaronid clan ELEAZAR that claimed Mosaic ancestry.

3. A family of Benjamin (1 Chr 7:8).

4. One of the priestly trumpeters who ushers the ark into Jerusalem (1 Chr 15:24).

5. Leader of the tribe of Reuben during the reign of Solomon (1 Chr 27:16).

6. Son of Dodavah (probably read *Dodiah) (2 Chr 20:37). He is a prophet from Maresha who curses Jehoshaphat, king of Judah, for his cooperation with Ahaziah of Israel.

7. Messenger of Ezra sent from the Ahava canal to Casiphia to find Levites to serve in the Temple (Ezra 8:16; 1 Esdr 8:43 has Eleazar). He might be the same as No. 8 below.

8. Priest of Ezra's day who marries a foreigner (Ezra 10:18; 1 Esdr 9:19 has Eleazar).

9. A Levite, contemporary of Ezra, who has a foreign wife (Ezra 10:23; 1 Esdr 9:23 has Jonah).

10. A lay Jew of the same period as Ezra and a member of the clan of Harim (cf. Ezra 2:32). He has a foreign wife (Ezra 10:31; 1 Esdr 9:32 has *Eliōdas* [Codex B] or *Eliōnas* [Codex A]).

11. An ancestor of Jesus (Luke 3:29).

ELIHOREPH (PERSON) [Heb *ʾĕlîḥōrep* (אֱלִיחֹרֶף)]. One of the sons of Shisha who served as a royal secretary at Solomon's court (1 Kgs 4:3). J. A. Montgomery (*Kings* ICC, 113) has suggested textual changes here and takes Elihoreph as *ʿal-haḥōrep* which he translates as "over the year"—the title for an official in charge of the court calendar. Such a change appears unsupported, and the traditional reading of Elihoreph as a proper name is preferred.

The duties of the secretary are not defined in the Hebrew Bible, but this appears to have been a significant position. The secretary could have been in charge of records and official correspondence. Some have even suggested a position such as secretary of state may have been implied. The reference to two secretaries could be a reference to different positions with one in charge of internal records and correspondence and the other in charge of external matters. The etymology of the name is debated (see *TPNAH*, 77). It may mean "Autumn God" or "God rewards."

PHILLIP E. MCMILLION

ELIHU (PERSON) [Heb *ʾĕlîhû* (אֱלִיהוּ), *ʾĕlîhû* (אֱלִיהוּא)]. The name can be interpreted as "El/God it was indeed" (i.e., who acted when the child was born). With its elements inverted, the name is already attested at Ugarit (*hwʾil;* PTU, 134). M. Noth (*IPN*, 143–44) may, however, be right in his assumption that the name became a confession to monotheism in the postexilic period, from which most of the references for Elihu derive (cf. Deut 32:39 "I, I am the one [Heb *hʾ*], and there are no [other] gods with me"). Five biblical persons bear the name Elihu.

1. The great-grandfather of Samuel (1 Sam 1:1); the same person is called Eliab "El is [my] father" in 1 Chr 6:12, and Eliel "El is [my] god" in 1 Chr 6:19.

2. The fourth opponent of Job (Job 32:2, 4; 5f; 34:1; 35:1; 36:1). Even scholars who regard the book of Job as a literary composition by a single author tend to see in Elihu's speeches (Job 32–37) an early orthodox addition (and commentary) to the original book of Job (Knauf 1988). Reasons for this view include the fact that Elihu is not introduced with the other friends in Job 2:11, he is not included in their redemption (Job 42:9), he does not say anything that is not said more succinctly by the three original friends or by God, and his speech contains more Aramaisms than the rest of the book of Job. Whereas the Elihu-author assigns his hero to the Arabian locale of the book of Job (see UZ) by means of Elihu's patronymic and country of origin (see BARACHEL), he may have chosen Elihu's name as an expression of his theological program: it is his god who speaks through Elihu's speeches.

3. A Manassite chief who joined David at Ziklag, 1 Chr 12:21 (without a parallel in the books of Samuel).

4. A Korahite door-guard, 1 Chr 26:7. H. Gese (1963: 232–34) dates the exclusion of the clan of Korah from the priesthood (as reflected in Num 16; 1 Chr 9:19, 31; 20:19; 26:1–9) to the 5th century B.C.

5. A brother of David and chief of Judah, 1 Chr 27:18 (LXX Eliab), his name obviously identical to Jesse's firstborn, Eliab (1 Sam 16:6; 17:13; 1 Chr 2:13). The list of Israel's tribal chiefs under David (1 Chr 27:16–22) is, however, without historical significance (the tribes of Reuben, Simeon, and Levi no longer existed in the 10th century B.C.), and probably was produced by a postexilic redactor who missed the category of "tribal chief" among David's officials (Galling *Chronik* ATD, 75).

ERNST AXEL KNAUF

ELIJAH (PERSON) [Heb *ʾēlîyâ* (אֵלִיָּה)]. Four persons in the Hebrew Bible bear this name. Three of these persons appear in postexilic lists (see #2–4 below). The most famous "Elijah" was the prophet who was active in N Israel around the middle of the 9th century B.C.E. (see #1 below).

1. The stories of Elijah the prophet are found in 1 Kings 17–19, 21 and 2 Kings 1–2. Their most frequent theme is the conflict between Elijah and the royal house of Israel over syncretistic worship. The prophet's ministry is set in Israel during the Omride dynasty (9th century B.C.E.), a period marked by relative peace and prosperity. Elijah is presented as the powerful champion of Yahweh against the royally-patronized worship of Baal.

Behind this drama we can discern a picture of prophetism as it was understood by the circle or circles who preserved the stories for us. The arrangement and details of the narratives reveal well-developed

theological ideas on the prophetic word, the Mosaic paradigm of Elijah's ministry, and the prophetic succession. The figure of Elijah is portrayed with characteristics drawn from throughout Israel's prophetic tradition.

The face of the historical Elijah himself, however, lies hidden behind a veil of miraculous legend. Even the prophet's name ("Yahweh is my God") has been seen by some as a pseudonym reflective of his zeal. He is regularly called "the Tishbite," but the word is of uncertain meaning. The LXX reads it as a reference to a place in N Transjordan, "Tishbe in Gilead" (1 Kgs 17:1). The MT, on the other hand, calls Elijah a "sojourner in Gilead" and nowhere uses "Tishbe" as the name of a place.

———

A. Elijah and Royal Paganism

The stories of Elijah occur mainly during the reign of King Ahab and his son Ahaziah. They presuppose a period of violent persecution of Yahwism, especially at the hands of King Ahab's Baalist queen, Jezebel of Tyre. Elijah is the hero of Yahwism, the prophet who speaks the word of the true God, the new Moses who withstands royal oppression and preserves the faith alive.

The struggle between Yahwism and Baalism supplies dramatic unity to the events recounted in 1 Kings 17–19. Elijah speaks a word of power to withhold rainfall, thus posing a direct challenge to Baal's claim of authority over storms and fertility. The resulting drought, however, is ambiguous. It could be understood as evidence of Yahweh's power working through Elijah; but Ahab chooses to see it rather as Baal's displeasure that Elijah's "blasphemy" has gone unpunished (18:17–18). The contest of the gods on Mount Carmel is intended to resolve the dilemma. Yahweh's resounding victory appears definitive, as the assembled Israelites help execute the prophets of Baal. But royal policy is not swayed by the vagaries of popular enthusiasm. Jezebel threatens to avenge the murder of her favorites, and Elijah escapes to the S desert, where he undertakes a pilgrimage to Horeb to complain of the failure of Yahwism in Israel.

Royal paganism plays a role in two other Elijah stories. The central focus of chap. 21 is the juridical murder of Naboth and the royal confiscation of his land. An editor, however, has inserted an awkward reference to Ahab's religious infidelity into the narrator's parenthetical remarks (21:26). Finally, 2 Kings 1 depicts Ahab's son and successor, Ahaziah, as a devotee of "Baal-Zebub of Ekron." As in 1 Kings 17, Elijah lays claim to the authority attributed to this manifestation of Baal by answering the king's question about his injury and denying his recovery. He also speaks a word of power that punishes those who disdain a prophet of Yahweh.

The Elijah narratives, however, may be exaggerating the royal house's infidelities. Elsewhere, Ahab is on good terms with prophets of Yahweh and consults them (1 Kgs 20:13–15; 22:1–28); and his children bear Yahwist names (Ahaziah, Jehoram, Athaliah). It seems likely, too, that the stories' demand for absolute exclusivity in the worship of Yahweh reflects, at this time, the views of an intransigent, not to say fanatical, minority. Religious syncretism was officially sanctioned as early as the reign of Solomon, if not of David; and it does not seem to have incurred effective resistance before the reforms of Hezekiah and Josiah (*HAIJ,* 271–74).

B. Portrait of a Prophet

1. Common Prophetic Traits. Elijah displays many of the traits characteristic of prophetic figures throughout Israel's history. He is a miracle worker whose word of power can produce weal or woe (1 Kgs 17:1, 16; 2 Kgs 1:10, 12; 2:8). He is a powerful intercessor for individuals or the whole people (1 Kgs

17:20–22; 18:42–45). He confronts the king with condemnation for religious infidelity and for social injustice (1 Kgs 17:1; 18:18; 21:20–22; 2 Kgs 1:16). The prophet's role in chap. 21 in particular seems modeled to some extent on that of later classical prophets.

The motif of "word" in chap. 17 reveals a well-developed theology of prophetism. The prophet is one who speaks an authoritative word of power (17:1), obeys Yahweh's word (vv 5, 10), commands human obedience and conveys divine promise (vv 13, 15, 16), speaks a word of miraculous intercession that Yahweh heeds (v 22), and is ultimately acknowledged as chosen bearer of Yahweh's own word (v 24).

2. A Prophet Like Moses. Allusions to the stories of the Exodus pervade chaps. 17–19 and establish a parallelism between the ministries of Elijah and Moses. The geographical framework of the three chapters recalls Moses' wanderings: each prophet begins his journey with a flight eastward to escape a king's wrath; each lodges with a family. Each returns to his country to face and challenge the king, and to awaken faith among the Israelites. Each leaves the country again on a journey to Sinai/Horeb, where he experiences a theophany. Each then departs for Israel via Transjordan.

Mosaic allusions in chap. 17 link these three stories to Exodus 16 and Numbers 11. Like Moses and the Israelites, Elijah is fed by Yahweh (17:6; cf. Exod 16:8, 12); Yahweh's miraculous food takes the form of cakes baked with oil (17:12–16; cf. Num 11:7–9); Elijah and Moses complain about Yahweh's mistreatment of a faithful servant (17:19–21; cf. Num 11:11–12).

In chap. 18 the Mosaic allusions point to Exodus 24 and 32. The people's conversion begins when they "draw near" to Elijah (18:30), who then builds an altar like Moses', symbolic of Israel's unity (18:31; cf. Exod 24:4). The people obey Elijah's command to drench the altar with water, a priceless sacrifice in time of drought (18:33–35; cf. Exod 24:6). The prophet "draws near" to Yahweh (18:36; cf. Exod 24:2) and begs forgiveness for the people's apostasy, invoking the memory of the patriarchs with the unusual sequence "Abraham, Isaac, and Israel" (18:36–37; cf. Exod 32:12–13). The people's conversion is completed by their confession of faith and their cooperation in executing the faithless (18:39–40; cf. Exod 32:25–28). After Moses had established the covenant with the people in Exodus 24, he and the elders of Israel went up the mountain of theophany and ate a covenant meal before Yahweh (Exod 24:9–11). Elijah's invitation to Ahab to "go up the mountain and eat and drink" (18:41) is an invitation to renounce Baalist sympathies and return to Yahweh as his people have just done.

Allusions in chap. 19 to Exod 33:12–23 continue the Elijah–Moses typology. But here the parallel between the prophets is antithetical. Moses requests Yahweh's continued presence with the people he leads; Yahweh promises him a theophany as sign of that presence. Elijah, on the other hand, comes to Horeb to resign as a prophet (von Nordheim 1978; Coote 1981: 117–19); Yahweh's theophany fails to dissuade him, and he is sent home with commissions that will lead to the punishment of unfaithful Israel and to his own replacement as prophet.

Allusions to the Exodus traditions are lacking in 1 Kings 21 and 2 Kings 1. In 2 Kings 2, however, Elijah's mysterious disappearance in Transjordan and the disciples' inability to recover his body parallel the death and divinely-hidden burial of Moses (Deut 34:1–6).

The cumulative impact of these extensive Mosaic allusions is to present Elijah as a Moses *redivivus*. Both appear at crucial moments in the religious and political history of the people. Through Moses, Yahweh rescued Israel from Egyptian oppression and formed it as his people; through Elijah, Yahweh preserves the faithful members of his people amid paganism and persecution. Both are significant figures in the history of prophetism as well. With Moses began the long line of Yahweh's intermediaries in Israel; in Elijah that line produces its quintessential hero.

3. Elijah's Assumption and the Prophetic Succession. The story of Elijah's assumption and of Elisha's succession to his master's prophetic office (2 Kgs 2:1–15) is oddly set in time and space. Its unusual position, between the formulaic notice of Ahaziah's death (2 Kgs 1:17–18) and that of Jehoram's succession (2 Kgs 3:1–3), removes it from the ordinary flow of history and places it, so to speak, outside time. Its locale, too, is symbolically removed from the ordinary world: the heroes' journey is a pilgrimage that miraculously crosses a boundary (the Jordan) to a place of power. Ordinary mortals, represented by the Jericho prophets, do not follow.

Elijah's mysterious assumption to heaven in a whirlwind occurs once the Jordan has been crossed. In 1 Kings 19, Elijah had made an earlier, solitary pilgrimage to Horeb, whence he returned with new tasks, including the commissioning of his successor. This time the pilgrimage is Elisha's. He accompanies his master on the outward road to the place of power where Elijah is translated. This is the moment of supernatural encounter from which Elisha returns transformed and empowered.

Elisha's succession is mirrored in the externals of clothing. His request for the oldest son's share of his master's prophetic spirit is confirmed by the sign Elijah had specified: Elisha sees Elijah disappear. Thereupon the disciple not only tears his clothing in the customary gesture of sorrow, but tears it *off* to assume the mantle of the master. On Jordan's banks, the waiting prophets witness Elisha's demonstration of his rightful succession when he wields the mantle to duplicate Elijah's final miracle.

The three stories of Elisha that follow have some parallels in the stories of 1 Kings 17, thus supporting an identification of Elisha as a new Elijah. The setting in both 1 Kgs 17:2–6 and 2 Kgs 2:16–18 is Transjordan, where Elijah has gone apart from the people. He is being sought in 2 Kings 2; in 1 Kings 17 we surmise he is hiding from the king he has angered. Neither search is successful. In 1 Kgs 17:7–16 and 2 Kgs 2:19–22 both prophets work miracles in response to others' need for provisions; in each case the need is a matter of life or death. 1 Kgs 17:17–24 and 2 Kgs 2:23–25 involve contrast: Elijah invokes Yahweh's name to raise the dead child of the good widow who acknowledged him; Elisha invokes Yahweh's name to bring about the death of a number of children who have mocked him.

C. Elijah in Later Tradition

1. Elijah in Judaism and Islam. Later OT, intertestamental, and rabbinic tradition sees in the mysterious disappearance of Elijah from this world a sign that he will have a unique role in the future victory of God. Mal 3:23–24 [—Eng 4:5–6 foresees him as the harbinger of the day of Yahweh. He will come to bring peace and to resolve all rabbinic legal disputes (‹*Ed.* 8:7). He is often identified as the precursor of the Messiah, a tradition that looms large in the NT as well.

Perhaps because of Christian use of Elijah's messianic associations, this aspect wanes in later Jewish tradition, though the prophet remains a popular figure of legend. Many of his traits reflect the influence of the stories in 1 Kings 17. He combats social ills by care for the poor and by punishment of the unjust. He is identified with the "Wandering Jew" of medieval folklore, and a place is always set for him at the Seder table. He is protector of the newborn, and the "Chair of Elijah" is a fixture at circumcisions.

Elijah has left an impression on Islamic tradition as well. The Qur›an lists Elijah among the "righteous ones" (*sura* 8:85) and recalls his mission as a staunch opponent of the cult of Baal (*sura* 37:123–130).

2. Elijah in Christian Tradition. The NT evokes the figure of Elijah in a variety of different contexts. Some passages simply recall Elijah's deeds in the OT (Luke 9:54; Rom 11:2–4; Jas 5:17–18); others use Elijah's ministry as a paradigm for Jesus', either explicitly (Luke 4:25–26) or implicitly (Luke 7:11–16; cf. 1 Kgs 17:10, 17–24). The later tradition of Elijah as helper of the oppressed may lie behind the bystanders' misunderstanding of Jesus' cry from the cross (Mark 15:34–36; Matt 27:46–49).

The primary trait of Elijah in the NT, however, is his role as precursor of the Messiah. In the Synoptic Gospels, popular opinion identifies Jesus as this figure (Mark 6:14–15; 8:27–28; Matt 16:13–14; Luke 9:7–8, 18–19), while Jesus himself so identifies John the Baptist (Mark 9:11–13; Matt 11:13–14; 17:10–13; cf. Luke 1:17). In the Fourth Gospel, on the other hand, the Baptist rejects such a designation (John 1:19–28).

A pre-Christian apocalyptic tradition of two messianic precursors may also explain Elijah's presence at the Transfiguration (Mark 9:2–8; Matt 17:1–8; Luke 9:28–36). Outside the NT the two forerunners are identified as Elijah and Enoch, presumably because both had been miraculously translated to heaven. A NT tradition identifying them as Elijah and Moses seems to lie behind the anonymous "witnesses" of Rev 11:3–6; here as in the Transfiguration accounts their appearance anticipates eschatological events (*TDNT* 2:938–39).

JEROME T. WALSH

2. A Benjaminite listed among the clan chiefs in the longer Benjaminite genealogy supplied by the Chronicler (1 Chr 8:27). Elijah is among those designated as "chief men" who "dwelt in Jerusalem." The linking of Benjaminites with Jerusalem receives repeated emphasis in the longer genealogy (1 Chr 8:28, 32), providing a clue as to why the Chronicler chose to elaborate on the line of Benjamin, which had been treated in its proper place in the earlier list of tribal genealogies (1 Chr 7:6–12).

3. A name appearing twice in the list of those returning from the exile who pledged, in response to Ezra's sermon (Ezra 10:1–5), to divorce the foreign women whom they had married while in captivity (Ezra 10:21, 26). The first of these Elijahs was a priest, the son of Harim (Ezra 10:21—LXX *elia*). The second Elijah, son of Elam, was among the extended list of lay people who had married foreign women (Ezra 10:26—LXX *ēlia*). Myers (*Ezra, Nehemiah* AB, 87) notes that the roster of 111 names in the unemended list of offenders is small considering the total census and the national furor caused by the intermarriage problem. He conjectures that the list is only a partial surviving fragment of the original list, not indicative of the full scope of the problem.

4. Listed among the ancestors of Judith (Jdt 8:1—LXX *ēliou*). Since the LXX uses *ēliou* to translate both Elijah (2 Kgs 1:3 [Heb *ʾēlîyāh*]) and Elihu (1 Sam 1:1 [Heb *ʾĕlîhûʾ*]), this Elijah is sometimes rendered Elihu.
SIEGFRIED S. JOHNSON

ELIJAH, APOCALYPSE OF. A title that appears in the listing of "apocryphal" writings appended to the Christian *Catalogue of the 60 Canonical Books.* A second, shorter list of apocryphal works is found in the *Stichometry of Nicephorus.* In that list, a book "of the prophet Elijah" is assigned a length of 316 lines. Scholars have generally assumed that both lists refer to the same *Apocalypse of Elijah.* Unfortunately, the lists provide no information about the content of the work beyond the stichometry and the designation as an apocalypse. Evidence from the early Christian writers and two surviving apocalypses, however, indicates that more than one apocalypse circulated in the name of Elijah. It is still not possible to determine whether they all can be traced to a common ancestor.

A. Surviving Traditions Concerning the Apocalyptic Visions and Writing of Elijah

It is hardly surprising that apocalyptic writings have been attributed to Elijah, an OT prophet who had conversation with an angel (1 Kgs 19:5–7), was granted a theophany at Horeb (1 Kgs 19:11–18), ascended into heaven in a chariot of fire (2 Kgs 2:9–12), and was expected to return in order to instruct men before "the great and terrible day of the Lord comes" (Mal 4:5–6). He provided an ideal pseudonym for anonymous seers who flourished from the 3d century B.C.E. until the Middle Ages. As a result, a number of apocryphal writings were attributed to him. The earliest contained traditional episodes or prophetic sayings that can be understood as the result of midrashic expansion of the biblical account.

Malachi's promise that Elijah would be sent to his people at the end of the present age meant that he would appear in the time of the "contemptible one" (Dan 11:21) who would mislead many, set up an abomination in the temple (Dan 9:27), "wear out the saints of the Most High" (Dan 7:25), and "magnify himself above every god" (Dan 11:36). Although the author of Daniel was alluding to the activities of Antiochus Epiphanes, later writers accepted the imagery as a description of the Antichrist, whose grotesque features they described in detail. An episode describing the physical appearance of the Antichrist and his torment of the saints appears in both of the extant Elijah apocalypses, the Coptic Apocalypse of Elijah, *Apocalypse of Elijah (C)* (verses cited below from 1985 translation by Wintermute), and the Hebrew Apocalypse of Elijah, *Apocalypse of Elijah (H)* (page lines cited from Jellinek's 1938 Hebrew text).

The description of the physical appearance of the Antichrist was a widespread literary topos found in many Christian and Jewish texts. J. M. Rosenstiehl (1967) has made available bibliography and French translations for most of the ancient witnesses. The texts vary considerably in detail. Among them is a short Greek text published by Nau (1917: 458), who discovered it at the end of a 13th century Biblical manuscript. It claims to be what "Elijah the prophet said concerning the Antichrist." Although it differs from the details in the *Apocalypse of Elijah (C)* and *Apocalypse of Elijah (H)* it confirms the opinion associating the Antichrist tradition with Elijah.

In Ben Sirach's encomium of Elijah (48:5–7), he celebrated the prophet as one "who raised a corpse from death and from Hades … who heard rebuke at Sinai and judgments of vengeance at Horeb." His association with Hades and vengeance provides one basis for a tradition regarding Elijah's familiarity with the postmortem torment of sinners in Gehenna. Stone and Strugnell (1979: 14–24) have collected both Jewish and Christian texts that reflect such a tradition. An excerpt from a lost book (apocalypse?) of Elijah that describes the torments in detail is quoted in the *Pseudo-Titus Epistle*, a 5th century Christian text. In the *Apocalypse of Elijah (H)* that episode is described in a single sentence, "Again the Spirit lifted me up and carried me to the west of the world, and I saw there souls punished with great pain, each one according to his deeds (Jellinek 1938: 65:7–9). No report of that episode is found in the *Apocalypse of Elijah (C).*

There are additional early witnesses to apocalyptic traditions associated with Elijah that are not found in either of the extant apocalypses. Epiphanius (*Adv. Haeres.* 42) claimed that the quotation in Eph 5:14, "Awake, O Sleeper, and arise from the dead, and Christ shall give you light," is "obviously from the Old Testament" with the specific passage being found "in Elijah." If that unusual citation is correct, it could refer to either a book (apocalypse?) of Elijah or to a gloss added to the biblical account of Elijah in 1 or 2 Kings. It is, however, possible that the citation is an error for Isaiah, who was credited with the quotation by Hippolytus (Dan. 4.56.4). In any case, it is obvious why such a quote would enter the tradition assigned to an eschatological prophet with a reputation for raising the dead.

It is also quite natural that the prophet who ascended into another realm should be credited with knowledge of "what no eye has seen, nor ear heard, nor the heart of man conceived, what God has prepared for those who love him." Origen traced that quotation in 1 Cor 2:9 to the *"Apocryphon of Elijah" (in Secretis Elia).* Jerome, who was concerned to protect his readers from being snared by the devil through the use of apocryphal works admits that the quote is found in "The Apocalypse of Elijah" (and also the *Ascension of Isaiah*), but insists that Paul did not quote it from there (Epistle 101 to Pammachius). According to Jerome, the true source was Isa 64:4, which Paul paraphrased freely (*Commentary on Isaiah,* vol. 17). The combined testimony of those two well-informed Church Fathers clearly proves the existence of an apocryphal apocalypse of Elijah which contained that famous quotation. Stone and Strugnell (1979: 42–73) have assembled a sampling of over two dozen quotes or partial quotes of the saying. It is found in Christian, Jewish, and Islamic texts. In the *Gospel of Thomas*, it appears as a dominical saying. As one might expect, it was also an obvious favorite among gnostic writers.

Finally, Epiphanius informs us of a lost gnostic story about Elijah. On the authority of an unknown source (apocalypse?), the gnostics reported that Elijah was prevented from going up to heaven by a female demon (Lilith) who seized him. When he protested, she claimed to have begotten children from him by stealing his seed during a nocturnal emission (*Adv. Haeres.* 26.13.228).

The relationship between the apocalyptic works credited to Elijah by the Church Fathers and the two surviving Apocalypses is still an open question. It is complicated by the fact that the relationship between the *Apocalypse of Elijah (C)* and the *Apocalypse of Elijah (H)* is not clear.

B. A Comparison of the *Apocalypse of Elijah (C)* and the *Apocalypse of Elijah (H)*

Both the *Apocalypse of Elijah (C)* and the *Apocalypse of Elijah (H)* show evidence of a complex reediting of earlier material. The *Apocalypse of Elijah (C)* is the translation of a Greek original that was written by a Christian in the second half of the 3d century (Rosenstiehl 1972: 36–37; *GJV* 3: 367–68; Bousset 1900: 103–12). It is assumed, however, that the writer incorporated an earlier Jewish writing that was at least a century older. Rosenstiehl (1972: 68–73) dated it in the 1st century B.C.E. Wintermute (*OTP*

1: 730) did not propose a specific date, but suggested that it was composed before 177 C.E. According to Buttenwieser (*JEnc* 1: 681–82), the writer of the *Apocalypse of Elijah (H)* lived in either the mid-6th or early-7th century, but much of the content goes back to an original apocalypse written about 261 C.E.

The two apocalypses agree in a number of details, but they reflect the contrasting views of the communities for which they were written. The *Apocalypse of Elijah (C)* was reworked within a Christian community and, in its present form, is a Christian apocalypse that includes a description of the advent of Christ (3:2–4), his compassion for those sealed in his name (5:2–4), and a report of his millennial rule (5:36–39). The *Apocalypse of Elijah (H)* was reworked within the Jewish community and contains eschatological elements not present in the *Apocalypse of Elijah (C)*, e.g. a rabbinic debate regarding the name of the last king who is about to come, a battle against Gog and Magog in which the Messiah plays a central role, and a picture of the resurrection in which dead bodies are dipped in a river so that their dust might be kneaded together again.

The major difference between the two apocalypses is the role that each writer assigned to Elijah. In the *Apocalypse of Elijah (H)* Elijah is described as a seer who is the recipient of the vision of the future events contained in the apocalypse. In the *Apocalypse of Elijah (C)* Elijah is not identified as the source of the description of future events. Rather the narrator of those events is an unnamed prophet, and Elijah is mentioned in the third person only as a participant in the events. Elijah is mentioned twice in the apocalypse; both times he acts together with Enoch in an eschatological context. In their first appearance they are expected to descend in Jerusalem to fight with the Antichrist, who will kill them. On the fourth day they will be resurrected and ascend into heaven in view of the whole city (4:7–19). In their second appearance they will kill the Antichrist (5:32). Other differences may be noted in the discussion of the individual texts which follows.

C. The Coptic *Apocalypse of Elijah*

The text of the *Apocalypse of Elijah (C)* was first clearly defined by Steindorff (1899). The studies by Rosenstiehl (1972) and Wintermute (*OTP* 1: 721–53) contain a discussion of introductory matters (e.g. language, manuscripts, ancient witnesses, provenance, and date) and commentary on the apocalypse. Pietersma, Comstock, and Attridge (1981) have made available an important new Sahidic manuscript of the text from the library of Chester Beatty.

The *Apocalypse of Elijah (C)* begins with a hortatory section encouraging prayer, fasting, and single-mindedness (chap. 1). That is followed by a cryptic description of the sequence of worldly powers ruling Egypt before the advent of the Antichrist (chap. 2). The chapter on the Antichrist (chap. 3) describes his miraculous acts which parallel those of the Christ "except for raising the dead," and ends with a portrayal of his physical appearance. That is followed by a chapter on martyrdoms (chap. 4), and a concluding description of a premillennial destruction of heaven and earth and the final judgment (chap. 5).

The text is a composite work. Although it is clearly identified as the *Apocalypse of Elijah* by a title at the end of a 3d/4th century Achmimic manuscript, it does not begin in the form of an apocalyptic revelation to a seer. The opening statement reads, "The word of the Lord came to me, saying 'Son of man, say to this people …' " Neither Elijah nor any other prophet is further identified with the "Son of man" who is addressed. The prophetic word which is given is in the form of a homily recalling the speeches of Deuteronomy with its repeated exhortation to "remember … hear … remember."

The second chapter begins with a subtitle containing the writer's description of the remainder of the text. It reads, "Furthermore, concerning the king of Assyria and the dissolution of the heaven and the earth and the things beneath the earth." The subject matter of the text which follows is typical of apocalyptic literature, but it lacks the literary framework of an apocalypse that would identify it as the content of a revelation to a seer.

A further example of the composite nature of the *Apocalypse of Elijah (C)* is provided by the changing scene of action. Chap. 2 has a special interest in Egypt. It will experience a sequence of rulers including "the king of injustice" and "the king of peace," whose "own son will rise up against him and kill him." "The cities of Egypt will groan … The markets of Egypt … will become dusty. Those who are in Egypt will weep." Four Persian kings will fight with three Assyrian kings, and "blood will flow from Kos to

Memphis." Eventually, the "Persian kings will plot ambush in Memphis" and control the land. In contrast to the Egyptian focus of chap. 2, the remaining chapters make no further mention of Egypt. The scene shifts abruptly to Jerusalem, where the Antichrist presides over a series of martyrdoms.

The abrupt shift in subject matter, setting and actors, which is characteristic of many ancient pseudepigrapha, is the result of the reworking of earlier traditions by one or more authors in order to make them relevant for a new community. In the case of the *Apocalypse of Elijah (C)* the abrupt changes suggest three stages of development. The earliest stratum must have dealt with a version of the Antichrist legend in which the "son of lawlessness" will appear in Jerusalem, cause the martyrdom of saints, and finally be destroyed on the day of judgment when heaven and earth have been devastated. The earliest version may also have included a description of world rulers who would precede the Antichrist. When, however, the Antichrist legend was reworked by an Egyptian author, the political changes which signify the imminent approach of the final age were described from the parochial perspective of his own community. By joining the political preface to the Antichrist legend, the author created the account of "the kings of Assyria and the dissolution of the heaven and the earth." It would have been appropriate at that stage to compose an introduction providing an apocalyptic framework. If the author ever planned such a preface, it is now lost because the work begins with a homiletical exhortation, which joins the apocalyptic section in an abrupt manner.

In addition to the obvious changes which occur between the three major sections of the *Apocalypse of Elijah (C)*, there are other literary seams and doublets in the text which are due to the Christian reworking and expansion of an original Jewish composition. Both Rosenstiehl (1972: 28–42) and Wintermute (*OTP* 1: 721–27) have made attempts to interpret the doublets and to distinguish between earlier and later material within the text, but much work remains to be done.

D. The Hebrew *Apocalypse of Elijah*

Buttenwieser (1897; *JEnc* 1: 681–82) has written the primary study of the *Apocalypse of Elijah (H).* The text, which first appeared in Salonica in 1743, was reprinted by Jellinek in 1853. A new edition of Jellinek (1938) is now available. A German translation of the text was also made by Wunsche (1907).

The *Apocalypse of Elijah (H)* is also a composite work. It contains six easily identified literary units: (1) An introduction which provides an apocalyptic framework in which Michael appears to reveal to Elijah a secret about the end of the age and its last king; (2) a description of Elijah's journey south, east, and west, where he saw sinners punished; (3) a rabbinic debate about the name of the last king; (4) a description of the advent, physical features, and evil acts of the Antichrist, Gigith; (5) a calendar of days of the year when significant eschatological events will occur, including the return of three captivities, three wars, and three days on which the Messiah will appear; and (6) five visions of Elijah, which include descriptions of the resurrection, future rewards and punishments, three patriarchs seated in a beautiful garden, the descent of a new Jerusalem, and the houses where the righteous will dwell.

The oldest portion of the text must have included an earlier version of the introduction, the description of Elijah's journey, and the section dealing with the Antichrist. Buttenwieser (*JEnc* 1: 682) wrote that the apocalypse in its original form was probably "more voluminous." That is especially true with regard to the description of Elijah's journey. The episode of the Antichrist is the only section common to the two surviving apocalypses.

Although the Antichrist episodes differ in detail, they are close enough to allow one to postulate a common ancestor. Since both of the surviving apocalypses are identified with Elijah, the common ancestor would have been an episode within a Jewish *Apocalypse of Elijah* composed before 100 C.E. That early text may also have contained the episode in which Elijah witnessed the punishment of sinners since it was an apocalyptic motif widely associated with that prophet in both Jewish and Christian circles, and it has survived in one of the witnesses. Both apocalypses locate the Antichrist episode within Israel, from Mount Carmel to Jerusalem. It is possible to assume that the writer also lived in Israel. The language of the postulated ancestor is harder to determine. It could have been Greek, Hebrew or Aramaic. Finally, it is possible that the ancestor contained the quotations known to Origen, Jerome, and Epiphanius.

ORVAL S. WINTERMUTE

ELIKA (PERSON) [Heb *ʾĕlîqā* (אֶלִיקָא)]. One of David's elite warriors, a member of "The Thirty" (2 Sam 23:25). He is called "the Harodite," an adjective probably describing the location of his origin. His name does not appear in the parallel list of "The Thirty" in 1 Chronicles 11. See DAVID'S CHAMPIONS. This is due to a scribal error in the transmission of the text of Chronicles caused by the repetition of "Harodite" in 2 Sam 23:25 (homoioteleuton).

There is dispute about the place of Elika's origin, Harod. The "Spring of Harod" is mentioned in Jud 7:1 (cf. 1 Sam 29:1). If this is the same Harod as Elika's home, Van Beek (*IDB* 2: 526) is probably right in identifying it with modern *Ain Jalud,* a spring located on the NE spur of Mt. Gilboa. However, Elliger argues that *Khirbet el-Harēdān,* just SE of Jerusalem, is the location. Possible supporting evidence is the early occurrence of Elika's name in the list of "The Thirty." It is placed 4th on the list in 2 Samuel, a position usually reserved for men who came from locations near Bethlehem, David's hometown.

The meaning of the name, Elika, is obscure. It is one of six names in the list of David's warriors in which the divine appellative, El, is used. The meaning of the name as it is vocalized in the MT may be "God has vomited." Zadok (1977) suggests this should be changed to read *ʾēl-yāqâ:* "God has guarded." LXX's *evaka* is a variant of *elika* (cf. Fowler, *TPNAH,* 142).

ELIM (PLACE) [Heb *ʾêlim* (אֵילִם)]. The second named encampment reached by the Israelites four days after crossing the Red Sea, as listed in Exod 15:27–16:1 and Num 33:9–10, possibly located in the wilderness of Shur (Exod 15:22–27) or Etham (Num 33:8–9). The site was marked by twelve springs and seventy palm trees; presumably Israel would have remained at this oasis for most of the period following the crossing of the Red Sea, and before entering the wilderness of Sin. It was within a day's march of a camping site on the coast of the Red Sea.

Researchers who accept a S route for the Exodus have usually located Elim in the wadi Gharandel, about 90 km S of Suez (*GP* 2: 210; Palmer 1872: 46, 226; Petrie 1906: 205; Robinson 1856: 68–69, 72–73; *GTTOT,* 252; *WHAB,* 41), where much water and vegetation was found (M.R. 953855). About half a day's journey to the N is ʿAin Hawarah, which last century was a brackish spring that may be identified with Marah, "Bitterness," the encampment reached just prior to Elim. For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai see DOPHKAH.

JEFFREY R. ZORN

ELIMELECH (PERSON) [*ʾĕlîmelek* (אֱלִימֶלֶךְ)]. A resident of Bethlehem, father-in-law of Ruth, and a relative of Boaz (Ruth 1:1–4; 2:1). Because of financial hardship and famine, Elimelech emigrated to Moab with his wife NAOMI and their two sons MAHLON and CHILION. Soon thereafter Elimelech died, but the family remained in Moab, where the sons subsequently married the Moabites Ruth and Orpah. See ORPAH. Tragically, the sons also died, and Naomi and Ruth returned to Bethlehem where they discovered a relative of Elimelech named Boaz who could act as a *gōʾēl* (i.e., kinsman-redeemer) for the family's property and progeny (1:2–3; 4:3, 9). However, since Naomi does not appear to know Boaz until she returned to Bethlehem (1:6–14), the familial relationship between Boaz and Elimelech is unclear. See BOAZ.

Legal questions concerning Elimelech's inheritance abound since the case of Ruth's marriage to Boaz does not conform to Mosaic legislation (Deut 25:5–10). The differences can be attributed to the unusual circumstances created by the death of all the Elimelech men. See RUTH.

The historicity of Elimelech as well as other characters in the story has been challenged. The name "Elimelech," meaning "my God is king," has encouraged the interpretation of Elimelech as a symbolic character. If Elimelech is figurative, the purpose of the name may be to contrast the period of the Judges, which is the story's setting, when Yahweh alone was king, with the era of the monarchy. Also, "Elimelech" can be read as "El is king" (*TPNAH* 51) or "My El is Milku." If the foreign deities El and Milku were intended, then the story is using the character's name to reflect the apostasy of the period. Since the name, however, is well-attested in the ANE (inscr. Hazor B2) and fits the period of the story, there is no necessity for taking Elimelech as unhistorical.

The LXX translators struggled with the name since they rendered it "Abimelech" (*abeimelech;* cf. variant *alimelech*). The LXX reading has been explained as the substitution of a more common name occurring in the Hebrew Bible (cf. Judges 8).

KENNETH A. MATHEWS

ELIOENAI (PERSON) [Heb *ʾelyôʿênay* (אֶלְיוֹעֵינַי)]. The name of six individuals in the Hebrew Bible. "Elioenai" appears to be a shortened form of Elyehoenai, which means "my eyes (are turned) toward YHWH." However, according to Noth, the name is not a genuinely Israelite name but is patterned after Akkadian forms of a "trust name" (*IPN,* 163, 216).

1. One of the descendants of Jehoiachin (called Jeconiah in vv 16, 17), and thus, a postexilic descendant of David (1 Chr 3:23–24 [LXX *elithenan*]). 1 Chronicles 3 is a list of "sons of David born to him at Hebron … and Jerusalem," and Elioenai appears in the next to last generation listed. The exact location of Elioenai in this genealogy is uncertain, owing to the ambiguity of the Hebrew text of v 21 and the variant readings in the LXX and Vg (see discussion in Williamson *Chronicles* NCBC, 58). Myers (*1 Chronicles* AB, 20–21) renders Elioenai as the fifth great-grandson of Jehoiachin, and calculates that he would have lived in the mid-5th century B.C.E. (the list having been compiled late in that century). Coggins argues that this list was probably maintained because of pride in Davidic ancestry rather than hope for a restoration of dynastic rule (*Chron* CBC, 26). This could indicate that Elioenai was a person of significant social standing in the community since he was the only member of his generation whose own sons were listed.

2. A chief of the tribe of Simeon (1 Chr 4:36 [LXX *eliōēnai*]). 1 Chr 4:34–43 describes the movements of several tribal chiefs and their clans and is part of one of four Simeonite genealogies (Gen 46:10; Exod 6:15; Num 26:12–13; 1 Chr 4:24–43). The movements which Elioenai led took some of the clans into territory occupied by Philistines and Canaanites who were traditionally considered Hamites (v 40) (Williamson *Chronicles* NCBC, 62) and others to Seir. The text implies that these migrations were undertaken to search for more grazing lands because the regions originally occupied had become overpopulated. It has been suggested that these "princes in their clans" (v 38) were military officers within the tribal structure and that their appointments may not have been made along hereditary lines

(Coggins *Chronicles* CBC, 32). Elioenai might have been a specially selected military commander who led a group of Simeonites in search of new grazing land.

3. A son of Becher and grandson of Benjamin (1 Chr 7:8 [LXX *elithenan*]). Because this genealogy (vv 6–12) does not correspond with the lists at Gen 46:21, Num 26:38–41, or the other Benjaminite genealogy in this block of material (8:1–28), some have speculated that this is actually a family list for Zebulun (see Williamson *Chronicles* NCBC, 77–78). Others have suggested that this list reflects both genealogical and census lists and is constructed from both old and new material, thus producing the discrepancies (see Myers *1 Chronicles* AB, 53). Alternatively, the Chronicler may have relied totally on later sources here, while the material in chap. 8 is based on the older lists in the Pentateuch. The name is more common in the postexilic era and may be a late name, indicating a postexilic date for this material.

4. A member of the priestly family of Pashhur and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:22 = 1 Esdr 9:22 [LXX *eliōnais*]). Elioenai was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:38; Neh 7:41). For further discussion, see BEDEIAH.

5. A descendant of Zattu and one of the returned exiles (Ezra 10:27 = 1 Esdr 9:28 [*eliadas*]). The lay Elioenai was also a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:10; Neh 7:13). For further discussion, see BEDEIAH.

6. A postexilic priest who assisted in the ceremony rededicating the newly reconstructed walls of Jerusalem (Neh 12:41 [*eliōēnai*]). Neh 12:41–42 lists the priests who accompanied Nehemiah in a circumambulation of the walls of Jerusalem in a dedicatory service. Elioenai is listed as a trumpeter who "went to the left" (12:38) around the wall while another group of celebrants "went to the right" (12:31). The inclusion of rituals of purification (v 30) underscores the importance of this rite. It is possible that this is the same Elioenai mentioned in Ezra 10:22 (see #4. above). However, Elioenai was a popular name in the postexilic community (1 Chr 3:23; Ezra 10:22, 27), and the missions of Ezra and Nehemiah may have been separated by several decades. Therefore, such an identification seems unlikely.

JEFFREY A. FAGER

ELIONAS (PERSON) [Gk *Eliōnas* (Ἐλιωνας)]. A son of Annan who divorced his foreign wife during Ezra's reform (1 Esdr 9:32). His name may be the Gk rendering of ELIEZER son of Harim in Ezra 10:31. Furthermore, Codex Vaticanus contains the textual variant Gk *eliōdas.* Differences such as this among the lists of personal names in 1 Esdras, Ezra, and Nehemiah, raise questions about the sources of and literary relationships among the texts.

MICHAEL DAVID MCGEHEE

ELIPHAL (PERSON) [Heb *ʾĕlîpal* (אֱלִיפָל)]. Son of Ahasbai and noted for belonging to the distinguished group of David's warriors (see DAVID'S CHAMPIONS) known as "The Thirty" (1 Chr 11:35)—for the meaning of the name, "my God/El has judged," see *TPNAH,* 107. In the two extant lists of David's heroes, the name "Eliphal" occurs in the list in Chronicles and is probably a corruption of "Eliphelet" in the parallel reference in 2 Sam 23:34. The text in 2 Samuel reads, "Eliphelet, the son of Ahasbai, the son of the Maachathite" whereas 1 Chronicles states, "Eliphal, the son of Ur, Hepher the Mecherathite." Since there are strong similarities in the readings and the grandfather's name is given in 2 Samuel (the only time in the list), there has been some textual corruption. Most scholars believe that 2 Samuel, as the older text, preserves the original name, Eliphelet. "Ahasbai the Maachathite" is a reasonable conjecture for his father's name. Maachathite probably designates the clan or tribe to which Eliphelet's father belonged. One such Judean clan was associated with the town of Eshtomoa, nine miles S of Hebron. The town had received its name from the clan's ancestor (1 Chr 4:19) (Elliger 1966: 99–100).

STEPHEN G. DEMPSTER

ELIPHAZ (PERSON) [Heb ʾ*elîpāz* (אֱלִיפַז)]. Two persons in the OT bear this name. The interpretation of this name (cf. Safaitic ʾ*lypz*) is uncertain. The construals "God/El is agile/nimble" (from **pzz;* Meyer 1906: 347) and "My God is gold" (Heb *paz,* "gold") are improbable. A derivation from Hurrian (Ginsberg and Maisler 1934) cannot be proven. The most plausible interpretation is either "God/El is the victor" (from **pūz;* Moritz 1926) or "God/El is pure/shining" (Wieppert 1971: 246–47, 261, 451–56).

1. The firstborn son of Esau and Adah, daughter of Elon the Hittite (Gen 36:4, 10, 15; 1 Chr 1:35). Eliphaz was the father of Teman, Omar, Zepho, Gatam, Kenaz, Korah, and Amalek (Gen 36:15–16), the latter being the son of Eliphaz' concubine Timna (36:12). The sons of Eliphaz are considered "tribal chiefs" (Heb ʾ*allûpîm*) of Edom. Within the Edomite tribal system, they probably designate clans of the tribe of Eliphaz.

ULRICH HÜBNER

2. The first friend of Job, identified as "the Temanite" (Job 2:11; 4:1; 15:1; 22:1; 42:7, 9). His name may mean "God is fine gold" (*BDB,* 45), but the meaning is problematic. The designation "Temanite" ties Eliphaz to a place known for its wisdom (cf. Jer 49:7). However, it has long been recognized that whatever historical background may be discerned in the book of Job is far less significant than the dramatic dialogue that ensues between the miserable sufferer and his three friends.

Along with Bildad and Zophar, Eliphaz has come ostensibly "to comfort and condole" the suffering Job (2:11). In fact, after the Joban outburst of chap. 3, wherein he damns the day of his birth (3:3–10) and accuses God of giving him an unlivable life (3:23–26), Eliphaz is in no mood to comfort, but rather intends to demonstrate to Job that he, Job, finds himself on an ashheap not because of God's randomness but because of Job's wickedness. In his first address to Job (chaps. 4–5), Eliphaz, representative of a traditional theology, reminds Job that his "fear of God" should be his "confidence" and the "integrity of his ways" his hope (4:6). As far as Eliphaz is concerned, "no innocent one ever perished" and no "upright one" was ever "cut off" (4:7). Though Eliphaz may intend these phrases as some kind of comfort (cf. Habel 1985: 118), in the ears of Job they sound cruel, clear indications that Eliphaz classes Job with the wicked. Job will say throughout the book that he is "innocent" (9:21) and a man of "integrity" (27:5).

And the reader hears something more. In the prologue of the book, both the narrator (1:1) and God (1:8; 2:3) have announced that Job is, in fact, "blameless and upright." Eliphaz' traditional theology has forced him to claim that "the upright" are never cut off. The case that gives the lie to that claim (i.e., Job himself) sits before his very eyes. Immediately, the reader is made aware that the book of Job has launched an attack on a theology that would offer simple solutions to a person in the condition of Job, namely, an "upright" person who has lost everything.

In Eliphaz' succeeding two speeches (chaps. 15 and 22), he steps up the attack on Job, classing him squarely with the wicked by using Job's own words to describe wicked people (cf. 15:20–35 and Holbert 1975: 192–200), and finally accusing him of being the foulest and most unjust of sinners, one who rejects "widows" and "breaks the arms of orphans" (22:9). That these are patent lies is made certain by Job's long oath of clearance in chap. 31.

In the epilogue of the book, Eliphaz is singled out by Yahweh as one who "has not spoken right about me" in distinction to Job (42:7, 9). As a result, Eliphaz and his two friends are forced by God to make sacrifice, and are only readmitted to the community through the prayers of Job, the one he had accused of evil. Thus is Eliphaz' theology called into the most serious question.

JOHN C. HOLBERT

ELIPHELEHU (PERSON) [Heb *ʾĕlîpĕlēhû* (אֱלִיפְלֵהוּ)]. One of the Levites of second rank appointed to provide music during David's second effort to move the ark to Jerusalem; his instrument was the lyre (1 Chr 15:18, 21). The list of names in 15:17–18 is expanded by ten in 15:19–24; Eliphelehu is not mentioned in the third list (16:5–6). The entirety of 1 Chr 15:1–24 is unique to Chronicles, not contained in the parallel account in 2 Samuel 6. Inadequate attention to preparation and detail on the part of the Levites had resulted in the initial abortive effort to move the ark; in this context the Chronicler is concerned to portray adequate preparations. The Levites are in transition from their former duties in moving the ark to their new roles in part as musicians. Numerous scholars regard sections of the lists in 1 Chronicles 15–16, particularly 15:16–24, as secondary expansions of the Chronicler's work; 15:16–24 is commonly viewed as interrupting the narrative flow between 15:15 and 15:25.
RAYMOND B. DILLARD

ELIPHELET (PERSON) [Heb *ʾĕlîpeleṭ* (אֱלִיפֶלֶט)]. Var. ELPELET. 1. A son of David (1 Chr 3:6; 14:5), one of 13 listed as having been born to David's wives in Jerusalem, in addition to his six sons born at Hebron. His mother's name is unknown: four of the 13 were Bathsheba's sons; the remainder were born to unnamed wives. Besides these 13, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9.

This name occurs between Elishama/Elishua and Nogah in both lists in 1 Chronicles, but it is missing at this juncture in the list of David's sons in 2 Sam 5:15. All three lists end with this name (1 Chr 3:8; 14:7; 2 Sam 5:16), leading to speculation about a scribal dittography in the 1 Chronicles passages, where the name occurs twice in each list. However, two OG traditions contain this name here in 2 Samuel (along with Nogah, also missing only in the 2 Samuel list); Josephus appears to have included this name here (*Ant* 7.3.3); and the spacing in the 4QSam[a] ms suggests that both names were there, as well (McCarter *2 Samuel* AB, 148). If so, then David had two sons named Eliphelet, or the second occurrence of the name in the 1 Chronicles lists is a dittography. The form Elpelet, Heb *ʾelpeleṭ*, which occurs only at 1 Chr 14:5, is merely a variant spelling. Since the number given in 1 Chr 3:8—nine—requires the presence of both occurrences of Eliphelet, as well as Nogah, it is internally most consistent to postulate two sons of David with the same name. One may have died at an early age and the other been named after him (Keil and Delitzsch 1875: 322). See also DAVID, SONS OF.

2. A son of David (2 Sam 5:16; 1 Chr 3:8; 14:7). See #1 above for discussion.

3. One of David's select group of thirty mighty men (2 Sam 23:34). He was the son of Ahasbai, of Maacah, which in this case was a town in Judah, south of Hebron (McCarter *2 Samuel* 498–99). He is likely the ELIPHAL, son of Ur, of 1 Chr 11:35.

4. A distant descendant of Saul and Jonathan, a Benjaminite, the third of three sons of Eshek (1 Chr 8:39).

5. One of the returnees from Babylon to Jerusalem under Ezra, during the reign of Artaxerxes. He and his two brothers, all sons of Adonikam, were heads of a contingent that included sixty men, and they came after the main return with Ezra (Ezra 8:13; 1 Esdr 8:39).

6. One of seven sons of Hashum who put away their foreign wives and their children during the reforms of Ezra (Ezra 10:33; 1 Esdr 9:33).

ELISHA (PERSON) [Heb *ʾĕlîšāʿ* (אֱלִישָׁע)]. A northern prophet of the 9th century, the son of Shaphat from Abel-meholah. He was a follower and the designated successor of Elijah (1 Kgs 19:16–21; 2 Kgs 2). He appears to have been active during the reigns of Ahab, Ahaziah, and Jehoram, ca. 850–800 B.C.E.

The extensive narratives which preserve numerous stories about the prophet Elisha are found in the Deuteronomistic History (1 Kgs 19:19–21; 2 Kings 2–13). This narrative complex is constructed from a number of legends or miracle stories which have been classified and analyzed by Rofé (1970; 1974), Schmitt (1972), Schweizer (1974), and De Vries (1978). The general conclusion is that many of these stories achieved their form prior to their inclusion in the Deuteronomistic History. It is conjectured that extensive hagiographical material about Elisha was collected and preserved by the prophetic groups closely associated with him in 2 Kings. The wide range of hagiographic material about Elisha details numerous dramatic feats of power which establish his authority as a prophet of Yahweh. After his commissioning by Elijah, his authority is confirmed by his ability to part the waters of the Jordan (2 Kgs 2:13–14), to clear the spring outside Jericho of impurities (2 Kgs 2:19–22), and to fatally curse the children that taunted him (2 Kgs 2:23–25). These prophetic acts of power are repeated throughout the narrative complex: he helped the widow of one of the prophetic guilds to pay her debts (2 Kgs 4:1–7); he promised a son to the barren Shunammite woman and then revived the child after its death (2 Kgs 4:8–37); he nullified poisonous wild gourds planted by one of the prophetic guilds (2 Kgs 4:38–41); he fed one hundred men with twenty loaves of barley and some fresh ears of grain (2 Kgs 4:42–44); he healed Naaman, the commander of the Syrian forces, of leprosy (2 Kgs 5:1–19); he punished Gehazi with leprosy for his dishonesty and greed (2 Kgs 5:20–27); he retrieved a lost ax-head by causing it to float upon the water (2 Kgs 6:1–7); he blinded a Syrian raiding party and led them into Samaria (2 Kgs 6:8–23); and a dead man was revived when he came into contact with Elisha's bones (2 Kgs 13:20–21).

The Deuteronomic setting of these legendary stories is important since Elisha provides a model of the Mosaic prophet. The transfer of authority from Elijah to Elisha is modeled on the transfer of power from Moses to Joshua (Num 27:18–23; Deut 34:9). The miracle stories, which provide little evidence of prophetic activity, appear to be concerned much more with authenticating the role of Elisha as a model Mosaic prophet who plays a central role in the overthrow of the Omrides. The prophecy and fulfillment schema of the Deuteronomistic History is evident in Elijah's prophecies of the overthrow of the Omrides and Elisha's active role in the rebellion of Jehu (1 Kgs 19:15, cf. 2 Kgs 8:7–15; 1 Kgs 21:23–29, cf. 2 Kgs 9:1–10).

It is difficult on the basis of these stories to identify, with any certainty, historical information about Elisha. However recent analyses of the social roles of Israelite prophets (Wilson 1980; Petersen 1981) reveal that despite Deuteronomic editing these narratives preserve important information about the activities of Ephraimite northern prophets. It is argued that these stories were originally collected and preserved by northern prophetic groups closely associated with Elijah and Elisha. Elisha is seen as the leader of a prophetic guild, "the sons of the prophets." The ambiguous term "father" (2 Kgs 2:12; 13:14), used of both Elijah and Elisha, is often interpreted as an honorific title designating the leader of a prophetic guild.

Elisha is frequently addressed as *ʾîš ʾĕlōhîm,* "man of God," in addition to *nābîʾ*, "prophet." Petersen (1981: 43) understands *ʾîs ʾĕlōhîm* as a designation for a holy man as depicted in legends. However, both terms in the Hebrew Bible appear to be synonymous, and it is very difficult to isolate differentiated meanings especially since they are both applied to Elisha and other prophetic figures. Wilson (1980) and Petersen (1981), among others, both describe Elisha as a peripheral prophet. His support group, "the sons of the prophets," was also composed of peripheral prophets removed from the religiously, economically, and politically dominant groups at the center of society. They may have had minimal support in Ephraimite society (2 Kgs 4:8–17, 42–44). Wilson (1980: 202) has likened this group to the members of a peripheral possession cult.

Elisha is depicted as constantly in conflict with the Omride dynasty, and he is responsible for Hazael's accession as king of Syria (2 Kgs 8:7–15). His opposition to the Omrides culminates in his central role in legitimizing the rebellion of Jehu (2 Kgs 9:1–10), who massacred Ahab and the remaining Omrides in a palace coup. Wilson (1980: 205–6) argues that Elisha's social role changed after Jehu's assumption of power from that of peripheral to central prophet. He became more closely associated with the royal court, particularly in the military sphere (2 Kgs 6:8–7:20; 13:14–19).

Smith (1971: 25–26) argues that Elisha is an example of a leader of a Yahweh-alone group in early Israel, as remembered in popular legend, who preserved Yahwism against the threat of syncretistic cults. He understands the revolution of Jehu as the triumph of Elisha and the Yahweh-alone movement, which included the prophetic group gathered around him.

The healing of Naaman by Elisha is used by Jesus in the synagogue at Nazareth to justify his own ministry to the gentiles (Luke 4:27). A universalistic tendency is to be seen in the Naaman narrative (2 Kgs 5:1–19) since he responded to his healing by promising to worship Yahweh alone, and would enter the temple of Rimmon only when he had to for the sake of the king of Syria.

KEITH W. WHITELAM

ELISHAH (PERSON) [Heb *ʾĕlîšâ* (אֱלִישָׁה)]. A son of Javan (Gen 10:4; 1 Chr 1:7), grandson of Japeth and great-grandson of Noah. In the Sam. Pent. the name is *ʾelîšā.* His name, like those of a number of other people in the Table of Nations in Genesis 10, became associated with a geographical area, presumably where his descendants settled. A maritime nation (Ezek 27:7), its association with Javan (Greece) would suggest a location in the Aegean. See JAVAN. It became known as a source for colored fabrics, even supplying them to Tyre (Ezek 27:7). Since Tyre itself was a well-known source of dyed cloth, their supply by Elishah would indicate that the latter's product was of very high quality indeed.

"Alašiya," attested in 2d millennium B.C. texts from Egypt, Assyria, Ugarit, and Asia Minor, is generally accepted as equivalent to Elishah. Apparently the term was first used for part of the island of Cyprus (*CAH* 3: 201–5), possibly the area around Enkomi on the E coast. Later the term expanded its use at times to refer to Cyprus as a whole. Another suggestion has placed Alašiya on the coast of N Syria. Cyprus exported copper (from which the name "Cyprus" is derived). This supports its identification with Alašiya, which name is itself derived from the Sumerian word *alas,* "copper." A Mycenaean colony on the island in the mid-2d millennium (*CAH* 3: 181–82) associates Cyprus culturally with Greece (Javan).

DAVID W. BAKER

ELISHAMA (PERSON) [Heb *ʾĕlîšāmāʿ* (אֱלִישָׁמָע)]. Name of six persons in the Hebrew Bible. The name probably means "El has heard."

1. Son of Ammihud and leader of the tribe of Ephraim. He, with others, assisted Moses in the wilderness (Num 1:10; 2:18; 7:48, 53; 10:22). In 1 Chr 7:26, Elishama, son of Ammihud, is identified as the grandfather of Joshua.

2. One of the sons of David born in Jerusalem (2 Sam 5:16; 1 Chr 3:8; 14:7). The name occurs twice in the list 1 Chr 3:1–9, but "Elishama" is probably a scribal error for "Elishua" in v 6 (cf. 2 Sam 5:15; 1 Chr 14:5).

3. A member of the royal house of Judah and grandfather of Ishmael son of Nethaniah. He was the Judean troop commander who assassinated Gedaliah following the destruction of Jerusalem in 587/6 B.C.E. (2 Kgs 25:25; Jer 41:1).

4. Son of Jekamiah (1 Chr 2:41) and a Jerahmeelite descended from Sheshan (vv 34–41).

5. One of the two priests (2 Chr 17:8) who formed part of a commission sent by Jehoshaphat to teach the law in the cities of Judah (vv 7–9).

6. A high-ranking government official who held the position of *sōpēr* during the reign of Jehoiakim (Jer 36:12, 20–21). It is probable that Elishama's office was that of state or royal secretary. On the basis of Jer 36:10, it has been suggested that there may have been two royal secretaries at this time (as was the case during the reign of Solomon [1 Kgs 4:3]), and that Elishama held this office together with Gemariah son of Shaphan. However, in Jer 36:10 the title *hassōpēr* undoubtedly applies to Shaphan, Elishama's predecessor (cf. 2 Kgs 22:8–10), and not Shaphan's son Gemariah. The secretary's chamber, which may have served as the state secretariat, was located in the royal palace (Jer 36:12). It was here that Baruch's scroll is reported to have been kept (Jer 36:20–21). Elishama was succeeded in the office of royal secretary by Jonathan (Jer 37:15, 20).

JOHN M. BERRIDGE

ELISHAPHAT (PERSON) [Heb *ʾĕlîšāpāṭ* (אֱלִישָׁפָט)]. The son of Zichri, a commander of a hundred men during the palace revolution of Jehoiada the high priest, overthrowing Athaliah (2 Chr 23:1) and placing her son, Joash, on the throne. The name means "God judged." His role, along with the other four palace guard commanders, was to raise an army among Judeans as well as Levites and priests. During the proclamation of Joash as king, he was among the military units who protected strategic points around the temple and the royal palace. These commanders were also responsible for the execution of Athaliah (2 Chr 23:14) and participated in the coronation processional (2 Chr 23:20). The parallel passage (2 Kgs 11:4) informs us that these commanders were the Carites, the royal bodyguard first established by David (2 Sam 20:23; *Kings* OTL, 571), which explains their support for a son of David. Curtis and Madsen (*Chronicles* ICC, 424), Gray (*Kings* OTL, 569) and Myers (*2 Chronicles* AB, 131) interpret the Chronicler as presenting the commanders to be Levites so that the temple would not be violated by the unconsecrated, contradicting the parallel account. However, there is no evidence of the temple ever having its own separate military units. More likely, these officers of the royal bodyguard commanded a mixed force of Levites, priests, professional soldiers, and volunteers, with Jehoiada relying upon the commanders' tactical expertise and steadiness in the heat of battle outside the temple while arming the Levites and priests who could enter the temple precincts.

KIRK E. LOWERY

ELISHEBA (PERSON) [*ʾĕlîšeba*ʿ (אֱלִישֶׁבַע)]. Daughter of Amminadab and sister to Nahshon (Exod 6:23), who was captain of Judah during the wilderness journey (Num 2:3). She became the wife of Aaron, the high priest, and thus mother of the priestly family. Rather than belonging to the 4th generation after Jacob, according to the genealogies of Ruth 4:18–20 and 1 Chr 2:4–10, Elisheba belonged to the 6th generation (Childs *Exodus* OTL, 117). Her name means "God of the oath" or "God makes an oath," so named for God's faithfulness to his promise of deliverance from Egyptian bondage.

JOEL C. SLAYTON

ELISHUA (PERSON) [Heb *ʾĕlîšûa*ʿ (אֱלִישׁוּעַ)]. One of 13 sons of David listed as having been born to David's wives in Jerusalem (2 Sam 5:15; 1 Chr 14:5), in addition to his six sons born at Hebron. In both lists, Elishua is listed between Ibhar and El (i)phelet, but the list in 1 Chr 3:5–9 omits this name, substituting ELISHAMA instead. This is undoubtedly a scribal slip, since Elishama was another of David's sons, his name occurring only a few names later in all three lists.

His mother's name is unknown: four of the 13 sons born in Jerusalem were Bathsheba's sons; the remainder were born to unnamed wives. Besides these 13, David had numerous (unnamed) sons born to his concubines, according to 1 Chr 3:9. See also DAVID, SONS OF.

DAVID M. HOWARD, JR.

ELIUD (PERSON) [Gk *Elioud* (Ἐλιουδ)]. The son of Achim and father of Eleazar, according to Matthew's genealogy tying Joseph, the husband of Mary, to the house of David and Solomon (Matt 1:14, 15). Eliud does not appear in any other genealogy or list of Jesus' ancestors (except in Luke in D, where an adaptation from Matt 1:6–15 is substituted in Luke 3:23–31), although Albright and Mann (*Matthew* AB, 4–5) believe the name is characteristic of names used in the last two centuries B.C., with Johnson (1969: 179–80) claiming that Eliud is a transliteration of ›*lyhw*‹ (1 Chr 12:20 MS A); cf. 1 Chr 26:7, where Heb ›*lyhw* is rendered Gk *heliou,* and Job 32:6, where Heb ›*lyhw*‹ is rendered Gk *helious.*

STANLEY E. PORTER

ELIZABETH (PERSON) [Gk *Elisabet* (Ἐλισαβετ)]. Wife of Zechariah, mother of John the Baptist, and a relative of Jesus' mother Mary. Elizabeth is mentioned only in the birth narrative material in Luke 1 where she is said to be a descendant of Aaron, barren, and advanced in years. Luke uses a general term which does not specify the degree of kinship between Mary and Elizabeth. Luke 1:42 indicates that Elizabeth is to be seen as a prophetess, given inspired insight into the character of the baby in Mary's womb, and the events which have just transpired in Mary's life.

The barrenness and supernatural intervention which causes Elizabeth to become pregnant are reminiscent of various OT stories, especially those of Sarah (Gen 17:15–21; 18:9–15; 21:1–7) and Hannah (1 Sam 1:1–20). These similarities suggest that Luke wants his audience to see Elizabeth as one who would bear a child important in Israel's history. However, Luke casts Elizabeth in the shadow of Mary, and thus prepares the way for the similar treatment of the Baptist and Jesus. The Lukan birth stories focus on the perspective of the women, Elizabeth and Mary, not their men Zechariah and Joseph. In fact, Zechariah is not seen to be a model of faith for Luke's audience in the same way that Elizabeth and Mary are. Here we see the first of many examples in Luke's Gospels of a reversal of ordinary expectations—the women, not Zechariah, properly respond to the initiatives of God in Luke 1 (cf. Luke 4:18). Elizabeth and Mary, not Zechariah and Joseph, first receive the message of the coming Christ, first respond in full faith to that news, first are praised and blessed by God's angels, and first sing and prophesy about the Christ child.

When the pregnant Mary visits Elizabeth she receives a twofold blessing. First, Elizabeth blesses Mary because she is the mother of "my Lord." Second, Mary is blessed because she responded in faith to the words of the angel—she believed the promise given to her about the coming Christ child. What follows this interchange in vv 46–55, the song called the Magnificat, has been the subject of much scholarly debate, because of the textual possibility that Elizabeth is the singer of this song of praise. Though the textual evidence that attributes this song to Elizabeth is primarily western and found in Latin mss (it^{a}, b, l, Irenaeus$^{Lat.}$, Niceta, Latin mss known to Origen), in view of the history of growing devotion to Mary in the Church it is difficult to see that any scribe would have changed an original reference to Mary singing this song in order to place it on the lips of Elizabeth.

There are also other factors which may favor Elizabeth as the giver of this oracle: (1) she is the nearest antecedent, who has just been speaking to Mary in 1:45; (2) as a childless older woman this song seems more appropriate on her lips, and it is probably not accidental that this song sounds like that of another barren woman, Hannah (1 Sam 2:1–10); (3) the Greek of v 56 seems to suggest that Elizabeth was the last speaker, hence Mary's name must be introduced again at that point; (4) we have already been told at v 41 that Elizabeth was filled with the Spirit and was speaking, but there is no mention of Mary being filled in like manner. Despite these considerations, the earliest and best mss attribute this hymn to Mary, and it seems unlikely that Luke would have Elizabeth overshadow Mary. Thus, most scholars believe that Luke cast Mary as the speaker of "The Magnificat."

We find further evidence of Luke's theme of reversal when we learn that Elizabeth gives her child his name when John is born, an act which Zechariah can merely confirm (1:57–66). Indeed speech only comes back to Zechariah when he confirms the action of his wife. Thus Luke intends us to see Elizabeth

and Mary as the primary human figures in the drama that leads to the births of the Baptist and Jesus. That Elizabeth fades out of the picture after Luke 1, is in part because Luke does not wish to have her or her son overshadow Mary and her child.

BEN WITHERINGTON, III

ELIZAPHAN (PERSON) [Heb *ʾĕlîṣāpān* (אֱלִיצָפָן)]. Var. ELZAPHAN. Two persons in the Hebrew Bible have this name. Several meanings have been proposed for the name Elizaphan. These include "my god is hidden," "god is hidden," and "god has hidden." The name has also been related to the name Zephaniah, and names using its base root of *ṣpn* have been found in Hebrew inscriptions, as well as in Phoenician, and Punic sources.

Although an alternate form of the name, Elzaphan (Heb *ʾelṣāpān*), occurs in Exod 6:22 and Lev 10:4, these texts obviously refer to the person otherwise called Elizaphan. Both the Samaritan Pentateuch and the Peshitta read *ʾelîṣapan,* and the LXX offers *el (e)isapha (n).*

1. The father of a clan of Levites and one of three sons of Uzziel, the Levite (Exod 6:22). When Nadab and Abihu, the sons of Aaron, were killed because of their "strange fire," (i.e., improper sacrifice), Moses instructed Elizaphan and his brother Mishael to carry the corpses out of the camp (Lev 10:4–5). Elizaphan is identified once as the leader of the Kohathite clan of Levites (Num 3:30); elsewhere his descendants are of equal status to the sons of Kohath, Merari, and Gershom (1 Chr 15:8; 2 Chr 29:13). This demonstrates that the descendants of Elizaphan retained an important position in the postconquest history of Israel. In 1 Chr 15:8, 10–11, King David commanded the sons of Elizaphan along with other Levites to carry the ark of the covenant up to Jerusalem. In 2 Chr 29:12–13, King Hezekiah called upon the descendants of Elizaphan to assist in cleansing the temple of its impurities.

2. The son of Parnach and the leader of the tribe of Zebulun who participated in the allotment of the land of Canaan (Num 34:25).

RAPHAEL I. PANITZ

ELIZUR (PERSON) [Heb *ʾelîṣûr* (אֱלִיצוּר)]. Son of Shedeur and Chief (*nāśîʾ,* Num 2:10) of the tribe of Reuben during the wilderness sojourn after the Exodus. He is mentioned only five times in the OT in four different tribal lists. He conducted a census of all able-bodied fighting men of the tribe of Reuben (Num 1:5); he led the Reubenites to their proper place on the S side of the tabernacle in the Israelite camp (Num 2:10) and to their position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:18); and he presented the offerings of the Reubenites on the 4th day of the twelve-day celebration of the dedication of the altar (7:30, 35). The name Elizur means "God is a rock" or "my God is a rock."

DALE F. LAUNDERVILLE

ELKANAH (PERSON) [Heb *ʾelqānâ* (אֶלְקָנָה)]. As many as eight different men, probably all but one of whom were Levites, bore this name.

1. A Korahite Levite descended from Kohath son of Aaron (Exod 6:24); possibly, though not necessarily, the same as # 2 below.

2. A Korahite Levite, presumably somewhat later chronologically than # 1 above (1 Chr 6:23, 25, 36).

3. A Korahite Levite, descended from # 2 above (1 Chr 6:26, 35).

4. A Korahite Levite, descended from # 3 above (1 Chr 6:27, 34; 1 Sam 1:1). The descriptive genealogical relationships between # 2, 3 and 4 may be seen in the following table:

	1 Chr 6:33–36	1 Sam 1:1
1 Chr 6:25–27	(in reverse order)	(in reverse order)
Elkanah #2 (6:25; cf. also 6:23)	Elkanah #2 (6:36)	

Amasai	Amasai	
Ahimoth	Mahath	
Elkanah #3 (6:26)	Elkanah #3 (6:35)	
Zophai	Zuph	Zuph
Nathan	Toah	Tohu
Eliab	Eliel	Elihu
Jeroham	Jeroham	Jeroham
Elkanah #4 (6:27)	Elkanah #4 (6:34)	Elkanah #4
Samuel	Samuel	[Samuel; cf. 1:19–20]

Elkanah # 4, the father of Samuel, is described in 1 Sam 1:1 as a Zuphite (revocalizing MT *ṣôpîm* as *ṣûpî* + enclitic *-m*), doubtless because of his descent from Zuph/Zophai (the above table displays similar spelling differences and other modifications in some of the other sets of parallel names as well). The reference to the Levite Elkanah as an Ephraimite probably relates to the tribal territory where he lived rather than to his tribal origins.

Samuel's father must have been a man of some means, since he is the only commoner in the books of Samuel and Kings to have had more than one wife. Solicitous of the religious welfare of his family, Elkanah was in the habit of taking his two wives (Hannah and Peninnah) and Peninnah's children with him on an annual pilgrimage to Shiloh. While there, he distributed portions of sacrificial meat (cf. Exod 29:26; Lev 7:33; 8:29) to them, since wives and offspring shared in certain of the sacrificial offerings brought to the Lord by the head of the family (cf. Deut 12:17–18; 16:13–14). Peninnah, the barren Hannah's rival, seemed to take special delight in using what should have been a time of joyous celebration as an occasion for continued provocation concerning Hannah's sterility, often moving her to tears. At such times, Elkanah would try to comfort Hannah by suggesting that his love for her should have meant more to her than numerous sons (1 Sam 1:2–8).

Eventually, and in answer to her prayers, Hannah became pregnant by Elkanah and bore Samuel. Elkanah meanwhile continues his custom of the annual pilgrimage to Shiloh. On one occasion, he used the opportunity for the additional purpose of fulfilling a vow (v 21), perhaps in support of the vow Hannah had made earlier (v 11). Elkanah concurred with her desire to present Samuel to the Lord for apprenticeship in the priesthood under Eli (vv 22–23; 2:11). Elkanah and Hannah ultimately became the parents of five additional children (2:20–21).

5. A Korahite Levite who was one of David's warriors at Ziklag (1 Chr 12:1, 6). See DAVID'S CHAMPIONS.

6. A Levite who was one of two doorkeepers for the ark of the covenant during at least a part of David's reign (1 Chr 15:23).

7. A high official in the court of Judah, assassinated by an Ephraimite warrior during the reign of Ahaz (2 Chr 28:7).

8. A Levite who was the ancestor of Berechiah son of Asa, who settled in Jerusalem after returning from Babylonian exile (1 Chr 9:1–3, 16).

The name *ʾelqānâ* means "God Has Created (a Son)." The verbal root underlying the name occurs in Gen 4:1 with the meaning "brought forth," where it puns on the name "Cain"; in 14:19, 22, where God Most High is called "Creator" of heaven and earth; in Exod 15:16, where the Lord is described as having "created" his people; etc. It has long been recognized that the root *qny* in various Semitic languages often means "bring forth, create," especially when a deity is its subject (BDB 888–89; KB 843; *WUS*, 229; Habel 1972: 321–37; Cassuto 1975: 55; Miller 1980: 43–46; contrast, however, Vawter 1986: 461–67). Titles similar to that in Gen 14:19, 22 were applied to El, the chief Canaanite deity, in ancient times (Pope 1955: 50–54).

An unpublished seal decorated with the figure of an ibex bears the name *ʾelqānâ* (Avigad 1987: 200). Three other names found on seals and containing the same verbal root are pertinent here: (1) *qnyw*,

"Yahweh Has Created" (Avigad 1987: 197); (2) *mqnmlk,* "The Creation of the (Divine) King" (Avigad 1986: 77); and especially (3) *mqnyw/mqnyhw,* "The Creation of Yahweh" (Avigad 1986: 99; 1987: 198), a name identical to that of Mikneiah (1 Chr 15:18)—who, like the descendants of Elkanah # 4, was a tabernacle/temple musician (15:21).

RONALD YOUNGBLOOD

ELKIAH (PERSON) [Gk *Elkia* (Ἐλκια)]. A name which is part of the genealogy of Judith (Jdt 8:1). Elkiah is a translation of the Hebrew name Hilkiah (Heb *ḥilqîyāh*). The most famous character in the OT named Hilkiah was the high priest in the time of Josiah (2 Kings 22, etc.). However, the Elkiah in the genealogy of Judith should not be connected with that Hilkiah, for the name here is part of what Noth *(HPT)* terms a "secondary genealogy," that is, a genealogy with no existence apart from the narrative. This is in keeping with the genre of the book of Judith.

SIDNIE ANN WHITE

ELKOSH (PLACE) [Heb *ʾelkōšî* (אֶלְכֹּשִׁי)]. Supposed birthplace of Nahum the prophet; probably the name of his village originated from the name of his ancestor. The place name *ʾelqōš* does not appear in the Bible, but can be assumed from the Heb *ʾelqōšî* "Elkoshite" in Nah 1:1; however, its locality is unknown. According to the prologue of Jerome's commentary on Nahum, "Elkosh was situated in Galilee, since there is to the present day a village in Galilee called Elcesi (or Hilkesei), a very small one indeed, and containing in its ruins hardly any traces of ancient buildings, but one which is well known to the Jews, and was also pointed out to me by my guide." Modern el-Kauzeh might be the site to which Jerome referred. A Galilean town Capernaum (M.R. 204254), which may mean "village of Nahum," supposedly from the Heb *kĕpar naḥûm,* appears to claim to be Nahum's hometown. A Turkish town of the medieval origin, Al-Qush N of Mosul near Nineveh, claims to be the birth and the burial place of the prophet Nahum. Another tradition locates Elkosh in the S Judean Simeonite territory. Pseudo-Epiphanius locates it near Begabar in Syria, the modern Beit Jibrin. All of these locations lack the positive evidence of being the hometown of the prophet Nahum.

Elkosh may have been originally a personal theophoric name which means "God, give!" if the last element *qōš* is etymologically related to the Akk *qâšu* "to give as a gift, reward." The biblical name Kushaiah (Heb *qûšāyāhû*) in 1 Chr 15:17 may mean "Yahweh rewarded," if *qûš* is the cognate of the Akk verb *qâšu.* Likewise, the Edomite name Kaush-Malak in the building inscription of Tiglath-pileser III (*ANET,* p. 282a) may mean "King gave." The Akkadian name *Anu-qîšanni* "God, reward me!" is quite similar to the Hebrew name *ʾEl-qōš* "God, reward!" Also other Akkadian names with the verb *qâšu* are attested as follows: *Taqîša-Bêltu* "divine Lady gave me," *Sin-iqîšam* "Sin gave me," etc. (See *AN,* 28, 138–39, 178–79; *APNM,* 259.)

YOSHITAKA KOBAYASHI

ELLASAR (PLACE) [Heb *ʾellāsār* (אֶלָּסָר)]. The domain of ARIOCH, Gen 14:1, 9. The identity and location of Ellasar was already uncertain to ancient interpreters. LXX, Targum Onkelos, and one version of the Palestinian Targum (Cod. Neofiti) simply reproduced the OT form. *Targum Ps.-Jonathan* rendered it by *tlʾsr* (Telassar), no doubt because of assonance. Another school of thought placed it in Asia Minor. The QL Gen Apocryphon XXI:23 replaced *Ellasar* by the totally unrelated *kptwk* (Old Persian *Katpatuka*) "Cappadocia." Another version of the Palestinian Targum rendered it by *pnṭws* (Pontus), a region

bordering on Cappadocia. (The Cod. Neofiti manuscript of the Palestinian Targum has *ʾlsr* in v 1, with the marginal note *pnṭws,* and, conversely, *pnṭws* in v 9, with the marginal note *ʾlsr*). This tradition was followed in Vg which has *Pontus* in both places.

An early and long-followed identification of Ellasar was that by Schrader 1883: 135 which equated it with Larsa, the capital of one of the two principal kingdoms of S Mesopotamia in the Isin-Larsa period before it was conquered by Ḫammurapi, king of Babylon. However, since neither of the two kings of Larsa proposed for that role could correspond to Arioch, and since the similarity between the names *Ellasar* and *Larsa* was not very close, this identification was abandoned. Böhl (1930: 23) resurrected the old identification of Ellasar with Telassar, but tacitly rejected it fifteen years later. Meanwhile, Dossin (1934: 118–19), in a different connection, proposed to see in *Ellasar* a phonetic transcription of A.LA^{5}.SAR, an ideographic spelling of *Aššur.* This idea proved to be in agreement with the presumed Babylonian model of Genesis 14, the "Chedorlaomer texts" (see CHEDORLAOMER, B:1), in which the character corresponding to Arioch represents the Assyrian king Tukulti-Ninurta I. Böhl (1953: 46) and Dhorme (1956: 42) also equated Ellasar with Assur, but derived it from *āl Aššur* "the city of Assur," according to the Assyrian pronunciation of *š* as *s* and its rendering in Hebrew and Aramaic transcriptions (e.g., *Aššur-aḫa-iddin* = Heb *ʾēsar-ḥaddōn,* Aram *ʾsr ḥ ʾdn*).

Lipiński (1975: 205) called attention to the Greco-Aramaic epitaph at Ağaça Kale, 41 km SW of Divriği (E Turkey), dating from the 3d century B.C., which mentions a man with a Persian name, written *Ariukēs* in Gk and *Hrywkʾ* in Aram, who was a satrap of—according to Lipiński's tentative restoration—[*Hr*]*m*[*n*] "Armenia." Referring to the rendering of Ellasar by *kptwk* in the QL Gen Apocryphon and by *Pontus* in Vg, Lipiński noted: "The repute of a dynast called Ariauka, who had reigned in those parts of Asia Minor, might have helped this localization of *ʾlsr* and it is not impossible for the author of the *Genesis Apocryphon* to have identified the Armenian satrap with the biblical Ariōk *(Ariōch).* The author of the *Genesis Apocryphon* obviously knew that a place called *ʾlsr* existed there. Now, a Cappadocian place called Alasar can most likely be identified with Alişar, that kept its old name." Lipiński had in mind the archaeological site of Alişar Hüyük, ca. 80 km SE of the Hittite capital Ḫattušaš (Bogazköy). However, (1) the site is quite distant from Armenia Minor, the satrapy of Ariukēs; (2) the last, very modest settlement at that site ended well before the Persian domination of Cappadocia; (3) the ample toponymic evidence on classical Asia Minor does not include a place name resembling Ellasar; (4) *Alişar* is a modern Turkish toponym, derived from a personal name, and besides the Alişar in question, there are six other places of that name in widely scattered areas of Turkey. Thus the motive behind Arioch's transfer to Cappadocia by the QL Gen Apocryphon remains unclear.

MICHAEL C. ASTOUR

ELMADAM (PERSON) [Gk *Elmadam* (Ἐλμαδαμ)]. The father of Cosam and son of Er, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:28). Gk *elmōdam* is read in numerous mss and a few versions, while Gk *elmadam* is contained in others. The variant is possibly based on Gk *elmōdad* found in Gen 10:26 for Heb *ʾlmwdd.* D omits Elmadam, substituting a genealogy adopted from Matt 1:6–15 for Luke 3:23–31. The name Elmadam is unknown as an ancestor of Jesus in any other biblical documents, including Matthew's genealogy, and falls within a list of eighteen otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 501). Kuhn's (1923: 214–16; endorsed by Schürmann *Luke* HTKNT, 201 n. 95) attempt to find a source for Elmadam, as part of the group from Neri through Er, in corrupted forms of names in 1 Chr 3:17–18 MT, is particularly unconvincing, especially since there is serious question whether the genealogy at this point is based on 1 Chronicles, which does not have Elmadam in 3:17–18 MT or LXX (Marshall *Luke* NIGTC, 164; cf. Jeremias 1969: 295–96).

STANLEY E. PORTER

ELNAAM (PERSON) [Heb *ʾelnaʿam* (אֶלְנַעַם)]. Father of Jeribai and Joshaviah, two of David's warriors, in 1 Chr 11:46. These warriors are two of the sixteen which Chronicles lists in addition to David's "Thirty" brave men (cf. 1 Chr 11:26–41 = 2 Sam 23:24–39 see DAVID'S CHAMPIONS). The additional sixteen names listed in 1 Chr 11:41–47 appear to form a supplement, and may be connected with heroes from the Transjordan. These names may have been found in another source, perhaps the one which extends to 1 Chr 13:4, and could have been appended to the original list in order to show that from the beginning David was recognized as a leader even by the inhabitants of outlying and isolated regions. It is not possible to determine whether the list of additional names may be traced back to the time of David.

In the LXX the Codex Vaticanus B calls Joshaviah the son of Jeribai and lists Elnaam (Gk codex A = *elnaam*; codex B = *ellaam*) as a separate warrior. This variant, however, may be attributed to a textual confusion in the Hebrew text underlying the LXX: *bnw* ("his son") instead of *bny* ("sons of").

STEPHEN PISANO

ELNATHAN (PERSON) [Heb *ʾelnātān* (אֶלְנָתָן)]. 1. The son of Achbor, and a royal official (Heb *śār,* translated "prince" in RSV) during the reign of Jehoiakim (Jer 36:12). Elnathan appears to have been a member of a prominent Judean family. His father was probably Achbor ben Micaiah, one of the officials sent by Josiah to consult the prophetess Huldah on the occasion of the finding of the lawbook. See ACHBOR.

According to the MT of Jer 26:20–23, Elnathan led a deputation appointed by Jehoiakim to bring the prophet Uriah back from Egypt. The reliability of the MT is challenged by the LXX, which notes more generally that "the king sent men to Egypt." According to Talmon (1960: 180), the LXX preserves an earlier reading to which the MT tradition subsequently added details. Lachish Ostracon 3, dating to ca. 590 B.C.E. (*ANET*, 322), mentions a "Coniah son of Elnathan" who was dispatched to Egypt, although it is not clear what his mission was. Malamat (1950: note 18), assuming that the ostracon refers to the extradition of Uriah and should be dated to that time, prefers the reading of the ostracon to that of the MT, in effect removing Elnathan from participation in this deputation. Although it is possible that the Elnathan of Jer 26:22 may be identified with the father of Coniah, there is otherwise no connection between the extradition mentioned in Jer 26:20–23 and the mission associated with the Lachish ostracon.

Elnathan was also one of the officials present for a reading of Jeremiah's scroll (Jer 36:12; the LXX reads "Jonathan"), and was one of those officials who later urged Jehoiakim not to burn the scroll (Jer 36:25), underscoring his sympathy to the prophetic voice. The fact that Elnathan's name heads this list of officials may provide some support for the view that Elnathan was also Jehoiakim's father-in-law (see #2 below), particularly since the second name is probably not Delaiah, but the more important Gedaliah (cf. LXX), whom the Babylonians later appointed ruler of Judah.

2. The Jerusalemite, father of Nehushta, wife of King Jehoiakim and mother of his successor Jehoiachin (2 Kgs 24:8). This Elnathan is possibly the same as #1 above.

3. Three men called Elnathan (Ezra 8:16) are among those sent by Ezra to Iddo at Casiphia, with the request that Iddo provide those returning to Jerusalem with Levites for the temple (Ezra 8:15–20). Although it is possible that this small group included three different individuals named Elnathan (another member of this delegation bears the short form of the name, "Nathan"), this is unlikely. As Ezra 8:16 now reads, there are nine "leading men" (literally "heads") and two "men of insight." Some commentators favor the view that the names of the "men of insight" (Joiarib and Elnathan) are duplicates of the 5th and 6th names in the list (Jarib and Elnathan), and are to be regarded as a gloss (cf. BHS and 1 Esdr 8:43–44). If this reading is valid, the text does not distinguish between two groups; rather, all nine men are portrayed as "wise leaders." For the first of the two remaining occurrences of the name Elnathan in Ezra 8:16, a few mss read "Jonathan."

4. A governor of Judah during the Persian period unattested in the Bible. Among the bullae and seals from a postexilic Judean archive (the discovery site is unknown; it is known only that the bullae and seals were found in the Jerusalem region [Avigad 1976:1]) is a bulla inscribed *l ʾlntn pḥwʾ*. It is probable that *pḥwʾ* is an Aramaic form of the Hebrew *hpḥh* ("the governor") and that this inscription is to be read "Belonging to Elnathan the governor." This interpretation of *pḥwʾ* is supported by the fact that a seal from the same official archive is inscribed "Belonging to Shelomith, maidservant *(ʾamah)* of Elnathan the governor" (restoring the last word to read *pḥwʾ*). It is probable that Shelomith was a woman of high status; possibly she served the governor in some official administrative capacity. Scholarly debate on the dating of these artifacts (on paleographical grounds) continues. There is a wide range in the dating of the seal and bulla containing the name Elnathan (see survey in Stern 1982: 203–5). Avigad (1976: 35) and Talmon (*IDBSup,* 325) believe that Elnathan served as governor of Judah in the late 6th century.

JOHN M. BERRIDGE

ELOHIM. See NAMES OF GOD IN THE OT.

ELOHIST. Anonymous author or authors of one of the four sources or collections of traditions which were combined, according to the documentary hypothesis, to form the Pentateuch. The symbol "E" was chosen because of the source's preference for the Hebrew word *Elohim* ("God") in referring to the Deity. "E" stands both for the author or authors of the source, and for the source itself.

———

A. History of Scholarship

Modern Pentateuchal scholarship began in the early 1800s, when researchers developed the theory that the Pentateuch was a composite document rather than the unitary production of a single author, namely Moses. The first criterion to be used in identifying and separating the narrative strands was the occurrence of the divine names "Yahweh" and "Elohim," the latter being the general Hebrew term for "god" or "gods." By this criterion, however, only two sources could be identified.

1. E in 19th-Century Pentateuchal Criticism. Not until the middle of the 19th century was E recognized as a source separate from P. Like P, E referred to the Deity as Elohim in the stories about the pre-Mosaic period. However, E was now seen to differ from P both in date (E reflected the concerns of preexilic Israel) and in characteristics (E had a prophetic rather than a priestly bias). By the time of the classic formulation of the documentary hypothesis in the late 19th century, E was described as an 8th-century document from N Israel, a source which manifested the ethical concerns of prophets like Amos

and Hosea. E also emphasized the relative remoteness of God from any casual interchange with humans: in E, God is "Elohim," not the more personal "Yahweh," and he mainly reveals himself through dreams and visions, not through direct encounters.

2. E in 20th-Century Pentateuchal Criticism. One set of developments in scholars' theories about E reflects changing trends in Pentateuchal criticism as a whole; another set relates specifically to E.

a. General Developments in Pentateuchal Criticism. The most important development in 20th-century Pentateuchal criticism has been the realization that the Pentateuchal sources derive from oral traditions, and that oral traditions continued to play a part in the development of narratives until a relatively late date. This realization has led in turn to a widely accepted theory that both J and E were preceded by an oral epic, designated "G," which contained the original forms of many stories used by J and E. G is also thought to have contributed the main outline of the Pentateuch, starting from the stories reflecting the promise to the patriarchs and stretching through the Exodus and Sinai Covenant narratives to the traditions about Israel's period of wilderness wandering. The conquest of the promised land is the culmination of these Pentateuchal themes, which all look forward to a time of fulfillment. In the Davidic and Solomonic empires the promise implied in the conquest is itself fulfilled in an experience of national strength and unity (*PHOE*; NHPT).

From the perspective of that heady experience of power and fulfillment, it is believed, J for the first time put the G materials into writing as a kind of national epic for the kingdom of Judah. After the division of Solomon's kingdom, E wrote down a northern version of the old epic tradition—a version which reflects the peculiar interests and insights of northern prophetic groups. The date of J is now commonly given as the 10th century, but there is less agreement about the date of E. Some scholars still maintain an 8th-century date and relate E to classical prophecy (Ruppert 1967); others relate E's religious concerns to those of 9th-century prophecy, the period of Elijah and Elisha (*IDBSup*, 259–263). An even earlier dating which has been proposed relates E to the crisis period following immediately upon the breakup of Solomon's kingdom, and would thus place E in the late 10th century (Jenks 1977).

Almost every element in the above reconstruction has been challenged, in recent years, by scholars who are not convinced by the evidence that there ever was a common epic tradition, "G," (Conroy 1980) and who would place the composition of J and E and of the entire Pentateuch quite late in the preexilic and exilic periods (Van Seters 1975; Schmid 1976). The scholarly reconstruction sketched above remains, however, a good working hypothesis, even though it is a hypothesis which still needs constant testing and is always subject to revision (North 1982).

b. Developments in Scholarship Specifically Relating to E. The most commonly voiced criticism of the classic view of E has been the claim that the E narratives are not independent of J. This view tends to greatly reduce the amount of "E" material, and the E narratives which remain are viewed as deliberate corrective supplements to J. This process of correction by means of supplementation has been compared to the production of *midrashim* in later Jewish tradition.

The crucial question in answering such theories concerns the precise amount and scope of E material, and especially whether there are E narratives and other tradition units which have no J parallels. As will be seen below, the nature and the number of E traditions makes such a "midrash" or supplement theory unlikely, pointing instead to a once independent narrative source.

Another consideration is the mention in E passages of narrative motifs which do not appear in the present Pentateuch. For example, Gen 42:21 and 50:16–17 both refer to scenes which must have been part of E's original narrative, but which must have been eliminated by the JE redactor when J and E were combined. This indicates that E was originally an independent and sizeable literary composition of which only fragments still appear in our Pentateuch (Wolff 1972).

B. The Contents and Scope of E

The Genesis patriarchal narratives contain three sets of double narratives: Gen 12:10–20 (parallel: 20:1–18); 16:4–14 (parallel: 21:8–21); and 26:26–33 (parallel: 21:22–34). In each pair listed, the second is attributed to E. These sets of stories, of which one actually exists in a triple form (see Gen 26:1–16), tell

the stories of Abraham and Sarah at the court of a foreign king, of the expulsion of Hagar, and of a controversy and covenant with Abimelech at Beersheba in relation to rights of access to water wells.

These parallel narratives constitute the most important source of information about the characteristic traits of E, for here the E narratives can be analyzed in contrast to similar J traditions. Characteristically, the E versions of these triple and double narratives use *Elohim* instead of *Yahweh;* they focus on the nature of divine revelations or disclosures to humanity, which in E generally occur in dreams; they include reflections on problems of sin, guilt, and innocence; and they emphasize the "fear of God."

Using these E characteristics as a starting point, at least the following Pentateuchal passages can be ascribed to E:

Abraham	Gen 15:1–6, 13–16; 20:1–17; 21:8–21; 21:22–34; 22:1–14, 19.
Jacob	Gen 28:11–12, 17–18, 20–22; 31:4–16, 17–24, 25–42, 45, 49, 50, 53–54; 31:5–11; 35:1–8.
Joseph	Gen 37:20–24, 28*a*, 29–30, 36; chaps. 40–41; 42:1*a*, 2–3, 6–7, 11*b*, 13–26, 28*b*–38; 45:2–3, 5–15; 46:1–4; 48:1–2, 7–14, 17–22; 50:15–26.
Moses	Exod 1:15–21; 3:1, 4*b*, 6, 9–13, 15; 4:17, 18, 20*b*; 13:17–19; 14:5*a*, 19*a*; 15:20–21; 17:4–7, 8–16; 18:1–27.
The Covenant	Exod 19:2*b*–3*a*, 4–6, 16–17, 19; 20:18–21; 24:1–2, 9–11; 24:12–15*a*, 18*b*; 32:1–6, 15–20; 33:3*b*–6, 7–11.
Wilderness Wandering	Num 11:1–3, 16–17, 24–30; chap. 12; 22:2–21, 36–40; 22:41–23:26.
Moses' Farewell and Death	Deut 31:14–15, 23; 34:1–12.

Some scholars would, in addition, ascribe portions of the Book of Joshua to E (Bright *Joshua* IB, Weiser 1961; Eissfeldt 1965); the Shechem covenant narrative of Joshua 24 has even been described as the culmination and conclusion of E. It seems preferable, however, to attribute such "Elohistic" segments of the Deuteronomistic History to northern tradition schools which continued to share E's theological outlook down to the end of the life of the kingdom of Israel. It is difficult, in any case, to separate E from "proto-Deuteronomic" materials, because of the similarity in outlook.

An "E strand" has also been claimed by at least one scholar in the Primeval History, Genesis 1–11 (Mowinckel 1937). It is much more likely, however, that all of the non-P material in Genesis 1–11 is J, and that minor discrepancies or inconsistencies within that J material simply point up the disparity and the antiquity of the earlier narrative fragments and lists which J has combined.

C. Characteristic Theological Perspectives and Emphases

From the above outline of E's contents it can be seen that E is represented in every major segment of the Pentateuchal traditions: the promise to the fathers, Moses and the Exodus from Egypt, the Sinai covenant, the wilderness wandering, the Balaam oracles, and the end of Moses' life after he transfers his authority to Joshua.

This sketch of E's contents lends weight to the belief that E, prior to its being combined with J, was an independent narrative strand stemming from a northern version of G, the common epic tradition of the premonarchical period. Still, the scope of E is narrower than J's world-historical scope, primarily because E does not contain a primeval history. That is, E does not begin with a depiction of Yahweh's creation of humankind, but with the divine address to Abraham, Israel's ancestor (Gen 15:1–6). At the same time, this primary focus on Israel puts E closer to the old premonarchic epic tradition, which likewise lacked J's universalistic, world-historical scope. There is more that characterizes E, however, than this focus on Israel as "a people dwelling alone, and not reckoning itself among the nations" (Num 23:9, from E's version of Balaam's blessing on Israel). Certain other major theological perspectives and emphases are evident.

1. Prophetic Leadership. E's overall narrative is built of segments which focus on four specific Israelite ancestors: Abraham, Jacob, Joseph, and Moses. E presents these four leaders, whether explicitly or implicitly, as prophets who receive revelations from God in visions (Abraham, Gen 15:1; Moses, Exod 3:4b), and in dreams (Jacob, Gen 28:11–12, 17–18; 31:4–16; Joseph, Gen 38:20–24). Abraham is explicitly called a prophet (Gen 20:7), while the call narrative in which Moses is addressed (Exodus 3) suggests that he is a prophet. Both Abraham and Moses appear in opposition to kings, while Joseph serves the Pharaoh of Egypt as his most significant source of divine revelation and guidance. Joseph is led by God to interpret Pharaoh's dreams and to exercise leadership because Joseph possesses the Spirit of God (Gen 41:38–41). Abraham intercedes for King Abimelech and heals the barrenness of the women of Abimelech's household (Gen 20:17). In the circles responsible for the E traditions, in short, Israel's leaders are idealized (e.g., Abraham in Gen 20:11–13; Jacob in Gen 31:9–13) in such a way that their ethically questionable behavior is excused and their forceful prophetic leadership is counterposed to the power of kings. Monarchy is seen in the E source as a potentially dangerous institution; royal pretensions to godlike power must be challenged by inspired prophetic leaders. Even Balaam, who is not an Israelite, is presented as an inspired spokesman of Israel's God ("The word that God puts in my mouth, that must I speak" Num 22:38); he is a prophet who resists the king's command to curse Israel.

2. The Fear of God. Several significant E passages are linked together by the repeated mention of the fear of God. Abraham, as he receives his initial call is told not to fear (Gen 15:1); Abraham had said that Sarah was his sister in order to avoid trouble in a city (Gerar) where he suspected there was no fear of God (Gen 20:11). Later, Abraham is tested by the command to sacrifice his son, Isaac. God knows from Abraham's obedient behavior, however, that he is one who "fears God" (Gen 22:12). Jacob is filled with awe-like fear at the realization of God's presence at Bethel, as revealed in a dream (Gen 28:16–17). Joseph is likewise one who "fears God," (Gen 42:19). When the Hebrew midwives heroically defy the orders of the Pharaoh to kill the male infants of the enslaved people, their defiance is a result of their fear of God (Exod 1:17, 21). In the Moses call narrative Moses avoids looking at God who addresses him because he is "afraid to look on God." Moses later appoints judges to try people's cases, being advised by Jethro to choose men who fear God (Exod 18:21). Finally, the Sinai theophany fills the people with fear so that they beg Moses to act as their intermediary with God (Exod 20:18–20).

The fear of God in E thus symbolizes a number of different human experiences and responses. It is not only the numinous awe engendered by an encounter with the holy, as in Jacob's dream at Bethel and the people's awe at Sinai, it is also the obedience to moral demands of God for basic human decency, as in the narrative of Abraham and Sarah at Gerar. It is the root, most profoundly of all, of a father's obedience to a mysterious and terrible command to slay his only son. For E, not only awe but the covenant values of obedience and loyalty are embodied in the fear of God (Wolff 1972).

3. Covenant. The centerpiece of E's theology of history is the covenant of Israel with God at Mt. Horeb ("Sinai" in the J and P traditions). E's narrative has been used by the JE redactor as the base for his entire presentation of the event, with the J Sinai traditions worked in secondarily, primarily in Exodus 34. A crucial question is whether the Decalog and the Covenant Code (Exod 20:1–17; 21:22–23:33) are to be ascribed to E, or whether these torah materials have been inserted secondarily, perhaps because of the frequent use of these legal/teaching materials in liturgical covenant contests. The balance of evidence seems to cast doubt on the older assumption that these law materials were part of E's collection, though many scholars (e.g., Weiser 1961) still describe them as "E."

Apart from these disputed law collections, E's covenant narrative lays the base for the entire pericope by depicting God's revelation of himself on Sinai, where he dwells or is enthroned. The role of the people is emphasized in E: because of their fear at the awesome theophany, they entreat Moses to act as their spokesman. Moses interprets the fearsome appearance of theophanic phenomena, however, in another characteristic E theme, as a "test" of the people.

The covenant ceremony of Exodus 24 is presented in two parallel narratives (vv. 1–2, 9–11; and vv. 3–8). It is in vv. 1–2, 9–11 that we find E's account of the conclusion of the covenant. Here the elders of the people, as well as Aaron, Nadab, and Abihu, worship afar off while Moses draws near to God. In the

sequel (vv 9–11), the elders and leaders eat a sacred meal in the presence of God on the mountain; it is a matter of wonder that God does not harm them for all his numinous power.

E's narrative of the Sinai covenant continues with the startling defection of Aaron, who fashions a golden calf which he proclaims as a representation of "your God, O Israel, who brought you out of the land of Egypt." This golden calf narrative has been interpreted as an indirect polemic against the installation of similar images for the people's worship at Bethel and Dan shortly after the division of Solomon's kingdom into the nations of Israel and Judah. If so, this narrative confirms the theory of E's northern provenance and suggests an early date for the composition of E, perhaps a time when the new cultic establishments at Bethel and Dan were still fresh developments. At any rate, E's narrative of apostasy and rebellion at Horeb emphasizes that the covenant was soon broken by priests and people—broken even before they had departed from the sacred mountain. This helps explain E's last Sinai narrative, which relates the establishment of the Tent of Meeting (Exod 33:3b–6, 7–11). Here God will meet his appointed representatives, Moses and Joshua, to spare the rebellious people the awesome impact of his direct presence among them.

Israel's rebellion at Sinai also coincides with E's rather gloomy view of the propensity of Israel to violate her covenant with God and to transgress the moral values which are part of covenant law. Here as elsewhere, E castigates idolatry (cf. Gen 31:34–35; 35:1–4) and suggests that Israel can avert deserved destruction only by the intercession of a prophetic figure like Moses, with whom God speaks "face to face, as a man speaks with his friend." The consciousness of human sin and guilt which we saw in the figure of Abimelech (Genesis 20) is the direct result of E's emphasis on the necessity of obedience to the demands of the covenant.

4. Theology of History. E's understanding of the history of Israel's life with God is characterized, as has been said, by a narrower scope than either J's or P's. Instead of beginning with the creation of the cosmos (P) or the inhabited world of man (J), E begins with Abraham.

Israel's life-story is thus the only arena E knows for the encounter of man with God. The life of the other peoples of the world, whether they impinge on Israel violently (as in the battle with Amalek, Exod 17:8–16), or peacefully (as in the Joseph narrative) is almost incidental to the sober fact that Israel's ultimate struggle is her own struggle to render obedience to God.

In its depiction of this struggle, E contrasts the disobedience and idolatry of the people, as in the golden calf narrative of Exodus 32, with the courageous loyalty of Israel's four great leaders, Abraham, Jacob, Joseph, and Moses. At critical junctures in history, God subjects Israel's obedience and her "fear of God" to deliberate stress; these stress events "test" the response of men (Gen 22:1; Exod 20:20). Ideally, however, it will be all of the people, not just the great leaders, who will be God's "prophets." "Would that all the Lord's people were prophets, that the Lord would put his spirit upon them" (Num 11:29).

In its presentation of historical events, E is inclined more than J to focus on the specifically religious aspects of human life—on prayer, sacrifices, pilgrimages, and prophetic revelations (Gen 20:3, 17; 28:17; 35:1–8; Exod 32:1–6, 15–20). Indeed, the goal of history for Israel is understood in religious—almost institutionally religious—terms: to be for God "a kingdom of priests and a holy nation" (Exod 19:4–6). E also contains a number of passages, especially in speeches of the major characters, where past and future are linked meaningfully to the present, with God's guidance of events as the connecting thread. Such an interpretation appears, for example, in Joseph's speeches to his brothers (Gen 45:7–14; 50:15–26), and in Moses' address to Israel in Exod 20:18–20. The resulting implication is that history's meaning is understood by inspired prophetic leaders, and that they perceive the goal of the historical process in thoroughly religious terms: "Do not fear; for God has come to prove you, and that the fear of him may be before your eyes, that you may not sin" (Exod 20:20). This strongly didactic and parenetic presentation of history—so similar to that of Deuteronomy—is but one of the indications that E and the Deuteronomic traditions shared a common origin, probably in the N kingdom.

D. Provenance and Date

There can be little doubt that E's provenance is the N kingdom. Evidence for this N origin includes the emphasis on N sites such as Bethel (Gen 28:11–12, 17–18, 20–22; 35:1–8), and the similarities between E's vocabulary (e.g. Horeb) and the characteristic vocabulary of Deuteronomy.

Even more importantly, E shares significant theological themes and emphases with Deuteronomy and Hosea and with the Samuel and Elijah traditions as well. Such shared themes include: emphasis on the covenant and covenant obedience, elevation of the figure of Moses, warnings of the danger of idolatry to the integrity of the covenant people, and a focus on the leadership of prophets as the counterbalance to the pretensions of royalty to absolute power. It may even be that the figure of Samuel provided the prototype for E's figure of Moses, which in turn influences the portrayal of Elijah. At any rate, it seems probable that all of these prophet-oriented traditions were preserved in related schools or tradition circles.

If it seems certain that E fits into a body of N traditions which stretches across the centuries between Samuel and Hosea, it is less certain when the composition of E should be dated. From the originally proposed 8th-century date, scholarly opinion has shifted in the last decades to an earlier date. One proposal has been that E should be dated in the late 10th century and interpreted as an attempt on the part of prophetic or levitical-prophetic groups to exert religious leadership over Jeroboam I (Jenks 1977). This proposal focuses attention on the parallels between the golden calf episode of Exodus 32 and the narrative of Jeroboam's establishment of calf images at Bethel and Dan (1 Kings 12). It also relates E to the opposition to dynastic monarchy which is evident in the stories about Saul's rise to kingship against the steady opposition of the prophet Samuel.

More commonly proposed as an earlier date for E is the 9th century. Here the emphasis is on the parallels between E's Moses and the figure of Elijah, as well as on E's preoccupation with covenant loyalty and the danger of idolatry. Here again, the author or authors of E would presumably be conservative prophetic circles in the N kingdom who, like Elijah, stood up for loyalty to Yahweh against idolatrous monarchs like Ahab.

The date assigned to E will, in the last analysis, depend on a given scholar's total reconstruction of the religious history of the kingdom of Israel. What is evident is that E intends to put forward a corrective—indeed a prophetic—call for religious loyalty and covenant obedience at some point in Israel's history which is sensed by prophetic groups as a turning point, and therefore a time for critical decisions to be made by the nation and its leaders. E's urgent plea in this time of decision is not only for a correct institutional balance between kings and prophets, but for a deeply-felt religious response of loyalty and awe before God.

ELON (PERSON) [Heb *ʾēlôn* (אֵלוֹן)*; ʾêlōn* (אֵילֹן)*; ʾêlôn* (אֵילוֹן)]. ELONITES. Three persons in the OT bear this name, which means "Oak" or "Terebinth."

1. One of three eponymous sons of Zebulun who went down to Egypt in time of famine (Gen 46:14) and whose descendants are named in a tribal roster of the wilderness period (Num 26:26).

2. A Hittite who was father of one of the wives of Esau. That the daughter is named Basemath in Gen 26:34, but Adah in Gen 36:2 probably reflects adjustments of Edomite genealogy in line with shifting sociopolitical alignments.

3. One of the leaders of Israel, unaptly called "minor judges" (Mullen 1982). He was a member of the tribe of Zebulun and "judged Israel" for ten years (12:11–12). He was buried at Aijalon (mentioned only here, location unknown) in the territory of Zebulun. The personal name Elon and the place name Aijalon are identical in consonantal spelling and may reflect on etiological interest. With no other information given, it is unclear which name is being explained by the other (see further Boling *Judges* AB, 215–16).

ELON (PLACE) [Heb *ʾêlôn* (אֵילוֹן)]. One of the villages included in the tribal territory of Dan, before the tribe's migration N. The context suggests that it is located between Aijalon and Timnath, i.e., S of the Nahal Ayyalon and N of Nahal Soreq. However, it is possible that Elon is a variant for AIJALON or ELON-BETH-HANAN.

ELON-BETH-HANAN (PLACE) [Heb *ʾêlôn bêt ḥānān* (אֵילוֹן בֵּית חָנָן)]. A locality enumerated within Solomon's second administrative district (1 Kgs 4:9). Although the general geographic setting is defined by the context as falling within the old tribal territory of Dan, textual as well as historical difficulties prevent a definitive identification. On the basis of the LXX's reading *heōs* (until) and the Vulgate's *et* (and) following the word *ʾêlôn,* many scholars (e.g. Elitzur 1982: 47; Naʾaman 1986: 115; but cf. Mazar *EncMiqr* 1: 266–67) regard *ʾêlôn* and *bêt ḥānān* as two separate places. A prevalent proposal which has textual support from the Codex Alexandrinus equates *ʾêlôn* with the well-known Aijalon (Heb *ʾayyālôn,* present-day Yālo; M.R. 152138). However, it is unlikely that an original reading *ʾayyālôn* would have suffered textual corruption. Moreover, in Josh 19:42–43 we find *ʾayyālôn* and *ʾêlôn* listed separately, the former grouped with sites in the N of ancient Dan, the latter grouped with sites to the SW and W. As for *bêt ḥānān,* we can look either to Beit ʿAnān, some seven km E of Yālo, or along with *ʾêlôn* to some as yet unidentified site to the W. Neither proposal is wholly satisfactory, as Beit ʿAnān was probably incorporated within the district of Benjamin, and the extent of Solomon's control over the Philistine lowland is debated (cf. 1 Kgs 9:16).

DAVID A. GLATT

ELOTH (PLACE) [Heb *ʾelôt* (אֵלוֹת)*; ʾêlôt* (אֵילוֹת)]. Alternate form of ELATH.

ELPAAL (PERSON) [Heb *ʾelpaʿal* (אֶלְפַּעַל)]. A Benjaminite name appearing three times in the longer Benjaminite genealogy offered by the Chronicler (1 Chr 8:11, 12, 18). Elpaal, whose name has been understood to mean "God has worked," is singled out in this list as the father of the builders of "Ono

and Lod with its towns." Since the list of Elpaal's sons in v 18 reveals no similarity with the sons of Elpaal listed in v 12, it is possible that two separate individuals are in view here, or that the name Elpaal reflects a strong clan name whose branches developed independently (Williamson *Chronicles* NCBC, 84).
SIEGFRIED S. JOHNSON

ELPELET (PERSON) [Heb *ʾelpāleṭ* (אֶלְפָּלֶט)]. See ELIPHELET (PERSON).

ELTEKEH (PLACE) [Heb *ʾeltĕqē* (אֶלְתְּקֵא); *ʾeltĕqēh* (אֶלְתְּקֵה)]. The first of four levitical cities allocated to the tribe of Dan (Josh 21:23). Eltekeh does not have a parallel in the Chronicles list (1 Chr 6:69). Eltekeh also appears in the inheritance list of Dan (Josh 19:44).

There is an important reference to Eltekeh in the Annals of Sennacherib. Here a detailed record is given of Sennacherib's military campaign into Palestine in 701 B.C. From Sennacherib's description, it seems that he entered Palestine from the Phoenician coast, advancing along the coastal cities, taking Jaffa, Beneberak, Azor, and Beth-Dagon. The march continued to Ashdod, where he met the Egyptians, whom Hezekiah, the Judean, and Sidqia, king of Ashkelon, had called for help. In a battle at Eltekeh, Sennacherib defeated the Egyptian forces as well as the city (*ANET,* 287).

Two sites have been proposed as the location of Eltekeh. Albright (1924: 8) first identified Eltekeh with Khirbet el-Mukenna‹ (Heb Tel Miqne; M.R. 136133), a site located 20 km E of the Mediterranean on the E border of the coastal plain. One km to the E are the hills of the Shephelah. The valley to the N and E of the tell is called Wadi el-Mekkenna‹. On the 1969 Israeli survey map, the river flowing to the N of Khirbet el-Mukenna‹ is called Eltekeh, while the river to the S is called Evot.

In proposing that Eltekeh lay at Khirbet el-Mukenna‹, Albright contended that it "fits the biblical and extra-biblical indications perfectly, better than any other possible location" (1924: 8). He found no evidence of Bronze Age occupation but a large number of early Iron sherds (12th–7th cent. B.C.), including Philistine ones.

A number of surface surveys were conducted between 1924 and 1957. Naveh in his 1957 survey proposed that Kh. el-Mukenna‹/Tel Miqne should be associated with biblical Ekron (Naveh 1958), a position that is widely held today. In 1981 an archaeological excavation there commenced under the direction of S. Gitin and T. Dothan. Gitin (1989: 52) has argued that Albright did not recognize the total extent of the site, which consists of a large lower tell of 40 acres and a northern acropolis. Further, while Albright did not find any LB material, this period is now well defined at Khirbet el-Mukenna‹. On the basis of the evidence, Dothan and Gitin refer to the site in all their reports as T. Miqne-Ekron. For a description of excavations at Kh. el-Mukenna‹, see EKRON (PLACE).

When Khirbet el-Mukenna‹ was identified with biblical Ekron, it became necessary to find a site to associate with Eltekeh. The second site that has been identified with Eltekeh, although always with a question mark, is Tell esh-Shalaf (M.R. 128144), located 16 km NW of Mukenna‹ and 3 km due W of the modern technological center Rehovot, on the coastal plain. About 4 km to the SE is Jabneh, a major road junction in ancient Israel from which one road ran N to Beth-Dagon, while the other turned off to ancient Lod. Only 9 km E of the Mediterranean, the tell has fallen victim to the winds of the sea and an outspreading of human occupation. Particularly from the W, Tell esh-Shalaf is visible from a distance because it is a relatively high mound compared to most others in the area. The height affords a view of the coastal plain, the Mediterranean, and the Shephelah in all directions except the NE, where three or four small hills block the view. However, the tell is unimpressive and is not widely known.

Since 1957 a few topographical surveys have taken place at Tell esh-Shalaf. On the first survey one MB II tomb was found as well as pottery from the LB Age, Iron Ib–c, Iron IIa, Persian, and Hellenistic periods. Three years later Mazar (1960: 73) identified characteristic pottery from the middle Iron Age, especially the 8th century B.C., as well as from the early Iron Age, including Philistine. When the Levitical City survey team visited the site eleven years later, only one 10th century sherd was found (Peterson 1977: 296–316).

The identification of Tell esh-Shalaf with biblical Eltekeh is not convincing since it is located too far to the S. While Dothan, Gitin, and others place Ekron at Khirbet el-Mukenna‹, they offer no alternative for the identification of Eltekeh except Tell esh-Shalaf. Boling points out that the argument that Eltekeh was too insignificant for a site as large as Mukenna‹ does not hold, because Eltekeh was "prominent enough for Sennacherib's scribe to use it as a major point of reference." (1985: 30). At the present time Khirbet el Mukenna‹ remains the best candidate for Eltekeh.

ELTEKON (PLACE) [Heb ›*eltĕqôn* (אֶלְתְּקוֹן)]. Town situated in the north-central hill country of Judah (Josh 15:59), within the same district as Beth-Zur and Halhul. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). Abel (*GP* 314) proposed an identification with Khirbet ed-Deir, located approximately 9 km W and slightly S of Bethlehem (M.R. 160122). Although this location is suitable in geographic terms, archaeological verification is lacking.

ELTOLAD (PLACE) [Heb ›*eltôlad* (אֶלְתּוֹלַד)]. Var. TOLAD. A settlement of the tribe of Simeon. Eltolad occurs twice in Joshua: in 15:30 it is listed among the settlements of Judah, while in 19:4 it is one of the towns of Simeon. Since the tribe of Simeon was assimilated to Judah at an early date, Eltolad is recorded under both tribes. In 1 Chr 4:29, another list of the Simeonite towns, Tolad is placed between Ezem and Bethuel. This is exactly the place Eltolad occupies in Josh 15:30 and 19:4 (in Josh 15:30 Chesil is a corruption, and in Josh 19:4 Bethul is a variant, for Bethuel). Some texts of Joshua have "El tolad"; Tolad is an abbreviated form of that found in Joshua.

Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the southern kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Eltolad is in the southernmost district of Judah, the Negeb.

The location of Eltolad is problematic. An ostracon found at Beer-sheba mentions Tolad in a context apparently having to do with the distribution of wine (Aharoni 1973: 71 and *LBHG*, 260). Eltolad is perhaps to be sought in the vicinity of Beer-sheba (M.R. 134072).

JEFFREY R. ZORN

ELUL [Heb ›*ĕlûl* (אֱלוּל)]. The sixth month of the Hebrew calendar, roughly corresponding to August and September. See CALENDARS (ANCIENT ISRAELITE AND EARLY JEWISH).

ELUSA (M.R. 117056). A city in the Negeb, some 20 km SW of Beer-sheba.

A. Identification

The name of the site is preserved in the Arab form el-Khalasa, possibly deriving from the common Nabatean personal name Halsat or Halisu (Elusa in its Greek form). Ptolemy (*Geog.* 5.16.10) lists it among the cities of Idumea W of the Jordan. On the Peutinger map, Elusa is marked at a distance of 24 Roman miles from Oboda and 71 from Jerusalem, on the way from Haila (=Aila). Libanius mentions it several times (*Ep.* 101, 132, 532, 536) as a city in *Palaestina Tertia,* formerly in Arabia. It is marked as an important border town on the Medaba map, and is named el-Khalus in the Graeco-Arabic papyri of Nessana. The Semitic name "Halusa" is found in the Jerusalem Targum of Gen 16:7, where it is appended to the name "Shur" as a kind of explanation or description.

B. Investigation

Elusa was discovered and identified in 1838 by E. Robinson, who estimated that the ruins covered 25 or 30 acres, about one-tenth of the actual size of the site (1856: 200–201). In 1870 E. H. Palmer (1871) estimated Elusa to be much larger, but stated that it was utterly destroyed. Palmer stated that by using the site as a stone quarry, the Arabs of Gaza had destroyed Elusa completely. Greek pre-Christian and Byzantine tombstones were discovered in 1904 by A. Jaussen, A. Savignac, and L. H. Vincent (1905). E. Huntington (1911) visited Elusa in 1909 and estimated its population to have been 20,000. The first attempt to draw a general plan of the site was by C. L. Woolley and T. E. Lawrence in 1914, who also discovered the earliest known Nabatean inscription, which was found in one of the cemeteries. The 21 Greek inscriptions which they published range from 426 to 565 C.E. Hellenistic black glazed and Nabatean pottery was found on the site by J. H. Iliffe of the Department of Antiquities. Exploratory excavations were made in 1938 which sought to establish the history of the site by excavating its dumps. After a preliminary survey by A. Negev in 1972, exploratory excavations began in 1973 show much still exists, even after extensive stone plundering. Further excavations were made in 1979 and in 1980.

C. History

Elusa apparently belongs to the first group of road stations established by the Nabateans in the 3d century B.C.E. or earlier, on the trade route from Arabia to Gaza. This is supported by the archaic Nabatean inscription dated to 168 B.C.E., and by the Hellenistic pottery. Painted Nabatean and early Roman pottery attest to the occupation of Elusa in the Middle Nabatean Period (ca. 30 B.C.E.–50/70 C.E.). In the Late Nabatean Period (2d–3d centuries C.E.) and Late Roman period it became one of the most important cities of the Provincia Arabia, and later of *Palaestina Tertia.* Christianity seems to have penetrated Elusa after the visit of St. Hilarion in the middle of the 4th century, but paganism died hard, as attested by late non-Christian Greek inscriptions. Elusa was certainly a Christian town by the beginning of the 5th century, when its bishop is mentioned in conjunction with the visit of St. Nilus at Elusa. Local bishops who bore Nabatean-Arabian names participated in the church councils of Ephesus (431) and Chalcedon (451). Nevertheless an official inscription found in the theater of Elusa, of 454/5 C.E., bears no signs of Christianity. The city of Elusa, in *Palaestina Tertia,* is mentioned by Hierocles (6th century C.E.) and by Georgios Cyprios (7th century C.E.). As attested by Theodosius and Antoninus of Placentia, Elusa must have been an important station on the pilgrims' road to Sinai. As a district capital, Elusa is frequently mentioned in the Nessana papyri. It still retained its position late after the Arab conquest, and is mentioned in a document of 689 C.E. found at Nessana. The city was abandoned by 800 C.E.

D. Excavations

The purposes of the exploratory excavations in 1973 were to refute the legend of the total destruction of the site, to study the reasons for the disappearance of ancient remains, and to determine the extent of the ancient town. Three soundings were made on the W half of the 250-acre site, which is limited between two dry rivers Nahal Besor and Nahal Atadim. Area A is one of the large city dumps, noted already by earlier researchers and located on the W and E borders of the site. The purpose of excavating these areas was to study the history of Elusa by collecting as many small finds as possible (pottery, glass, coins). Contrary to expectations these "dump heaps" contained mostly dust and sand, and very little pottery. These huge heaps consisted mainly of windblown dust and sand (Elusa is situated in the heart of huge sand dunes that extend from the sea), which the city had constantly to battle. The thick cover of sand and dust consequently protected most of the ancient buildings after Elusa was deserted.

Area B is a tower to the E of area A. At this place Woolley and Lawrence marked a gate in the city wall. The ground floor of the tower and remains of an upper floor were buried in sand, but it was not connected with any city wall. Ground surveys identified two lines of towers, one on the N, facing Nahal Atadim, which included the tower in area B, and another on the S, above the bank of Nahal Besor. These date to the Late Roman period and were probably manned by the "Keeper of Peace," referred to by Libanius. In area C, S of area B, is a 10 × 5 m pool, preserved to its full depth of 2 m, which was part of the city's water supply. It was constructed in the Late Roman period and was repaired twice, once in the same period, and again in the Byzantine period.

The discovery of Nabatean capitals, bases, and other decorated architectural members on the E part of the site prompted an additional probe (area D) in the NE part of Elusa. These excavations revealed a large house in an excellent state of preservation. The house was originally built in the Nabatean period, possibly in the 2d century C.E., but it was apparently expanded in the Byzantine period, as attested by a capital decorated by a cross flanked by two birds. At the S end of the E quarter was discovered a Nabatean theater, near which the outlines of a large church were observed.

1. The Theater. The theater is entirely artificial, built on level ground. It consists of two separate components, the *cavea* and the *scaenae frons.* The *cavea* (35 m in diameter) is founded against a structure consisting of two heavy parallel semicircular walls (the outer wall is 1.70 m wide, and the distance between the two is 2.97 m). The walls are built of large hammer-dressed blocks of hard limestone. The space between the walls, normally used in other contemporary theaters for the placement of *vomitoria*, was filled at Elusa with a hard-packed mixture of Early Roman-Middle Nabatean pottery and glass, not later than the middle of the 1st century C.E. The *cavea* is of hard concrete consisting of gray mortar mixed with quarry refuse and has nine or ten rows of seats, separated by 0.55-m-wide gangways. In the middle of the *cavea* is a 2.90 × 2.80 m paved box, apparently for the directors of ceremonies. In the orchestra, facing the box, is a small base (1.0 × 0.80 m) approached by two steps, possibly for a statue (the lower part of a life-size statue of white marble, showing two sandaled feet, was found in the debris). The orchestra is paved with blocks of limestone.

The *scaenae frons* is 31.30 m long, and consists of two rectangular towers—one on the N, the other on the S—and of a solid wall 1.42 m wide. Both towers had steps leading to their roofs, from which one reached the roofs of the vaulted *parodoi* and the *cavea.* In the *scaenae frons* were the three regular doors. In the debris of the central door, two classic Nabatean doorpost capitals were found, and an inscription of a later date was found in the debris of the N door. While the pottery found in the fill of the theater is dated to Aretas IV (9 B.C.E.–40 C.E.), within the *cavea* and in the N tower were found numerous pottery vessels of the Late Roman–early Byzantine period, attesting for a later use of the theater. This is confirmed also by the Greek dedicatory inscription mentioned above, which reads: "During the governorship of the most magnificent and most glorious Flavius Demarchus was made the pavement of the old (or: in front of the) theater, up to the old pavement, by the charge of the citizen Abraamius son of Zenobius. In the year 349" (349 Arabian Era = 454/5 C.E.). Despite its relatively late date, there are no signs of Christianity in this inscription. There is a remote possibility that the theater was still used for the performance of pagan cults even at this late period. W of the theater rises a 3-m-high wall; the relation between the wall and the theater has not been established. In the Byzantine period a dwelling was built against this wall, facing the theater.

2. The East Church. Approximately 36 m N of the theater is the East Church, apparently the cathedral of Elusa. This building (77.40 × 29.60 m) is the largest church in the Negeb and one of the largest in the Holy Land. To the W is a spacious atrium (28 × 32 m) with four porticoes (8 × 9 columns). The E portico is approached by a monumental flight of steps extending along its whole length. Like the rest of the basilica it is paved by large slabs of Proconesian marble. The columns of the portico were, however, made of limestone segments. Three doors lead into the partly excavated basilica. There were ten columns and two engaged pilasters in each row. The monolithic columns (only one was found), bases, and large Corinthian capitals were made of the same imported marble. The sanctuary consists of three apses. Most of the space of the central apse (5.65 m in diameter) is occupied by a marble-covered seven-step structure

of the base of the bishop's seat, the largest known in the Christian world. The walls of the apse were also faced with marble. The unusual size of the bishop's seat forced the moving of the large marble altar (2.60 × 2.0 m) from its regular place on to the bema. The bema is T-shaped, deep in the middle and narrow in front of the side apses. Broken chancel posts and screens decorated with Christian symbols were found in the debris. Special care was given to the S apse. At the back of the chancel a small square was cut off by a subsidiary chancel. At this space a reliquary was placed on a small altar supported by one leg (fragments of the leg, altar table, and reliquary were found in the debris). The floor of the apse was decorated by a large star made in opus sectile. A marble hexagonal preaching pulpit, placed to the NW of the bema, completed the church furniture. The pulpit was supported by a small marble capital richly decorated by windblown leaves, painted in crimson and plated with gold. One face of the capital is occupied by an eagle of spread wings with a cross on its chest. In the debris in the basilica were found numerous small glass mosaic cubes of various colors (some gilded), large white tesserae, and clay roof tiles. It seems that the large tesserae come from the floor of the gallery above the aisles, whereas the small cubes pertain to the decoration of its balustrade. The wooden beams covered by the clay tiles were robbed, together with the marble columns. Chapels and dependencies were along both sides of the building, but these have hardly been investigated.

Excavations E of the basilica, behind the lateral apses, indicate that this church was originally a monoapsidal building with rectangular rooms at the sides of the single central apse. At a later date the lateral apses were added. A similar phenomenon has been observed in the churches of Sobata. A. Negev attributes these innovations to a change which took place in the performance of the cult of saints and martyrs, which occupied a most prominent place in the Christian cult of this region. At the beginning, the reliquary was at the back of the S side room; it was moved to the front of the apse at a later stage. With these changes, the central apse was made smaller by the construction of an additional shell against the original wall, both of which were faced with marble.

No dating material was found in the church, but it apparently still existed after the Islamic conquest of the Negeb. This is supported by the fact that each of the nine Corinthian capitals so far discovered has had one face damaged by iconoclasts, which almost certainly was done by order of the Moslem conquerors. Tentatively, the church could have been built at about 350–400 C.E.; the structural changes probably took place about 450–500 C.E. The excavators are of the opinion that the spacious atrium of the East Church, larger than any other in the Negeb, similar in plan to the forecourt of the Nabatean temples, could have formed part of a large Nabatean sanctuary, which also included the theater. This point has not yet been verified.

3. The Cemeteries. Explorers had earlier observed large cemeteries to the N, E, and S of Elusa. An additional cemetery was found immediately SE of the theater. Although ancient, the tombs also contained burials of the 19th/20th centuries. Investigations were conducted in a cemetery ca. 400–500 m E of Elusa, where the terrain is covered by pottery of the Middle Nabatean Period. Several family tombs were discovered, each surrounded by a thick wall. In one plot, an ashlar-built subterranean monument was found under a fill of heavy boulders. This tomb was lined and covered with slabs of stone, and was used for secondary burial. In the same area were found two *triclinia*, which were used in funerary meals. The Middle Nabatean pottery found all over the site dates this cemetery to the late 1st century B.C.E.–the 1st century C.E.

AVRAHAM NEGEV

ELUZAI (PERSON) [Heb *ʾĕlʿûzay* (אֱלְעוּזַי)]. One of the Benjaminite warriors who left Saul to ally themselves with David at Ziklag (1 Chr 12:6—Eng12:5). 1 Chr 12:1–22 is a section which provides information on the accumulating support for David in his early career, prior to his ascending to the throne. Williamson *Chronicles* NCBC, (104–106) offers a discussion of the literary structure of this section. The defectors from Benjamin are placed first, possibly because their support, coming from the house of Saul, placed special honor upon David (Myers *1 Chronicles* AB, 96). The fact that even Benjaminites allied themselves to David develops the theme that the coming kingship of David was recognized by all, even while Saul remained on the throne (Ackroyd *Chronicles Ezra Nehemiah*, TBC, 54). In addition, a special skill of theirs as warriors is indicated in the narrative (1 Chr 12:2): the ability to shoot arrows and sling stones with either the right or left hand, a skill that made up for their lack in number.
SIEGFRIED S. JOHNSON

ELYMAIS (PLACE) [Gk *Elymais* (Ἐλυμαις)]. Greek name for biblical Elam, the region or province between Babylonia and Persia, of which Susa was the chief city; today SW Iran (Khuzistan). The text tradition of 1 Macc 6:1 is quite confused (*IDB* 2:95). Although the majority of the readings suggest that Elymais was the name of a city located in Persia, the original text was likely: "in Elymais in Persia there was a city." Although the chief city of Elam was Susa, the reference is not likely to Susa, since it was controlled by Antiochus IV at the time of the story narrated (Goldstein *1 Maccabees* AB, 308). The name may have been used to refer to that part of Elam that was not under the control of the Seleucids (KlPauly 2: 253–54).

In Josephus (*Ant* 12.9§1), Elymais is considered a city where there was a temple of Artemis (cf. Polybius *Hist.* 31.9[11]). The reference in Tob 2:10 could refer to a city or a province. However, there is no evidence that such a city ever existed. Elymais is, however, known to be the name of a region or a province of the Persian empire (so the LXX text of Dan 8:2, preserved by Codex Chisianus [87]; cf. Strabo 15.732, 744; Herodotus 3.91; Ptolemy *Geog.* 6.3).
W. WARD GASQUE

ELYMAS (PERSON) [Gk *Elymas* (Ἐλυμας)]. The Jewish magician (Acts 13:8; also called BAR-JESUS, Acts 13:6) who had connections with the Roman proconsul of Cyprus, Sergius Paulus, and opposed the Apostle Paul when he and Barnabas sought to evangelize the proconsul. He was temporarily blinded by Paul as punishment.

A consensus has emerged in recent studies that the author of Acts intended to translate *Elymas* by *magos* (magician) and to say that a person with the Jewish name of Bar-Jesus had taken in a Greek context the foreign name Elymas, which translated into Greek as "magician" (e.g., Haenchen *Acts* MeyerK, 398). According to this reconstruction, Elymas is to be seen as the transliteration of a Semitic word which could be connected with the functions of a magician. Various solutions have been proposed ranging from the Arabic *halīm,* "wise," to the Aramaic *hālimā,* "powerful." Yaure (1960: 297–306) has argued that *Elymas* is the exact transliteration of the Aramaic *ḥālōmā,* which refers to a person who can interpret dreams and offer divine messages in a state of trance. These activities are common characteristics of magicians in the ancient Near East and thus *magos* would be an accurate translation.

Other scholars have thought that Luke intended Elymas to be the Greek translation of the Semitic Bar-Jesus and that he understood both to mean "magician." However, the generally accepted readings will not work for this reconstruction since *bariēsous* means "Son of Jesus" (or more completely, "Son of Salvation") and *elymas*, whatever its meaning, has no relation to this. But some mss read *hetoimas* (or *hetoimos*) in place of *elymas* (D, cf., Lucifer, it^{gig}, vg^{mss}, Ambrosiaster, Pacianus). Zahn (*Acts* KNT, 416–18) adopted *hetoimas* (meaning "ready") as the original text. In turn this led him to conjecture that Bar-Jesus is actually a corruption of the transliteration of the Heb *bar-yišwah.* The *Pi*ʿ*el* form of *šawah* means "make smooth, level, or ready" and could be translated *hetoimas.* The resultant "Son of Readiness" is supposed to connote "magician."

Zahn's reconstruction has not been generally accepted. The occurrence of *hetoimas* in D can be explained as originating with a later scribe who sought to connect the Cypriot magician of Acts 13 with one mentioned by Josephus (*Ant* 20.7.2, and in one ms named *Atomos*). We also know that it was common for Jews to have both a Jewish name and a Greek one that may not have been linguistically related. In Acts there are Saul, also known as Paul (13:9), and John, also known as Mark (15:37). Thus some scholars who believe that Luke intended to connect Bar-Jesus with Elymas suggest that *methermēneuetai* (v 8, "is translated," RSV, "is the meaning"), might be taken in a weak sense to connote "this person known as Bar-Jesus in Jewish circles was called Elymas in Greek circles" (e.g., Lake and Cadbury 1933: 144). There is, however, no evidence that *methermēneuō* can have this weak meaning.

The picture of a diaspora Jew involved in the popular Hellenistic preoccupation with magic, despite the condemnation of magic in "official" Jewish texts, is not surprising (Alexander in *HJP* 3/1: 342–43). His function in the proconsul's household may have been similar to that of a court philosopher or later private chaplain; to answer questions about the nature of life and offer divine guidance for the future. It is from a Christian perspective that he is called a "false prophet" (v 6).

Other questions surround the function of this magician in the theology of Acts. It seems clear that this confrontation between Paul and Elymas is part of an anti-magic polemic which is also found in Acts 8:9–13; 16:16; 19:13–16, 18–19. In each case Luke does not engage in a philosophical attack on magic but simply points out that it is negated by the power of Jesus.

Sanders (1987: 259) argues that Luke's theology is anti-Jewish, and that what is important about Elymas is that he is a "Jewish" magician. True to the stereotypical picture of Jews in Acts, he intransigently opposes the gospel. However, it should be noted that not all scholars agree that Lucan theology is anti-Jewish, and debate on this point continues.

ELYON. See MOST HIGH.

ELZABAD (PERSON) [Heb ʾ*elzābād* (אֶלְזָבָד)]. Two individuals in the OT bear this name which means "God has given." In addition, this Hebrew name also occurs in Neo-Babylonian business texts as *Ilî-za-ba-du/Ilî-za-bad-du* (Coogan 1976: 13, 43–47, 71–72). With it may be compared the biblical Jehozabad and the Aramean *Nabû-zabad* (Hilprecht and Clay 1898: 27, 65; Clay 1904: 57).

1. Ninth of eleven men who were "chiefs of the Gadites in the army" (NEB, 1 Chr 12:15—Eng12:14). Elzabad was among the warriors, experts in close combat (Rudolph *Chronikbücher* HAT, 106), who came to the aid of David while he was at Ziklag. LXX^{BS} reads *eliazer* in place of Elzabad.

2. Elzabad is also the name of a gatekeeper (1 Chr 26:7) in the temple in Jerusalem according to the schematization offered by a reviser of the Chronicler's organization of these temple functionaries (Williamson *1 and 2 Chronicles* NCB, 125–26, 169–70; Rudolph, 173). Here Elzabad is named as the fourth son of the preeminent family of Shemiah (Rudolph, 173), the oldest son of the Gittite OBED-EDOM.

ELZAPHAN (PERSON) [Heb *ʾelṣāpān* (אֶלְצָפָן)]. See ELIZAPHAN (PERSON).

EMADABUN (PERSON) [Gk *Ēmadaboun* (Ἠμαδαβουν)]. One of the sons of the Levite JESHUA responsible for supervising the building of the Temple (ca. 520 B.C.E.) after the return from exile (1 Esdr 5:56—Eng5:58). His name appears in 1 Esdr 5:56 as one of the Levites charged with overseeing the laying of the Temple's foundations. The fact that the parallel section in Ezra 3:8–9 does not mention him calls attention to differences between 1 Esdras and Ezra-Nehemiah. Josephus mentions a similar name at this point, Aminadabos, identifying him, however, as the father of Judas and Zodmielos, and less clearly with Jeshua (or Jesus) (*Ant* 11.4.2).

It has been suggested that Emadabun represents a confusion or modification of the name Henadad, which does appear in Ezra 3:9 (Myers *1 and 2 Esdras* 66). The similarity between Josephus and 1 Esdras here is one of several indications that Josephus had followed 1 Esdras rather than Ezra-Nehemiah in his account of this period. In addition to the reference to Emadabun in 1 Esdras' depiction of the founding of the Temple, other slight differences from Ezra 3:8–13 mark this section. Both Ezra 3 and 1 Esdras 5 state that the founding took place in the second month of the second year after the people's arrival. 1 Esdras, however, adds also that they began their activities "on the new moon," (1 Esdr 5:55), a detail Josephus repeats. Such variants play a role in scholarly debates about the relation between 1 Esdras and Ezra-Nehemiah and in the attempts to determine which is the earlier work.
TAMARA C. ESKENAZI

EMAR (36°01´N; 38°05´E). A Bronze Age city, modern Tell Meskene/Balis, located on the great bend of the Euphrates river in Syria. The name of the city does not appear in the Bible; nevertheless, the archaeological and epigraphic material that has been found there portrays in a remarkable way the period at the end of the Late Bronze Age (14th–13th centuries B.C.), the importance of which to the formation of Israel is well known.

A. The Excavations

The campaign originated as a salvage operation to save the archaeological sites of a region which was in danger of being flooded by the construction of a dam on the Euphrates near Tabqa. It was in the context of this operation that the observations made at the site of Meskene enabled one to confirm that the medieval city of Balis, which was then being excavated, partially covered the city of Emar, a city known only from some epigraphic documents dating from the 2d millennium B.C.

A first reconnaissance mission was carried out in November and December 1972. The findings were of such interest that five other campaigns followed between 1973 and 1976. In addition, a study of the environs led to the discovery of the site of Tell Faq'ous, which was situated on a promontory overlooking the river near the site of Emar. It was excavated in 1978. This operation was especially important, for it made it possible to describe the regional system in which Emar functioned and the organization of that part of Syria as a whole during the Late Bronze Age.

B. A New City

The research in the area rapidly revealed that the site of Emar, destroyed in 1187 B.C., judging from a dated tablet discovered on the floor of a private house, did not date back any further than the 14th century and that it showed all the signs of a newly built city. That information was in apparent contradiction with the fact that the name Emar had been found in Mari documents dating to the 18th century B.C. as well as in the later documents of the Mitannian period. Moreover, texts found at Ebla in 1975 have again mentioned the name of the city, which would therefore place Emar as far back as the ED Period. The

antiquity of the city is thus attested, yet the situation resulting from the excavation was hardly in accord with this information. However, the meander of the Euphrates provides the explanation for this anomalous situation. The early city, which existed at the time of Ebla or perhaps even before, and which continued to exist during the first two thirds of the 2d millennium B.C. undoubtedly underwent increasing difficulties due to the change in the meander of the river with which it was associated. The movement of the river condemned the city to destruction; the only solution was to abandon the city and rebuild it nearby.

The Hittite King Suppiluliuma I (ca. 1380–1346 B.C.) or his son Mursili II (1345–1315 B.C.) had the city moved and rebuilt. The dwellings were not rebuilt in the valley beside the old ones, but on the plateau which bordered the valley on the south side. The builders used the slope of the rocky sub-foundation which descended from west to east to form the base of the successive terraces on which the living quarters as well as the main monuments were to be set up. To build this terraced city it was necessary to remodel the face of the rock, eliminate its asperities, fill in its cracks and gullies, and build rock embankments all around, the purpose of which was to retain the earth and the constructions, but also to raise the floor of the sub-foundation by several meters in order to balance the plan as a whole and allow prominent parts effectively to dominate the environment. One can easily measure the magnitude of this task if one is mindful that the new city extended more than a thousand meters from east to west and six to seven hundred meters from north to south. But above all, it is the boundaries of the eastern side of the city that best show the size and difficulty of the operation: the rocky mass which served as a foundation was bordered on the northern side by the Euphrates and on the eastern and southern sides by a deep ravine originating on the plateau, but on the western side the rock had no break which could be used. Therefore the builders dug out a slightly curved ravine more than 500 meters long, about 15 meters deep and about 30 meters wide at the base. The fortress of the city was connected to the edge of this artificial ravine. The final result was the building of a sort of amphitheater, facing the river, located 285 meters away and rising to a height of 325 meters at the site of the city's great sanctuary. The excavation also showed that the layout of the city had been very well planned and organized. Before building the houses, the people had set up the system of roads in the form of a network of parallel streets spread out along the slope following the level curves, then connected by highways which followed the line of the largest slope. This was a magnificent work which shows the degree of technology attained by Bronze-Age men and is also the only example that we have at present of a new city which involved works of such major importance.

C. The Palace

The local king's palace stood on a NW promontory. From this position one could overlook not only the city but also the valley below. This may have allowed the palace to communicate by visual signals with the fortress of the province of Ashtata located at the site of Tell Faq'ous.

The architectural style of the building is the well-known *bīt Hilāni* style seen in other 1st millennium sites. Recently the origins of this architectural style have been questioned, and therefore Emar is extremely important since this is the first time that the *bīt Hilāni* style could be so clearly seen on a Syrian site dating to the end of the Bronze Age. Thus the origin of that style seems clear; one must look for it in the Hittite architectural practices such as those found at Boğhazköy (see Hrouda *RLA* 4: 406–409).

The palace was formed mainly of a large rectangular room which undoubtedly served as a throne room. It was connected to a porch upheld by two columns by a hall with unequal sides. One floor extended above the official quarters, which were situated on the ground floor to house the royal family, while outlying buildings were terraced along the slope behind the main building. It was in this palace that the first 14 tablets were discovered, placed in a jar and hidden in a small cupboard. These tablets, found on the fourth day of the excavation, made the identification of the site possible. Some beautiful objects (glazed ceramics, a bronze sword, the remains of a composite statuette) also attest to the quality of the furnishings of this residence. The building seems to have belonged to the local king and not to the representative of the Hittite government.

D. The Temples

Four temples were discovered, all based on the model of the *megaron;* an oblong room closed off at one end but opened at the other by a central entrance which was preceded by a porch supported by two columns. The interior furnishings consisted of a raised altar which was often preceded by a platform that covered almost two thirds of the length of the room and facing a support or a small seat placed in the middle of the far wall; other seats were occasionally placed along the side walls and small supports were placed in the room itself. Decorations made from earthenware nails adorned the front, and perhaps also the long walls, of some of the temples which have been found, but it is impossible to suggest exactly how to restore them.

Two of these temples, set up at the highest point of the site, were closely linked: they were set up on both sides of the highway leading to a vast esplanade, where what is doubtless the base of an altar has been unearthed. The tablets collected from the floors of these buildings indicate that the south temple, situated a meter higher than the second one, was probably dedicated to Baal, and the north one to Astarte. These buildings make up the major worship center of the city, which explains why the place chosen for them could be seen from all over the city and from all the surrounding areas.

A third temple was unearthed in a different section of the city; it differs only minimally from the two preceding ones, but it was the worship center of a diviner who, protected by the Hittite sovereign, seems to have played an important role in the city. In the ruins of the sanctuary, part of the library and its archives have been found, a discovery which not only brings to light the activity of such a personality in the city, but fills in the step which had been hitherto missing in the process of the transmission of hepatoscopic practices between Mesopotamia and the Hittite Anatolia. Unfortunately we do not know the name of the divinity worshipped there. But the wealth of the artifacts found there (high-quality glazed ceramics, engraved stone, and a sculptured horn) is proof enough of its importance.

E. Houses and Daily Life

Many sections of the city have been completely or partially excavated. Added to the information about urbanism which is gleaned from this site is that which concerns daily life. The houses hardly differ from each other; one can see a kind of blueprint which was modified only to fit in with the terraces and the system of roads. Each house consisted of a main room which opened directly on to the outside, and two small rooms placed side by side, generally opposite the entrance. In the main room can often be found a baking oven of traditional shape and the remains of the staircase leading to the floor where there were one or two rooms looking out on the terrace which played such an important role in daily life.

The utensils found consisted of the usual potteries, stone objects, tools, earthenware figures of humans or animals, and occasionally jewelry. One characteristic of the site was also to provide a large number of "models" of houses or towers apparently used for home worship. Real works of art are scarce; one of the most remarkable of them is a sculptured horn of capridae. This relative paucity of artwork may certainly be due to the pillaging that occurred when the city was finally destroyed.

F. The Texts

The palace, the temples, and the private houses have yielded several hundred cuneiform tablets which shed new light on the culture of that region of the Euphrates in the 13th century. They lead us deeper into the daily life of Emar, its administrative problems, its economic and judicial activities, and its religious practices. Most of the documents are written in the Akkadian language, but some were also written in Hittite and Hurrian. As regards the seal impressions—there are almost 400 different copies of them—they show the same diversity of origins and influences as well as a local style imitating the patterns of the dominant power. Thus at the heart of the Syrian universe Emar found itself in contact with Mesopotamian and Anatolian influences, but the latter influences seem to have been weaker than the former.

G. Tell Faq'ous and the Province of Astata

This is a fortress built on the top of a promontory overlooking the valley. This fort guarded the entrance of the site and was responsible for defending the river upstream against the incursions of the Assyrians. The Hittite annals enable one to attribute its construction to Muršili II, and by chance a sealing was found there belonging to the "Chief of Chariots" (that is, the Hittite general-in-chief) identical to the one found at Emar; the close association of the two sites is beyond doubt. The organization of the province of Astata,

the southeast border of the Hittite Empire, therefore stands out clearly: there was a fortress at the entrance of the province which was responsible for protecting the capital Emar, whose role on the Euphrates as a commercial port between Mesopotamia and Syria was economically important. With these conditions, it is easily understood why Astata was the object of the particular attention of the Hittite sovereigns and why they did not hesitate to engage in a policy of major building developments there.

EMBALMING. The various methods of preserving dead human and animal corpses from organic putrefaction and decay. The Hebrew *ḥānaṭ,* "to embalm," is found twice in the OT (Gen 50:2, 26), where it is used with reference to the bodies of Jacob and Joseph in Egypt. The verb *ḥānaṭ* in Song of Solomon 2:13a ("the fig ripens/brings forth her fruits") must be an unrelated Semitic loanword of the same consonantal spelling, cp. Arabic *ḥanaṭa* and Akkadian *ḫunnuṭu,* "to become mature, to ripen." Others have suggested a relationship to the word for mature wheat *ḥiṭṭāh* (<**ḥinṭat;* cp. Aramaic *ḥinṭīn,* and Ugaritic *ḥṭt*) perhaps by reason of its color at maturity, although this needs further study. Embalming of the dead has its origins in ancient Egypt.

A. Origins of Embalming in Egypt

It is generally assumed that embalming arose in Early Dynastic Egypt to some extent as a result of the occasional observation and examination of Predynastic-period bodies which had been preserved by simple accidental desiccation in the hot sands of Egypt, but which later had been exposed to view by natural means such as the wind. This was probably a contributing factor but certainly not the major reason why embalming began in Egypt. It is also generally assumed that the origins of embalming paralleled developments in Egyptian religion. This may be true for all but the earliest periods of Egyptian history. It

is well known that Osiris, as god of the dead and the resurrection, was closely associated ritually with embalming and beliefs concerning the afterlife of the dead. However, such an association cannot be earlier than the latter part of the Old Kingdom or about 2700–2250 B.C., the date at which Osiris first appears in Egyptian texts (Fleming et al. 1980: 5). By this time attempts at embalming were already several centuries old. Indeed, it is with the Predynastic Badarian culture burials, ca. 3790 B.C. with a radiocarbon date error of about 300 years (the village of El-Badari is about 30 miles south of Asyut), that we find the first evidence of belief in an afterlife which was apparently thought of as being similar to mortal life along the Nile valley, and requiring the same daily supplies and material objects (Fleming et al. 1980: 1). At the present time, the central motivating factors which underlie the origins of embalming in Egypt remain obscure.

B. Formative Period of Embalming

Embalming developed during the Archaic to Early Dynastic Periods, ca. 3100 B.C.–2700 B.C. The earliest attempts to preserve lifelike corpses appear during the 1st–3d Dynasties, where corpses were wrapped in linen wetted with resins fashioned around the corpse to preserve a likeness of the dead body and visage. Somewhat similarly, the application of painted plaster modeling to early skulls, some of which are now in the Cairo Museum, shows just how accurately the visage of the dead could be reconstructed. Clearly, however, at this period there is no true embalming of the dead. The use of resinated linen outer wrappings over the body provided in effect only a shell within which some degree of decay still occurred, and so preservation of human remains from this period, especially the soft tissues, is generally poor. The use of natural dehydration in sandy burials may well have continued for some time among the poorer classes, and occasionally well into the later Pharaonic periods in unusual circumstances such as war, where rapid preservation of the body was required (Spencer 1982: 114).

C. First Attempts at True Embalming

(Dynasties 3–61; ca. 2686 B.C.–2181 B.C.). From the 4th Dynasty to the beginning of the 6th Dynasty, the first real attempts at embalming the dead are found. It was obvious by this time to Egyptian burial technicians that the abdomen, the intestines, and the stomach were somehow directly associated with processes of decay. Only by their removal and neutralization by washes and soaks could such putrification be arrested. For the first time the incision in the left side of the lower abdomen is used to gain access to internal organs of the abdomen which were removed and preserved individually in receptacles placed within the tomb. Removal of the brain, however, is not found until the New Kingdom. The Egyptian Coffin Texts, especially Spell 755, show plain familiarity with the realities of the decay of the dead corpse (here now ritually associated with Osiris): “The members of Osiris are inert, but they shall not [always] be inert, they shall not putrefy or shake, nor swell up or make foul liquid” (Fleming et al. 1980: 18). The slow procedure of mummification, still quite an imperfect process at this early period, with the dissection and preservation of various individual organs must surely have been a very gruesome and repulsive procedure. From a modern perspective, if one considers that human fecal matter is composed approximately of 40–50 percent living and dead anaerobic bacterial cell bodies, then one quickly realizes just what potential there is for rapid decay of human corpses and the associated massive production of foul gases. Certainly it took an extraordinary motivation such as religion and eternal existence to facilitate and ensure the continuance of such large-scale dissection and embalming of corpses through several millennia in the climate of Egypt.

Alongside these first attempts at arresting decay by dissection, embalmers as late as the end of the 5th Dynasty (ca. 2400 B.C.) were still applying the simple linen wrapping around intact corpses to preserve and mold the external shape and likeness of the body, with facial features and other details highlighted by paint, the application of hair, etc. During this period, embalming was a luxury available only to royalty and nobility (Fleming et al. 1980: 7). The application of natron, the one crucial ingredient for successful embalming in later periods, first occurs at this period as a desiccant, but by no means was it applied universally.

The oldest extant mummy is that of Waty, found at Saqqara, where it still remains; it dates to the late 5th Dynasty (ca. 2400 B.C.). This mummy was wrapped only in resin-soaked linen. Facial details such as

eyebrows and moustache, painted onto the surface of the wrapping, reproduce the deceased's appearance (Andrews 1984: 9, and photograph). Only three complete mummies survive from the Old Kingdom. A fourth, once the property of the Royal College of Surgeons, London, perished in World War II.

D. Embalming during the First Intermediate Period

(Dynasties 7–11; ca. 2181–1991 B.C.). During the First Intermediate Period (ca. 2200–2000 B.C., 7th–11th Dynasties) there was a substantial decline in the quality of mummification due to several factors, particularly the decline in the quality of material arts generally and a shortage of various imported oils, resins, and woods which were required for embalming (Fleming et al. 1980: 8). There are few examples of mummies from this period, but those that do survive exhibit the now common practice of evisceration through incisions in the abdomen, with the preservation of the internal organs in storage containers. Even so, as late as the 11th Dynasty, primitive mummification without dissection is still evident in some mummies. The use of linen bandaging during this period continued to be an important procedure in embalming. Enormous quantities of linen were often employed as outer wrappings. For example, an 11th Dyn. mummy from Thebes belonging to a certain Wah was bound and wrapped with a total of some 375 square meters of material (Spencer 1982: 115).

E. Embalming during the Middle Kingdom

(Dynasty 12; 1991–1786 B.C.) During the reign of Mentuhotep II at the beginning of the Middle Kingdom, trade was widely reestablished throughout the Mediterranean and Africa and supplies of embalming materials were again available in Egypt. When corpses were embalmed elaborately, the internal organs were still removed from the body, but now, apparently in response to the need for simpler or cheaper methods of embalming, mummies were found in which the internal organs were not removed and the corpses themselves were merely dehydrated. Thus decay often continued after the mummy was wrapped because of residual moisture retained deep within the corpse. During this period, mummification continued to be increasingly available to the lower classes of Egyptian society (Fleming et al. 1980: 17–19).

F. Embalming during the Second Intermediate Period

(Dynasties 12–17; 1786–1567 B.C.). The Second Intermediate Period in Egypt was a period characterized by internal collapse, most notably that which occurred following occupation of the country by the Hyksos after about 1670 B.C. Interruptions in trade resulted in shortages of embalming materials, especially in the south. Thus mummies from the 17th Dyn. are of poor quality and generally lack treatment with coniferous resins (Fleming et al. 1980: 19).

G. Embalming during the New Kingdom

(Dynasties 18–20; ca. 1567–1070 B.C.). Very little is known about mummification during the Second Intermediate Period (1786–1567 B.C., Dynasties 12–17). However, by the beginning of the New Kingdom, major advances appear in the embalming process. Advanced and superior techniques of embalming continued through the 21st Dynasty. Here are found the most extensive efforts at making the mummy appear as lifelike as possible. The skin was colored according to artistic tradition—red for men and yellow for women. False eyes were made of glass and shell and imparted to the mummy a startlingly realistic stare, shriveled limbs of the dehydrated corpse were packed subcutaneously with sawdust, mud, or rags to reproduce lifelike bodily contours and corpulence, wigs for women replaced hair lost to embalming, and sometimes the mummy was clothed and bejeweled to reproduce the dress and appearance of daily life. The so-called "Royal Mummies" of the Cairo Museum certainly represent the finest embalming techniques available during this period (see the plates in Smith 1912). Surviving examples of superior preservation of the corpse include the mummy of Seti I (14th Dynasty; see Andrews 1984: 8 and photograph, or Smith 1912), the mummies of Yuya and Thuya (18th Dynasty; see Fleming et al. 1980: 34 and photograph), and Rameses II (14th Dynasty; see Smith 1912).

From the 22d through the 25th Dynasties and later, the art of embalming gradually declined in quality.

H. Embalming during the Late Period

(Dynasty 26, Saite Period and later; *post* 664 B.C.). After 600 B.C., the desire to preserve the visage of the living body accurately is increasingly less obvious. The embalmers are no longer of priestly rank, and

Herodotus seems to regard them merely as common tradesmen. In this light, Herodotus lacks almost completely any mention of the religious nature of embalming (Lloyd 1976: 355). By the Ptolemaic Period, the process is rather crude generally, with the majority of the effort applied to the bandaging and other efforts to create the outward appearance of a wholesome intact body, while less and less effort is expended in the actual preservation of internal organs and tissues. Copious treatment of the corpse with hot resins usually made it heavy and hard. Preservation of tissues in these mummies is very poor as resin usually impregnated the entire corpse and permeated into the bone. While the mummy itself may have lacked suitable treatment, the outermost wrappings were often elaborately fashioned, imparting to them a beauty distinctive of the period.

The word "mummy" stems from the Late Period, deriving from a Persian word for bitumen or pitch. The application of the term to embalmed corpses is due to the blackened color of Late Period mummies, which resembled bitumen both in color and in combustible characteristics when mummified corpses were burned as fuel in late antiquity. The word passed into Byzantine Greek *moumia/momion* and then into the Arabic *mumiyya*, literally "a bituminized thing or object." The importance of bitumen as a medical remedy in antiquity was soon associated with Late Period mummies and their presumed bituminous qualities. This eventually resulted in the sale and widespread prescription of ground and powdered mummy corpses as a potent medicine used for a wide variety of ills, and which was still being imported into Europe as late as the 17th century. One 17th-century English drug list describes mummy as being "resinous, hardened, [having a] black shining surface, of a somewhat acrid and bitterish taste, and of a fragrant smell" (Dawson 1927).

I. Embalming and the Rise of Christianity

The Christian belief in the ultimate resurrection and eternal preservation of the body differed from the older Egyptian religion by recognizing no fundamental need for the deliberate preservation of the body immediately following death. The treatment and burial of Egyptians in the Christian Period after the third century was simple and uncomplicated. Coptic corpses were washed, dressed, and bound in shrouds, often with salt and juniper berries placed within the layers, and then buried to be preserved naturally by accident in much the same way as Predynastic corpses (e.g., Grilletto 1981). The Greek *Life of St. Antony* by Athanasius illustrates the Coptic attitude toward the treatment of the body and its burial. Here Antony forbids pagan Egyptian burials: "The Egyptians love to honor with burial rites and to wrap in linens the bodies of their worthy dead … not burying them in the earth but placing them on low beds … Do not permit anyone to take my body to Egypt, lest they set it within the houses." And thus, "in accordance with the commands he had given them [i.e., his disciples] making preparations and wrapping his body, buried it in the earth, and to this day no one knows where it has been hidden …" (Gregg 1980: 96–98). A passage in the Bohairic *Life of Shenoute* 133 describes the treatment of the body of a young monastic novice in simple terms: "They wrapped him in a shroud, took him out, and buried him" (Bell 1983: 85). Attempts at embalming employing any of the classical Pharaonic methods declined and ceased by about the 4th or 5th century A.D., a period which also roughly corresponds with the last dying vestiges of the old religion and its priesthood, and the loss of the knowledge of hieroglyphs.

J. Procedure of Embalming

Descriptions of the process of embalming in Egypt are extant only from the later periods, notably from the hands of Herodotus (*History* 2.85–90) and Diodorus Siculus (*History* 1.91). The earliest and fullest account is that of Herodotus, who visited Egypt just after 450 B.C., and whose account of mummification probably describes methods of embalming stemming from the New Kingdom period, but in the particular state of decline representative of the time in which he writes (see Lloyd [1976] for a recent detailed analysis of Herodotus' account of mummification). Herodotus appears to describe two or three individual methods of embalming, but recently Lloyd (1976: 356) discounts these as "yet another example of the orderly Greek mind's imposing a rigid system [of classification of embalming] where none appears to have existed." It is important to note that there is no inherent or direct derivational pathway between the dissection of the corpse during mummification and the development of Egyptian medicine and knowledge of physiology. Physicians were priests of the healing goddess Sekhmet, whereas the embalmers were

priests of Anubis the god of the dead. Further, while much of the canon of Egyptian medical practice and tradition was already fixed near the beginnings of Egyptian history, the process of embalming developed much more gradually (see Wilson 1962: 121–22). And thus also, the mention in Gen 50:2 of the mummification of Joseph at the hands of the Egyptian "physicians" (Heb *rōpĕʾîm*) is probably incorrect as Egyptian physicians were not employed in the mummification of the dead.

The religious character of the process of embalming cannot be overemphasized. For most, if not all of Egyptian history, embalming was a religious practice. The preservation of the body was necessary so that the *ba*, very roughly similar to an individual's soul or spirit, could recognize the body upon its return to it. Further, in certain periods at least, the embalming priests wore masks of the god whose function they were ritually performing upon the deceased. For example, from one workshop has been discovered a priest's mask of Anubis, the god of embalming, which has openings located at the bottom of the chin through which the wearer could see and work upon the dead while at the same time impersonating the god of embalming himself (Spencer 1982: 129).

Embalming itself surely took less than the 70 days mentioned in certain texts. It is now clear that this included the period of actual embalming as well as the periods of mourning, ceremonies, and other burial preparations, as illustrated by one Demotic text which mentions day 35 as the day in which the prepared corpse was wrapped with linen. It has been rightly emphasized that the ceremonial and religious aspects of embalming were extremely important to the Egyptians, being the key to the continuance of life in the hereafter. Accordingly, the various ritualized performances attending death were the reason why the process of embalming and burial lasted so long (Lloyd 1976: 361; Spencer 1982: 126–27). The period of 40 days in which the body of Jacob was embalmed (Gen 50:2–3), is not incompatible with current knowledge of the duration of the process.

Embalming usually took place in a temporary structure located near the tomb or necropolis. Generally the corpse was placed upon the embalming table, a shallow stone "trough" which sloped and drained toward one end where biological fluids and washes derived from any part of the embalming process could easily be collected. Actual work on human corpses began with the head. A narrow chisel was inserted into the left nostril and forced through the ethmoid bone into the cranial vault. The brain was slashed to pieces with a hooked rod, then removed (often incompletely) with a slender spoonlike instrument (Leek 1969). The vault was sometimes packed with linen soaked in resin. Next the corpse was incised on the left side of the lower abdomen so that the abdominal organs could be withdrawn. Such incisions are said to have been made with an Ethiopian obsidian knife (the use of obsidian knives for ritualistic purposes is known elsewhere, as in Joshua 5:2, where they are used for circumcisions). Through this incision the intestines, liver, and other organs were removed. The diaphragm was slashed and the thoracic organs removed. The heart and kidneys were usually left *in situ.* However, examples are known in which the internal organs were removed through the anus without the use of the abdominal incision, but with the aid of a fluid which was introduced to accelerate lysis and degeneration of the internal organs, much like one method described by Herodotus and for which examples are extant today (see Reyman and Peck 1980). The organs were individually preserved and wrapped in bundles which were either stored in canopic jars or returned to the corpse. Various spices such as myrrh, cassia, and other substances were placed in the body cavity, apparently to mask the smell of biodegradation of the corpse until it was completely dehydrated.

The application of natron was the one step necessary to ensure successful preservation of the corpse. Natron is largely a mixture of sodium carbonate and sodium bicarbonate. It is found naturally in various locations, especially at Wadi el-Natrun in the Libyan Desert, Barnugi near Naucratis, and El-Kab in the south. The natron powder was applied in a process which Herodotus describes as being similar to the drying and salt preservation of fish, except he notes that natron was substituted for salt. Modern experiments have shown that natron in solution (as suggested by some of the older translations of Herodotus) was not suitable for embalming, and that dry natron powder is far superior as a desiccant and preservative than is sodium chloride or natural dehydration, or either substance in solution (Lucas 1932; Lucas 1962; Sandison 1963; David 1979). Even so, Iskander and others seem correct in believing that Old Kingdom mummies were often processed with a natron solution during the formative attempts at

embalming, and that many such corpses which appear partially decarnated were not embalmed after partial decay but were actually exhibiting the results of an extended liquid steeping in salt or natron solutions (Iskander 1980: 9–10). The corpses were dehydrated by being packed within a pile of dry natron powder, and linen sacks of natron were also placed within the eviscerated corpse. In fact, one of the hieroglyphic symbols for natron is a sign representing a linen bag (filled with natron) like actual bags which survive as embalmers' refuse and which were originally packed within the corpse. In Egyptian texts, natron is sometimes termed *ntry,* meaning something like "the divine salt," so closely is it associated with embalming (Iskander 1980).

After desiccation, the corpse was washed and cleaned of natron, then packed with resinated linen or other materials such as sawdust or lichen. Then the embalming incision was covered over with a gold plate or beeswax held in place with a coating of resin. The plate frequently bore the imprinted Eye of Horus, a powerful amulet which protected the now purified and preserved corpse from invasion by evil external influences (compare the similar notions of the origins of physical illness by demons "from the outside" gaining access into the body, and the unique ghoulish determinative hieroglyph used in Egyptian medical texts which mention such illnesses, in Breasted 1930). At some time during the process of mummification, the eyes were pressed flat in the ocular orbits and packed with small resinated linen packets. Then the eyelids were closed over the top of the packing. Naturally, the embalmers may have felt obligated to restore portions of the corpse which were defective or had been lost (Gray 1966). The dried body was apparently anointed and freshened with a final dressing of ointments and spices, followed by a swabbing with resins. Finally the embalmed corpse was wrapped in linen shrouds and bound with linen strips. The mummy, called in Egyptian the *sah,* was then ready for various ceremonies such as the "Opening of the Mouth" and other vivifying rites, ultimately concluding with burial. Indeed, the mummy was now ready to live forever. A late Egyptian funerary text illustrates the purpose and final result of embalming: "You live again, you revive always, you have become young again [now] and forever" (Sauneron 1952: 18).

It is important to note that the entire mass of embalming refuse was buried with the mummy. Such matter included rags, natron stained with body fluids, scraps of tissue removed from the skull or abdomen, and vegetable matter which had been in contact with the corpse, hair, and other materials (Iskander 1980: 25). The refuse was placed in as many as 70 jars, which were in turn placed within the tomb so that not a single hair or portion of the embalmed corpse could be obtained by enemies of the deceased who might apply black magic against the peaceful repose of what Morenz (1984: 198) calls the "living corpse" and its eternal existence (Winlock 1941).

There were some side effects of embalming. Occasionally sheets of epidermis were exfoliated and found in modern times wrapped in linen and buried within the tomb. The nails of the fingers and toes commonly fell off during the process and were tied in place with string. The color of the mummy changed over time from near natural color to the darker browns and blacks noted in modern times. The hair commonly suffered damage during mummification and through time lost natural pigmentation, seen in modern times as the patchy orange-brown hair observable in several New Kingdom mummies such as Rameses II, or Yuya and Thuya.

K. Was Embalming Biohazardous?

Portions of the process of embalming, especially the removal of the alimentary tract and certain other organs, could be expected to be associated with a relatively significant biohazardous risk to the team of embalming priests and subsequently their families and their immediate associates. Embalming must have occasionally placed the workers in direct contact with dangerous contagious microorganisms such as cholera vibrios, the causative agents of tuberculosis, dysentery, and typhoid fever, or the causative organisms of food poisoning illnesses such as salmonella and others. However, there is no evidence that the ancient Egyptians were aware of such potential or regarded the process as being risky in any way. In this light it is important to note that the occupation of embalming priest was hereditary.

L. Embalming in the Bible

In ancient Israel and in other early societies of the biblical world, embalming was not practiced. Excavations of numerous sites outside of Egypt have not produced a single native corpse which was embalmed. Obviously this also explains the lack of references to embalming in the OT and NT, the only exceptions being the specific mention of the embalming of the bodies of the Patriarchs Jacob and Joseph in Egypt (Gen 50:2–3, 26). In the case of Joseph, mention is made of the sarcophagus in which his body was placed (Gen 50:26, the Heb *ʾārôn,* commonly translated "ark, box, chest"). The discrepancy found in Josh 24:32 which mentions the transport of Joseph's bones from Egypt, rather than his mummified body, undoubtedly reflects a scribal awareness of the common practice of secondary interment of skeletons, a practice which was common in ancient Israel as well as in nomadic societies, rather than reflecting in hindsight an accurate knowledge of the period and circumstances of the presumed removal of the mummified body of Joseph from Egypt.

The lack of any form of embalming in ancient Israel is the result of its religion and theology, as well as the probable antipathy held by Israelites against Egyptian religion generally. The body of Asa was simply covered with spices (2 Chr 16:14). The body of Jesus was buried with 100 pounds of spices (John 19:39–40; the text implies that certain women present at the burial regarded this amount as insufficient and therefore they brought to the tomb even more spices (Mark 16:1; Luke 23:35–36; 24:1). Neither of these examples describes embalming in any true sense but appears as an attempt to cover the foul odors associated with the natural biodegradation of corpses during the single day of mourning before burial, and to keep the immediate locality of the burial or tomb fresh. Even so, the body of Lazarus reeked with foul odors soon after burial (John 11:39). For such reasons the small son of the widow of Nain was mourned only briefly on the day of his death and then quickly carried off to his burial (Luke 7:11–17). Thus, in contrast to the beliefs of Egypt, where it was necessary to preserve a suitable habitat for the use of the dead in the next life, including a proper store of earthly supplies, in late ancient Israel (at least) and during the Christian period generally, preservation of the corpse was considered unnecessary in view of various developing beliefs regarding the resurrection.

M. Embalming in Egypt, the History of Medicine, and Paleopathology

It is only by the study of substantive extant ancient human remains that any sure knowledge of the history of human health and disease may be obtained. The advances in mummification and preservation of the body developed thousands of years ago in Egypt have preserved for the modern scientist the precious perishable organs and tissues required for a medical examination of the ancient inhabitants of Egypt. The fields of paleopathology and the history of medicine owe a great debt to the development of embalming. In fact, the beginnings of paleopathology appear more or less simultaneously with the influx of Egyptian antiquities into Europe and Britain and the first crude unwrapping and examination of mummified corpses more than 200 years ago (see the bibliographies and discussions in Dawson 1929; Strouhal and Vyhnanek 1979; and PALEOPATHOLOGY). The importance of embalmed corpses for the field of Egyptology is exemplified in the extreme by one particular case—that of the Pharaoh Akhenaten. It is clear that the discovery of his mummy would bring to an end the countless debates regarding his personal health, his potency and children, related issues regarding the canons of artistic representation during his lifetime, and evidence for the presence of certain diseases in antiquity. Indeed, scores of historical problems could be solved by the discovery of this one mummy alone.

It is unfortunate, however, that historically there has been a certain amount of neglect in the proper study and preservation of excavated human remains, as well as a reluctance by host countries to provide scholars freely with the opportunity to examine the remains of their ancient dead. Precious few mummies are currently available for serious examination and study. Egyptology in particular is desperately in need of a serious centralized preservation and storage facility with an associated data base devoted to the study of ancient human remains recovered from Egypt—and this logically located somewhere in Egypt. Sadly, it appears that the best examples of embalmed human remains from ancient Egypt have been exhausted, and certainly most of the better examples of Egyptian embalming have already been exhumed and largely lost forever during the last two centuries. It must be recognized by all that embalmed corpses, indeed all physical human remains from Egypt, are nonrenewable resources, and only now is modern science and

technology just adequate for a serious study of such remains, enabling scientists to discover from them the vast store of evidence which they surely contain. Important studies of these human remains could be performed reverently by sympathetic scientists if only this could be freely permitted and allowed. Ancient corpses are dead indeed when left to lie in the earth. However, ancient human remains may yet speak to us of the many aspects of their lives if placed in the careful hands of modern forensic anthropologists and other specialists in related fields.

EMBROIDERY. See DRESS AND ORNAMENTATION.

EMEK REPHAIM (JERUSALEM). See REPHAIM, VALLEY OF (PLACE).

EMEK-KEZIZ (PLACE) [Heb *ʿēmeq qĕṣîṣ* (עֵמֶק קְצִיץ)]. One of the towns in the tribal territory of Benjamin, listed after Jericho and Beth-hoglah and before Beth-arabah (Josh 18:21). Beth-hoglah may be identified with Deir Hujlah (M.R. 197136) and Beth-arabah may be associated with Ein el-Gharaba (M.R. 197139), less than 2 miles N of Deir Hujlah. The context therefore suggests that it was located somewhere in the Jordan plain SE of Jericho, even though the name (containing the element *ʿemeq,* "valley") hints otherwise.

EMENDATIONS, SCRIBAL. See SCRIBAL EMENDATIONS.

EMESA. The small but surprisingly influential Kingdom of Emesa arose in the 1st century B.C., basing itself on the city of that name in Syria (modern Homs). It lay on the Orontes River, N of the Anti-Lebanon Mountains, just W of the desert where the "tent-dwelling" Arabs (*Skenitai*) ranged. Its prosperity derived from rich pastures and from trade.

Though ancient, the city largely escaped notice in Hellenistic times, and also did not receive a Seleucid colony, retaining its native Arab name and rulers. About 88/87 B.C., Emesa emerged into recorded history. A possible ruler from there, Azizus, engaged in the factional disputes of the last Seleucids; he may have assisted Philip I Philadelphus against his brother, Demetrius III Eucaerus (Jos. *Ant* 13 §384). The conquest of Syria by Tigranes the Great of Armenia deferred these ambitions, but after Tigranes left in 69 B.C. Azizus joined Sampsigeramus, the later King of Emesa, in a complicated intrigue designed to remove the last Seleucids and partition Syria (Diod. 40.1a–1b).

The arrival of Rome in force prevented that, but Sampsigeramus maintained himself in Emesa and Arethusa, winning the praise of Strabo (16.2.11.753) for his well-ordered government. He appears to have been ruling, along with his son Iamblichus, as late as the conspiracy of Caecilius about 46/45 B.C. (Strabo 16.2.10.753).

Despite the failure of his scheme to obtain a portion of the former Seleucid holdings, Sampsigeramus became a Roman ally. During his reign at Arethusa, an era on its coinage honored Pompey. In 51, when he still lived, his son Iamblichus wrote to Cicero in Cilicia to warn of a Parthian invasion. Cicero describes him as one "whom men consider well disposed to our Republic, and a friend" (Cic. *Fam.* 15.1).

In 47 B.C., when Caesar sought to extricate himself from a desperate situation in Alexandria (not Cleopatra, but her brother), he summoned allies. Among the "dynasts in Syria" who responded was Iamblichus (Jos. *JW* 1 §188). About two years later, however, he appeared among the allies of Caecilius opposing Caesar, for reasons impossible to determine (Strabo 16.2.10.753). The complexities of the Roman civil war caught more than one dynast on the losing side.

Just before Actium, Antony executed Iamblichus. His brother, Alexander, succeeded him but suffered the same fate at the hands of Octavian soon afterward (Plut. *Ant* 37.2; Dio Cass. 51.2).

By 20 B.C., Iamblichus II succeeded to the throne of Emesa, with the blessing of Augustus (Dio Cass. 54.9). This restoration parallels others in the vicinity: Cilicia, Commagene, Armenia Minor. Iamblichus married his son, Sampsigeramus II, to a princess from the dynasty of Commagene, Iotape III. The son in turn carried on the policy by marrying his daughter, Iotape IV, to Aristobulus of Judea, grandson of Herod the Great. The sister and brother of Iotape II contracted a philadelphic marriage and became the parents of Antiochus IV of Commagene, who ruled throughout the reigns of the Julio-Claudians. A son of Iotape III, King Azizus of Emesa, also went to Judea for a brief marriage to Drusilla, daughter of Agrippa I and sister of Agrippa II (Jos. *Ant* 20 §139). This extensive intermarriage greatly strengthened the dynasties of the Near East (*ANRW* 2/8: 198–219, 296–354).

Sampsigeramus II had begun his reign as "Great King" by the time of Tiberius (*ANRW* 2/8: 213). He took part in the assembly of Eastern dynasts convened by Agrippa I of Judea at Tiberias in A.D. 42 (Jos. *Ant* 19 §338–342). One of the dynasts, Polemo II of Pontus, married an apparent relative of Sampsigeramus, Julia Mamaea.

King Azizus, his successor, is first mentioned in A.D. 53, though he may have taken power as much as a decade before. He died by the first year of Nero, A.D. 54. He was succeeded by his brother, Sohaemus, the last firmly attested King of Emesa.

Emesenes engaged as allies in the Roman wars of the 1st century. King Sohaemus ruled both Emesa and distant Sophene, near Armenia, under Nero. He appears several times under arms in the record of the Jewish War. In A.D. 70, he joined the forces of the future Emperor Titus marching on Jerusalem (Jos. *JW* 2 §500–501; 3 §68; Tac. *Ann.* 2.81; 5.12). He also assisted Rome against its former ally, Commagene, in the war which broke out under Vespasian in A.D. 72 (Jos. *JW* 7 §226).

Perhaps Emesa shared the fate of Commagene in due course, but its kings may have ruled to the end of the 1st century, as in nearby Judea. A "very doubtful" coin of Domitian (A.D. 81–96) cannot prove the dynasty's eclipse; otherwise, Roman coinage apparently does not begin there until the reign of Antoninus Pius (A.D. 138–161) (*ANRW* 2/8: 218–19). Some dynastic names lacking the royal title turn up on epitaphs in the 2d century, but these people may be only relatives of a ruling king and do not prove the kingdom extinct. A King of Armenia with the Emesene royal name of Sohaemus ruled between A.D. 163 and 175.

Emesa leaped out of this second period of obscurity late in the 2d century. Suddenly a line of priests there began to supply the royal family for the Roman Empire (Stemma: *ANRW* 2/8: 200). One priest of the local cult (*sacerdos Soli Elagabali*), Ti. Julius Balbillus, may have descended from the royal family of Commagene. Another priest of this cult, Julius Bassianus, produced two daughters, Julia Maesa and Julia Domna, who married the Emperor Septimius Severus. Their two sons both ruled, Geta (A.D. 211–212) and Caracalla (A.D. 211–217). The grandson of Julia Maesa was the Emperor Elagabalus (A.D. 218–222).

Emesa declined again in prominence after this last efflorescence. About 253, an aspirant with the pretentious name L. Julius Aurelius Sulpicius Uranius Antoninus declared himself Emperor of Rome at Emesa, and coins exist reflecting his claim (Seyrig 1958: 51–57; Magie 1950: 704, 1566 n. 26). Odenathus of Palmyra (ca. A.D. 260–267) has been considered a descendant of the Emesene royal house. He brought Emesa again into notice when he defeated the usurper Quietus there. In 272, his widow, Zenobia, suffered defeat by the Emperor Aurelian "in a great battle at Emesa" (*Scriptores Historiae Augustae: Aurel.* 25).

By late in the 4th century after Christ, Emesa had sunk to such obscurity that Libanius can speak of it as "no longer a city" although it "continues to send ambassadors and crowns to the Emperors, knowing its poverty but ashamed to fall from the number of cities" (Lib. *Or.* 227, 42 Foerster; *Ep.* 846). Two 6th-century lists, the "Synecdemus" of Hierocles and the "Description" of Georgius Cyprius, mention Emesa still among the cities of Syria (Jones 1971: App. III and 267).

The little Kingdom of Emesa achieved an impressive record, dimly reflected in the echo of its ancient name in the modern town of Homs.

RICHARD D. SULLIVAN

EMIM [Heb *ʾêmīm* (אֵימִם)]. Hebrew for "terrible ones" or "frightful ones," the designation used by the Moabites for giants who occupied their territory in more ancient times. Deut 2:10 describes the Emim as "great and many, and tall as the Anakim," another race of giants who lived in ancient Palestine. Both the Anakim and the Emim were called Rephaim (Deut 2:11). Because the Emim are associated with ancient Moab, the Zamzummim (or Zuzim) are giants linked with Ammonite territory (Deut 2:20; Gen 14:5). The Emim were defeated by Chedorlaomer and his coalition in Shaveh-kiriathaim (Gen 14:5). Nothing is known about the Emim outside of the OT.

GERALD L. MATTINGLY

EMIR, IRAQ EL-. See IRAQ EL-EMIR (M.R. 221147).

EMMAUS (PLACE) [Gk *Emmaous* (Ἐμμαους)]. Many places bore the name in antiquity, but in the NT Emmaus was a village where the risen Christ appeared to two disciples, one named Cleopas (Luke 24:13–35). Efforts to identify this site have focused on its distance from Jerusalem. There are two figures in the textual tradition in Luke for the distance from Jerusalem to Emmaus. The better reading is "sixty stadia." This is the reading in Papyrus Bodmer (P75), Codex Alexandrinus, Codex Vaticanus, Codex Bezae Cantabrigiensis, the second corrector of Codex K, Codex Regius, the Freer Gospels, Codex X, Codex Delta, Codex Psi, and uncials 063 and 0124. "Sixty stadia" also appears in minuscule families one and thirteen, in twenty-one other minuscule manuscripts, in the menologion of Byzantine Lectionary 185, in

eight manuscripts of the Old Latin tradition, and also in several ancient versions: in the Vulgate, in the Curetonian, Sinaitic, and Harclean Syriac, in the Peshitta, in both the Boharic and Sahidic Coptic, in the Ethiopic, and in the Georgian. The poorer reading "one hundred and sixty stadia" appears in Codex Sinaiticus, the original of Codex K, Codex Koridethi, Codex π, probably in uncial manuscript 079, certainly in minuscule 1079, in the Palestinian Syriac, in the Armenian, and in Eusebius, Jerome, and Sozomen. Codex Palatinus of the Old Latin reads "seven stadia." The Editorial Committee of the United Bible Societies' Greek New Testament feels that the reading "160 stadia" arose with patristic identifications of Emmaus with Amwas-Nicopolis W of Jerusalem (Metzger 1971: 184). Since a stadium was 600 Roman feet, sixty stadia was about 7.5 miles, while 160 stadia was about 19.5 miles. The committee dismisses "seven stadia" as a scribal blunder.

According to Luke, the disciples journeyed to Emmaus, meeting up with Jesus on the way, ate a meal, and returned to Jerusalem, where they found the disciples still awake. These events therefore took place in one day, which makes a one-way distance of 160 stadia surely wrong. This distance would indeed place the traveler at ancient Emmaus-Nicopolis (modern Khirbet Imwas; M.R. 149138), which lies about 17.4 miles or 153 stadia from Jerusalem on the S road and 18.3 miles or 161 stadia from Jerusalem on the N road to Joppa. Nicopolis is assumed in almost all Christian Pilgrim texts from the 4th century onward. In 221 C.E. the emperor Heliogabalus (Elagabalus) gave Emmaus the title of "city" and the name Nicopolis or "City of Victory" at the petition of Sextus Julius Africanus, a Christian, who headed a delegation from Emmaus to the emperor. The Bordeaux pilgrim about 333 C.E. visited Nicopolis, but he merely listed it as a staging post. But in 404 C.E. St. Jerome describes his journey eight years earlier with Paula and her daughter Eustochium to the holy places, including Emmaus, which he names "Nicopolis, formerly called Emmaus" (Letter 108; Wilkinson 1977: 47). Nicopolis is Emmaus in Eusebius' *Onomasticon* (90:16). In 440 C.E. Hesychius of Jerusalem was aware that Nicopolis was too far from Jerusalem to be the Emmaus in Luke 24, if the distance was 60 stadia (*Problems and Answers;* Wilkinson 1977: 156). Extensive remains of Roman Jewish, Christian, and Samaritan buildings have been found at Khirbet Imwas.

Other sites that have been recommended as ancient Emmaus are first el-Qubeibeh (M.R. 163138), 65 stadia from Jerusalem on the road to Khirbet Imwas. This was a site favored by the Crusaders, who found an old Roman fort near el-Qubeibeh named Castellum Emmaus. A Byzantine church was excavated here by the Franciscans beginning in 1873.

Second, Abu Ghosh (M.R. 160134) is about nine miles or 83 stadia W of Jerusalem on the S road to Khirbet Imwas. It is also known as Kiryat el-'Anab (City of Grape[s]), and has been identified as OT Kiriath-jearim. There is a Roman fort at Abu Ghosh with a Greek inscription that mentions the Tenth Legion stationed there.

Third, Qaloniyeh, or ancient Colonia, lies about four miles or 35 stadia W of Jerusalem on the same S road as Abu Ghosh. It is often identified with the Motza (M.R. 165134) of the Jerusalem Talmud (Avi-Yonah 1976: 82; Sukkah 54b). Motza could be the Latin *Amassa* or Greek *Ammaous* of Josephus (*JW* 7.10.9 §217), who tells us that Titus settled eight hundred Roman veterans at Motza after the First Jewish Revolt. Josephus also tells us that Ammaous was 30 stadia from Jerusalem. Although the distance is wrong, it is not impossible as a candidate for NT Emmaus. There is no scholarly consensus.

JAMES F. STRANGE

EMPEROR WORSHIP. See ROMAN IMPERIAL CULT.

EN-BOQEQ (M.R. 185067). An oasis on the SW shores of the Dead Sea. Like En Gedi 33 km to the N, it thrived on the growth of precious plants indigenous to hot climates. These were watered by two springs: En Boqeq and En Noith, producing 216,000 m^3 and 17,500 m^3 per annum respectively. The original name of the site is lost. However, it may be identified with the 7th century C.E. *tetrapyrgium,*

mentioned by the monk Anasthasius in his *Questiones* (Migne, *PG* 89, col. 744–45), so named after its dominant *castellum.*

Excavations have shown that the earliest occupation was in Hasmonean times, when a tower was built by Alexander Jannaeus (?) to guard the newly established plantations of pharmaceutical and cosmetic plants, such as the world famous and exceedingly lucrative judean balsam (cf. Strab 16.41, 486–89; *HN* 12.111–23; *JW* 4.468–70).

These plants, together with bitumen from the Dead Sea (also a much esteemed compound of ancient medications; Galen, *De Simplicium Medicamentorum* 11.2.10) were processed in a factory *(officina)* in the middle of the plantations, which were established by Herod and operated until its destruction by the Zealots during the First Revolt (*JW* 4.402). The Romans quickly restored the plantations (*HN* 12.112), but only Bar Kokhba refurbished the factory. Following the final destruction of the *officina* by Hadrian, the first certain sign of renewed life at En Boqeq is the building of the *castellum* during the first half of the 4th century, either by Constantine or Constantius. Until the Islamic conquest in about 634 C.E. this *castellum* guarded the E flank of the cis-Jordanian sector of the Roman *limes* and the revived plantations. After the conquest, life in and around the *castellum* continued for several decades.

A. The Officina

This is a workshop of 20 × 20 m, built of coarse masonry and preserved to a height of 3 m. Six rooms, including the anteroom with benches, are arranged around a central courtyard, the covered portions of which formed an integral part of the production areas. See Fig. ENB.01. Room 4, with heavy plaster on the walls and floor, had a treading floor and a collection basin for pressed-out liquids. Room 6 housed a mill on a round base for crushing, and in room 5, fixtures belonging to a bag press (?) were discovered. A central production area in the courtyard had a storage facility for dry raw materials, a fireplace, a grinding platter, a stone vat, and two adjacent ovens, of stone and clay, constructed on two different levels. Other ovens and fixtures attest to the complexity of the production process. A staircase led to a flat roof or a second story.

In one corner of the workshop area was a Hasmonean tower of well-cut ashlar blocks. This is the oldest preserved structure on the site. It served for protection as well as a strongroom for the *officina.*

Heaps of dates and lumps of bitumen attest to their use, while chemical analyses have detected the presence of etheric oils and resinous matters; these could be residues of balsamum and related substances.

The installation served, with minor changes, during three short periods: those of Herod, the first procurators, and Agrippas I up to 68 C.E. The workshop was roughly refurbished during the Bar Kokhba war (131/132–135 C.E.), after which it fell in permanent disuse.

B. The *Castellum*

The *castellum* was a typical *tetrapyrgos* (i.e., a square structure with four protruding towers). It was small but quite strong, guarding the oasis and its approaches. It measured 18 × 18 m, and its towers were about 6 × 6 m. The walls were about 1.90 m thick, and were built of rough ashlar faces with a rubble fill. The walls were preserved 5.80 m above the lowest floor and up to 8 m from the foundations. The deep foundations were an effort to reach a layer of hard gravel. To further strengthen the structure, its E half was filled with up to 2 m of hard pressed fine gravel beneath the lowest floor. All these were necessary precautions, since this region is susceptible to frequent earthquakes. The good state of preservation of the *castellum* attests to their success.

The two internal barrack blocks, one or two stories high, were built against the outer walls, thus strengthening them and providing additional space behind the ramparts (see Gichon 1987). The following four phases of occupation have been established for the *castellum:* (1) Constantius II (337–361) to the second third of the 4th century; (2) Valentianus (364–375) to the mid-5th century; (3) mid-5th century to the Persian invasion (613/14); and (4) Heraclius (628/29) to the Arab conquest (634/35).

C. Aqueducts and Plantations

The oasis was watered by a system of channels and cisterns fed by two aqueducts from the springs of Boqeq and Noith. The former was 1 km long, and its course was partly rock-hewn, and part was on a freestanding wall which bridged the 35 m wide, 12 m deep Nahal Boqeq; this supplied water to the

castellum. Water from En Noith was undrinkable because of its mineral content. The Noith aqueduct was maintained throughout the whole Byzantine period to irrigate the plantations that had adapted to the mineral waters.

The plantations were partitioned into various-sized plots that covered the whole delta and some terraced slopes. The former were divided by dry walls up to 2 m high, with no openings; the sole access was by steps to the top and down again on the other side. The multiple enclosures seem to indicate that not all the plots were government owned, or that crown lands were leased out to private growers (cf. Yadin 1971: 128, 239). Whether the partitions were constructed only to guard the precious plants from wandering cattle, or also against theft or hostile inroads, can only be conjectured.

MORDECHAI GICHON

EN-DOR (PLACE) [Heb *ʿên dōr* (עֵין דֹּר)*; ʿên dôr* (עֵין דּוֹר)*; ʿên dōʾr* (עֵין דֹּאר)]. A town located in the vicinity of the Esdraelon Plain (the ancient Megiddo Plain). Since the spelling of the final element varies in Hebrew, the meaning of the name is not certain. The spellings *dōr* (Josh 17:11), and *dôr* (1 Sam 28:7) would seem to derive from the Hebrew root *dwr* and would yield a meaning "spring of settlement," or perhaps "spring of divine assembly" (Margalith 1985: 111). There is no root *dʾr* in Hebrew, so the meaning of the third attested spelling (Ps 83:11 [—Eng 83:10]) is uncertain. It has been connected with the Greek tribal group the Dorians, on the presumption that a group of Dorian settlers settled beside a spring somewhere in the vicinity of the plain at the end of the LB or the beginning of the Iron I period (Brown 1981: 399; contrast Margalith 1985: 111).

The town is to be distinguished from its larger namesake, often qualified as NAPHOTH-DOR, a port located on the Mediterranean coast 20 km S of Haifa at the foot of the Carmel spur. The spelling of the latter site also fluctuates between *Dor* and *Doʾr,* and confusion between the two sites seems to have led to attempts to identify which "Dor" was intended in older texts where the qualifiers *ʿên* and *nāpat* were not used by appending them after the fact (so esp. Josh 12:23; Josh 17:11 and perhaps other texts where the qualifiers now appear).

En-dor is reported to have been the home of the medium whom Saul, the first king of Israel, was to have consulted on the eve of his final battle against Beth-shan (1 Sam 28:7). It is also named in Ps 83:11 (—Eng 83:10) as the site of Sisera's defeat by Barak. According to Judg 5:19, the same battle took place "at Taanach, by the waters of Megiddo"—outside of Taanach, in the Megiddo Plain, near the Kishon River. The implication in the prose account (Judg 4:12–16) that the battle site was further N, in the vicinity of Mt. Tabor, may have arisen from the interweaving of Barak's battle against Sisera with another battle in which the enemy confronted was Jabin, king of Hazor (cf. Josh 11:1–9; contrast Rainey 1985: 63*–65*). A generic Dor is listed in Judg 1:27 as a Manassite city that lay within the territory of Issachar. The list appears to be loosely arranged from E to W, so that Dor's position between Taanach and Ibleam would favor its equation with En-dor rather than Naphoth-dor. The same city list appears again in Josh 17:11, but with the variant spelling *dōʾr* instead of *dôr,* and with the expository expansion immediately following, "that is, the inhabitants of En-dor," introduced by the explicative *wāw* (for this device, see Kallai *HGB,* 258; contrast the proposal that the latter phrase arose through dittography by Margalith 1985: 111).

On the basis of the available evidence, no final decision can be made as to whether the site was located on the S or N side of the Esdraelon Plain, but two factors tend to favor a S location. The battle in Judg 5:19 was to have taken place in the immediate vicinity of Taanach, so the reported defeat at En-dor in Ps 83:11 should have been in the S end of the plain, and all the other sites named in the list in Judg 1:27 are located on the S side of the Esdraelon Plain, perhaps indicating that En-dor was too.

The site identification currently favored for En-dor is Kh. Ṣafṣâfeh (M.R. 187227), N of the Esdraelon Plain, on the N side of Nebi Dahi, ca. 6.7 km NE of modern Sôlem (i.e., Alt 1927: 41; Abel *GP* 2, 316; Zori 1952; Simons, *GTTOT* sec. 715; Aharoni *LBHG,* 434). This proposal has replaced the early equation with modern Indur, a few km SW of Ṣafṣâfeh, which was based on assumed name preservation and the 4th century C.E. testimony of Eusebius in his *Onomasticon* (Klostermann 1904: 34, 94). Archaeological survey work has ruled out Indur as a candidate, since no antiquities were found. Most recently, Tell el-ʿAjjūl (M.R. 185226) has been suggested as a viable candidate (Gal 1982: 85; Kallai, *HGB*, 175). As indicated above, however, a site on the S side of the Esdraelon Plain may be more consistent with the biblical evidence.

The narrative about Saul's final battle positions the Philistine army on the N side of the Esdraelon Plain at Shunem (modern Sôlem) on the evening of Saul's visit to En-dor and the Israelites on the S side of the plain, at the foot of Gilboa (1 Sam 28:4). According to the narrative, Saul would have had to cross behind enemy lines undetected to reach Ṣafṣâfeh or ʿAjjūl. The narrator's report in v 8 that he donned a disguise may therefore have had a twofold purpose: to lead the audience to believe that he needed it (1) to pass through the enemy ranks undetected and (2) to hide his true identity from the medium so that she would break his royal mandate and summon Samuel's dead spirit for him. Whether the author wanted to imply that Saul was risking his very life to go to En-dor to learn from the dead Samuel that he would die the next day is no longer clear to a modern audience for whom the location of En-dor is not common knowledge. It seems to be a possibility but is not a certainty. On the basis of 1 Sam 28:4–7, En-dor might just as logically be sought behind Saulide lines, on the S side of the plain, with the disguise intended to hide the king's identity from the medium.

Since according to the story Saul's trip to En-dor was to have been a secret known only to a few trusted servants, it is very unlikely that such a trip actually occurred the night before his death. Knowledge of a secret rendezvous would not have survived in sources to be "reenacted" by the "Deuteronomistic Historian" in his account of Israel's past. Nevertheless, the author of chap. 28 would have been familiar with the geographical setting in which he was recreating his fictionalized action, so that implications derived from the story as to En-dor's location can be deemed reliable for the author's own time frame.

A site in or near the S portion of the ancient Megiddo Plain, in the vicinity of the Kishon River, W of Ibleam, near a spring, and with evidence of Iron II occupation would be consistent with all the biblical evidence. All textual references to En-dor can arguably be dated to the Iron II period, so Iron I occupation does not seem to be a prerequisite. While Josh 1:27 and Judg 17:11 envision En-dor to have been a walled LB or Iron I site with dependent villages ("daughters") surrounding it, this characterization may not be reliable. It may have arisen from the use of the stereotypical description for all the sites, regardless of their size, and a retrojection or presumption of their existence "from of old."

Kh. Jadûrāh (M.R. 175213) suits the geographical context, but does not satisfy all the deduced criteria. While Iron II and Byzantine pottery has been found there during a single survey (Zori 1977: site 67), there is no spring in the immediate vicinity today. A non-perennial spring could have silted up over time, however. The site would only have housed a small village in the Iron II period, requiring one to discount the size implications from Josh 17:11 and Judg 1:27 as stereotyping. A second more promising candidate that meets all the specified criteria would be Tell Qedesh/Tell abu Qudeis (M.R. 170218). Surface survey has indicated more or less continuous occupation from the MB II period (Zori 1977: site 72), and a 12-day trial excavation in 1968 uncovered 5 strata spanning the Iron I, Iron II, Persian, and Late Roman periods in a probe trench that did not reach bedrock (Stern 1968). Two springs lay just outside the ruins to the NW. The site was a walled urban center during most of its existence, making it consistent with the

descriptions in Judg 1:27 and Josh 17:11, although the reliability of the site characterizations in both lists needs careful consideration.

DIANA V. EDELMAN

EN-EGLAIM (PLACE) [Heb *ʿên ʿeglayim* (עֵין עֶגְלַיִם)]. A place apparently on the shore of the

Dead Sea mentioned in Ezekiel's eschatological vision of the life-giving river flowing from the temple (Ezek 47:1–12). In that vision, the water flows S and E from Jerusalem (i.e., down the Kidron Valley) to the Arabah, freshening the once brackish water of the Dead Sea, which will then be so teeming with fish that "from En-gedi to En-eglaim it will be a place for the spreading of nets" (v 10). However, in Ezekiel's vision salt will remain in the swamps and marshes (v 11).

The location of En-gedi has never been doubted: it is identified with Ain Jidi (M.R. 187096) on the W shore of the Dead Sea about 9 miles N of the tip of the Lisan peninsula. The location of En-eglaim, however, is more problematic. Assuming that Ezekiel's vision was limited to only Cisjordanian reference points, many scholars have assumed that En-eglaim also lay on the W side of the Dead Sea. At one time, on linguistic grounds, it was identified with Ain Hujlah (M.R. 197136), about 3 miles N of the Dead Sea (however, this hardly seems to be a good place for "casting nets," and many scholars now identify this site [also, in part, on linguistic grounds] with Beth-hoglah). Another proposed identification has been Ain Feshkhah (M.R. 192122), on the W shore of the Dead Sea 16 miles N of En-gedi. In this view, Ezekiel envisioned a 16-mile-wide band of fresh water running across the Dead Sea, fed by the waters of the Kidron, with the salty marshes remaining intact N of Ain Feshkhah (and probably also S of En-gedi; Farmer 1956: 21).

However, the assumption that Ezekiel's perspective was parochially restricted to the W side of the Arabah can be questioned, and it is possible that En-eglaim was located somewhere on the E shore of the Dead Sea *opposite* En-gedi. This possibility has been enhanced by the discovery of a cache of mid-2d century A.D. documents from caves in the Judean desert. One of these documents, a Nabatean contract, mentions a place named *mḥwz ʿgltyn,* which has been associated with the biblical En-eglaim (Starky 1954: 167). A Hebrew document from this cache refers to two men "from Luhith which is in *mḥwz ʿgltyn,*" which is noteworthy because elsewhere (Isa 15:5) "Luhith" is associated with Zoar, Eglath-shelishiyah, and other Moabite places (including "Eglaim"; v 8) on the E side of the Dead Sea. Aramaic documents from this cache refer to this place simply as *mḥwzʾ,* while Greek documents refer to it as *Kōmē Maōza* ("village of Maoza") and describe it as lying within the administrative district of Zoar, thus somewhere in the SE quadrant of the Dead Sea (Yadin 1962: especially 242 and 251; Polotsky 1967: 46, 50).

It is therefore possible that *Maōza, mḥwzʾ, mḥwz ʿgltyn,* and En-eglaim are one and the same. It is furthermore possible that Ezekiel's En-eglaim is the same as Isaiah's Eglaim, which is cited apparently in poetic parallelism with Beer to define the extreme limits of Moabite territory (Isa 15:8). Beer is undoubtedly located N of the Arnon (wadi Mojib), thus Eglaim lies to the S. Eusebius (Klostermann ed., p. 36, lines 19–21) lists an *Agalleim* 8 (Roman) miles S of Areopolis (=Rabbah); if this is the same as biblical Eglaim it is located high on the Moabite plateau near Kerak (M.R. 217066), too far from Zoar to be associated with the *mḥwz ʿgltyn* of the 2d century and too far from the Dead Sea to be associated with the En-eglaim of Ezekiel 27. Aharoni (*LBHG,* 35), however, tentatively identified Eglaim with Mazra

(M.R. 201078) on the shore of the Dead Sea on the NE end of the Lisan peninsula and therefore at the extreme SW corner of Moab, but still far enough S to be placed reasonably within an administrative district headquartered at Zoar in the 2d century A.D. If Mazra is (En-) Eglaim = *mḥwz ʿgltyn,* then Ezekiel envisioned the *entire* Dead Sea N of the Lisan (not just a 16 mile wide band extending from the wadi Kidron) being revived by the river flowing from the temple, with salt residues remaining only in the marshy area S of the Lisan.

GARY A. HERION

EN-GANNIM (PLACE) [Heb *ʿên gannîm* (עֵין גַּנִּים)]. The fourth levitical city in the tribe of Issachar, mentioned only once in the Bible (Josh 21:29). It does not have a parallel in 1 Chronicles; instead ANEM is the fourth city in that list (6:58—Eng6:73).

There is much disagreement about the identification of En-Gannim. Robinson (1841: 156) first suggested that the city should be associated with Jenin, but Jenin is clearly located in the tribe of Manasseh, only 2 km NE of Khirbet Belʿameh, a city that has been identified with the levitical city Ibleam. Because of Jenin's location, two other cities have been identified with En-gannim: En-onam (modern Olam) and Khirbet Beit Jann.

ʿÔlām (M.R. 197230) was identified as En-gannim by Albright (1926: 232) as a result of his text-critical work. Albright had argued that there was a corruption in the name as reflected in two different readings between the Joshua and 1 Chronicles texts and that the name should have been En-onam. ʿÔlām is 2 km SE of Tell Hadeṭeh/Tell ʿên-Haddah and only 5 km from the Jordan rift. North of ʿÔlām the slope drops decidedly into a narrow, cultivated ravine. Saarisalo (1927–28: 63) described this ravine as flowing to Wadi eš-Šerrâr. ʿÔlām was near the trunk road running from Damascus to Egypt via Megiddo, providing it with ready access to other parts of Galilee as well as to the Mediterranean. The deep valleys around ʿÔlām contributed to an easy access to the site. It is believed that Eusebius identified ʿÔlām as Ullama (ʾ*Aulam*) in the *Onomasticon* (140: 17).

The first pottery found was identified by Albright as belonging to the Roman/Byzantine and Arabic periods and possibly some dating to the early Iron Age I. When the inspection visits were made by the Palestine Department of Antiquities (Makhouly 1927) and by the levitical city survey team (Peterson 1977: 186–201), the pottery found was also exclusively Roman/Byzantine and Arab. It has been suggested that Albright's early Iron I assignment was based on a fine burnish ware that appears in the Roman period as well as in Early Iron I. From all the survey pottery evidence, it does not seem that ʿÔlām had an occupation before the Roman period. If this is so, then another site for En-gannim in Issachar must be found.

Over a century ago, Guérin (1880: 83) pointed out the similarity in the names between the biblical city En-gannim and the Galilee village Beit Jann. Aharoni (*LBHG,* 376) has followed this identification, suggesting that En-gannim should be provisionally identified with Khirbet Beit Jann, a site clearly situated on the NE border of Issachar (M.R. 196235), 1.5 km from Kh. Artushah at the mouth of Wadi Sarunah, where it emerges into the plain. Immediately to the W of the tell is the village of Bet-gan, bearing the ancient name of its neighboring ruin. It is only 7 km due W of the Sea of Galilee, but the altitude is much higher because of the mountains near the lake. The mound is about a km E of *Har Yabneel;* consequently Beit Jann looks over the plain to the E and has a good view to the N and S along *Har Yabneel.* It is on a strategic pass from Mt. Tabor to the Sea of Galilee. The occupational history of Kh. Beit Jann includes EB I and II, LB, possible Iron I, an abundance of Iron II, particularly the 8th century, Roman, Byzantine, and Early and Late Arabic (Porath 1971).

The one unresolved question concerning this site is whether or not a linguistic association can be made between biblical En-gannim and the village Beit Jann. From an archaeological point of view the evidence supports an Iron Age occupation (and earlier) at Beit Jann, while at ʿÔlām there is no such corroboration. The location of Beit Jann is also more accessible since it is directly on a trunk route. Nevertheless, to accept Beit Jann as biblical En-gannim does not deal with the 1 Chronicles 6 problem, but even Albright (1945: 70–71) admitted the solution to this question was "more ingenious than convincing."

JOHN L. PETERSON

EN-GEDI (PLACE) [Heb *ʿên-gedî* (עֵין־גֶּדִי)]. An oasis midway down the W shore of the Dead Sea, about 35 miles SE of Jerusalem (Gold *IDB* 2: 102; M.R. 187096). This oasis is fed by a spring located on the lower slope of the cliff which rises from the Dead Sea; there are other springs nearby. The name "En-gedi" means "spring of the young goat" or "spring of the kid." Its long usefulness as an oasis is attested to by a temple that has been uncovered which dates from the 4th millennium B.C.E. (Ussishkin 1971). En-gedi later served as a stronghold in the Herodian period, ca. 50–60 C.E. (Mazar 1967a: 86; 1967b: 141–42). The oasis also contained a bathhouse in the Roman period, and a synagogue existed at the turn of the 6th century C.E. (Barag and Mazar, *EAEHL* 2: 377–79).

In strata dating from OT times, excavations at Tell el-Jurn within the oasis have uncovered buildings dated to the turn of the 6th century B.C.E., ca. 625–580 B.C.E. and a larger settlement in the Persian period, ca. 400 B.C.E. (*EAEHL* 2, 373–75).

En-gedi is spoken of in the OT both as a place whose springs created a fertile oasis and as a military stronghold. The Song of Solomon (1:14) speaks lovingly of the "gardens of En-gedi," while in Ecclesiasticus, the figure of Wisdom speaks of herself as having grown tall or been exalted "like a palm tree in En-gedi" (24:14; cf. Pope *Song of Songs* AB, 354–55). Josephus (*Ant* 9.1.2) also praises En-gedi for its palm trees and balsam. Indeed, Mazar (*EAEHL* 2, 373) supposes that ovens and pottery unearthed at Tell el-Jurn were used for the production of perfume.

As for the military side of En-gedi's history, 1 Sam 24:1 (—Eng 23:29) speaks of David in his period of flight from Saul as dwelling in the "strongholds of En-gedi." It is to this place that Saul pursues David (1 Sam 24:2—Eng 24:1) and here that David cuts off a section of Saul's robe instead of killing the king (1 Sam 24:5b–8—Eng 24:4b–7). 2 Chr 20:2, in relating the story of Jehoshaphat's battle against a coalition of Moabites, Ammonites, and Meunites, equates Hazazon-Tamar with En-gedi and says that the enemies of Israel gathered themselves for battle there. Hazazon-Tamar is spoken of as an Amorite stronghold in Gen 14:7, the story of Abraham's rescue of his nephew Lot from an alliance of eastern kings.

En-gedi is assigned in the allotment of tribal territories to the wilderness district of Judah (Josh 15:62).

The enduring quality of Israel's portrayal of En-gedi is apparent in Ezekiel, where En-gedi is named along with EN-EGLAIM as proverbial boundaries of the Dead Sea in the prophet's vision of the salty Dead Sea turned fresh and teeming with fish by the stream of water which will flow from the temple at the restoration of Israel (Ezek 47:10).

JEFFRIES M. HAMILTON

EN-HADDAH (PLACE) [Heb *ʿên ḥaddâ* (עֵין חַדָּה)]. A town in the territory of the tribe of Issachar, mentioned only in Josh 19:21. The site is generally located at the former village of el-Hadatheh (M.R. 196232), now named Tel en-Hadda on modern maps (*LBHG,* 434). This identification is based upon the similarity in the names, the order in which the towns are listed in the passage in Joshua 19, and the assumption that all the towns listed were located between Mt. Tabor (M.R. 187232) and the Jordan River. Kallai (1986: 476) questions the identification, since he would prefer to locate the town of Shahazumeh at Tel en-Hadda (*HGB,* 476), but his suggestion has not been accepted by other researchers.
MELVIN HUNT

EN-HAKKORE (PLACE) [Heb *ʿên haqqôrēʾ* (עֵין הַקּוֹרֵא)]. A name of a spring in an unknown location. The phrase, a *hapax legomenon,* is found only in Judg 15:19 as "the spring of the invoker," based on Samson's "call" to God to quench his thirst and God's miraculous provision of a spring of water. An alternate etymology arises if one associates the name of the spring with that of a bird, *qôrēʾ,* identified "usually as a partridge" (KB, 851, I; cf. 1 Sam 26:20). Burney (1970: 375) suggests that *qôrēʾ* likely refers to the quail (usually Heb *sĕlāw*). While springs and fountains in Scripture often have animal names (cf. KB 1958: 699–700), there is no apparent connection between Samson's tale and the *qôrēʾ,* "partridge." There is even less reason to believe that the *qôrēʾ* refers to *sĕlāw,* "quail," since the Bible employs both names and clearly differentiates between the two. The text suggests, instead, an explanation based on Samson's "call" to God.

The ancient translations (of Judg 15:19) provide the following insights. The LXX identifies the spring as bursting forth from a "pond" (Gk *lakkos*) in the "jawbone" (Gk *siagōn*). See also LEHI. The Aramaic Targum (Sperber 1959: 79) notes that the spring emerged from a "tooth" (*kakkāʾ*) "in the jaw" (*bĕlôʿāʾ*). Because the Babylonian Aramaic *kakkāʾ* is related to Akk *kakku,* "weapon," the point of the Targumic passage may be that the spring gushed from Samson's weapon, the jawbone of a donkey. See RAMATH-LEHI. The Vg reflects this approach by indicating that the water sprang out of the molar in *"maxilla asini,"* "the jawbone of the donkey." Thus the ancient translations associate En-hakkore with a miracle, rather than with a specific topographical entity.

Despite this, during Jerome's times (ca. 400 C.E.) the spring was believed to exist in the vicinity of Eleutheropolis (Robinson and Smith 1860: 64). Modern attempts to identify the spring have thus far been unsuccessful. Guerin's (1868: 318) suggestion of Kh. ʿAin el-Lehî NW of Bethlehem is too far away for Samson's activities. Similarly, *ʿuyûn qara,* the "fountains of *qara*" (whatever *qara* means), is not a convincing identification (Buhl 1896: 90–91; Naor 1954: 147–48). If indeed the tradition of the ancient translators is true, the search for a specific topographical spring may be pointless and futile.

The extensive use of paronomasia in the Samson tales supports this view. The narrator intended a pun when citing *leḥî* twice in verse 19. The source of water was from the *leḥî,* the jaw, and the name *ʿên haqqôrēʾ* was given to commemorate the event at a particular spot, but not necessarily to name an existing spring. The location of the occurrence was *balleḥî,* "in the *leḥî,"* which here means "along the border" (see LEHI) where two other of Samson's campaigns against the Philistines took place.

EN-HAZOR (PLACE) [Heb *ʿên ḥāṣôr* (עֵין חָצוֹר)]. A fortified town of Naphtali, mentioned between Edrei and Yiron (Josh 19:37). It has been proposed that it can be identified as *ʿn-y*, referred to in the town list of Tutmoses III. Its location is not certain. Some scholars have placed it at Khirbet el-Hasireh in Upper Galilee (modern Khorvat Hadran; M.R. 179271). However, archaeological surveys there have shown that Khirbet el-Hasireh was not settled before the Roman period. Aharoni (LBHG, 150; *EncMiqr* 6: 210) suggested that it may be identified with the modern Ainatha (M.R. 191281) near Bint Jbeil in S Lebanon.

EN-NASBEH, TELL. See NASBEH, TELL EN-.

EN-RIMMON (PLACE). See RIMMON (PLACE).

EN-ROGEL (PLACE) [Heb *ʿên rōgēl* (עֵין רֹגֵל)]. Spring on the boundary between Judah and Benjamin (Josh 15:7; 18:16). The name most likely means "spring of the treader, fuller, or cleaner (of clothes, i.e., at a spring)." The boundary itself, from the standpoint of Judah, runs from En-rogel up the Hinnom Valley along the S slope of the Jebusite city, Jerusalem (15:7). From the standpoint of Benjamin, it goes down to the foot of the hill facing the Himmon Valley, then down this valley along the S slope of the Jebusite city (Jerusalem) to En-Rogel (18:16). Thus the location of the site is pinpointed to be S, ca. 200 m (ca. 600 feet), just below the confluence of the Hinnom and Kidron Valleys as they join to become the lower course of the Kidron (Wadi en Nar), which then proceeds through the Wilderness of Judea to the Dead Sea. En-rogel, then (if the modern identification is correct), is just a short distance (ca. 650 m, ca. 2150 feet) S of the Spring Gihon located at the foot of the E slope of the City of David. 2 Sam 17:17 reports that Jonathan, son of Abiathar the priest, and Ahimaaz, son of Zadok the priest (2 Sam 15:35–36), were stationed at En-rogel to pass on to King David the news they would hear about the rebellion of Absalom David's son, coming from the palace at the City of David near the Spring Gihon. A little later we are told that at the Stone of Zoheleth beside En-rogel, Adonijah, David's fourth son, who aspired to be king, sacrificed sheep, cattle, and fattened calves to enhance his cause (1 Kgs 1:9).

En-rogel—Bir Ayyub ("Job's Well") in Arabic—then, near the junction of the Hinnom and Kidron and about 90 feet lower than Gihon—provided an additional water source for Jerusalem (En-rogel may share the same underground water source as Gihon). The lower part of the spring or well, 31 feet deep, is made of large, rough-hewn stones, with the upper section extending up from this lower part about 41 feet. It may be that the original spring was covered over in the earthquake in the days of Uzziah (Amos 1:1; Zech 14:5; *Ant* 9.225) (Mazar 1975: 157–58). The water comes out of a cave at the bottom of the well and, at the time of the winter rains, overflows into this upper section; the waters from the well must have helped water the gardens, such as the King's Garden (2 Kgs 25:4; Neh 3:15), in the valley (Mare 1987: 108). Some feel En-rogel may be the same as the "Jackal Well" of Neh 2:13, (Simons 1952: 161); others associate it with the Fountain Gate (Neh 3:15).

W. HAROLD MARE

EN-SHADUD (M.R. 172229). Adjacent to a perennial spring located on the N-central slope of the Jezreel Valley at the foot of the Nazareth mountains, the site has a modern name derived from the Hebrew word for spring (*En*) combined with the name of the nearby Tel Shadud.

Blanketed by as much as 1 m of alluvium, the low-lying site was apparently quite extensive, covering a wide swath of the valley slope up to and beyond the tell some 200 m to the W. The abundant water supply

from the spring and annual rains, a mild climate, and large tracts of arable land in the valley favored settlement at this site.

In salvage excavations directed by E. Braun and S. Gibson (Braun and Gibson 1984), initiated when modern construction activity uncovered some of the remains of the ancient buildings, two strata were uncovered. The earlier, Stratum II, founded on virgin soil, was represented by a number of partially preserved rectangular houses including several with features common to the EB Age such as pebbled and cobbled floors, stone pillar bases, and internal benches.

Stratum I, constructed above and occasionally reusing the earlier walls, showed some continuation of the preceding architectural traditions but is notable for the addition of an unusual sausage-shaped structure and the appearance of rounded corners in rectilinear buildings, suggesting new architectural influences.

The pottery associated with both strata is virtually identical, suggesting a continuous and probably relatively short-lived occupation. The majority of vessels are of light colored ware painted red or in the grain wash style. Rarer are finely made gray-burnished or Esdraelon Ware bowls, probably in forms attributable to the later development of this style. A few special finds include cylinder seal impressions, which have almost exact parallels at Megiddo (Stages IV and V) suggesting direct trade links, perhaps through the medium of an itinerant potter.

En Shadud was a farming community of food producers with evidence found in the flint tool kit for the reaping of cereals. A study of the faunal remains suggests that the inhabitants were also herders of sheep, goats, cattle, swine, and perhaps ass. The presence of Canaanean flint blades, some unused, without the blade cores, suggests that the village was capable of producing sufficient food surpluses to stimulate trade.

Sometime in the EB I period the low-lying village was completely and apparently peacefully abandoned with the permanent settlement shrinking to the area of the small nearby tell perched on a protruding hump of bedrock. Perhaps marshy conditions prevailed which might account for the serious warping of the strata of the site encountered in the excavation. Whatever the ultimate reason, despite the seemingly favorable factors for population development, the site never again attracted any sizable settlement, although there is evidence for occupation on the tell for the EB II, MB, LB, Iron II, Roman, and Byzantine periods as well as finds from the Middle Ages.

ELIOT BRAUN

EN-SHEMESH (PLACE) [Heb *ʿên šemeš* (עֵין שֶׁמֶשׁ)]. A town on the border between Judah and Benjamin (Josh 15:7; 18:17). It is usually identified with Ein Haud (M.R. 175131), on the road between Bethany and Jericho 2 miles due E of Jerusalem.

EN-TAPPUAH (PLACE). See TAPPUAH (PLACE).

ENAIM (PLACE) [Heb *ʿênayim* (עֵינַיִם)]. Place "on the way to Timnah" where the sexual encounter between Tamar and her father-in-law, Judah, took place (Gen 38:14, 21). Its occurrence in the phrase of v 14, *bĕpetaḥ ʿênayim,* has been interpreted either, following the Targums, the Peshitta, and the Vulgate, as a reference to a fork in the road or crossroads (hence the NEB translation "where the road forks in two directions"), or, following the LXX, as a place-name (generating such translations as "entrance to Enaim" (JPSV) or "gate of Enaim" (RSV)). KJV simply translates "in an open place." The occurrence in v 21 of *ʿênayim* by itself, however, supports the latter interpretation as a place-name, possibly taken from nearby springs. Many scholars have equated Enaim with Enam in Josh 15:34, and locations in the Shephelah, either between Zanoah and Jarmuth in Nahal Yarmut (Wâdi Bûlus) or in the vicinity of the Vale of Elah, have been suggested.

ENAM (PLACE) [Heb *ʿênām* (עֵינָם)]. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:34), within the same district as Azekah, Zanoah, and Socoh. The only reference to this settlement, whose name perhaps means "two springs," occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). The location of the ancient settlement is uncertain. It may be the same place as Enaim.
WADE R. KOTTER

ENAN (PERSON) [*ʿênān* (עֵינָן)]. Father of the chief (*nāśîʾ*, Num 2:29) Ahira of the tribe of Naphtali. Each of the five times that Enan is mentioned in the OT occurs in a tribal list where his mark of distinction is his status as the father of Ahira. Under the leadership of Enan's son Ahira, the tribe of Naphtali participated in the census of Israelite men able to go to war conducted by Moses (Num 1:15, 42–43), presented its offerings on the final day of the twelve-day celebration of the dedication of the altar (Num 7:78, 83), took its proper place on the north side of the tabernacle in the Israelite camp (Num 2:29), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:27). The name Enan is a hypocorism which seems to mean " (God's) spring (of water)" and may have originated, as Noth (*IPN*, 224) contends, as a metaphor for the delight and joy the parents felt at the birth of their child.

ENCHANTER/ENCHANTMENTS. See MAGIC (OT).

ENCOMIUM [Gk *enkōmion* (ἐνκωμιον)]. The encomium was a rhetorical device that has been described as an elementary exercise commonly mastered in Greco-Roman schools of rhetoric. Although the rhetoricians included discussions for writing encomia under the Epideictic (display) division of oratory, its impact upon the Deliberative (legislative) and Forensic (judicial) divisions is readily evident. The encomium played a pivotal role in the development and use of portraiture in all types of literature produced during the Greco-Roman period.

While the encomium could be either a praise or an invective treatise, the primary purpose was that of praise. According to the rhetoricians, suitable subjects for the encomium included persons, cities, things; i.e., any subject an author might select. Lucian of Samosata, for example, wrote an encomium to a fly. Whereas Lucian's effort reflected his negative view of the device, such treatises were intended to demonstrate the author's rhetorical skill by concentrating on the degree of difficulty inherent in the subject chosen for praise.

Rhetorical discussions of encomium writing are found in the *Rhetorica* by Aristotle, *Rhetorica ad Alexandrum* (author unknown, though attributed to Aristotle), *Rhetorica ad Herennium* (attributed to Cicero), *De Partitione Oratoria* (Cicero), *Institutio oratoria* (Quintilian), and the works of Theon and Hermogenes. Though this list is more representative than exhaustive, the examples cited encompass prominent Greek and Roman literary traditions and span five centuries of rhetorical activity (4th century B.C.–1st century A.D.).

The rhetorical schools detailed precise rules for writing encomia. Quintilian's rules, for example, are representative (*Inst.* 3.7.10–18). Encomia that praise persons are to include signs or prophecies which anticipate the birth of the subject and significant events that occur on the occasion of birth. References to the person's country, parents, and ancestors may convey praise, as do accounts of his childhood and youth accomplishments. The author will then present the subject's adult career and offer accounts that give evidence of his praiseworthiness. The nature of the evidence depends upon the subject's vocation: i.e., battles for praising the soldier/general, laws for the ruler, orations for the orator, and the like. Next, the description of death with attention to how the subject stood in death is appropriate. Finally, praise is derived from events occurring both at the time of death (e.g., as signs or events of nature) and after death (e.g., resurrection accounts or festival celebrations in honor of the subject). In each instance, praise of the

adult is the primary focus, and the author is free to select those topics which best serve this encomiastic purpose.

Literary techniques are also specified. Amplification by way of exaggeration or embellishment is important to the writer of encomia. Amplification involves the selection of those events which best reflect the character of the subject, even to the point of attributing events or actions to a subject that have not occurred, if they are the kind in which the subject might have been involved. Comparison is also an important technique. Literary comparison with other personages demonstrate the superiority and excellence of the chosen subject.

Extant texts illustrate the rigor by which the rules are followed. For example, Isocrates's *Helen, Busiris,* and *Evagoras* may vary with respect to the specific topics chosen for portrayal, but they mirror rhetorical encomium prescriptions. Xenophon's *Agelilaus* also presents the model. Other ancient works of portraiture reflect close affinity with the encomium but also give evidence of more fluidity of form and variation of purpose. Examples of this type include Philo's *Vita Mosis,* Tacitus's *Agricola,* Lucian's *Demonax,* and some of the lives by Suetonius and Plutarch.

Further evidence for the fluidity of the form and the popular use (or misuse, as Lucian argues) appears in those works which contrast portraiture with history and in Lucian's invective treatise *How to Write History.* Polybius (*The Histories* 10.21.8), Cicero (*Fam.* 5.12.3), and Plutarch (*Alex.* 1.1–3) distinguish between tasks of positive or praise portraiture from the recording of events. Lucian likewise attacks those "historians" who praise at the expense of the accurate recording of events. In such works as these, one sees both the influence of this popular rhetorical device and the tensions the encomium produces, praise purposes which will move subsequent periods to further refine the art of literary portraiture.

The relevance of encomium writing for biblical studies has recently focused on discussions of the genre of the canonical gospels. Whereas there is currently a general willingness to admit the biographical nature of these biblical writings, the identification of the gospels with specific *bios* ("life") categories remains tenuous and the question continues to be the object of open discussion. See GOSPEL GENRE.

ENCRATISM. The advocacy of a harsh discipline of the body, especially in regard to sexual activity, diet, and the use of alcoholic beverages. The word is derived from the Greek *enkrateia,* which has a basic meaning of "self-control." While the term had some significance in Greek philosophical usage and appears occasionally in the LXX and NT, its most familiar association is with early Christian groups practicing such disciplinary observances as celibacy, abstinence from wine, and vegetarianism (a triad familiar in the history of religions to this day). Most notable among these groups is an early Christian community called Encratites, said to have been founded by Tatian, the pupil of Justin Martyr.

In discussions of ancient Greek philosophy *enkrateia* referred to self-mastery in relation to the desire for food, drink, sex, or sleep as well as the hardships of heat, cold, or drudgery (*Xen. Mem.* 2.1.1). The ability of Socrates not only to resist sexual attraction but also to endure physical hardship is an example admired

by Plato (*Symp.* 219–20). Aristotle defines the virtue at length in the *Nicomachean Ethics* (7.1–10. 1145a–1152b). Naturally, *enkrateia* was a highly prized virtue among the Stoics.

The relatively few places where *enkrateia* is used in the LXX are mainly in the Wisdom literature and reflect the influence of Hellenistic asceticism. The term is not used in the Gospels. Paul uses it for the self-discipline of athletes (1 Cor 9:25), and it appears in the list of virtues in Gal 5:23. Exercising self-control is contrasted to marrying in 1 Cor 7:9, but the perspective is obviously eschatological and, in any case, Paul is stating a preference rather than a command. More typically Hellenistic usages occur in Acts 24:25, 2 Pet 1:6, and Titus 1:8.

As might be expected, Philo has great affection for the ideal of *enkrateia.* It also appears that the main community at Qumran practiced celibacy, although the skeletons of women and children have been found in some of the adjuncts to the main cemetery there, suggesting that it was not practiced by all community members. A number of scholars have considered the asceticism of Qumran to have been a major influence on Jewish Christianity and have used this theory to account for the severe asceticism that characterized early Christianity in Mesopotamia. Two facts stand in the way of this interpretation: (1) the Jewish communities from whom the first Christian converts in Mesopotamia were drawn were very hellenized and showed little Palestinian sectarian influence, and (2) a demonstration of the origins of the initial impulse to this asceticism would not explain why it was so dispersed through the area and lasted so long.

While early Mesopotamian Christianity as a whole was characterized by encratic tendencies, such tendencies were common elsewhere in the late Roman and early Byzantine period. There was a general mood, though not a movement, of popular encratism which extended from Mesopotamia to the Coptic monks, male and female, in the Nile river valley.

Little is known about an organized sect of Encratites. The credit for founding such a group is given to Tatian by Irenaeus, who says that they rejected marriage, abstained from meat, and denied the salvation of Adam (*Haer.* 1.28). The heresies of which Irenaeus accused Tatian do not appear in Tatian's *Oration Against the Greeks,* but there is no reason to doubt that after Justin's death (ca. 165) Tatian returned to his Mesopotamian homeland and fell into an extremely ascetic form of Christian practice and teaching there. Certainly the fragments that have remained of Tatian's other works support this view and Tatian's *Diatessaron* contains what are described as "encratite glosses," or additions to the biblical text. Regarding Tatian, Hippolytus seems to have no information not derived from Irenaeus and he does not even connect Tatian explicitly with the Encratites. He does say of both that they were Cynics and not Christians (*Haer.* 8.9, 13 and X.14). While virtually nothing is known about the sect, it must have shared the asceticism reflected in documents of other early Christian groups in Mesopotamia, documents as diverse as *The Gospel of Thomas, The Acts of Thomas, The Odes of Solomon, The Gospel of Philip,* and the works of the Marcionites, the Quqites (with significant differences), and the Manichaeans.

ENEMESSAR (PERSON) [Gk *Eneméssar (os)* (Ἐνεμέσσαρος)]. The name of an Assyrian king in the book of Tobit during whose reign Tobit was taken into captivity (1:2). His successor is said to have been his son Sennachereim (Sennacherib; Tob 1:15), who in turn was followed on the throne by Sacherdonos (Esarhaddon; 1:21). The Vulgate reads Salmanassar throughout (1:2, 15, 16).

No king named Enemessar is otherwise attested. Since according to Assyrian sources Shalmaneser (V) was followed by Sargon (II), who was succeeded by his son Sennacherib, scholars have tried to see in Enemessar either a corruption of Shalmaneser or some reference to Sargon. To the latter belong the suggestions (1) that the name is an inversion of Assyrian Sarru-ukkin said to mean "legitimate king," adopted by Sargon who was a usurper, and (2) that it is an otherwise unrecorded private name of Sargon

for Anumasir "Anu is gracious." In support of the former it has been suggested (1) that Enemessar derives from Senemessar, with a loss of *l* and transposition of *m* and *n*, and (2) that *shal-* was dropped and *m* and *n* were transposed. Corruption of the name would seem to be the better explanation, though it is not possible to trace all its stages. Transposition of *m* and *n* becomes the more plausible when one notes a similar metathesis in *sacherdonos.* Elsewhere in the LXX, Heb *ʾsr-ḥdn* is transliterated by some such form as *asordan* (2 Kgs 19:37; Isa 37:38; Ezra 4:2). It should come as no surprise that a romance written some centuries after its fictive date might make a mistake on the succession of Assyrian kings.

ENGRAVING. See JEWELRY, ANCIENT ISRAELITE.

ENLIL (DEITY). The principal god of the Sumerians, attested as early as 2500 B.C., in the cuneiform tablets from Fara near Nippur (Sum EN.LÍL). His principal cult center was at Nippur, the Sumerian religious and cultural capital. His great temple there, called the Ekur, was considered to be the assembly hall of the gods.

Although Enlil's father An was the nominal head of the Mesopotamian pantheons, his embodiment of authority was rather static, and Enlil was de facto the most important deity, representing activity and direct engagement with the human world. In this regard, the relationship between Mesopotamian An and Enlil was similar to that between Canaanite El and Baal.

In the mythology, Enlil is allotted the earth as his domain, but he was also considered to have mastery over the moisture-bearing spring winds, and in the earliest periods Enlil was primarily a god of agriculture and productivity. He caused trees and plants to spring up from the earth and fashioned agricultural implements for humankind to use in tending them. His name was invoked in prayers for abundance and prosperity.

By the second millennium B.C., the Assyrians and Babylonians attributed to Enlil a gradually more cosmic role. He became more explicitly a wise father figure, ordering and presiding over creation. Alternately he executed the collective will of the gods toward the universe or assigned to them specific tasks to be done. Eventually he came to embody the very notion of kingship and was the source of it among all of humanity. Kingship and authority were called in Akk *ellilûtu* (<**enlilûtu*), "Enlil-ship."

Later texts, especially of the first millennium B.C., begin to assign progressively more negative traits to Enlil: he brings destruction, famine, chaos. This negative aspect, however, has probably been exaggerated in some recent studies. (See discussion in Kramer 1963: 119).

Enlil's consort was Ninlil, and among their offspring were Ninurta, god of the plow and of spring thundershowers, Nergal, lord of the underworld, and Nanna-Suʾen, the moon god who was, in turn, father of Utu, the sun god. Enlil's preeminence in the Mesopotamian pantheon was gradually replaced by Marduk among the Babylonians and Ashur among the Assyrians.

Enlil was prominent in many ancient hymns and tales. His role varies in the major Deluge traditions (i.e., in the Sumerian Flood Story, Gilgamesh Tablet XI, and Atraḫāsis), but in general he is the agent of the floods, sent because the gods are bothered by human noise. (See Jacobsen 1976: 118–21).

The *Hymn to Enlil* (Jacobsen 1976: 100–101), akin in style and content to Ps 104 and to the *Hymn to Aton* (*ANET*, 369–71), proclaims that nothing can happen in the universe without Enlil's participation. There are at least two hymns to Enlil and Ninlil, and Enlil plays a part in the Journey of Nanna to Nippur and in the Descent of Inanna as well as in many other Mesopotamian texts. In the famous creation story *Enūma eliš,* Ashur is the force in creation in the Assyrian version and Marduk in the Babylonian, but some have suggested that these versions both reflect an earlier common tradition where the god was Enlil.

The lore about Enlil was well known at the Canaanite city of Ugarit and presumably at other Canaanite sites at least by the middle of the second millennium B.C. The Hurrians were probably the transmitters of these and other major Mesopotamian religious ideas to the Mediterranean coast and into the cultural and literary milieu of the Bible (see Fulco *EncRel* 6: 533–35).

WILLIAM J. FULCO

ENOCH (PERSON) [Heb *ḥănôk* (חֲנוֹךְ)]. 1. Son of Cain and father of Irad (Gen 4:17–18). The genealogical context suggests that Enoch (rather than Cain) may have been the builder of the city which he named after his son, Irad (Cassuto 1961: 229–31; *GHBW,* 139–41; Sasson 1978: 174; Miller 1985: 241–42 n. 9; but cf. Sawyer 1986: 164).

2. Son of Jared, born when Jared was 162 years old (Gen 5:18), and at 65 years, father of Methuselah (Gen 5:21). Enoch lived 365 years, "walked with God" (cf. also Noah in Gen 6:9), and was taken by God (Gen 5:22–24).

The name Enoch may be derived from the West Semitic root *ḥnk*, "to introduce, initiate" (Reif 1972; *TWAT* 3/1: 20–22). See HANUKKAH, which shares the same root. It has been suggested that the name Enoch means "founder," on the basis of its association with the founding of the first city in Gen 4:17 (Westermann 1984: 327), or "initiate," on the basis of the non-canonical traditions about Enoch's introduction into the mysteries of the world (see VanderKam 1984).

As the first biblical character to forgo death, Enoch had a unique relationship with God. This direct and continuous relationship may be the meaning of the phrase "walked with *hā-ʾĕlōhîm,"* though others have found here a reference to Enoch's association with angels. As the seventh in the line from Adam (Sasson 1978), Enoch's life of piety is a contrast with the seventh in the line of Cain, whose life is one of bloodshed (Gen 4:23–24). Further, the tradition of acquisition of heavenly wisdom, which lies behind the prophecies of *1 Enoch* and of Jude 24, contrasts with the earthly wisdom of Lamech (cf. Reiner 1961), seventh in the line of Cain.

Enoch's life of 365 years is unusually brief for the members of the Sethite genealogy. It may suggest associations with the solar year (i.e., 365 days); in this regard, Enoch has been compared with Enmeduranki, a figure taught divinatory rites by the sun god and usually listed as seventh on Mesopotamian antediluvian king lists (VanderKam 1984: 33–52; Lambert 1967). However, a closer comparison exists with Enmeduranki's adviser Utuabzu (seventh and last in the *bīt mēseri* list of antediluvian sages), of whom it is also said that he ascended to heaven (Borger 1974: 192–93).

In the NT, Enoch is portrayed as an individual who possessed faith and pleased God, so that he did not die (Heb 11:5–6); his prophecy in Jude 14–15 is a quotation from *1 En.* 1:9. The quotations of Genesis 6 that are found in the book of *1 Enoch* argue against Milik's hypothesis that the Genesis 6 material is dependent upon *1 Enoch* (1976: 30–31; cf. Black 1985: 24–25; 1987). Parallel themes in Mesopotamian myths may suggest other sources for the pseudepigraphic traditions (Grelot 1958: 24–25).

ENOCH, FIRST BOOK OF. A collection of traditions and writings composed between the 4th century B.C.E. and the turn of the era, mainly in the name of Enoch, the son of Jared (Gen 5:21–24). The collection, which is roughly the length of the Book of Isaiah, is extant in its entirety only in a Ge'ez (ancient Ethiopic) translation of a Greek translation of Aramaic originals which are attested, nonetheless, by manuscript fragments from the Qumran caves (see B below).

The Enochic corpus claims to be a series of revelations which Enoch received in antiquity and transmitted to his son Methuselah for the benefit of the righteous who would live in the end times. Its major subject matter is twofold: the nature and implications of the created structure of the cosmos and the origin, nature, consequences, and final judgment of evil and sin.

The figure of Enoch portrayed in the various strata of this collection is much more complex than the prototypical righteous person suggested in Genesis. He is variously seer, sage, scribe, priest (or at least mediator), and eschatological judge.

Three myths govern the exposition in *1 Enoch.* The primary myth, rooted in Gen 5:21–24 and its Mesopotamian sources, is concerned with Enoch's journeys to the heavenly throne room and through the cosmos and the wisdom that was revealed to him during these excursions. Two other myths posit different scenarios for a primordial heavenly revolt that has had long-lasting evil consequences for the human race. In tension with these latter two myths, however, is the prevailing assumption that human beings are accountable for their conduct and for their positive or negative response to the revelations contained in this book.

In order to trace the development of the diverse but related traditions that have been collected in *1 Enoch,* this exposition will follow what appears to have been the order of their composition.

———

A. The Component Parts of *1 Enoch*
1. The Book of the Heavenly Luminaries (Chaps. 72–82)
2. The Book of the Watchers (Chaps. 1–36)
3. Enoch's Two Dream Visions (Chaps. 83–90)
4. Two Pieces of Testamentary Narrative (81:1–82:3; 91)
5. The Epistle of Enoch (Chaps. 92–105)
6. An Account of Noah's Birth (Chaps. 106–7)
7. Another Book by Enoch (Chap. 108)
8. The Book of Parables (or Similitudes) (Chaps. 37–71)
9. The Book of the Giants
B. Literary History, Versions, and Manuscript Tradition C. Literary Genres and their Function
1. A Collection of Apocalypses
2. A Testament and Testimony
D. The Enochic Corpus as Revealed Heavenly Wisdom
E. Dualism in the Enochic Writings
F. *1 Enoch* as a Theological and Intellectual Synthesis
G. Provenance and Social Setting
H. The Enochic Traditions and Early Christianity

———

A. The Component Parts of *1 Enoch*

1. The Book of the Heavenly Luminaries (Chaps. 72–82). The structure and functioning of celestial (mainly) and terrestial phenomena are the subject matter of these chapters (VanderKam 1984: 76–109). The primitive science that is expounded suggests that this section is the oldest stratum in *1 Enoch* and that it stems from the Persian period (Neugebauer in Black 1985: 387). The text as it presently stands is a narrative in which Enoch recounts to Methuselah (76:14; 79:1) his journey through the heavens and over the earth, during which Uriel, the angel in charge of the luminaries, interpreted what Enoch saw.

Fundamental to the treatise is a solar calendar of 364 days, i.e., four seasons of ninety days each, plus one day added to each season. In the 2d century B.C.E. sectors of the Jewish community were locked in a bitter debate about the divine institution of the solar or lunar calendar. Evidence of this controversy appears in the Qumran sectarian documents and in the book of *Jubilees* (4:17, 21), which cites this treatise in support of polemics against a "gentile" lunar calendar (*Jub.* 6:35–38). Although the non-tendentious style of most of the treatise probably indicates that it was not composed for a polemical purpose, the revelatory form in which it is cast suggests that it is presented as a divinely ordained Torah, and two passages—probably not original to the book (80:2–8; 82:4–6)—indicate that the treatise had a polemical function in the form transmitted in *1 Enoch*.

The literary history of this section has many question marks. Because of its fragmented condition, the precise contents of the Qumran Aramaic material underlying these chapters are uncertain. It is clear, however, that at least parts of the Ethiopic version are a considerably abbreviated form of an Aramaic treatise that was copied on manuscripts that did not contain the other parts of *1 Enoch.* On the other hand, literary considerations indicate that 81:1–82:3 in the Ethiopic are an addition to an earlier form of the Book of the Luminaries.

2. The Book of the Watchers (Chaps. 1–36). These chapters constitute the second oldest section of *1 Enoch.* As a literary unit they probably date to the second half of the 3d century B.C.E. and reflect a developing accretion to a nucleus of traditions that stem from the 4th century.

a. Introdution (Chaps. 1–5). Most likely composed as an introduction to chaps. 1–36, this section strikes the keynote for the book (Hartman 1979). The superscription and introduction to the section (1:1–3) describe Enoch as a righteous man who saw heavenly visions that were interpreted by angels and that are now transmitted as a "blessing" for "the righteous chosen" who will live at the time of the eschatological judgment. That blessing is given in an oracle in late prophetic style which describes the eschatological theophany and the resulting blessing and curse on the righteous and sinners. Thus the Book of the Watchers is presented as a collection of revelations about the judgment.

Parallels to the form and contents of this section indicate that it is a fusion of literary forms and ideas that were at home in prophetic, wisdom, and priestly circles. The opening words (1:1) and the beginning of the theophanic description (1:3c–4) are drawn from the blessing of Moses (Deuteronomy 33), and the oracle is introduced in analogy to the oracles of Balaam the prophet (1:2–3b; cf. Num 24:15–17). The poetic first and third parts of the oracle (1:3c–9; 5:4–9) are a pastiche of phrases from biblical accounts of theophanies (Deuteronomy 33; Micah 1; Zechariah 14) and from the scenario of the new creation in Isaiah 65. Positive and negative paraphrases of the priestly benediction (Num 6:24–26) appear in 1:8 and 5:5–6. Between these two parts is a prose passage in wisdom style that contrasts nature's obedience to God's order with humanity's disobedience of the divine commands. The paradigmatic citation of the heavenly bodies may indicate that the human perversion of God's commands includes a rejection of the Enochic astronomical and calendrical Torah.

b. The Myths of the Watchers' Rebellion (Chaps. 6–11). This narrative of the primordial angelic rebellion serves as a mythic foundation for the Enochic authors' interpretation of certain regnant evils and their expectation of its resolution in the eschatological judgment (Nickelsburg 1981a: 212–13). The text conflates two or three separate traditions. The first recasts Genesis 6–9. The biblical "sons of God" are angels, led by their chieftain Šemiḥazah—"holy watchers," whose intercourse with mortal women breeds a race of malevolent giants whose bloody violence desolates the earth. The sin of "all flesh," which triggered God's judgment in the Deluge, according to Genesis, is here transformed into the watchers' rebellion and giants' violent victimization of "all flesh." The biblical description of the postdiluvian restoration of the earth (Genesis 9) is rewritten as a scenario of eschatological re-creation. The tradition interprets the events of Genesis as a prototype of eschatological violence, judgment, and restoration in which evil that originated in demonic rebellion would find its cure in divine intervention. Although aspects of this interpretation of Genesis may have their roots in pre-Hellenistic times, the form of the myth attested in *1 Enoch* 6–11 fits well in the time of the successors of Alexander (the Diadochoi), whose wars in contention for the kingdom (323–302 B.C.E.) have a mythic counterpart in the violence of the

giants and whose claims of divine parentage find an admirable parody in the motif of the watchers' rebellious spawning of semi-divine warriors.

In the second tradition of angelic rebellion, the angelic leader, ‹Aśa›el, reveals the secrets of metallurgy and mining which enable men to make the instruments of war and to fashion the jewelry and cosmetics that facilitate sexual seduction. According to the text of chaps. 6–11 preserved by the chronographer Syncellus, this rebellion preceded and precipitated the rebellion of Semihazah and his associates. It is likely that in the original form of this myth the watchers were sent by God to instruct humankind in useful arts (cf. *Jub.* 4:15; 5:6; Pseudo-Clementine Homilies 8:13). The story of ‹Aśa›el has analogies in ancient Near Eastern myths about culture bearers and is most closely paralleled in the Greek myth of Prometheus as told by Hesiod and Aeschylus. The motif of rebellion through the revelation of forbidden knowledge is further expounded in 8:3 (perhaps relying on another tradition), which ascribes to various of the watchers the revelation of several kinds of astrological prognostication. In context this revelation is a foil to the astronomical revelations that Enoch received and transmitted.

This section as a whole criticizes aspects of contemporary civilization, construing them as the result of heavenly rebellion that can be reversed and overcome only by divine judgment and reparation. The pervading sense of humanity's victimization by demonic forces and the necessity for direct divine intervention will continue to be a constitutive part of much of later apocalypticism.

c. Enoch's Commissioning as a Prophet of Judgment (Chaps. 12–16). In a kind of commentary on chaps. 6–11, this section describes Enoch's ascent to the heavenly throne room as a prophetic commissioning in the tradition of Ezekiel 1–2. The account also contains important characteristics of later Jewish accounts of mystical ascents. Although the name of Šemiḥazah is not mentioned, the text focuses on the watchers' sin with the women, which is interpreted as the heavenly priests' forsaking the eternal sanctuary and defiling themselves by violating the created distinction between spirit and flesh. Unlike chaps. 6–11, the death of the giants results not in their annihilation, but in the release of evil spirits which will plague the world until the eschaton (15:11–16:1; cf. *Jub.* 10:1–13). Reference to ‹Aśa›el and the revelation of forbidden secrets (13:1–2; 15:2–3) appears to be secondary to the section but reflects ‹Aśa›el's increasing importance in the tradition.

The watchers' sin is recounted in traditional language also found in polemics against the Jerusalem priesthood (15:3–4; cf. *Ps. Sol.* 8:13; CD 5:6–7), and aspects of the story are reminiscent of Ezra's confrontation with the Jerusalem priests who had married foreign women. This may reflect a conflict between this author and the Jerusalem priesthood. The narrative setting of the account in Upper Galilee near sites that were sacred to Canaanites, Israelites, Jews, pagans, and—later—Christians, suggests that this author lived in this region among people whose opposition to Jerusalem led them to another traditional sacred place (Nickelsburg 1981b). A date in the mid–3d century B.C.E. seems likely.

d. Enoch's Journey to the West (Chaps. 17–19). From the heavenly throne room (the setting of chaps. 14–16) certain angels (17:1; only Uriel is named in 19:1) accompany Enoch on a journey to the western edge of earth's disk, which culminates in two visions of the places of punishment of the rebel watchers and certain transgressing stars (18:10–11 + 19:1–2 + 18:12–16 + 19:3, assuming there is a displacement in the received text). The order of the account parallels chaps. 14–16, with the horizontal journey to God's mountain throne and the vision of the watchers' punishment replacing the vertical ascent to the heavenly throne room and the oracle that announces that punishment. A literary form akin to the Greek Nekyia (a journey to the places of punishment in the underworld) replaces the form of the prophetic call. The detailed references to places of geographic and cosmic importance indicate the apocalyptist's familiarity with speculation about these matters. In the account, however, they function as landmarks that document the seer's progress to his journey's goal.

e. Enoch's Journey to the East (Chaps. 20–36). After a list of the seven archangels who will accompany Enoch (chap. 20), this section recounts Enoch's visions, from the far west (where chaps. 17–19 left off) to the easternmost edge of earth's disk. The principal motif is eschatological retribution, which is stressed through a series of additions to the traditions in chaps. 17–19 (Wacker).

The journey narrative begins in chap. 21 with a repetition, in reverse order, of the visions in 18:10–19:2. Still in the West, Enoch arrives at the mountain that holds the spirits of the dead until the time of the final reward or punishment (chap. 22). Chap. 23 may be a doublet of traditions in chap. 21. At 24:2–25:7, Enoch visits the mountain paradise where God's throne is set (cf. 18:6–8). Here the Tree of Life is kept until it will be transplanted to the temple mount in the new Jerusalem, where it will nourish the righteous in the new age. Enoch's vision of Jerusalem focuses on the cursed valley of Hinnom, where the wicked will be punished eternally in the presence of the righteous. Chaps. 24–26 depict the geographic setting for the scenario in the resurrection passage in Dan 12:2. In 28:1–32:2, a literary counterpart of 17:1–7, Enoch recounts his travels through the eastern spice orchards to the paradise of righteousness, whose trees are dominated by the fragrant tree of wisdom (32:3–6). At chap. 33 he arrives at the eastern end of the earth, where Uriel shows him the outlets of the luminaries, a summary allusion to the Book of the Luminaries. The Book of the Watchers ends in chaps. 34–36 with a brief account, reminiscent of chap. 76, which summarizes Enoch's journey around earth's edge, to the sources of the winds in the North, West, South and East.

3. Enoch's Two Dream Visions (Chaps. 83–90). Enoch recounts to Methuselah the contents of two dream visions which he saw before he was married to Edna. According to the first (chaps. 83–84), he saw a vision of the Deluge and prayed that his posterity not be destroyed.

The second vision is an extensive allegorical apocalypse that traces human history from Adam to the eschaton (chaps. 85–90). The author depicts human beings as animals, and angels as human beings. The patriarchs through Isaac are portrayed as bulls. Jacob and his descendants are symbolized by sheep that are continually being victimized by the wild beasts that represent the gentiles. In response to the sin of Manasseh, the Lord of the Sheep commits his flock to seventy angelic shepherds (89:59–64), who are to rule for four periods. The shepherds abuse their office by permitting more than the proper number of sheep to be destroyed. This is recorded by an angelic scribe who intercedes for the sheep. The eschaton is depicted in a two-stage textual tradition (90:9–19). In its developed form, a great horned ram, representing Judas Maccabeus, wages war against the nations. A theophany leads to the final judgment of the rebel watchers, the angelic shepherds, and the apostate Jews of the end time (90:20–27). Then Jerusalem and the sanctuary are rebuilt in unsurpassed glory. A white bull is born as a (messianic?) reappearance of the primordial man, and the sheep and other animals are transformed into white bulls, thus signaling the eschatological unity of the human race which has returned to its created purity.

This dream vision has important points of contact with Enochic and biblical traditions. The rebellion of the watchers and their judgment by the archangels, the intercession of the angelic scribe which triggers the final judgment, and the final reconstitution of a righteous humanity all have counterparts in *1 Enoch* 6–11. Many events in the historical narrative reflect biblical narratives. The antagonism of the sheep and wild beasts, the shepherds' dereliction of duty (cf. Zechariah 11), and the appearance of an eschatological messianic figure are all reminiscent of Ezekiel 34. The seventy shepherds and the four periods of their rule recall the seventy years in Jer 25:11–12 and 29:10 (cf. Dan 9:2) and the four kingdoms in Daniel 7.

The dream vision was composed at least by the time of Judas' defeat of Nicanor in 161 B.C.E., though an earlier version may have ended with the theophany. Although the exact provenance of the apocalypse is uncertain, several details reflect social, theological, and ideological aspects of that provenance. The author is critical of the Second Temple and seems to assert that the polluted food on the sacrificial altar (89:73; cf. Mal 1:7) was never removed. Alongside this polluted food are mentioned apostate Jews (blind sheep, 89:74), who, late in the Hellenistic period, are opposed by young lambs whose eyes are opened—obviously pious Jews of the author's persuasion. At least in its final form the apocalypse was transmitted (and revised) by an author favorably disposed toward Judas Maccabeus, and the prominence of the motif of the eschatological sword indicates a militant ideology that is reminiscent of the congregation of mighty warriors, described as Hasidim in 1 Macc 2:42.

4. Two Pieces of Testamentary Narrative (81:1–82:3; 91). The brief narrative in 81:1–82:3, which is out of place in its present context in the Book of the Luminaries, forms a narrative bridge with material that follows. Enoch views the heavenly tablets that contain a record of human deeds. He is then brought

back to earth by the angelic guides mentioned in the Book of the Watchers and is told to instruct his children for one year, transmitting to them the wisdom he received on his journeys. This "testimony" for future generations is given in the presence of Methuselah.

Although chaps. 83–90 are part of Enoch's instruction to Methuselah, the narrative style of 81:1–82:3 is continued in chap. 91. Enoch's other children gather to hear the testimony of Enoch's final instruction. Its ethical component employs the scheme of the two ways, of righteousness and wickedness. The predictive section in vv 5–10 parallels two subsequent texts: the Apocalypse of Weeks (93:1–10 + 91:11–17) and Enoch's prediction in 106:13–107:2.

5. The Epistle of Enoch (Chaps. 92–105). These chapters claim to be an epistle from Enoch to his spiritual descendants in the latter generations. Counterposed throughout are the righteous and the sinners and the respective judgments that await them. The introductory Apocalypse of Weeks schematizes human history from Enoch to the eschaton and provides a time frame for the judgment that is presumed in the rest of the Epistle (VanderKam 1984: 142–60). Central to the Apocalypse is the primordial and eschatological opposition between violence and deceit and righteousness and truth. The seventh week will be marked by the constitution of the community of the righteous and chosen, whose gift of "sevenfold wisdom and knowledge" will enable them to uproot the structure of violence and deceit. The sword of judgment given to the righteous in the eighth week is reminiscent of the Animal Vision, and the motif is repeated in 95:3; 96:1; and 98:12. In the tenth week, the eschatological temple will be built, and the revelation of righteous Torah will turn all humanity to righteousness (see also above).

The body of the Epistle employs three literary forms typical of biblical prophecy: woes, admonitions usually introduced by "Fear not," and eschatological predictions introduced by "then" or "in those days" (Nickelsburg 1977). Described throughout is the oppression of the righteous by rich and powerful sinners (corresponding to the aforementioned "violence") and the false teaching of those who alter the Torah and lead many astray with their lies (corresponding to the "deceit" mentioned in the Apocalypse; Nickelsburg 1982). In a final major section (102:4–104:8), the author confronts the problem of theodicy raised by the present situation and offers a solution in the judgment that will give new life to the righteous dead and will recompense the sinners who have thus far gone unpunished. In a brief concluding section (104:12–105:2), the eschatological wisdom mentioned in 93:10 is identified with the books of Enoch, which are the basis on which the righteous will "testify to the sons of the whole earth."

Although the Epistle employs earlier and, in many cases, non-Enochic traditions, the section as a whole was created as an exhortative conclusion to the Enochic corpus. Its admonitions to the faith and righteous conduct that will lead to salvation presume earlier sections of *1 Enoch.* Enoch's vision of the place of the dead (chap. 22) is presupposed in 102:4–103:8, his viewing of the heavenly tablets is cited in 103:2, and his visions of angelic intercession are referred to in 104:1. Vision, angelic interpretation, and his reading of the tablets are mentioned in 93:2. Through these citations and the use of prophetic literary forms and of oath formulas that underscore the certainty of the author's message of judgment, the author identifies this section and the corpus as a whole as the revealed, saving wisdom they claim to be.

The date and provenance of the Epistle are uncertain. If the Epistle as a whole was composed at the same time as the narrative in 81:1–82:3 and 91, the possible allusion to this narrative in *Jub.* 4:18–19 may indicate a date early in the 2d century B.C.E. On the other hand, the body of the Epistle may reflect excesses in the Hasmonean period and thus date to the latter part of the 2d century. The Epistle was composed in unidentified circles closely related to the Qumran community.

6. An Account of Noah's Birth (Chaps. 106–7). The miraculous circumstances attending Noah's birth terrify his father Lamech, who suspects an angelic conception and sends Methuselah to Enoch for an explanation. The seer attributes the evils of the present time to the angelic rebellion but promises that in Noah Lamech's progeny will be preserved and the world and humankind will be restored after the judgment of the Deluge. Thus the narrative concludes the Enochic corpus with the promise, inherent in its typology of primordial and end times, that salvation will follow the eschatological judgment. Evidence from the Qumran manuscripts indicates that the narrative was composed before the middle of the 1st century B.C.E. It is a variant of the stories of Enoch's vision of the Flood in chaps. 83–84 and Noah's

anticipation of the Flood in chap. 65. All three reflect the kind of apprehension and fear that are typical of people who believe they are living in the last times.

7. Another Book by Enoch (Chap. 108). This brief work of uncertain origin and date was added to the end of the corpus as a final word of exhortation to the righteous of the end time. Drawing on other parts of the corpus, it presents a brief vision of the place of punishment as evidence of the coming judgment and calls on the suffering righteous to endure in anticipation of their glorification.

8. The Book of Parables (or Similitudes) (Chaps. 37–71). This longest of all the Enochic books is generally considered to be the latest major stratum in the corpus. There is some doubt as to its title. Although the superscription in 37:5 calls attention to the three "parables" (38–44; 45–57; 58–69) that constitute its primary contents, and 68:1 (a later interpolation) refers to "the Book of the Parables," the expression "He took up his parable and said" is used in earlier strata to introduce the initial oracle (1:2, 3) and the Apocalypse of Weeks (93:1, 3). The author's superscription designates the work as "The vision of wisdom which Enoch … saw" and wrote down both for the men of old and those of the latter days (37:1–3; cf. 1:1–2; 92:1).

The Book of Parables is, for the most part, an account of the visions that Enoch saw and the accompanying angels interpreted as the seer journeyed to the heavenly throne room and through the cosmos. A significant part of the text is a revision of earlier Enochic traditions drawn from the Book of the Luminaries and the Book of the Watchers. Material parallel to the former is found in 41:3–8, chaps. 43–44; 60:11–24; and 69:22–24. The first parable has many point-by-point similarities to chaps. 1–16, and later sections develop aspects of the accounts of Enoch's journeys in chaps. 17–36. The double list of angelic names in 69:1–12 is a variant of the lists in 6:7 and 8:1–3. The Noachic narratives in chaps. 65–67 are related to the stories in 83–84 and 106–107, although this material may be a secondary interpolation into an earlier form of this work.

The uniqueness of this Enochic work lies in a series of vignettes set in the heavenly throne room which depict, in the form of a developing drama, events related to the great judgment. The principal figure in these scenes is a transcendent heavenly figure whom God has designated as the eschatological judge and the vindicator of the righteous and elect. The text refers to him variously as "the Chosen One" (his primary title), "the Righteous One," "that son of man," and God's "Anointed One." See SON OF MAN. As these designations indicate, the descriptions of this figure are the fruit of speculations on the biblical texts about "one like a son of man" (Daniel 7), the Deutero-Isaianic servant of the Lord (esp. Isaiah 42, 49, 52–53), and the Davidic king (Psalm 2 and Isaiah 11). The Chosen One will judge two major groups of sinners. They are "the kings and the mighty," who persecute the righteous and function in analogy to the giants in chaps. 6–11 and the sinners in 92–105, and the angelic chieftain Azazel and his hosts, who, like ‹Aśa›el and the others in chaps. 6–11, have revealed the secrets of unrighteousness.

Through these vignettes the author presents his message. In the coming judgment, God will vindicate the righteous and elect and punish their enemies. The book, in turn, is offered as revealed wisdom about this judgment and the heavenly realm in which it is already beginning to happen, and it promises salvation to the righteous who stand firm in this knowledge.

The Enochic character of the Book of Parables is emphasized in its last two chapters, which, however, may be secondary to the text. Here Enoch's translation (Genesis 5) is identified with his ascent to the heavenly throne room (*1 Enoch* 14) and with the presentation of the son of man in Daniel 7. Thus, as a climax to the drama that the seer has seen unfold, he sees himself being presented to God as the son of man who is to be the eschatological judge.

The date and provenance of the book have long been disputed. Taking note of their absence from the Qumran Aramaic fragments and some similarities to the Christian Sibylline Oracles, Milik (1976: 91–98) has argued that they are a Christian product from ca. 270 C.E. However, several weaknesses in Milik's argument make this conclusion highly dubious. The Parables' absence from Qumran need only indicate that their author based his work on copies of the pre-Qumran Enochic texts which circulated outside of Qumran. The Christian Sibyllines are probably ultimately dependent on the Parables and not vice versa. Milik's identification of the Parthians and Medes (56:5) with the Palmyrenes is generally not accepted.

Currently, most scholars take the Parables to be a Jewish text from either the last half of the 1st century B.C.E. or the first three quarters of the 1st century C.E. The earlier dating finds in 56:5 a reference to the Parthian invasion of 40 B.C.E. and in 67:8–13 a reference to Herod the Great. The later dating emphasizes the affinities between the Parables and the Jewish apocalypses of the late 1st century C.E. and the book of Revelation (Knibb 1978). Their specific provenance in Judaism is uncertain.

9. The Book of the Giants. Although these narratives about the sons of the watchers and the women are not part of the Ethiopic corpus, they are contemporaneous with some of the strata in that corpus. Fragments of six copies of the work have been identified among the Qumran Aramaic fragments, and paleographic considerations indicate the early 1st century B.C.E. as a terminus ad quem for its composition. From the Qumran fragments and from numerous fragments and passages from a Manichean version of the work we can reconstruct some of the contents of the book, but the rest of its contents and its relationship to the narrative parts of *1 Enoch* are uncertain (Milik 1976: 298–317).

B. Literary History, Versions, and Manuscript Tradition

Although many details remain obscure, we can trace major aspects in the literary history of the Enochic corpus. The Book of the Watchers developed in stages from its mythic nucleus in chaps. 6–11. With some more additions this major unit came to function as the narrative introduction to an Enochic testament. An additional narrative described how Enoch returned from his journeys through the cosmos and was commanded to instruct his children (81:1–82:3; 91). At some point that instruction came to include not only the two–ways admonitions in chap. 91 and 94:1–4 and the historical surveys in 93:1–10 and 91:11–17, but also the two dream visions (chaps. 83–90) and the body of the Epistle (92; 94:5ff). This latter served as an exposition of the two–ways theology and an extended exhortation that was based on Enoch's visions (chaps. 21–36; 81) and the announcement of the judgment implicit in them and explicit in chaps. 1–5. The addition of chaps. 106–107 provided a narrative of primordial times that anticipated the salvation of the eschaton. A compressed form of the Book of the Luminaries (chaps. 72–82) was juxtaposed to the astronomical material in chaps. 33–36, and then the Book of Parables (chaps. 37–71) was interpolated between these two sections. Chapter 108 was added as a final exhortation.

With the exception of the Parables and chaps. 83–84 and 108, all the major sections of *1 Enoch* are represented among the Qumran Aramaic manuscripts, as is the Book of Giants. It is likely that all component parts, including the Parables, were composed in Aramaic. The Akhmim papyrus (6th century) and the Chester Beatty papyrus (4th century) preserve, between them, approximately twenty-five percent of the Book of Watchers and the Epistle in Greek translation. Two other mss preserve Greek fragments of the Book of the Luminaries and the Animal Vision. Quotations in the Book of Jude, various of the Church Fathers, and the chronography of George Syncellus reflect knowledge of a Greek translation of the Book of the Watchers, the Apocalypse of Weeks, and the Epistle, and the earliest of these quotations indicates the late 1st century C.E. as a terminus ad quem for the Greek translation(s). Whether the archetype of the Ethiopic translation, which was made no later than the 6th century, used a single Greek ms or a set of mss depends on whether the Parables were translated from a Greek version or directly from the Aramaic, as Ullendorf and Knibb suggest (Knibb 1978: 2.37–46). In the latter case, *1 Enoch* would have come into its present form only in the Ethiopic version. Of that version, a large number of mss are known, many of them parts of more extensive biblical mss.

C. Literary Genres and Their Function

1 Enoch provides a wealth of information about the development of (biblical) literary genres during the crucial transitional Hellenistic period. Chaps. 6–11 are an early example of the rewriting of biblical narrative which will later emerge in Targum and Midrash. Other texts are developing examples of the prophetic forms of call story, salvation-judgment oracle, woe, or exhortation. Chaps. 2–5, the two–ways instruction in chaps. 91 and 94, and some of the woes in the Epistle have important analogies in Israelite Wisdom Literature.

1. A Collection of Apocalypses. Large parts of the Enochic corpus belong to two literary genres. The first of these appears in various types of apocalypse. The Book of the Luminaries, chaps. 17–19 and 20–36, large parts of the Parables, and part of the narratives in 81:1–82:3 and chap. 108 are cast as journeys

to inaccessible places where visions are interpreted by an accompanying angel. This form and literary device have counterparts in Ezekiel 40–48 and Zechariah 1–6 (Himmelfarb 1983: 56–58). In addition, in texts with no counterpart in a biblical genre, Enoch recounts in chaps. 85–90, 93:1–10, and 91:11–17 visions that describe the history of the world from primordial time to the eschaton. In both of these, the narrator functions as an inspired revealer of secrets about the hidden future. Finally, the instruction and exhortation that constitute the major part of the Epistle are explicitly based on Enoch's visions of heavenly and cosmic entitites: heavenly tablets and books, angelic intercession, and the places and objects of eschatological blessing and punishment. This repeated use of revelatory literary forms and recourse to revealed visions and information justifies our calling *1 Enoch* an apocalyptic work or, in large part, a collection of apocalypses.

Enoch sees and then reveals to the reader God's hidden world and hidden future. The former is important to note because studies of apocalyptic theology have tended to stress eschatology. However, in its earliest form, a work like the Book of the Luminaries appears not to have dealt with eschatology. Instead, the author revealed the hidden workings of the heavenly bodies which undergird a calendrical Torah.

Although the journey narratives in chaps. 17–36 reveal aspects of God's hidden world and doubtless reflect study and speculation about "scientific" matters, the journeys and various segments in them climax in interpreted visions about phenomena and places of eschatological importance, and thus the cosmic information functions to undergird the author's eschatology. This eschatology has both a temporal dimension and a spatial one. Here Enoch sees the places, things, and agents of the judgment that elsewhere is predicted. God has prepared and built into the cosmos the entities that will facilitate that judgment and its consequences. Enoch's revelation includes reports that these things are present and happening in God's hidden world, and this revelation of present realities guarantees that the future judgment and its consequences will also take place.

2. A Testament and Testimony. The function of the apocalyptic genres becomes evident in the use of a second genre—the testament—which governs the shape of a large part of the Enochic corpus. Especially noteworthy are the similarities to parts of Deuteronomy. The superscription and initial description of the eschatological theophany recall the Blessing of Moses (1:1, 3c–4, 9; cf. Deut 33:1–2). The testamentary setting in 81:5–82:3 and chap. 91, the double description of future history in 91:5–10, 93:1–10, and 91:11–17, and the two–ways instruction in 91:3–4, 18–19; 94:1–4 have counterparts in Deuteronomy 38–32. The fragmentary passage in 93:11–14 paraphrases Deut 4:33 and sets the uniqueness of Enoch's revelations of the heavenly throne room and the cosmos in parallel to the uniqueness of the revelation of the Mosaic Torah (contrast Deut 30:11–14). The key word "testify" (81:6; 91:3), used of Enoch's instruction to his children and of the book's function in the eschaton (104:11; 105:1), parallels the usage in Deuteronomy 30–31 and ascribes to the Enochic corpus a function that parallels the Mosaic Torah and Moses' descriptions of the future. In the end time the testamentary deposit of Enoch's revealed wisdom appeals to the righteous and the world at large to obey its Torah (both what is written in the corpus and the broader tradition transmitted by the community) so that they may be saved in the coming judgment.

D. The Enochic Corpus as Revealed Heavenly Wisdom

The Enochic authors' use of revelatory genres derives from their belief that they are transmitting heavenly "wisdom." Contrary to what one might expect, the noun "revelation" seems never to have been used in this corpus, and the verb "reveal" is rare (see 7:1; 8:3; 9:6, 8; 13:2 for the secrets brought by the rebellious watchers; 10:2, 107:3 for information about Noah and the Flood, and 106:19; 91:14; 94:2 for the revelations to Enoch and their promulgation in the end time). More frequently Enoch's revelations are called "wisdom" (5:8; 32:3–6; 37:1–4; 82:2–3; 92:1; 93:8, 10; 94:5; 104:12; 105:1), and the verb "given" denotes its divine origin (5:8; 37:4; 93:10; 104:12).

The Enochic corpus is an earthly deposit of wisdom from and about the hidden world, which has been mediated through authors who are identified with the primordial sage and seer. One is interested not in the historical process by which this wisdom came to be embodied in these texts but with its identity as

heavenly wisdom and its association with an ancient figure who is perceived to have been the quintessential source and mediator of such wisdom.

Enochic wisdom has a salvific function. It is Torah broadly conceived. Aspects of it reveal the laws that embody the divine will that is to be obeyed if one is to be saved. It also provides instruction about the coming judgment, in which God will save and damn the obedient and disobedient. Thus the Enochic revelation of wisdom and one's response to it are crucial for salvation, or life, or blessing.

This view of wisdom is functionally similar to Ben Sira's understanding of wisdom. As is evident from Sirach 24, Ben Sira sees the Mosaic Torah less as a historical phenomenon associated with Mount Sinai than as the perennial repository of preexistent heavenly wisdom whose life-giving function is mediated through its interpretation by sages like himself. The differences between the two authors' understanding of wisdom must, of course, be noted. Ben Sira expounds what he understands to be Mosaic Torah; his opinion about the specifics of Enochic wisdom is uncertain (44:16 is textually problematic). As to the means of revelation, he is skeptical about dreams and visions (34:1–8). Unlike the author of the Epistle, moreover, he does not limit salvation to those who accept his interpretation of Torah.

E. Dualism in the Enochic Writings

The Enochic authors' use of revelatory genres is a function of the dualistic understanding of historical and cosmic reality which pervades the corpus and is essential to its exposition. The phenomenal world is a reflection of a hidden world whose complex realities can be known only if they are revealed. The nature and functions of this dualism and the consequent pervasive use of apocalyptic genres are important defining characteristics of the Enochic corpus and signal some important transformations of biblical tradition.

A spatial dualism is integral to the exposition of Enochic Torah. Although we are not well informed about the totality of the Torah of the circles that created the Enochic writings, it is evident that correct calendrical practice played an important role. For this reason, certain of the authors emphasized the revealed knowledge of the hidden world of the heavenly luminaries which was necessary for right conduct.

Important aspects of the Enochic authors' understanding of the nature of evil were governed by a dualistic worldview. Human beings were, of course, responsible for their actions, and they would be rewarded or punished accordingly at the great judgment. Nonetheless, the Enochic authors attributed a significant part of the evils in this world to a hidden demonic world, and the corpus devotes considerable space to myths that trace the origins of that world to an angelic rebellion that took place in the heavenly realm and the hidden primordial past (see A.1.b above).

Given the supernatural origin and character of the evils, the authors seek a remedy beyond history and beyond the empirical world. On the one hand, the remedy lies in the hidden future when divine judgment will usher in a new age qualitatively different from the present one, when the Creator's primordial intention will become permanent reality and evil will be forever eradicated. On the other hand, the solution is already in process, in the hidden throne room in the heavenly realm, where the archangelic counterparts of the demons plead and prepare for salvation, and in the secret recesses of the cosmos, where the places of punishment await or already claim their victims.

F. *1 Enoch* as a Theological and Intellectual Synthesis

1 Enoch attests the confluence of many social, cultural, and religious currents in postexilic Judaism. Fundamental is the belief that God's will has been revealed and is to be obeyed. The Mosaic Torah, evidently interpreted in specific ways, is presumed, but supplemented by Enochic Torah, which focuses on cosmology and calendar. In their predominating claim to be mediating revelations about the great eschatological judgment that will recompense the righteous and the sinners for their responses to God's will, the Enochic authors are indebted to aspects of Israelite prophecy, as is evident from the use of prophetic forms and genres and dependence on specific prophetic traditions. However, the embodiment of this message in extended historical and cosmological apocalypses and the transformation of the call vision into a heavenly ascent reflect important divergences from biblical tradition. Passing allusions and detailed references to animate and inanimate aspects of the created world and its components and structure

indicate more than a passing acquaintance with interests and concerns elsewhere evident in the Wisdom Literature (Stone 1976). These motifs supplement the temporal emphasis of prophetic eschatology with a spatial dimension, and the whole is further embellished through the use of literary forms and traditions at home in the Wisdom Literature.

Through the intersection of these currents a new phenomenon appears in *1 Enoch.* The content of Torah is broadened, and its true interpretation is specified. The revelation of God's will and of the eschatological future is supplemented by revealed knowledge of a hidden world, and together these are identified as heavenly wisdom of broad and inclusive dimensions, mediated by a primordial seer and sage.

The Enochic convergence of Israelite intellectual, theological, and religious streams is further complicated by elements of pagan provenance: Babylonian myths about the ancient sage (VanderKam 1984: 23–75), Greek myths about Prometheus and about the Titans, and common Near Eastern mythic geography and cosmology (Nickelsburg 1981a: 212–13). The principle of selective syncretism is not new to Israelite religion, but the specific mix is novel.

G. Provenance and Social Setting

The Enochic writings are a corpus of closely related traditions that were created, transmitted, and developed in "pious" Jewish circles of the 4th to 1st centuries B.C.E. The Essenes at Qumran were one important heir and transmitter of the corpus during the 2d and 1st centuries, although there is no sure evidence that this group wrote any part of the corpus (Nickelsburg 1986). That the group or groups who created the Enochic traditions were closely related to the Qumran sect is indicated not only by the presence of many Enoch manuscripts at Qumran but also by allusions to this literature in Qumran sectarian documents and by a substantial number of similarities between *1 Enoch* and various of the sectarian texts. Among the similarities are a common solar calendar, antagonism toward the Second Temple (though partly for different reasons), the prized memory of a religious awakening, reform, or renewal in the Hellenistic period, the claim to be God's (harried and persecuted) righteous elect who possess the interpretation of the Torah necessary for salvation and insight into the divine eschatological mysteries, and a common militant ideology that anticipated the elect community's participation in the coming judgment.

Much work remains to be done on the history of the circles that produced the Enochic literature and their relationships to the Qumran sect, but the following are guideposts. In the earliest recoverable form of the Šemiḥazah story, the reference to God's revelation to Noah reflects the author's belief that he and certain others constitute a righteous remnant whose knowledge of the coming judgment will save them. The early date of the Book of the Luminaries indicates that a solar calendar was one of the earliest constituents of Enochic Torah. Chaps. 12–16 appear to reflect antipathy toward the Temple as early as the 3d century, and the later Animal Vision and probably the Apocalypse of Weeks trace this back to the time of its construction. The book of *Jubilees,* which probably dates to the time of Jason's reforms in Jerusalem, prizes the Enochic traditions and emphasizes the importance of the solar calendar. Nonetheless, it reflects little sectarian consciousness and appears to limit its condemnation of the temple and priesthood to the Hellenistic period. Daniel 7 and 12 appear to reflect traditions in *1 Enoch* 14: 24–27, and Daniel's visionary activity parallels that of Enoch. Although we know very little about the Hasidim mentioned in 1 and 2 Maccabees, nothing in the Enochic texts prevents the theory that these texts and that group were parts of a common reform movement or series of movements. Column 1 of the Damascus Document and the Apocalypse of Weeks appear to refer to a religious awakening in a period that both describe without mention of the Return and the Second Temple, and Column 8 of the Manual of Discipline reapplies the tradition to the founding of the Qumran community. The absence of the Book of Parables in the Qumran library suggests that the corpus was transmitted and developed in at least one context other than Qumran.

Although the pseudepigraphic nature of the Enochic texts masks much of the social, institutional, and other functional realia that constituted their authors' world, some hints are present. Interpretation of received tradition was a primary activity. This tradition was, of course, ascribed to Enoch. Behind it, however, lay the Pentateuch and the Latter Prophets, and in the Animal Vision, the history recorded in the

Former Prophets. In addition, certain kinds of speculation reflect a study of the heavens and transmission of cosmographic and geographic lore. From a formal point of view, the largest part of the corpus records dreams and visions and their interpretation—an activity with a history that runs from the Joseph stories, through Ezekiel and Zechariah, to the Danielic stories and visions.

Binding all this activity together is the claim to be mediating revelation. Interestingly, however, in spite of the Mosaic and prophetic roots of much of the tradition, the authors never attribute the title of "prophet" to Enoch or to any of the righteous described in the texts. Two terms in the texts are suggestive of revelatory activity. Certain of the righteous who teach divine Law are called "the wise" (98:9; 99:10), which may indicate the title *ḥakkîm* or *maśkîl.* Since Enochic "wisdom" is revealed, the title has revelatory connotations. Enoch, on the other hand, is called the wise and righteous "scribe" (15:1; 92:1). Although this term refers to his writing activity, it has more exalted connotations. In keeping with the earlier picture of Ezra and the later description by Ben Sira (chaps. 24, 39), it probably identifies the authors as sages who are the authoritative interpreters and transmitters of sacred tradition. Unlike both of these, however, the Enochic authors claim for their interpretation a directness and immediacy of revelation that functionally parallels that of the prophets. The precise office, institution, and practices that underlie the terms "wise" and "scribe" need further study. The Qumran Scrolls offer some hints in their references to "the Teacher of Righteousness," whose title parallels that of Enoch (*1 Enoch* 12:4; 15:1) and whose interpretation of the Torah and the Prophets may be counterparts of some of the types of activity in the Enochic tradition.

How the Enochic authors and their readers and adherents may have been organized into a community or communities remains a mystery. Some suggestions of communal existence may be present in the references to the chosen righteous in chaps. 1–5, the Apocalypse of Weeks, and 104:12–14, as well as in the Parables in the reference to "the houses of his congregations." However, specific and explicit information of the type furnished by the Qumran Manual of Discipline and archeological evidence is lacking for the Enochic literature.

H. The Enochic Traditions and Early Christianity

Until the discovery of the Qumran Scrolls, the only preserved texts of the Enochic writings derived from Christian circles (see B above). The living context of this transmission was a religious community that arose from and for some time continued to draw on the resources of an apocalyptic Judaism transmitted in the Enochic writings. At least some of the Son of Man sayings in Mark and "Q" know the tradition as it was reshaped in the Book of Parables and "christologize" it (see SON OF MAN). Traditions associated with the Apostle Peter (in Matthew 16, 1 and 2 Peter, and the *Apocalypse of Peter*) draw on elements in the corpus (Rubinkiewicz). Matthew and probably Luke reflect parts of it. The Apocalypse of John of Patmos uses Enochic traditions about ‹Aśa›el and is the closest formal counterpart to the Book of Parables. Jude (vv 14–15) and Tertullian (de Idololatria 4; de Cultu Feminarum 3:1) ascribe prophetic status to the patriarch Enoch and quote the opening oracle and the Epistle respectively. *Barnabas* 16 quotes the Animal Vision and the Apocalypse of Weeks as "scripture." Justin Martyr (2 Apologia 5) and evidently Irenaeus (Adversus Haereses 4.36.4) appear to know the Enochic traditions about the angelic rebellion, and Pseudo-Clement (Homilies 8:12ff.) knows more than is preserved in *1 Enoch.* Other allusions and quotations appear in Clement of Alexandria and in Origen. Thus, at a time when the writings ascribed to Enoch were falling into disuse among Jews, these same texts continued to be cited as inspired scripture in sectors of Christianity. Except in the Ethiopian church and among the Manicheans, however, this authority of Enochic scripture disappeared as the canon of ancient writings was limited to the books contained in the Hebrew Bible or the. Nonetheless, the Enochic influence has continued in the form of traditions that were formative in the writing of the NT texts.

GEORGE W. E. NICKELSBURG

ENOCH, SECOND BOOK OF. This pseudepigraphical apocalypse is attested only in Slavonic. Conventionally identified as *2 Enoch*, the work has almost as many names as there are manuscripts (Andersen, *OTP* 1: 102), ranging from "The Tale (*slovo*, literally 'word') of" or "Life of" or "Book of (the Secrets of) (Righteous or Wise) Enoch" to even more elaborate titles. These variants reflect the mixed identity, the diverse contents, and the complex structure of the work.

———

A. Contents

In its most extended form, *2 Enoch* consists of two distinct and different parts: first, the life of Enoch (chaps. 1–68); second, events after the final disappearance of Enoch until the death of Noah (chaps. 69–73). The contents can be outlined as follows:

1. Life of Enoch
    a. Enoch's Journey Through Seven (or Ten) Heavens (chaps. 1–21)
    b. Enoch's Interview with the Lord (chaps. 22–35)
    c. Enoch's Return to Earth (chaps. 36–38)
    d. Enoch Instructs His Children (chaps. 39–63)
    e. Enoch's Final Call and Last Words (chaps. 64–66)
    f. Second Translation of Enoch to Heaven (chaps. 67–68)

2. Subsequent Events a. Ministry of Methusalom (69:1–70:16)
b. Ministry of Nir (70:17–26)
c. Birth of Melkisedek (chap. 71)
d. Translation of Melkisedek (chap. 72)
e. The Flood (chap. 73)

B. The Text

The study of *2 Enoch* is hampered by the inaccessibility of the primary data in reliable form. Although at least twenty mss are known which contain portions of the text in various forms and contexts, so far only one (*Mpr*) has been published in facsimile (Tikhomirov 1961). There are no diplomatic presentations of any of the others, and critical editions (Sokolov 1899; 1910a; Vaillant 1952) are limited in scope and method.

1. Manuscripts. The best available stemmatology is that of Vaillant (1952: xxiv). This will be used in what follows, although it can be considered only provisional. Vaillant classified twelve manuscripts (mss) into six families. Bonwetsch (1922: xiv) arranged ten mss into six families, different from those of Vaillant.

a. Family 1. (1) Ms *A.* BAN 45.13.4 in the Library of the Academy of Sciences, Leningrad (Meshchersky 1964; 1965). This is a still unpublished 15th-century ms, the "Academy Chronograph" in which the text of *2 Enoch* occupies folios 357–366ob. This ms is the basis of Andersen's translation (*OTP* 1: 101–221).

(2) Ms *U.* The Uvarov ms, GIM 3 (18) in the State Historical Museum, Moscow. The text was published by Sokolov (1910a: 111–30), with notes (1910b: 33–44). In 1899 Sokolov (1–80) supplied variants from ms *U* to his edition of ms *Rum* (see family 2 below). This 15th-century ms was the basis of Vaillant's edition (1952). Ms *U* is close to ms *A*; in fact Meshchersky (1974) recorded the impression that ms *A* had been copied from ms *U.*

(3) Ms *Tr.* Ms No. 793 of the Trinity-Saint Sergius Monastery Library (now in the Lenin Library, Moscow) is a 16th-century chronograph into which has been worked a summary of the final part of *2 Enoch* (folios 401–402ob). The extracts cover the closing scenes of Enoch's life and go on to the Melkisedek story. They correspond to *2 Enoch* 67; 69:16–18a; 70:16; 71:1–23a, 27–29; and 72:9. This material was the first part of *2 Enoch* to be printed in modern form (Tikhonravov 1863: 19–20 [Enoch]; 26–28 [Melkisedek]). Sokolov subsequently published some extracts (1910a: 161–62; notes 1910b: 95–103), and concluded that the précis had been made from a ms belonging to the same family as ms *U* (1910b: 103). Because the excerpts have been handled with considerable liberty, unique readings cannot be given much weight as evidence for the original text.

(4) Ms *Syn.* Ms 387 (3) in the Moscow Synod Collection. In a late recension, the synaxarion for the feast of the Archangel Gabriel (celebrated on March 26) contains material reminiscent of *2 Enoch* derived from a tradition resembling ms *U* (Sokolov 1910b: 103–105).

b. Family 2. (1) Ms *B.* The Barsov ms in the State Historical Museum should not be confused with Charles' "B" which is labeled ms *N* in Family 3 (see below). The text of *2 Enoch* in ms *B* is a 17th-century Russian redaction. It was edited by Sokolov (1899: 83–107 [text, with variants from mss *N* and *V*]; 1910b: 54–69 [notes]). Vaillant (1952) pays particular attention to its variant readings.

(2) Ms *Rum.* Ms No. 578 in the Rumyantsev Museum is dated to the end of the 16th century. It is a miscellany of 466 folios, containing over fifty items (Sokolov 1910b: 84–89). The sixth (folio 164) is an extract from *2 Enoch*. This text was published by Sokolov (1910a: 153–55). After a few phrases from the long heading as in ms *B* (1a:1–2), it jumps to the story of Melkisedek, for which it supplies a title. It reproduces 70:13 (Methusalom's investiture of Nir) and moves on to 70:22, continuing to the end of the story, which is complete except for a few small gaps. This portion was published by Tikhonravov (1863: 28–31). Vaillant (1952: vi) suggested that this material was derived from a ms older and better than the *Vorlage* of ms *B* and was prepared to use its evidence rather confidently in textual reconstruction of the brief portion that it covers, which is otherwise rather sparsely attested.

c. Family 3. (1) Ms *N.* Ms No. 151 (443) had been in the National Library of Belgrade, evidently destroyed during the war. It was published, not scientifically, by Novaković (1884), the first printing of a text of the so-called "short" recension. The extract occupies folios 1–11. It is a 16th-century Serbian redaction (and abridgement?) from a Russian *Vorlage.* It ends with chap. 67, except that some later material has been inserted instead of 65:11. Sokolov (1910a: 83–107) incorporated variants of ms *N* into the apparatus of his edition of ms *B.* It is unfortunate that the early appearance of this text, which supplied the translation labeled "B" in *APOT,* gave it prominence in the early stages of *2 Enoch* research, since this ms is the worst of all the main witnesses.

(2) Ms *V.* Ms No. 125 in the Austrian National Library (Vienna) is a Serbian recension, the text almost identical with that of ms *N.* Sokolov's notes (1910b: 74–77) listed its Russian traits (77), indicating that it was not as far removed from its source as ms *N.* Repp (1963) pointed out the superiority of some of its variants.

(3) Ms B^2. This is another ms in the Barsov collection of the State Historical Museum, Moscow, dated 1701. Folios 87–98 contain a text virtually identical with that of mss *N* and *V.* They were studied by Sokolov (1910a: 133–42 [text]; 1910b: 69–72 [notes]), but his edition normalized the text from chap. 3 onward, limiting its value for critical work.

d. Family 4. (1) *Mpr.* Ms TSS 15 is in the Trinity-St. Sergius Monastery Library. Not later than the 13th century, a notable collection of juridical texts was assembled called *Merilo Pravednoe,* "The Just Balance" (Job 31:6). It contains a chapter titled "From the Book of Righteous Enoch." It is not clear from the literature just how many copies of this work exist (Andersen, *OTP* 1: 215). There are at least three (Tikhomirov 1961: v), possibly four (Sokolov 1910b: 106–18), or even five (Meshchersky 1964a: 94). In any case, interest attaches to *Mpr,* a mid-14th-century copy which has been published in facsimile by Tikhomirov (1961). The text had been published by Tikhonravov (1863: 20–23), folios 36–38ob of *Mpr.* Although it is the oldest extant evidence for the text of *2 Enoch,* it is limited to extracts from chaps. 41–65 and its value for textual reconstruction is diminished by the great freedom with which the material has been rearranged and paraphrased (translated by Andersen, *OTP* 1: 215–21).

(2) Ms *TSS 498.* Folios 335–37 are a copy of *Merilo Pravednoe* made early in the 15th century. It was described briefly by Sokolov (1910b: 92–93), who listed twenty variants.

(3) Ms *TSS 253.* This gigantic codex of 1124 folios is divided into 827 small chapters and includes such curiosities as a calculation of the number of months, weeks, days, and hours from the creation of the world up to 1622 (chap. 815), which dates the ms. A copy of the *2 Enoch* extracts derived from *Merilo Pravednoe* occupies folios 543–45 but has not been made a separate chapter. The (normalized) text was published by Sokolov (1910a: 155–57), with notes (1910b: 89–92). There is an intriguing reference to the Presbyter Jeremiah, a character much discussed in connection with possible links between *2 Enoch* and the Bogomils (Angelov 1976; 1985).

(4) Ms *TSS 682* is a 16th-century miscellany in which chap. 16 is a copy of *2 Enoch* as found in *Merilo Pravednoe.* Sokolov (1910b: 90–95) listed forty-two of the "more interesting" variants.

(5) ?. A fifth copy in the *Mpr* tradition about which we have no information beyond a remark of Meshchersky (1964a).

(6) Ms *G.* In 1489, Gennady, Archbishop of Novgorod, wrote a letter to Ioasap, Archbishop of Rostov and Yaroslav, in which he quoted from *2 Enoch* a passage resembling 65:1–10 and with a text resembling that of *Mpr.* It was first published by Popov, who compared it with ms *P.* Sokolov published the text and discussed its affiliation (1910b: 118–19); but he could not decide whether Gennady got his quotation from a copy of *Merilo Pravednoe* or from some other recension of *2 Enoch.*

e. Family 5. (1) Ms *Chr.* Ms No. 39 of the Institute of History and Philology, Nezhin, is a beautiful 17th-century codex of 677 folios, a history of the ancient world into which extracts from *2 Enoch* have been incorporated in four portions. The first (folios 16ob–17ob) describes the movements of the sun and moon as in *2 En.* 11:1–13:2 and 14:1–15:3. The second (folio 20) has *2 En.* 16:1, 6–8; the third (folio 36) 58:1–5; the fourth (folios 50ob–53) represents a selection and rearrangement of *2 Enoch* 37; 24:1–33:4;

47:2–48:4; 40:1–42:6. These excerpts were edited by Sokolov (1910a: 148–53 [text]; 1910b: 80–83 [notes]), with variants from three other mss of the chronograph (the three following items).

(2) Ms Udolsky 728; see *Chr* above.

(3) Ms Udolsky 729; see *Chr* above.

(4) Ms *Chr*^{2}. This 18th century ms is No. 590 in the Rumyantsev Museum. It reproduces the first extract from *2 Enoch* as found in ms *Chr* in folios 134–36. Sokolov (1910a: 147–48) reproduced the text in normalized orthography.

f. Family 6. (1) Ms *R.* This ms was No. 321 in the National Library of Belgrade. Sokolov had given an ample description of the ms and designated it *"A"* (1910b: 10–32), but here we follow Vaillant (1952: vii) and call it *"R."* With a discoverer's enthusiasm, Sokolov made it the basis of his first critical edition of *2 Enoch* (1899). Bonwetsch used it for his 1922 translation, and Vaillant regarded it as the best witness to the "longer" recension.

(2) Ms *J.* BAN 13.3.25 is a 16th-century miscellany with Moldavian features. Sokolov published some notes on it (1910b: 44–53), but the text has not been published. Andersen used a microfilm, generously supplied by the Library of the Academy of Sciences of the U.S.S.R. through the good offices of James H. Charlesworth, as the basis of his translation of the "longer" recension in *OTP*. The text continues into the Melkisedek legend, but not to the end.

(3) Ms *P.* Part of the Khlyudov collection, now in the State Historical Museum, Moscow, was published by Popov (1880) and was the source of the Morphill-Forbes translation in *APOT,* recension "A." This was unfortunate, because *P* is the most corrupt of all witnesses (Vaillant 1952: iii, viii; Meshchersky 1964a: 93).

(4) Ms *P*^{2}. Ms No. 3058 in the Rumyantsev Museum; an 18th-century extract of God's account of creation (*2 Enoch* 28–32), recensionally close to ms *P* (Sokolov 1910b: 77–79). The text was published by Sokolov (1910a: 145–47).

2. Recensions. Because of the codicological practices of Slavic scribes, no intact copy of *2 Enoch* exists as a stand-alone item. The text has been excerpted, abbreviated, expanded, and rearranged. A shorter and a longer recension are generally recognized. The available material may be classified as follows: (a) reasonably complete manuscripts of the shorter recension (*A, U, B, N, V, B*^{2}); (b) excerpts from sources akin to the shorter recension which appear in other works—*Tr, Syn, Rum, Mpr* (TSS 253, TSS 498, TSS 682), *G, Chr* (Ud. 728, Ud. 729, *Chr*^{2}); (c) manuscripts of the longer recension, the only complete text (*R*) having been destroyed before it had been properly edited (*J* and *P* are truncated); and (d) a short extract of the longer recension (*P*^{2}).

3. Text Criticism. Early researchers favored the longer recension as more original. Charles, while recognizing that there were interpolations in *P* (his *"A"*) and that it was "very corrupt" (Charles and Morphill 1896: xv) considered "it is nevertheless a truer representative of the original than [his] *B*" (our *N*) (1896: xv). After Schmidt's paper (1921) opinion swung the other way (Vaillant 1952; Sparks 1984); but misgivings have been increasingly expressed (van den Broek 1972). The textual history of this work is probably beyond recovery; it is very complicated, and in all likelihood there have been deletions and interpolations in both recensions.

4. Chapters and Verses. The mss present no standard system of versification and there is no agreed division into chapters. Sokolov introduced verse numbers, followed in part by Vaillant and Sparks. Charles made partial use of the (artificial and somewhat inconsistent) chapter divisions of *P,* which has a unique set of headings as well. Andersen (*OTP* 1: 98) extended Charles' system into the Melkisedek legend for the sake of continuity, and this scheme is being followed here.

C. Literary Affinities and Dependence

Although it is a pseudepigraphic apocalypse, *2 Enoch* does not belong to only one distinctive genre. With its revelations of heavenly secrets it is indeed an apocalypse. As narrative, it is a kind of midrash on Gen 5:24. With its moral admonitions it stands with the wisdom tradition (Enoch is called "wise" [1a:1]). Its discussions of natural phenomena, particularly astronomy, give it a strong scientific interest. Comparison with other traditions, literary corpora, and individual compositions suggests possible sources

for the ideas found in *2 Enoch,* but the only palpable connection that can be established is its dependence on *1 Enoch*.

1. *1 Enoch.* The derivation of *2 Enoch* from *1 Enoch,* which is a collection of numerous Enochic books, is only partial and probably indirect. Even then the themes and motifs that *2 Enoch* shares with *1 Enoch* are not so distinctive as to require a direct connection, since many of them enjoyed a general circulation. The closest links are (a) in the journeys through celestial realms (but in *1 Enoch* they are visions while in *2 Enoch* they are real); (b) in Enoch's visions of judgment on humans and angels; (c) in his intercessory role; (d) in using the legend of the fallen angels or watchers (including the Mount Hermon location); (e) in astronomical-calendrical matters (although they differ in specific details); (f) in gaining access to heavenly books (*1 Enoch* 81; *2 Enoch* 23—details are different); (g) in being returned to earth to instruct his family (by seven holy ones in *1 En.* 81:5; by two in *2 En.* 38:1); (h) in forseeing the Flood (but *2 Enoch* ends there, whereas *1 Enoch* surveys the whole history of Israel, a subject in which *2 Enoch* has no interest); etc. See ENOCH, FIRST BOOK OF. The contacts are palpable with *1 Enoch*'s Book of Watchers and the Astronomical Treatise. Both books contain parting admonitions of Enoch to his family, similar in circumstances, intention, and ethical values and literary expression. Yet it is hard to find any passages in *2 Enoch* which can be proved to be derived substantially from *1 Enoch.* Besides that, there is much in *1 Enoch* that has no echo in *2 Enoch* (not only the Similitudes, which are a special problem) and much in *2 Enoch* that does not match anything in *1 Enoch,* such as the great interest in creation, and its continuation into the Melkisedek legend. The theory of Vaillant and others that *2 Enoch* represents an early Christian revision of *1 Enoch* is unconvincing, not only because the links are so tenuous, but also because hardly any of the material found only in *2 Enoch* is distinctively Christian.

2. Comparative Methodology. The piecemeal search for other occurrences of the hundreds of ideas and images found in *2 Enoch* usually comes up with something. But not one of the innumerable cases now on record has indicated whether *2 Enoch* borrowed from that source (and so is later), was itself the source (and so is earlier), or whether both got it from an unknown third source. This is true even when verbal coincidences suggest direct or indirect, conscious or unconscious literary quotation or allusion (there are no identified quotations in *2 Enoch*). Thus the echoes of the NT, already noted by Charles (Charles and Morphill 1896) convinced him that *2 Enoch* was known to early Christian writers; but the same evidence suggested to others that the NT was behind these parallels. The instances are so numerous that in this brief summary we shall mention only one or two examples of each kind, with a very small selection of the literature.

a. Mesopotamian Background. The work of Borger (1974), Milik (1976), VanderKam (1983), and others has found a Mesopotamian background for motifs in *1 Enoch,* some of it known only in works of great antiquity. In the case of *2 Enoch* one could point to the issue of eating or drinking or changing clothes when a mortal visits heaven, as in the Adapa myth (*ANET,* 102), or the preservation of books written before the flood and their later recovery. But these could be floating folk motifs that could surface anywhere at any time.

b. The OT. Biblical background can shine through indirectly. Ethical cliches about widow and orphan such as found in the OT and in *2 Enoch* prove nothing. The surprising thing is that, apart from the recognizable contact with Genesis, there is no palpable use of OT sources. Even the Melkisedek legend shows no interest in what the Bible says.

c. Egyptian Background. Charles (Charles and Morphill 1896; *APOT*) was convinced of the Egyptian provenience of *2 Enoch;* for him, the author was an Alexandrian Jew in the 1st century B.C. He pointed to such details as the crocodile form of the chalkydri (chap. 12) and the Egyptian month names (chap. 73). One might add the peculiarity that the Lord tells the story of creation in the first person, just as Re does in the Brenner-Rhind Papyrus III: 26–27 (Faulkener 1936); or compare Enoch's mode of celestial travel with the ascension myth in the Pyramid texts (Davis 1977); or *2 Enoch*'s fascination with the sun; or the thought of salvation as healing (Therapeutae?). The two most serious proposals of this kind are (1) that of van den Broek, who has shown in detail (1972: 287–304) that both the phoenixes and the chalkydras of *2 Enoch* are close to Egyptian traditions and come from "Egyptian syncretism of Roman times" (p. 297);

and (2) that of Scopello (1980), who identified Enoch's transformation into a "glorious one" (chap. 22) as gnostic and identified a quotation *from 2 Enoch* in the Nag Hammadi text *The Apocalypse of Zostrianos.* See also Charlesworth (1986). Philonenko (1969) found Egyptian affinities in the cosmogony of *2 Enoch*.

d. Other Pseudepigrapha. Innumerable tenuous similarities have been pointed out between phrases and ideas in *2 Enoch* and other pseudepigrapha, though it is not possible to determine who borrowed from whom. Of interest is the similar description of bird songs at dawn in *2 Enoch* 15 and *3 Baruch* 6.

e. Qumran. Soviet scholars have been particularly interested in possible links between *2 Enoch* and the Qumran community (however they may have to be explained historically), especially in the matter of the calendar and the Melkisedek legend (Amusin 1971; 1981). In addition there are a number of motifs, such as dark (or cold) fire, as well as ideas about angels in which the two sources resemble each other.

f. Philo. Some of Philo's ideas, such as Adam's appointment as king of the world (*2 En.* 30:12 compared with *Quaes Gen* 2: 56), may have found their way into *2 Enoch*. But these could have come through many channels, and *2 Enoch* is quite lacking in Philo's philosophical seriousness.

g. The NT. Charles' notes are rich in NT parallels which he took to be quotations from *2 Enoch,* but most can be explained as late Christian interpolations and glosses. An obvious case is the Trishagion in its Christian form (*2 En.* 21:1), which is a later addition to the text.

h. The NT Apocrypha. Some themes in *2 Enoch* which remind one of marginal but popular Christian writings, such as the torments of the damned (chap. 10) or the release of Adam from hell (chap. 42), may be early or late Christian additions and do not prove that the book as a whole is a Christian composition or revision of "Jewish" Enoch.

i. Church Fathers. Early Christians debated such questions as the number of heavens, the place of the creation of angels in the program of Genesis 1, the day on which Satan fell, whether Satan tempted Adam before he tempted Eve, how long Adam was in Paradise, etc. *2 Enoch* answers all these questions—there are seven heavens (chaps. 3–21 [but ten in chap. 10, a crude interpolation]); angels were created and Satan rebelled on the second day (chap. 29 [but the longer recension gives another version of the Satan legend in chap. 31]); Satan had no contact with Adam (31:6—interpolation); Adam was in Paradise for five and a half hours (32:1) or seven years (71:28).

j. Hexameron. The relation of the six days of creation in *2 Enoch* to the widespread hexameron tradition (Robbins 1912) needs a full study, especially in light of the prestige enjoyed by John Eksarch's *Shestodnev* (Kochev 1981) in Slavic culture.

k. Judaism. The posture of *2 Enoch* in relation to rabbinic Judaism is hard to gauge. The apocalyptic ascent to the place of secrets has affinities with merkabah mysticism (Gruenwald 1980); the uncompromising monotheism of *2 Enoch,* and its strict moral code, could be Jewish, but there is no interest in the history of Israel apart from Enoch and his generation, and no trace of Torah piety. Rubinstein (1962) showed that a sacrifice rule (59:3; 69:12) is known in marginal Judaism; but the general teaching of the book about sacrifice is mixed.

l. Gnosticism. The relation of *2 Enoch* to Gnosticism is a vast question that still awaits systematic investigation. Its severe monotheism contrasts with the dualism(s) (Charlesworth 1968–1969) of Gnosticism (Segal 1977) and of Bogomilism (see below). But in numerous other respects, including Enoch's acquisition of knowledge, there is a gnostic flavor. Its cosmogony touches *The Hypostasis of the Archons* at some points (but then Archas [chap. 26] could have come from the Chaldean Oracles); its theory of sin includes the idea of a fall from spirit to body (Gero 1978); its question-and-answer method reminds one of the gnostic gospels. Yet these similarities are so vague (apart from the one noted by Scopello) that similar impressions could be recorded of the *Corpus Hermeticum* (Poimandres).

m. Origen. The question whether Origen knew *2 Enoch* has been debated since Charles (Charles and Morphill 1896: xx) argued the affirmative from a statement that Origen knew about creation in a book of Enoch (not a theme in *1 Enoch*). Vaillant (1952: x) was likewise convinced; but Milik (1976: 109) explained this as no more than a reference to the astronomical section of *1 Enoch.* Pennington (1984: 323–24) reviewed the question evenhandedly but inconclusively, admitting that "there is a similar uncertainty about all the other suggested patristic quotations" (p. 324).

n. The Quran. There are a number of passages in the Quran that remind one of *2 Enoch,* particularly those touching on creation and on the activities of Satan. Just one illustration: in *2 Enoch* 71 the newly born Melkisedek is already fully developed, as Jesus was according to Sura 3:46; 5:110; 19:30.

o. 3 Enoch. The numerous parallels between *2 Enoch* and *3 Enoch* were listed by Odeberg (1928: 52–63), who accepted Charles' position. Of similar interest is the place of *2 Enoch* in the Metatron tradition (Greenfield 1973). See also ENOCH, THIRD BOOK OF.

p. Byzantine Background. Milik, accepting Vaillant's theory that the longer recension was the result of a late medieval revision of the Slavonic translation, argued that the Gk original of the short recension, "which preserves the original Greek text fairly faithfully" (1976: 109)—a theory impossible to prove or disprove, since not one word of this supposed Gk original is available—was based on *1 Enoch* as we know it from the Ethiopic, and contains a number of Byzantine features which point to composition by a monk in Constantinople in the 9th or 10th centuries.

q. The Bogomil Connection. The theory that *2 Enoch* is simply a Bogomil work was propounded by Maunder (1918), but it received its fullest expression by Ivanov (1925). It was refuted by Turdeanu (1981: 1–74) but is still strongly held by Bulgarian scholars (Andersen 1987).

r. Slavic Culture. Study of pseudepigrapha in their medieval setting by scholars of eastern Europe has highlighted the significance of folk ingredients in this kind of literature (Petkanova 1979; Oinas 1985).

D. Composition, Translation, Transmission

The origins of *2 Enoch* are unknown. Research has not reached any consensus about the time, place, or contents of its first published form. The options range from Charles' theory that the longer recension was written by an Alexandria Jew in the 1st century B.C. through belief that it was a Christian rewrite of *1 Enoch,* probably in Gk, made anywhere from the 2d century A.D. (in Syria?) to the 10th (in Byzantium), up to the denial that it is anything more than a home-grown product of Slavic religious culture. The numerous Gk elements, such as the names of the planets or the anagram for Adam's name (chap. 30), could betray the source language; but such features could attest no more than the general dependence of Slavic letters on Gk influence. The same can be said about the Semitisms that have been detected in this (Pines 1970) and similar works with a biblical flavor (Rubinstein 1953).

E. Translations

The main English translations are those of Morphill (Charles and Morphill 1896), Forbes (*APOT*), Andersen (*OTP* 1: 101–221), and Pennington (1984). In French there is Vaillant (1952). German translations include Bonwetsch (1922) and Reissler (1928), while Angelov (1922) and Petkanova (1981) are Bulgarian translations. For an extensive bibliography covering Bulgarian works, see Andersen 1987.

FRANCIS I. ANDERSEN

ENOCH, THIRD BOOK OF. A late Jewish apocalypse in Hebrew, probably compiled in the 6th or 7th century A.D. in Babylonia.

A. The Name "3 Enoch"

Odeberg coined the name "3 Enoch" for his 1928 edition of the text. He chose it because he held that the redactor of *3 Enoch* made extensive use of *1 Enoch* and *2 Enoch.* Despite many shared motifs, direct literary dependence of *3 Enoch* on the earlier texts has yet to be proved. To avoid the possibly tendentious overtones of "3 Enoch" some scholars prefer the more neutral designation "Hebrew Enoch." The manuscripts refer to the work in whole or in part by a variety of titles, e.g., "The Book of Enoch by Rabbi Ishmael the High Priest"; "The Book of the Palaces [*Hêkālôt*]^{w}; "The Chapters of the Palaces"; "The Chapters of Rabbi Ishmael"; "The Matter of the Elevation of Metatron."

B. Structure and Content

Both the content and the redactional identity of *3 Enoch* are problematic. The manuscripts and early printed editions contain very different collections of *3 Enoch* traditions. The differences between these collections are fundamentally a matter of length; wherever *3 Enoch* traditions are found they always occur in the same order. It is unclear whether the shorter collections have been excerpted from the longer, or whether they represent earlier stages in the evolution of the longer collections. The manuscripts which contain *3 Enoch* material sometimes appear to be anthologies, i.e., private notebooks in which medieval scholars collected from diverse sources traditions which interested them. Note, e.g., the Cambridge Geniza fragment (T.-S. K 21.95.L; Schäfer 1984: No. 12) which quotes a version of *3 Enoch* 1 (Schäfer 1981: §§1–2) followed directly by a version of *3 Enoch* 43–44 (Schäfer 1981: §§61–62). This consideration might be seen as favoring the primacy of the longer collections. On the other hand, the longer collections are clearly made up of preexisting and sometimes contradictory units of tradition (pericopae). Consequently the possibility cannot be ruled out that some of the shorter collections mark earlier phases in the history of the work. One Oxford manuscript (Neubauer No. 1748/2) and the early printed edition *Děrûš Pirqð Hêkālōt* (ca. 1650) contain only the account of the elevation of Enoch (*3 Enoch* 3–12, 15; Schäfer 1981: §§4–15, 19). The traditions regarding the elevation of Enoch play a pivotal role in the longer forms of *3 Enoch* (see below on structure), so it is intrinsically probable that these were the first *3 Enoch* traditions to be collected. They also happen to be the first collection of *3 Enoch* traditions to be externally attested (see below on date).

The largest collection of *3 Enoch* traditions is to be found in the manuscripts Vatican 228 and Oxford 1656. This collection tells a coherent story and has a clear redactional structure. Rabbi Ishmael ascends to heaven and meets the archangel Metatron, who acts as his sponsor, rescuing him from the hostility of the Merkaba angels and bringing him before God's throne, where he joins the angels in the celestial Sanctus (*Qědušša*). Ishmael asks Metatron to identify himself and in particular to explain the title "Youth" (*Naʿar*) with which the Merkaba angels addressed him. Metatron reveals that he is Enoch the son of Jared (Gen 5:18–24); as the youngest of the angel princes he is known as "Youth." He recounts in detail to Ishmael how as Enoch he was taken up to heaven and transformed into Metatron, one of the highest of the archangels who acts as God's vice-regent. Having established Metatron's impeccable credentials as a heavenly guide, the text then turns to the revelations which he granted to Ishmael. First Metatron discourses to Ishmael on the angels (the *familia caelestis*)—their hierarchies, the sessions of the Heavenly Law Court, and the performance of the celestial *Qědušša.* Then he takes Ishmael on a tour of the wonders of heaven: he shows him the cosmic power of the divine names and the storehouses of souls (both those to be born and those who have been born and returned). Finally he shows Ishmael the Right Hand of God waiting impatiently to redeem Israel.

The structure of the text may be analyzed in detail as follows:

A. SUPERSCRIPTION = Gen 5:24

B. THE ASCENSION OF ISHMAEL (1:1–2:4; Schäfer 1981: §§1–3)

1. Ishmael's ascent to heaven, his meeting with Metatron, and his participation in the *Qědušša* (1:1–12)
2. Alternative version of the angels' opposition to Ishmael's ascent (parallel to 1:7–8)

C. THE ASCENSION OF ENOCH (3:1–16:5; Schäfer 1981: §§4–20)

1. The Names of Metatron, especially the name *Naʿar* (3:1–4:2)

2. The Elevation of Enoch (4:3–7:1)
   a. First Version: Enoch taken up as a "witness" to God's justice (4:3–10)
   b. Second Version: Enoch taken up with the *Šekīna* (5:1–7:1)
      (1) Preface: the story of the taking up of the *Šekīna* (5:1–14)
      (2) First attempt to link Enoch's elevation with the taking up of the *Šekīna* (6:1–3)
      (3) Second attempt to link Enoch's elevation with the taking up of the *Šekīna* (7:1)
3. Enoch's physical transformation, enthronement and insignia (8:1–15:2)
4. The Humbling of Metatron (16:1–5)

D. THE *FAMILIA CAELESTIS:* ITS HIERARCHIES AND ACTIVITIES (17:1–29:2; Schäfer 1981: §§21–58)
1. The Angelic Hierarchies (17:1–29:2)
   a. First hierarchy, in descending rank (17:1–8)
   b. Second hierarchy, in ascending rank (18:1–25)
   c. Third hierarchy, in ascending rank (19:1–29:2)
2. Traditions regarding the Heavenly Law Court (30:1–34:2)
3. Traditions regarding the Celestial *Qĕdušša* (35:1–40:4)

E. THE WONDERS OF HEAVEN (41:1–48A:10; Schäfer 1981: §§59–70)
1. Cosmology (41:1–42:7)
   a. The cosmic letters by which the world was created, i.e., the letters of the Divine Name (41:1–3)
   b. The power of divine names to hold in balance the conflicting physical elements (42:1–7)
2. "Psychology": the storehouses of souls (43:1–47:4)
   a. The souls of the righteous (43:1–3)
   b. The souls of the wicked and intermediate (44:1–6)
   c. The souls of the patriarchs (44:7–10)
   d. The souls in the Heavenly Curtain (the *Pargôd*) (45:1–6)
   e. The souls of the stars (46:1–4)
   f. The souls of the angels that erred (47:1–4)
3. Eschatology: the Right Hand of God waiting to bring the messianic redemption (48A:1–10)

F. CONCLUSION = Zech 14:9

G. APPENDIX: THE ALPHABET OF AQIBA TRADITIONS ON METATRON (48B:1–48D:10; Schäfer 1981: §§71–80)
1. The Seventy Names of God (48B:1–2)
2. Short Account of the Elevation of Enoch, in acrostic form (48C:1–12)
3. The Seventy Names of Metatron (48D:1 + 5)
4. Metatron as Prince of Torah (*Sõar* Tôrâ) (48D:2–4 + 6–10)

Certain elements within this long form of the text look like secondary additions. The Appendix (chaps. 48BCD; Schäfer 1981: §§71–80) has clearly been borrowed from an alphabetic midrash, as its acrostic form shows. Its insertion at the end of *3 Enoch* probably reflects the desire of the redactor to make his encyclopedia of Metatron traditions as full as possible. The parallel lists of the winds and chariots of God (chaps. 23–24; Schäfer 1981: §§35–38) seem to interrupt the third angelic hierarchy. However, their appearance at this point is not illogical in that they provide further information on the cherubim, who are the subject of chap. 22 (note 23:1 and 24:1). Chap. 34 (Schäfer 1981: §51), on the circles around the creatures (the *Ḥayyôt*), also looks intrusive. But note that it attaches itself by the catchword principle to 33:4 (cf. 34:1), and it forms a natural transition to the following section on the *Qĕdušša* (see 34:2). Chap. 16 (Schäfer 1981: §20), on the humbling of Metatron, might be thought to reverse too abruptly the laudatory trend of the preceeding chapters. It need not, however, be explained as a secondary expansion; it could be an integral part of the work, added in a spirit of self-correction. Or it might represent an attempt to link the Metatron speculations to Talmudic tradition, and thus to validate them (see below). There is a suspicion of a lacuna at 4:1 (Schäfer 1981: §5); Ishmael's question about the seventy names of

Metatron is not answered. A block of material (similar to 48D:1; Schäfer 1981: §76) has apparently been edited out.

None of these cases seriously impairs the integrity of *3 Enoch* as found in Vatican 228 and Oxford 1656. Indeed, they are what would be expected, given that the work is basically a compendium. The redactor has gathered together certain Merkaba traditions that interested him and arranged them in a coherent order. As his organizing principle he has chosen a standard apocalyptic form, broadly resembling that found in *1 Enoch, 2 Enoch, T. Levi* 2:6–5:3, *Ascen. Is.* 6–11, and *Ap. Ab.* 15–29, in which a sage ascends to heaven and meets an angel who discloses to him certain secrets. As a secondary measure, the redactor has attempted to superimpose on his apocalypse midrashic form by adding the superscription (Gen 5:24). The direct quotation of a biblical lemma is totally foreign to apocalyptic form, but it serves here to key the material of *3 Enoch* into Scripture. Its presence illustrates the tendency of midrash to dominate all other literary forms in rabbinic literature.

C. Literary and Historical Context

Though *3 Enoch* is an apocalypse which shares many features with early apocalypses such as *1 Enoch* and *2 Enoch,* and with late apocalypses such as *Rĕ'uyyôt Yĕhezqē'l,* its closest affinities (in language, style and content) are with the so-called *Hêkālôt* literature (represented by texts such as *Hêkālôt Rabbātî* and *Hêkālôt Zûtartî*). The Talmud classifies the subject matter of the *Hêkālôt* texts as *Ma*ʿ*ăśēh Merkābâ,* the "Account of the Chariot," a term used to describe Ezekiel's vision of the glory of God by the river Chebar (Ezek 1:1–28). The *Hêkālôt* texts draw motifs from Ezekiel 1 and from other OT theophanies but they are not straightforward expositions of the biblical text. They present themselves as fresh visions, as attempts to see again what Ezekiel saw. In elaborate descriptions of the heavenly world, of God's throne, of the angelic hierarchies, and of the celestial liturgy, they depict God as a heavenly emperor, the angels as a celestial civil service (*pāmalyâ šel ma*ʿ*ălâ;* cf. the Roman term *familia Caesaris*). They stress the transcendence of God: his throne is located in the seventh heaven, in the middle of seven concentric palaces or temples (*hêkālôt*), and can be approached only through seven doors guarded by fierce guardian angels. Even if the adept does manage to penetrate to the Throne of Glory, what he perceives on the throne is only the outward manifestation of God; God in himself dwells in impenetrable regions beyond the seventh heaven.

The circles which produced the *Hêkālôt* literature were concerned to assert their links with rabbinic Judaism: they wrote in good rabbinic Hebrew and attributed their works pseudepigraphically to Rabbi Aqiba and Rabbi Ishmael. Yet their teachings were viewed with distrust by some rabbinic authorities; their appeal to fresh visionary experience ran counter to the fundamental rabbinic doctrine that the age of prophecy had passed, and their angelology at times comes close to jeopardizing the unity of God. The Talmud declares *Ma*ʿ*ăśēh Merkābâ* esoteric doctrine, not to be proclaimed in public, and to be studied only by scholars who have mastered the traditional discipline of halakhah (see *m. Ḥag.* 2:1, *t. Ḥag.* 2:1–7, *j. Ḥag.* 77a–d and *b. Ḥag.* 11b–16a). The nature of the *Hĕkālôt* circles is unclear. Some texts point to the existence of conventicles of Merkaba mystics who passed on a secret doctrine, and who met to engage in trance ascent to heaven (*Hêkālôt Rabbātî,* Schäfer 1981: §§198–268). Other texts contain rituals (whether performed privately or with others is not clear) for conjuring the Prince of the Divine Presence (*Śar happānîm*) down to earth and inducing him to part with secret information, probably relating to the heavenly world, or to the future (Schäfer 1981: §§623–39). Yet other texts appear to be liturgies formulated to promote effective private prayer (*Sēper haqqômâ* Cx, in Cohen 1983: 195–96). A powerful current of theurgy runs through *Hêkālôt* literature: the ultimate aim is to compel God or the angels to perform one's will. This aspect of the literature brings it close to magical texts such as *Sēper hārāzîm.* Certain *Hêkālôt* motifs appear on amulets, notably on the incantation bowls from Babylonia.

The historical development of *Hêkālôt* mysticism is obscure. The Talmud indicates that there were groups in Tannatic and Amoraic times (2d–6th centuries A.D.) devoted to the study of *Ma*ʿ*ăśēh Merkābâ,* though only glimpses are given of their teaching. It is reasonable to assume that some of the traditions contained in the extant *Hêkālt* texts go back to Talmudic times. *Hêkālôt* mysticism clearly owes a debt to Jewish apocalyptic of the Second Temple period, which suggests that it originated in Palestine. Scholem

(1965) and others have argued that *Hêkālôt* mysticism and Gnosticism show significant parallels. The *Hêkālôt* distinction between God as transcendent and God as he reveals himself on the throne in the seventh heaven (a theophany sometimes designated the *Yôṣēr bĕrēʾšît,* the "Creator of the World") recalls the gnostic distinction between the Primeval Father who resides in the Pleroma and the Demiurge who created the world and who resides in the seventh heaven. (However, unlike most gnostic systems, *Hêkālôt* mysticism is not strongly dualistic; the transcendent and the revealed God are one and the same, and there is no obvious denigration of the material world as evil.) The seven *hêkālôt* with the guardian angels recall the seven gnostic aeons with their attendant archons. Both gnostic and *Hêkālôt* texts speak of an ascent of the soul to the highest heaven which involves negotiating one's way past the angels/archons by the use of magical names, called "seals" in both literatures. Gnostic texts which will bear detailed comparison with the *Hêkālôt* literature are *Hyp. Arch.* 93:31–96:17 (NHC II,4); *Orig. World* 102:11–106:18 (NHC II,5; compare the elevation of Sabaoth with the elevation of Enoch!); and Origen's account of the doctrines of the Ophians (*c. Cels.* 6:24–38). Though the historical connection between the *Hêkālôt* texts and Gnosticism is much debated (see Alexander 1984), it is very probable that *Hêkālôt* mysticism emerged as a full-blown system within rabbinic society at the same time (3d–4th centuries A.D.) as Gnosticism was flourishing in the non-Jewish world.

Hêkālôt ideas and literature were carried from Palestine to Babylonia, and some of the key texts were known to the Babylonian Geonim (e.g., Saʿadya and Hai) in the 10th and 11th centuries. The texts were also known in North Africa and Egypt (they are referred to in the writings of Rabbenu Hanan'el [11th century] and fragments have been recovered from the Cairo Geniza). The Qaraites attacked the *Hêkālôt* literature and made fun of its exaggerated anthropomorphism. Though this attack deeply embarrassed the Rabbanites, it did not halt the spread of *Hêkālôt* literature. Certain texts were transmitted W to Europe, probably via Italy. They were valued by the medieval German Jewish pietists, the *Hăsîdêʾ Aškĕnaz.* Most of the surviving texts have been passed down by the *Hăsîdêʾ Aškĕnaz,* who may have had a hand in editing some of them into their present form. From the Rhineland the texts traveled to E Europe, where they had some influence on the thought of the 18th-century Hasidic movement. From medieval Italy *Hêkālôt* ideas passed also into S France. Their presence there in the early 9th century is attested in the *De judaicis superstitionibus* of Bishop Agobard of Lyons. Certain *Hêkālôt* ideas were taken up and reinterpreted by the Qabbalists of Provence and Catalonia and can be found reflected at various points in the Zohar.

D. Date and Provenance

Given the long and active history of *Hêkālôt* mysticism and of the *Hêkālt̃* literature, it is not surprising that the date of *3 Enoch* has been fiercely disputed. Odeberg (1928: Part I, 23–43, 188) argued that the text as a whole is pre-Islamic, the main body (chaps. 3–48A, Schäfer 1981: §§4–70) having been redacted in the latter half of the 3d century A.D. He detected a stratum of material on Metatron as a primordial being (9:2–13:2, Schäfer 1981: §§12–16) that goes back to the 1st century A.D. Scholem (1965: 17), Gruenwald (1980: 192), and Alexander (*OTP* 1: 229) favor a 5th- or 6th-century date. Milik (1976: 123–35) suggests that *3 Enoch* cannot have been composed before the 9th or 10th centuries, and that, in fact, most of it was written between the 12th and 15th centuries.

In the case of a work such as *3 Enoch,* which is made up of diverse traditions from diverse periods, dating is a complex problem covering at least three things: (1) the date at which the individual pericopae, traditions, and motifs originated; (2) the date at which the macroform of the text, represented by Vatican 228 and Oxford 1656, was redacted; and (3) the dates at which the microforms of the text, represented by the other text witnesses, came into being. Though *3 Enoch* contains traditions and motifs that can be traced back to the Talmudic era, or even to the Second Temple period, there are indications that the macroform belongs broadly to the Gaonic period. It is unlikely to be later, since there are no compelling reasons to date any of the *Hêkālôt* texts, with the possible exception of *Masseket Hêkālôt,* to post-Gaonic times (though some editorial activity on the texts by the *Hăsîdêʾ Aškĕnaz* cannot, as noted earlier, be ruled out). The Geonim Saʿadya and Hai knew of a body of *Hêkālôt* literature and speak of it in terms which imply that it was of considerable antiquity. Conversely, the macroform is unlikely to be pre-Gaonic, since

it includes the short account of the elevation of Metatron from the Alphabet of Aqiba (*3 Enoch* 48BCD, Schäfer 1981: §§71–80), a work normally dated to the early Gaonic period. The Qaraite Jacob al-Qirqisani (10th century) criticizes these Alphabet of Aqiba Metatron traditions in his *Kitab al-anwar wal-maraqib* I.4.2.

That the macroform of *3 Enoch* dates from the early Middle Ages is further indicated by its constant reuse of earlier *Hêkālôt* traditions and of traditions attested in the Talmud. The following are some examples:

(1) *3 En.* 4:2, 3, 10 (Schäfer 1981: §§5–6): Metatron's title *Naʿar* originally meant "servitor" and referred to his role in the heavenly sanctuary (cf. Exod 24:5; 1 Sam 2:13). *3 Enoch* reinterprets it as meaning "youth" and uses the reinterpretation to validate the identification of Metatron with Enoch. In doing so it is probably making use of the tradition in *b. Yebam.* 16b: "The following was uttered by the Prince of the World [=? Metatron], 'I have been a youth [*naʿar*] and now I am old' " (Ps 37:25).

(2) *3 En.* 4:3–5 (Schäfer 1981: §§5–6): *Gen. Rab.* 28:8 and *b. Sanh.* 108a consider the question of whether God acted unjustly in destroying all flesh in the waters of the Flood. *3 Enoch* attempts to use this tradition to suggest that Enoch was taken up to heaven to bear witness to future generations that God had not destroyed the innocent with the guilty. *3 Enoch* seems untroubled by the biblical chronology which implies that Enoch was translated 669 years before the Flood (Gen 5:21–24; 7:11). Note, however, that the motif of Enoch as a heavenly witness is very old (see *Jub.* 10:17).

(3) *3 En.* 4:6–10 (Schäfer 1981: §§5–6): *b. Sanh.* 38b reports the tradition that the angels opposed the creation of man and claimed that their opposition was vindicated when God was compelled virtually to obliterate mankind in the Flood. *3 Enoch* rather obviously tries to adapt this tradition: (a) The Talmudic "third company" of angels is identified with ʿUzza, ʿAzza and ʿAzaʾel, three angels mentioned elsewhere (*3 En.* 5:9, Schäfer 1981: §§7–8); (b) The general charge against mankind is made incongruously to apply specifically to Enoch; (c) The Talmudic "first ones" is left without any obvious referrent; and (d) *3 Enoch* perforce retains the dating of the tradition to the time of the Flood, even though the biblical chronology has Enoch translated to heaven long before the Flood (cf. *3 En.* 4:7).

(4) *3 En.* 5:1–14 (Schäfer 1981: §§7–8) weaves together rabbinic traditions regarding the removal of the *Šekīna* from earth and the beginning of idolatry in the time of Enosh (*Gen. Rab.* 25:6; *b. Sanh.* 118b). It introduces the figure of Enoch and suggests that Enoch was translated to heaven with the *Šekīna* in the time of Enosh. That Enoch was contemporary with Enosh is based on the Cainite genealogy in Gen 4:17–26, which makes both grandsons of Adam. The Sethite genealogy in Genesis 5, however, puts Enosh in the third and Enoch in the seventh generation from Adam (cf. Jude 14).

(5) *3 En.* 16:1–5 (Schäfer 1981: §20): *3 Enoch's* account of the humbling of Metatron is almost certainly dependent on that in *b. Ḥag.* 15a. The manuscripts of *b. Ḥag.* 15a offer at least three recensions of the story of the humbling of Metatron. Significantly *3 Enoch*'s version corresponds to the latest of these recensions (found, e.g., in the Vilna edition of the Talmud), which turns on the notion that there is no sitting in heaven (Alexander 1987).

(6) *3 En.* 18:22 (Schäfer 1981: §28): the name ʾZ"BW"GH, which in earlier *Hêkālôt* tradition probably designated the Ogdoad, the Eighth Heaven (its three groups of consonants each add up by gematria to eight), has been reinterpreted as a name of an angel and taken by a kind of *notariqon* to mean "he who girds (the pious) with the garments of life" (*ʾôzēr bigdê ḥayyîm*).

(7) *3 En.* 31:1–2 (Schäfer 1981: §48): the "staff" of Mercy appears (deliberately?) to transpose the "staff" of Violence (= Judgment) in *b. Sanh.* 108a. That the image of the staff is original to the Talmudic tradition is shown by the quotation of Ezek 7:11, "Violence has risen up into a rod of wickedness."

(8) *3 En.* 45:2 (Schäfer 1981: §64): Metatron shows Ishmael all the generations of the world printed on the Heavenly Curtain (the *Pargôd*). This is probably modeled on the tradition (based on Gen 5:1, "This is the book of the generations of Adam") that God showed Adam all his descendants (*Gen. Rab.; b. ʿAbod. Zar.* 5a; *b. Sanh.* 38b). The reference to "tormentors" (*sôrĕqîm*) in *3 En.* 45:2 possibly alludes to the martyrdom of Aqiba, whose flesh they "combed" (*sôrĕqîn*) with combs of iron (*b. Ber.* 61b). The

Talmudic version of the generations of the world tradition actually concludes with the martyrdom of Aqiba.

The redactor of *3 Enoch* has a clear purpose in reusing earlier rabbinic tradition: he wants to integrate his ideas with mainstream tradition and thereby to validate them. This maneuver only makes sense if the traditions he uses would be recognized as in some sense authoritative. The simplest hypothesis is to suppose that those traditions carried authority because they were already included in the Talmud. This indicates that the macroform of *3 Enoch* is post-Talmudic. A date in the 6th or 7th century A.D. is probably not too far from the truth.

As to provenance, there is evidence that the *Hêkālôt* movement flourished both in Palestine and Babylonia, so the macroform of *3 Enoch* could have originated in either region. In favor of Palestine is *3 Enoch*'s use of Palestinian apocalyptic traditions. However, the fact that *3 Enoch* appears to have a particularly close literary relationship to the Babylonian Talmud (note especially its reuse of the story of the humbling of Metatron found elsewhere only in *b. Ḥag.* 15a) tips the balance in favor of a redaction of the macroform in Babylonia.

PHILIP S. ALEXANDER

ENOS (PERSON) [Gk *Enos* (Ἐνος)]. The son of Seth and father of Cainan, according to Luke's genealogy of Jesus in Luke 3:38. See ENOSH (PERSON).

ENOSH (PERSON) [Heb *ʾĕnôš* (אֱנוֹשׁ)]. Var. ENOS. Son of Seth at the age of 105 and father of Kenan (Gen 5:6–11). Enosh lived 905 years, fathering Kenan at the age of 90. Gen. 4: 26 also notes the birth of Enosh, with the observation that it was at that time that people first began to call on the name of Yahweh. Both the name of Enosh and the meaning of Gen 4:26 have been subjects of discussion.

Enosh means "man" in Hebrew. Despite attempts to prove the contrary, the term is virtually synonymous with the Hebrew root underlying the name of Adam (Maass *TWAT* 1: 373–75). It occurs less frequently than *ʾdm,* however, most often in poetic texts where parallelism demands a synonym for the more frequent term. The name *ʾdm* is unique to this figure, and *ʾdm* is used both as a name and as a generic term for humanity in the opening chapters of Genesis. Similarly, the figure Enosh appears first in that line, which was destroyed in the murder of Abel but renewed by the birth of Seth. Just as in the case of the name of Adam, the name of Enosh may also form a symbolic reference to that line from which all humanity would come after the Flood. Enosh thus appears as a parallel or new Adam (Cassuto 1961: 246–47; Sasson 1978: 175; Rendsburg 1986: 24).

During the generation of Enosh, people began to call upon the name of Yahweh. Setting aside earlier attempts to translate the verb as "to profane" (for surveys, see Sandmel 1961; Fraade 1984), source critics view this statement as originating with J. They note the contrasting statements of E (Exod 3:13–15) and P (Exod 6:3–4) that the tetragrammation remained unknown until the time of Moses (Gunkel *Genesis* HKAT, 48; Skinner *Genesis* ICC, 127). Others understand the Exodus 6 (P) passage as referring either to worship in general taking place for the first time (Westermann 1984: 340–41), or to a particular type of divine self-revelation (Speiser *Genesis* AB, 37–38). A third alternative accepts both Yahweh's name as

first revealed in the time of Moses and as revealing a particular aspect of the divine character, but also as having been retrojected into the Genesis narrative (including 4:26) by a writer who discerned that aspect of divine character as apparent in God's earlier manifestations (Wenham 1980: 182–83, 188 n. 72; *Genesis 1–15* WBC, 116). Finally, an alternate translation has been suggested for Exodus 6:3 which would relate it to the occurrences of the divine name in Genesis, "Did I not let myself be known to them by my name Yahweh?" (Martin 1955: 18–19; Driver 1973: 109). The implications of Gen 4:26 suggest that in some unspecified manner the worship of God began at this time. Whether or not this is intended to contrast with the line of Cain in the preceding verses depends upon whether or not the line of Cain is given as an example of wickedness in contrast to the righteousness of the line of Enosh (von Rad *Genesis* OTL, 112).

ENTRANCE OF HAMATH. See HAMATH, ENTRANCE OF.

ENUMA ELISH. A Babylonian narrative myth of about 1100 poetic lines, often misleadingly called "The (Babylonian) Epic of Creation." Its purpose was to explain and justify the rise of the god Marduk to headship of the pantheon, and creation is incidental to that. H. Gunkel and others held that it was the source or inspiration of OT passages about Yahweh's killing of Rahab, Leviathan, and other monsters, but this view is no longer tenable, since it is now known that Baal's defeat of Leviathan and Tannîn lies behind the Hebrew poetic passages. However, Enuma Elish remains important as a major Babylonian cosmological text, though it was not normative for its own world and needs to be understood in the light of other Sumero-Babylonian texts. It is a highly composite work, but many of its sources still survive so that its exposition is an object lesson in ancient composition.

In this narrative, because of a primeval contretemps, a group of young gods was threatened with destruction by Tiamat ("Sea"), who had her own group of followers. To prosecute her plan, she created a number of monsters which she put under the command of her spouse Kingu. Of the younger gods, Anshar, their king, first sent Ea and then Anu to do battle with Tiamat and her host, but both withdrew at the first glance. Marduk, Ea's son, was persuaded to take up the cause. He, however, imposed a condition that, were he to return victorious, the existing divine government would abdicate in his favor, and this was agreed. Duly armed he set out, and after falling back at the first sight of the enemy, he recovered his nerve and advanced to victory. Immediately after victory he rearranged the universe according to the Babylonian concept of the author's day and made Babylon the first city. In his newly built temple there he was celebrated by the gods as their king.

In history, Babylon and Marduk, its patron god, were insignificant until Hammurabi made Babylon the capital of southern Iraq ca. 1750 B.C. and promoted Marduk to be a "great god" (among other great gods). It was only under Nebuchadnezzar I (ca. 1120 B.C.) that Marduk was officially exalted as "king of the gods," though there are rare hints of this earlier. Enuma Elish was probably composed at about that time to support and justify this promotion (Lambert 1964).

The text is divided by most ancient scribes into seven tablets, but though seven is a significant number, the author does not seem to have composed the text with this division in mind. Many pieces of this text

written in cuneiform script on clay tablets have been recovered from both Babylonian and Assyrian sites, since it was a very popular composition at least with scribes in the second and third quarters of the 1st millennium B.C. Most date from between ca. 750 and 200 B.C., but there are four small fragments from Assur of about 900 B.C. The lack of earlier pieces and of allusions to the text opposes a date of composition substantially earlier than Nebuchadnezzar I, and nothing internal supports an earlier dating. Berossus narrates a very similar story, but it is different enough in some details that his dependence on the text we know is not completely certain. All the available evidence argues that this is an original composition, using very freely earlier sources. There is no reason to suspect that this is a lightly revised version of an earlier text (now lost).

The major motif of threatened gods (gods actually worshipped in the author's time) saved by one of their juniors who is rewarded for the service is known from two other Babylonian texts, the Anzû Myth and the Slaying of Labbu. Enuma Elish clearly depends on the former, though all but a few of the details are changed. The text begins with a theogony that combines elements from the traditional ancestries of the gods Anu and Enlil. The only original elements are the pair at the head, the male Apsû (the underworld body of water on which springs draw) and the female Tiamat ("Sea"). The concept of water as the prime element is commonly attested elsewhere in the ancient world, in Sumer with Nammu/Namma, mother of Ea, but only in Enuma Elish and dependent sources are the male–female pair Apsû and Tiamat used. Since there is no evidence of a Sumero-Babylonian background for Tiamat as the origin of everything, there have been suggestions that this concept was borrowed from the West, perhaps from the Amorites. However, there is no good support for this idea ("Sea" there is Yam, a male deity), and there is now evidence of Tiamat as a primeval god from the Diyala region in the later 3d millennium. So the author himself probably married the Sumerian male Apsû to the Semitic Tiamat (perhaps from the Diyala region) and used them as the prime elements. In Enuma Elish Tiamat in fact varies between being a body of water and a monstrous female goat. The theogony leads up to Ea, Marduk's father.

At this point the junior gods disturb Apsû and Tiamat by their noise, so Apsû proposes to exterminate them, despite Tiamat's objections. Ea acts first by killing Apsû and sets up his abode on the dead body. This is etiological, explaining how (in Sumero-Babylonian thought) Ea lived in the Apsû. In this new abode of Ea, Marduk, Ea's son is born and promptly disturbs Tiamat by creating a wave. Gods of unspecified origin now urge Tiamat to act before she meets the fate of Apsû, so she creates eleven monsters (the victor of the Anzû Myth had defeated eleven opponents) and puts Kingu in charge. The author has incorporated verbatim a passage from a lost text describing the monsters. No explanation of Kingu's origin is given, but he is an alter ego of Enmesharra, who, with his sons (paralleling the monsters of Enuma Elish), was defeated by Marduk in another myth. From this point to the victory the Anzû Myth provides the outline of the narrative.

Marduk's reorganization of the universe involves the Apsû, which already existed and was put at the bottom; the body of Tiamat, which was split into two to provide the watery upper heavens and the solid earth; and a lower heaven ("Esharra"), the only part specially created. The author is in fact blending three originally distinct cosmologies: (1) a two-level universe of heaven and earth resulting from splitting a body of matter (an extremely widespread concept), (2) a Sumero-Babylonian three-level universe for the Neo-Sumerian trinity consisting of Anu in heaven, Enlil on earth, and Ea in the Apsû (most clearly attested in the Atra-ḫasīs Epic), and (3) the concept of three heavens (in Enuma Elish, the uppermost is half of Tiamat's body, the middle one was apparently made *ex nihilo,* and the lower one is the level of the stars, and not given any particular name). No netherworld is mentioned, though it was believed to exist below the Apsû. Enlil, the god Ea displaced as head of the pantheon, is first mentioned at this point, when Marduk assigns him the second heaven as his abode. Creation continues with the furnishing of the void between the base of the lower heaven and the surface of the earth. The heavenly bodies were appointed, but the author had no interest in astronomy as such and only deals with those heavenly bodies conceived to regulate the cultic calendar: the thirty-six stars that regulate the year; the moon, which regulates the month, and the sun, which governs the day. Meteorological phenomena are supplied, and the physical features of the surface of the earth are arranged from parts of Tiamat's animal body (the Tigris and

Euphrates flow from her eyes, etc.). The various levels of the universe thus set up are finally stabilized by a cosmic cable and Marduk's battle net, which was spread around them. Images of the eleven monsters were then set up as a memorial of Marduk's victory (etiology in fact: representations of them existed in the author's day).

From this point, between the remaining episodes, the gods repeatedly proclaim Marduk king. First Babylon is built on the earth and centrally in the universe to serve as Marduk's home, where the gods of upper and lower cosmic regions will meet in assembly. Thus Nippur, Enlil's town, where the gods met in Sumerian myths, was displaced, just as its god was. Now man is created by interplay between Ea (the traditional Sumero-Babylonian creator) and Marduk (who replaces the Mother Goddess of tradition). The particular version of creation used is that of the Atra-ḫasīs Epic, in which Ea and the Mother Goddess make man from clay mixed with the blood of a slain god, but in Enuma Elish much of the detail is omitted. There is no mention of clay, only of the slain god's blood (Kingu in Enuma Elish), but probably readers were expected to be familiar with the notion of clay being mixed with the blood. Kingu is judicially found guilty of causing the war (wrongly, according to the story of Enuma Elish: Tiamat was responsible), and he is condemned to die so that man can be created from his blood. It is assumed that life can come only from preexisting life. The contradiction in the story results from using the myth about Enmesharra as the basis of the judgment scene. In that story Marduk defeats Enmesharra and his sons, who had rebelled, and after a short period in prison their father is condemned to death as the ringleader while his sons are pardoned. The author deftly changes this freeing from prison into the freeing of the younger gods from the hard labor required of them to provide them with their daily bread. In Sumero-Babylonian thought the human race existed solely to supply the gods with food and drink, which they did with regular meals set before the statues of the gods in the temples. With the gods now content with this supply of food and drink, Marduk proceeds to organize them in two groups, those of heaven and those of the netherworld, which suddenly appears from nowhere. At this the gods in gratitude build Marduk's temple in Babylon, Esagil, and, seated at a banquet, admire his net and bow and then, for the fourth time, proclaim him king and in addition take a loyalty oath, after which they proclaim his fifty names. This listing of names together with etymological and (more often) pseudo-etymological interpretations occupies 172 lines and was borrowed by the author from a triple-column god list with a little rearrangement and expansion (Bottero 1977). The interpretations constitute a theology of the god.

The concluding epilogue hopes that this work, whose compilation was undertaken for the benefit of posterity, would teach the greatness of Marduk to scholar and shepherd alike.

It is known that under the Late Babylonian empire this text was recited to Marduk's statue on the fourth day of Nisan in the course of the New Year festival (*ANET*, 332). During the same festival, about a week later, Marduk ceremonially defeated Tiamat and was proclaimed king by the other gods, who had assembled in Babylon for this purpose. It has been argued that Enuma Elish was the "scripture" for this annual reenactment, an example of the interplay of myth and ritual. But the recitation did not take place in connection with the Akitu rites in the course of which Tiamat was defeated. Furthermore it is known that Enuma Elish was also recited to Marduk on the fourth day of Kislimu, when no Akitu house battle took place, and information about the fourth day of the other ten months is lacking. Thus it is possible that Enuma Elish was recited to Marduk on the fourth day of every month, so the occurrence in Nisan is not especially significant. In any case there is no evidence that Enuma Elish was composed with cultic recitation in view. The epilogue states clearly that it was intended to serve in spreading knowledge of the greatness of Marduk throughout the population, by oral recitation. Thus the context of Enuma Elish is the rise of Marduk in history, in the reign of Nebuchadnezzar I, not the cult of Babylon, in which its use was presumably secondary.

ENVY. Envy is not a topic of any significance in either the OT or the NT. There is, for instance, no passage in which envy itself is discussed. This is in striking contrast to the importance it is accorded in Greek and Latin literature and in the writings of the Fathers of the Church. In this latter body of literature, envy is singled out as a moral failing particularly to be avoided by Christians, because it is the peculiar fault of the Devil and because it is the very antithesis of the injunction that we love our enemies. Envy is the peculiar fault of the Devil, since it was envy that brought about his fall and it was his envy that caused man's fall (Cypr. *Zel. et liv. PL* 4:665–66); it is the antithesis of loving our enemies, since the envious man will hate even a friend if that friend is fortunate (John Chrysostom, *Invid. PG* 63:679). It is true that frequent citations from the Bible lend a seeming authority to the teaching of the Church Fathers on envy, but the real intellectual underpinning of that teaching is provided by Greek literature and philosophy. We have then something of a paradox: envy plays little part in the Bible but is a key concept in developed Christian theology.

———

A. *Phthonos*

The Fathers of the Church were the products of a culture that was acutely conscious of envy; they possessed a profound understanding of its nature and at the same time were convinced that it was an ever-present threat. In these circumstances it is not surprising that they should have read their own preoccupations into the Bible. What the Fathers of the Church were concerned about when they spoke of *phthonos, baskania* or *zēlos,* or if they were writing in Latin, *invidia, livor, zelus,* or *aemulatio,* was a grudging, mean-spirited condition of mind. A man subject to that state of mind finds it difficult or impossible to share his own goods with another and cannot bear to see anyone else in possession of a good. It is this latter aspect of *phthonos* that corresponds to our "envy" and "jealousy." It is important to bear in mind that *phthonos* has a broader application than "envy" or "jealousy" and that these terms are not always an accurate rendering of its meaning. Sometimes it is applied to those who only reluctantly share their own goods with others; on other occasions, and this is how it is most often used, it has the same intent as "envy" or "jealousy"; and sometimes it is used of those who not only begrudge others a share of their own goods but begrudge others their good fortune.

The man afflicted by *phthonos,* the *phthoneros* man, begrudges others their possessions not because they possess them unjustly but simply because it is not in his nature to view such good fortune with equanimity. It may nonetheless be the case that he is convinced that he is justified in his resentment. This unjustifiable begrudging is a form of malice or ill will; it is so because in wishing to see his neighbor deprived of a good he wishes him ill. It is the unjustified malevolence inherent in *phthonos* that makes people hate and fear it.

Ancient moralizing on *phthonos,* both Christian and pagan, tends to concentrate on the ill it does its possessor rather than others, perhaps because arguments aimed at self-interest are more effective than those that rely on one's sense of altruism. *Phthonos* was supposed to make its possessor unhappy to the point that he might even begin to waste away in his misery. All ancient definitions of *phthonos* in fact say

that it is distress *(lupē)* provoked by the good fortune of others (Plat. *Phlb.* 49d; Arist. *Rh.* 1387b22–25; *SVF* 3:99:38–39).

Phthonos is to be distinguished, as in envy, from greed and from competitiveness. Unlike the greedy man, the man afflicted by *phthonos* does not necessarily want the goods he resents another having; he simply does not want that other to have them. He differs from the competitive man in that his aim, unlike that of the competitive man, is not to win but to keep others from winning.

One of the pecularities of *phthonos,* as of envy, is its lack of self-awareness. The *phthoneros* man, if called upon to justify his conduct, will always tell himself and others that those he attacks deserve it and that it is the unfairness of the situation that moves him to criticize. If asked how he can possibly speak of a friend in the way he does, he will say that his criticisms have the friend's best interests at heart. It is because *phthonos* always conceals its true nature from its possessor and from others that it is associated with hypocrisy. This made it all the more feared, since its attacks were never open and straightforward but always veiled.

Those given to *phthonos* were thought to indulge their spite in whispered slanders, in backbiting, and in denigration in general. Their ill will could also take a more sinister and immediately dangerous form: their hate-filled look was thought to blight that on which it fell. It was believed to make crops, livestock, and people wither and waste away. This is the superstition known as the evil eye, although there is very little ancient authority for it under that name. In Classical Antiquity, it was known simply as *phthonos* or *baskania*.

This brief analysis of the nature of *phthonos* should make it clear on a little reflection that it is a particularly vicious and inexcusable form of malice. In Classical Antiquity it was a condition that was supposed to afflict all men in some measure and a very large number of men in significant measure (*Aesch. Ag.* 832–33; Hdt. 3:80:3; 7:237:2). This is a view of human nature shared by many other societies. What is so remarkable about the OT and the NT is that this fundamental human failing should have so little engaged the attention of its authors. What little is said about it shows the stamp of Greek ways of thought.

B. OT References

The Church Fathers when they discourse on *phthonos* regularly appeal to what was obviously a canonical list of the envious drawn mainly from the OT. They begin with the *phthonos* of the Devil for mankind, and proceed to that of Cain for Abel, to that of Joseph's brothers for Joseph, and to that of Saul for David and end up finally with the *phthonos* of the Jews for Jesus (*1 Clem.* 3; Cypr. *Zel. et liv. PL* 4:665–67). Only in the first and third of the passages from which these *exempla* are drawn are *phthonos* or *zēlos* mentioned explicitly (Wis 2:23–24; Gen 37:11). This is an illustration of how seldom *phthonos* is cited as a motive for men's actions in either testament. By the standards of Classical Antiquity this is quite remarkable.

It is really not until we come to the later books of the OT that *phthonos* makes an appearance, though a somewhat illusory one. It is in Ben Sira and in Wisdom that *phthonos* first comes to the fore. On closer scrutiny we find that the translator of Ben Sira, although he appears to be talking about *phthonos,* is not really doing so, for he uses *phthonos* and *baskania* with the same extension of meaning that they have elsewhere in the LXX. Warnings against *phthonos* and *baskania* turn out on closer inspection to be admonitions against a greedy and miserly spirit (14:3–10; 18:19). There is in that work very little evidence of a real concern with envy.

Baskania in the LXX is used principally of a spirit that is both greedy and miserly. (Prov 23:6; 28:22; Sir 14:3–10; 18:19). In one passage, in Deuteronomy, "jealousy" is a plausible rendering (28:54–56). Once in Wisdom it appears to be used of bewitching (4:12). The situation with *phthonos* is superficially less confused. It is used of envy and jealousy (Wis 2:24; 1 Macc 8:16) and is also applied to a begrudging and stingy spirit (Wis 6:23).

The author of Wisdom has a rather better grasp of the concept of *phthonos* than is evident elsewhere in the LXX. In one passage, the writer promises to reveal all the wisdom he has received from God and not

accompany that wisdom with wasted *phthonos,* on the ground that *phthonos* does not consort with wisdom.

> I shall not lead the truth aside, nor shall I accompany it with wasted *phthonos,* because *phthonos* does not consort with wisdom (6:23).

The idea that it is wrong to hold back special knowledge or wisdom and not give it unstintingly is Greek and is to be found first in the collection of gnomic verses that go under the name of Theognis of Megara (769–72. *Cf.* Pind. *Isthm.* 1:43–46). It is very much the common currency of the time of the author of Wisdom and plays a prominent part in the writing of Philo Judaeus (*Post* 138; *Spec Leg* IV:75; *Virt* 223). It is especially prevalent in prefaces to technical treatises (Gal. *De anatomicis administrationibus* 9; Vitr. *De Arch.* 7 *praef.* 1).

The mode of expression is also Greek; wasting is regularly associated with *phthonos.* It is so because the envious are thought to waste away in their own misery. It is nonetheless puzzling that wasting should be an attribute of *phthonos* here, as it is the *phthonos* of envy or jealousy which causes wasting and not that of being merely begrudging.

The influence of Greek thought is to be seen most clearly in those lines in Wisdom in which the presence of death in the world is explained:

> For God made man without corruption and created him in the likeness of his own immortality. By the *phthonos* of the Devil death came into the world (2:23–24).

What this passage amounts to is an interpretation of Gen 1:26, where God is said to create man in his own likeness, and Genesis 3, in which the story of Eve's temptation by the serpent is told. The serpent has become the Devil or the Devil's instrument, as it is hereafter in Christian and gnostic literature, while the temptation of Eve becomes the Devil's introduction of death into the world. His motive for so acting is put down to *phthonos.* We have to infer that his *phthonos* was aroused by God's making man in his own likeness and thus making him immortal.

The influence of Plato's account in the *Timaeus* of how the Divine Demiurge made the world in his own image may be detected in this interpretation of the creation-myth in Genesis. In the *Timaeus* the Divine Demiurge is said to have created the world because he was good, since in one who is good there is no *phthonos* ever about anything at all (29e). The Devil has been endowed with exactly the attribute of which the Divine Demiurge is free and whose absence in the Divine Demiurge explains his willingness to create all things in his own image. We know that in Alexandria in the generation following that in which Wisdom was composed, Philo used the *Timaeus* to interpret the creation story in Genesis (*Op* 21). The same influence may well be at work in Wisdom. If not, it is exceedingly difficult to see where the idea of the Devil's *phthonos* can have come from.

Reese (1970: 11) suggested that in this passage the author of Wisdom wished to introduce from Greek religious literature, where Reese thinks it is common, the motif of the envy of the gods to clear God of the responsibility of having brought death into the world. Van Unnik (1972: 130) was prepared to entertain the suggestion but very properly asked whether the idea was in circulation in the time of the author of Wisdom. There is no evidence in what we have of Hellenistic Greek literature for the idea as such, although belief in the *phthonos* of fate or fortune existed at that time. The two Greek authors in whose work the notion of the envy of the gods plays a prominent part belong to the 5th century B.C. They are the historian Herodotus and the lyric poet Pindar. It seems unlikely that the author of Wisdom had read either.

Wis 2:23–24 was taken up by both Christians and gnostics as the accepted explanation of the Fall. It also helped shape one of the standard tenets of early Christian theology, namely, that envy is the Devil's chief and defining characteristic.

C. NT References

The NT has relatively little to say about envy. Perhaps not surprisingly it is Paul who mentions it most frequently, and it is what he has to say about envy to which the Church Fathers have most frequent recourse.

At Rom 1:29, in the midst of a long catalog of the sins to which those who reject the knowledge of God for idolatry are given, Paul mentions *phthonos,* murder *(phonos),* contentiousness *(eris),* and deceit and a

malicious nature *(kakoetheia). Phthonos* in Classical and later Greek literature is regularly mentioned alongside *eris* and *phonos* (for *phthonos* with *eris* and *phonos,* see Soph. *OC* 1234–35; for *phthonos* and *phonos,* see Eur. *Tro.* 769–70; Plut. *Marc.* 29:1; *Phoc.* 37:2) while *kakoetheia* and *phthonos* are frequently coupled in later Greek literature (Plut. *Arat.* 15:4–5; *Demetr.* 50:5; *Mor.* 92b; 100f–101a; 465b; 556b; 630d; 845d; 856a–b). The influence of Greek culture on Paul here cannot be gainsaid, although there is little of ethical or theological significance that can safely be gleaned from this passage.

In Gal 5:20–22 Paul mentions *phthonos* in a catalog of the deeds of the flesh. In that passage he also mentions *eris* and *zēloi.* In Rom 13:13 Paul couples *eris* with *zēlos* in appealing to his hearers to put off the deeds of darkness and don Christ. Again in 1 Cor 3:3 he warns his listeners that when there is *eris* and *zēlos* in them they are creatures of flesh. In 2 Cor 12:20 he expresses the fear that he may still find *eris* and *zēlos* in the Corinthians. There is really nothing in these catalogs to enable us to decide whether Paul intends a distinction between *phthonos* and *zēlos* or whether they are little more than synonyms for him. The conjunction of *eris* with *zēlos* does not help to clarify the issue, since contentiousness can equally well be coupled with both envy and worldly ambition. Although envy is clearly the graver failing, it would still make perfectly good sense for Paul to include worldly ambition among the deeds of the flesh. It does, after all, lead to envy and strife.

There is little help in turning to Church Fathers to see whether they shed any light on what Paul means by *zēlos* and *eris.* Cyprian in the *De Zelo et Livore (On Envy and Jealousy),* not unsurprisingly, given his subject matter, takes Paul in 1 Cor 3:3 to be issuing a warning against envy (*PL* 4:672). Basil, for his part, associates *zēlos* and *eris* with *philoneikia,* "contentiousness," and places them in opposition to *sumpnoia* and *homonoia,* "harmony" (*jud. PG* 31:660; *reg. br. PG* 31:1000). If these associations and oppositions point in any direction, they suggest that Basil understands *zēlos* to be competitiveness or emulation rather than envy.

It would not greatly matter what Paul intended by *zēlos* and *eris* in these catalogs of the deeds of the flesh were it not the case that he also uses *zēlos* in his definition of what love *(agapē)* is in 1 Cor 13:4. It is, he says, long suffering, it does good, it does not engage in *zēlos,* it is not vainglorious, and it is not conceited. Both Origen (*comm. in I Cor.* 51 ed. C. Jenkins, *JTS* 9 & 10 [1908]) and Cyprian (*Zel. et liv. PL* 4:672) assume that he is speaking of envy or jealousy. Origen, as examples of a *zēlos* that is far from love, cites the *zēlos* of Cain toward Abel and that of Joseph's brothers for Joseph. These are by the time of Origen *exempla* of envy. Modern scholarship also takes it for granted that envy is at issue in 1 Cor 13.4 (Conzelmann *1 Corinthians* Hermeneia, 72 n.32).

It is impossible to decide whether *zēlos* in this passage is to be rendered as envy or as competitiveness. If *zēlos* here is envy, Paul's definition of love has a sharpness and precision, since envy is the very antithesis of Christian love; it is self-absorbed and filled with ill will toward others, whereas love is selfless and goodwill toward others is of its essence. That said, it has to be admitted that Paul might well have meant that there is no competitiveness in love, in which case it is probably the self-sacrificing quality of love that he intends to emphasize.

At the conclusion of Galatians 5, Paul calls on those he addresses to walk in the path of the spirit and to reject vainglory *(kenodoxia)* and neither challenge nor envy *(phthonountes)* each other (25–26). This exhortation is reminiscent of Epicurean and Stoic rejections of worldly ambition. Such ambition was rejected by Epicureans on the ground that it led to strife, murder, and the mental distress of greed and envy (Lucr. 3:59–81). For Epictetus, boastfulness and *kenodoxia* are one side of a coin whose other side is made up of distress, envy *(phthonos),* and lamentation (Arr. *Epict. Diss.* 3:24:43). Those in pagan antiquity who advocated withdrawal from the world did so in the belief that it gave men tranquility of mind and happiness by eradicating the sources of the aspirations that make men greedy, envious, and ambitious, and so tortured and unhappy. This concern with personal contentment and happiness is clearly not Paul's. It nonetheless remains the case that Paul's exhortation to the Galatians to put aside vanity and its attendant ills owes a good deal of its inspiration to Greek popular philosophizing.

In Rom 12:15 Paul exhorts his hearers to rejoice with those who rejoice and weep with those who weep. John Chrysostom, in commenting on this exhortation, says that many weep with those who weep but do

not rejoice with those who rejoice but rather weep. That, he says, is *phthonos* and *baskania* (*hom. 1–32 in Rom. PG* 60:447). That Chrysostom should see in Rom 12:15 an exhortation against envy was almost inevitable for a man both versed in Classical Greek literature and possessed of a heightened awareness of the part that envy played in human life. In Aeschylus' *Agamemnon,* the Chorus of Elders, addressing Agamemnon, remark that everyone is ready to groan over one in misfortune but that many men have to force their faces into a semblance of a smile when they want to pretend that they rejoice with someone (790–98). Agamemnon's response to this is that it comes naturally to few men not to envy a friend when he is successful (830–33). In a paraenetic speech in the Isocratean corpus the speaker bids the addressee in choosing his friends not to select those who are merely distressed by his ills but those who in addition do not envy him (Isoc. *Ad Demonic.* 26). The ultimate inspiration for Rom 12:15 must be teaching of the sort found at Isoc. *Ad Demonic.* 26, but Paul's failure to expand on the meaning of the exhortation makes it impossible to know whether he intended a warning against envy. Since he shows no great familiarity with the commonplaces of Greek moralizing, it seems on balance more likely that he did not have envy in mind.

To put into perspective what Paul says about envy, we should remember that he does not accord that failing any special attention and that it is simply one among several other failings to which he makes passing reference. Only in Galatians 5 can envy really be said to be toward the center of his thinking. There is, in short, little sign that he has given much thought to envy.

In James there is a passage in which bitter *zēlos* and factionalism are compared to their disadvantage with the wisdom that comes from on high and are condemned as the cause of anarchy and all that is bad (3:13–18). The writer then turns to the origins of wars and battles, which he finds in the pleasures that, in his words, "campaign in our limbs" (4:1). As the ensuing passage makes clear, what he means by this is that strife comes from frustrated desires, which realize themselves in *zēlos* (4:2). The topic of physical pleasure leads into that of love of the things of the world, which the writer condemns as hateful to God (4.4). He then asks rhetorically:

> Does it seem to you that Scripture speaks emptily saying: "The spirit that dwells in us longs jealously *(pros phthonon)*" (4:5).

That is followed by the assertion that God sets himself against the proud and gives his grace to the humble (4:6 = Prov 3:34). The writer's hearers are now enjoined to place themselves under God's command and to resist the Devil, whom, they are assured, will flee from them (4:7).

These strictures against *phthonos* and *zēlos,* and in particular the association of a bitter and contentious spirit with bodily desires and wordly ambition, strongly resemble Paul's warnings on the same topic. As in Paul there is the same difficulty in deciding what exactly the writer understands by *zēlos* and by *phthonos* and to what extent, if at all, he distinguishes between them. James goes beyond Paul in finding the origins of strife in frustrated physical desire, but it should be noted that his conception of physical desire is a broad one and encompasses a longing for the things of the world, among them the objects of ambition.

In some ways the most interesting aspect of the passage lies in what seems to be implied in the exhortation to resist the Devil, namely, that *zēlos* and *phthonos* are the Devil's work. It is probably wrong to press this connection too hard and to take the writer to have in mind something akin to the later thesis that *phthonos* is the snare by which the Devil entraps men. The writer in all likelihood had nothing more specific in mind than that the deeds of the flesh belong to the Devil.

In 1 Peter the writer calls on his hearers to put aside all wickedness, guile, instances of hypocrisy *(hypokrisis)* and *phthonos,* and all slandering, and in their place drink the unadulterated milk of the word (2:1). *Hypokrisis* and *phthonos* are almost certainly a hendiadys here and represent one idea, not two, the hypocrisy of *phthonos.* It is readily understandable why *phthonos,* which always tries to conceal its true nature, should be associated with hypocrisy. There are in Classical Greek literature before this passage no instances of this association. The earliest seems to be in the *Meditations* of Marcus Aurelius (1:11). That may be simply an accident of survival. However that may be, the association of these two ideas in this passage led some of the Church Fathers to profound insights into the nature of *phthonos*.

Besides these passages of moral and theological purport, *phthonos* is twice adduced in narratives as the motive for men's actions. Both Matthew and Mark say that Pontius Pilate knew that *phthonos* was the motive that had prompted the high priests and elders of the Jews to hand Jesus over to him (Matt 27:18; Mark 15:10). We are told that he knew this when he asked these same high priests and elders whom they would prefer him to set free, Jesus or Barabbas. That is to say, both Mark and Matthew are suggesting that Pontius Pilate was being disingenuous in asking that question, since he already knew that the high priests and elders were fatally prejudiced against Jesus because *phthonos* was their motive in handing Jesus over to him. These passages were to bear fruit in later Christian literature: there Jesus' death is regularly ascribed to the *phthonos* of the Jews (Cypr. *Zel. et liv. PL* 4:667 is the first instance).

In sum, neither the OT nor the NT provides any real guidance on the subject of envy. Paul, it is true, leaves us in no doubt that it is to be avoided. What neither he nor anyone else makes clear is what it is nor what there is about it which makes it reprehensible.

D. Extrabiblical Material

A better perspective on its relative insignificance in the NT may be gained by comparing the NT with some Jewish and Christian texts of roughly the same era. Philo Judaeus mentions *phthonos* frequently. For example, he appeals to God's complete freedom from *phthonos* to explain God's goodness and his creation of the world (*Spec Leg* II:141; 173). Philo's inspiration here is Plato's *Timaeus.* The adroit manner in which Philo handles and analyzes the concept suggests that he was deeply imbued with Greek culture to the point that his patterns of thought were those of an educated Greek.

Phthonos plays an important role in the *Testaments of the 12 Patriarchs,* a Jewish work almost certainly of the 1st century A.D., which shows signs of a superficial Christian redaction. It is the envy which Joseph aroused in his brothers that is responsible for the work's concern with *phthonos.* One of the Testaments, that of Symeon, is devoted largely to that subject. The author of the work displays an easy familiarity with the concept, evidence that Hellenized Jews of very modest intellectual attainment and culture were quite at home with the notion.

At the end of the 1st century A.D., we have a letter from a Roman Christian, presumably a man of some standing in the community, addressed to the Christians of Corinth, who had just deposed their leaders, warning them of the dangers of communal strife. This is the letter that goes under the name of *1 Clement.* Its Greek is significantly more elegant and idiomatic than anything in the NT (Lane Fox 1986: 305). The writer of the letter, to impress on the Corinthians the evil *phthonos* does, cites a long list of examples of that failing drawn principally from the OT (4–6). It is true that he has little or nothing to say about the nature of *phthonos* and that his knowledge of Greek myth is sadly confused. Yet his concern with *phthonos* is transparent. He would hardly have devoted so much energy to cataloging the ills it does were he not convinced of its importance. Even if it is the case that the catalog is not his own work, it still remains true that here we have a man of modest education in whose consciousness *phthonos* looms large.

The greater awareness of *phthonos* that Philo and the authors of *T. 12 P.* and *1 Clem.* display is surely to be attributed to their having been more deeply Hellenized than any of the authors of the OT or NT. An indication of their Hellenization is their facility with Greek. Philo, despite his verbosity and pomposity, writes infinitely better Greek than anything in the NT; the writers of *T. 12 P.* and *1 Clem.* write reasonably clear Greek and rather better than what is on offer in the NT. What all of this adds up to is that at a certain level of Hellenization, Greek ideas take hold. The authors of the books of the NT have barely crossed that threshold. Hence, apparently, their lack of concern with envy.

MATTHEW W. DICKIE

EPAENETUS (PERSON) [Gk *Epainetos* (Ἐπαινετος)]. A Roman gentile Christian who received greetings from Paul in Rom 16:5 as "my beloved." Epaenetus had immigrated to Rome. Rom 16:5 depicts him as the first Christian convert of the province Asia whose capital was Ephesus. He may have been converted by Prisca and Aquila in Ephesus and moved together with them to Rome (see AQUILA); the couple is mentioned just before Epaenetus in Rom 16:3–5. He therefore also may have attended the couple's Roman house-church. Ollrog (1979: 38) even conjectured that he was one of Aquila's servants, although there is no evidence that Aquila had ever hired anyone other than Paul in Corinth for his workshop (Acts 18:2–3); Aquila's social status has often been overestimated (see AQUILA; Lampe *StadtrChr*, 160–64).

PETER LAMPE

EPAPHRAS (PERSON) [Gk *Epaphras* (Ἐπαφρας)]. A Christian from Colossae (Col 4:12), referred to by Paul as a "fellow slave" (Col 1:7) and "fellow prisoner in Christ Jesus" (Phlm 23). Epaphras is also mentioned as having sent greetings to Philemon (Phlm 23) and to the Colossians (Col 4:12), both of whom were undoubtedly well known to him.

According to Paul, Epaphras is the one who taught the Colossians "the grace of God in truth" (Col 1:6). Paul also testified that Epaphras worked hard for them "and for those in Laodicea and in Hierapolis" (4:13). From this it can be inferred that Epaphras was the founder of the Colossian church (Lightfoot 1879: 29) and an important evangelist in the other two communities in the Lycus valley (Bruce 1984: 8–10).

During one of Paul's imprisonments Epaphras brought him news of the Colossians' faith in Christ Jesus and their love for all the saints (Col 1:4). Epaphras also conveyed to Paul their love in the Spirit (1:8). Furthermore, it was probably Epaphras who had informed Paul about false teachers in the Colossian community (2:4, 8). That very situation may have inspired Epaphras to visit Paul in prison in order to consult with him. When he saw Paul, Epaphras most likely is the one who gave him news about Philemon, thus bringing much joy to Paul (Phlm 5). In addition there is some merit to the suggestion that Epaphras brought the runaway slave Onesimus to Paul, because he knew that Paul would be able to help him (Bruce, *Colossians, Philemon, Ephesians* NICNT, 197).

Paul greatly respected Epaphras, whom he describes as "our beloved fellow servant," and as "a faithful minister of Christ on our (some mss read 'your') behalf" (Col 1:7). Paul also calls him a "*doulos* ('servant' or 'slave') of Christ Jesus" (4:12, cf. 1:7, where Epaphras is called *sundoulos*, "fellow servant"), a description Paul uses at various times of himself but rarely of another (cf. the identification of Timothy in Phil 1:1). From Paul it is also known that Epaphras was a man of prayer, for he tells the Colossians that Epaphras was constantly praying for them that they might "stand mature and full assured in all the will of God" (4:12). Although the name Epaphras may be a shortened form of Epaphroditus, this Colossian should not be confused with the Philippian of similar name.

On the site of ancient Colossae an inscription has been found which mentions a person named T. Asinius Epaphroditus (Johnson 1950: 7), but it is rather doubtful that this refers to the Epaphras known to Paul. A marble altar was also found in Laodicea which is thought by some to have the name of Epaphras on it (Johnson 1950: 7).

FLORENCE MORGAN GILLMAN

EPAPHRODITUS (PERSON) [Gk *Epaphroditos* (Ἐπαφροδιτος)]. A Christian sent by the Philippians to help Paul and to take the collection from Philippi to Paul (Phil 2:25; 4:18). The name Epaphroditus, rather common in the 1st century, suggests that his family may have been followers of the

cult of Aphrodite, the Greek goddess of love and fertility. It is interesting to note that after being converted from paganism to Christianity, Epaphroditus was not required to change his name in spite of its association with this cult.

The identity of Epaphroditus is best understood within the context of his relationship to Paul and to the Philippians. Paul uses three significant terms to characterize his bond with Epaphroditus: "my brother" (Gk *adelphos*), "my fellow worker" (Gk *sunergos*), and "my fellow soldier" (Gk *sustratiotēs*) (2:25). As a brother, Epaphroditus was one in the faith with Paul and other Christians, but more specifically, a colleague of Paul in evangelizing, as the next two terms suggest. As a fellow worker, one of those who labored with Paul in spreading the Gospel, Epaphroditus must have had a prior association with Paul, perhaps going back to the founding of the church at Philippi. As a fellow soldier, he had struggled side by side with Paul against adversaries of the Gospel (cf. 1:28, 30). See ARCHIPPUS. This military metaphor suggests that Epaphroditus experienced suffering and conflict in his ministry. Undoubtedly he was highly regarded by Paul.

The Philippians sent Epaphroditus to Paul during his imprisonment either in Ephesus, ca. A.D. 56–57, or in Rome, ca. A.D. 61–63. The proximity of Ephesus to Philippi makes that city the preferred choice because of the frequent comings and goings between Paul and the Philippians implied in the letter. Epaphroditus was their Gk *apostolos* (2:25) and a minister to Paul's needs. Whether the term indicates that Epaphroditus was their "apostle" in the sense of being commissioned and sent out with a specific task of spreading the Gospel as was Paul, or in the sense of being their messenger, envoy, or delegate, is not immediately clear. Epaphroditus serves as a minister (Gk *leitourgos*) to Paul's material need by bringing the monetary gifts the Philippians entrusted him with, gifts described as "a fragrant offering" and "an acceptable sacrifice" (4:18), which perhaps also were intended to aid Paul in other ways while he was imprisoned. Thus Epaphroditus was able to "complete their service" (2:30) as they could not all come personally. Also, he was probably the one who made Paul aware of the disagreement between EUODIA and SYNTYCHE.

In the course of carrying out his mission, Epaphroditus "risked his life" (2:30) and became so ill that he nearly died (2:27, 30). His illness may have developed during his journey to Paul, or later, when he was with Paul, doing the work of Christ. Paul says nothing about the nature of Epaphroditus' illness. But, the later regained his health—a turn of events explained by Paul as a merciful act of God. Thus, not only did Epaphroditus recover, but Paul was also spared from "sorrow upon sorrow" (2:27).

The Philippians eventually heard of Epaphroditus' illness and began to worry, which in turn caused him further distress and a longing to be with them (2:26). Hence Paul thought it necessary to send Epaphroditus back to Philippi sooner than expected (2:25) in order to calm the anxiety raised there, to enable Epaphroditus to fulfill his desire to be with them again, and to relieve Paul's own concerns. Paul may also have been thinking that Epaphroditus, probably a respected leader in the church there, would be instrumental in leading the Philippians away from a misguided perfectionism and legalism (cf. 3:2–19). Also, because of the way he had risked his life in self-sacrificing service while with Paul, Epaphroditus was an admirable example of one who had the "mind of Christ" (cf. 2:5–11), which Paul asked all the Philippians to make their own.

Epaphroditus probably delivered Paul's letter to the church at Philippi (cf. 2:25, 28; the aorists can be taken as "epistolary"). In sending him back, Paul includes a commendation, requesting that the Philippians "receive him in the Lord with all joy" (2:29). Paul explains that he takes sole responsibility for Epaphroditus' return at that time, lest the Philippians suspect that Epaphroditus had not fulfilled his mission. Evidently Paul wanted no misunderstanding, no questioning of his character, no lessening of his authority. Epaphroditus was to be held in high esteem because of what he had done.

Finally, Epaphroditus is among those sometimes identified with the "yokefellow" in Phil 4:3; as the bearer of the letter he is the likely object of this otherwise obscure reference. See YOKEFELLOW. Epaphroditus should not be confused with the Christian Epaphras from Colossae.

EPHAH [Heb ʾ*êpâ* (אֵיפָה)]. See WEIGHTS AND MEASURES.

EPHAH (PERSON) [Heb ʿ*êpâ* (עֵיפָה)]. Three persons in the OT, one of which (if not all three) was an Arabian tribe. If Ephah is a genuine personal name, it can be compared to Ar *ġayfâ*ʾ and *ġâfah* (a kind of tree); compare the Hebrew personal name Elon. This explanation does not, however, apply to (1) because of the Akkadian evidence listed below.

1. A son of Midian (Gen 25:4; 1 Chr 1:33). Midian’s five “sons” as listed in Gen 25:4 comprise the clans, tribes, or people inhabiting the country of Midian sometime before 716 B.C. (Knauf 1988: 84–86). Ephah heads the sons of Midian and may have been the leading tribe in this country. By the time of Isa 60:6 (late 6th century B.C.?), the tribe was still famous for its camel breeding. In the Assyrian annals, Ephah figures as a tribe of NW Arabia under the names of (URU) *Ḫa-a-a-ap-pa-a-a* (Tiglath-pileser III, 734 B.C.) and *(lú) Ḫa-ia-pa-a* (Sargon II, 716 B.C.). The Heb consonants ʿ*yph* together with the Akk syllables lead to **Ġayyâpâ* as the original form of the tribal name. According to the Ar, *Ġayyâpâ* can be explained as “having long beards” (compare the Germanic ethnonym *Langobards;* Knauf 1988: 79–80).

As the most prominent Midianite tribe, Ephah may have inhabited the Wâdî ʿAfâl, Midian’s central area with the town of Madyan (today Maġâyir Šuʿayb and al-Badʿ). Tiglath-pileser’s determinative URU (“city”) in front of the tribal name may refer to this place. It is not possible to link Ephah/*Ḫayyâpâ* with the site of Ruwâfah, as Musil had suggested (Knauf 1983: 153–54).

2. A concubine (Heb *pîlegeš*) of Caleb, and mother of several Calebite clans and/or villages, 1 Chr 2:46.

3. A son of Jahdai (1 Chr 2:47) who appears in the list of Calebite towns and clans (1 Chr 2:42–50) without a genealogical connection to any descendant of Caleb. Ephah 2 and 3 may form variant traditions referring to a clan or family which originated from Ephah 1 and immigrated into the Negeb in the exilic or postexilic period. Such an immigration is suggested by the high frequency of Arabian names in 1 Chronicles 2 and 4 (Wellhausen 1870: 38–39).

ERNST AXEL KNAUF

EPHAI (PERSON) [Heb ʿ*ēpay* (עֵפַי)]. A Netophathite from Judah whose sons were among the troop commanders of Gedaliah at Mizpah following the destruction of Jerusalem in 587/6 B.C.E. (Jer 40:8). The form of the name follows the Qere reading. The Kethibh reads ʿ*wpy* “Ophai” and is the reading of the name adopted by the LXX and Vg. In a parallel text, 2 Kgs 25:23, the words “the sons of Ephai” are omitted and Seraiah the son of Tanhumeth is designated as the Netophathite.
JOHN M. BERRIDGE

EPHER (PERSON) [Heb ʿ*eper* (עֶפֶר)]. Three eponymous ancestors of tribes or clans in the OT. As a personal name, Epher can be interpreted as a phonetic variant of Heb ʿ*ōper,* Ar *ġufr* and *ġafr* “kid of a gazelle” (or ibex). For the Midianite tribe (see #1), Sabaic ʿ*fr* “agricultural land awaiting rain” provides a more fitting etymology (Knauf 1988: 80).

1. A son of Midian (Gen 25:4; 1 Chr 1:33), i.e., a clan, tribe, or people inhabiting the country of Midian. The list of Midian’s five sons antedates 716 B.C. (Knauf 1988: 84–86). There are three areas or towns in NW Arabia which may have preserved the name of this ancient tribe: (1) Wâdî ʿAfâl (also recorded as ʿAfâr), the heartland of Midian with the site of Madyan/Maġâyir Šuʿayb - al-Badʿ; (2) Wâdî al-ʿIfrîyah, SE of Wâdî ʿAfâl; (3) Ṭayyib al-Ism on the Midianite coast of the Gulf of ʿAqabah (ancient names from

the root ʿ*PR* have frequently been changed to "good [of] name," which is the literal translation of Ṭayyib al-Ism, in order to avoid any resemblance with Ar ʿ*ifrît* "demon"). The three places or areas were all settled in the Early Iron Age (Knauf 1988: xii Abb.1; 80).

2. A son of Ezra (1 Chr 4:17). This Ezra is probably identical to the Ezer in 1 Chr 4:4, a grandson of Judah. Given the high frequency of Arabian personal and tribal names in 1 Chronicles 2 and 4, one may ask whether the Judahite Epher was in fact a family or clan of the Midianite tribe which immigrated into S Palestine in the exilic or postexilic period (Wellhausen 1870: 38–39; Knauf 1989: 68).

3. A family in Israelite Transjordan, exiled by Tiglath-pileser III in 734 B.C. (1 Chr 5:24). 1 Chr 5:26 suggests that the compiler of the list still knew descendants of these "Manassite" families among the Jewish diaspora in Mesopotamia. If one accepts a 3d century B.C. date for the compilation of Chronicles (Welten 1973: 200), one may ask whether the Jewish families mentioned in 1 Chr 5:24 were not, in fact, exiled by the Persians in the course of the troublesome 4th century B.C. (*IJH*, 500–502). Their geographical distribution as described in 1 Chr 5:23 fits into the postexilic period much better than into preexilic times.

ERNST AXEL KNAUF

EPHES-DAMMIM (PLACE) [Heb ʿ*epeś dammîm* (אֶפֶשׁ דַּמִּים)]. Var. PAS-DAMMIM. The area in which the Philistines gathered before the battle during which David slew Goliath (1 Sam 17:1). This text places the area between Socoh (M.R. 147121) and Azekah (M.R. 144123) and near the Valley of Elah where the Israelites under Saul gathered. It lies W of Bethlehem toward the Philistine coast. This same place is mentioned as Pas-dammim (Heb *pas dammîm*) with reference to David's victory over "the Philistine" in 1 Chr 11:13. The main subject of the text in Chronicles is the exploit of one of David's warriors, Eleazar, against the Philistines. The parallel text at 2 Sam 23:9 lacks the reference to Pas-dammim (Ephes-dammim) in the MT, but the fuller text in the LXX^{L} has the place-name and is to be preferred (see McCarter *2 Samuel* AB, 490, 494–495; Driver *Samuel* ICC, 365). The area has been equated with modern Damun, ca. 4 miles NE of Socoh (McCarter *1 Samuel* AB, 290; Gold *IDB* 2: 108).

JEFFRIES M. HAMILTON

EPHESIANS, EPISTLE TO THE. Ephesians, like Philippians, Colossians, and Philemon, is traditionally counted among Paul's "imprisonment epistles" (3:1; 4:1). Although the majority of ancient manuscripts indicate that it is intended for "the saints who are faithful at Ephesus" (1:1), the words *en Ephesō* ("at [or "in"] Ephesus") are not present in some of the earliest and most important manuscripts. Moreover, the phrase does not seem to have stood in the mss used by Marcion, who regarded this as the letter to the Laodiceans (Col 4:16), or in those known to Tertullian, whose rejection of Marcion's view makes no appeal to the text of the opening verse (*Against Marcion* 5.11.17; 5.17.1). By the end of the 2d century, however, it was generally regarded as a letter "to Ephesus," and so entitled; with this the way was clear for the words "at Ephesus" to be inserted into the opening sentence by some later scribe or editor.

A. Structure and Contents

At least in a general way, the overall structure of Ephesians conforms to that of the other letters of the Pauline Corpus. One notable difference, however, is that the address (1:1–2) is followed by two introductory paragraphs—a blessing (1:3–14; cf. 2 Cor 1:3–11) and a thanksgiving (1:15–23; cf. Rom 1:8–15[17]; 1 Cor 1:4–9; Col 1:3–8). No other letter in the Pauline Corpus has both. Within the body of Ephesians, a series of affirmations (2:1–3:21) is followed by a lengthy series of appeals (4:1–6:20), a division which is found in most of the Pauline letters (Rom 1:18–11:36 [affirmations] and 12:1–15:13 [appeals]).

The affirmations of chaps. 2 and 3 reiterate and extend what is already stated in the opening blessing and thanksgiving: that through the grace of God bestowed in Jesus Christ, believers have experienced a moral and spiritual resurrection (2:4–9; 3:11–12; cf. 1:3–8, 13–14), and that by their incorporation into Christ's body the Church, they have become a new people reconciled to God and to one another (2:13–20; cf. 1:22–23). It is "the mystery of [God's] will" (1:9; "the mystery of the gospel," 6:19) which is being presented here, as this has been made known to Paul by revelation (3:3–4, 7–9).

The appeals in chaps. 4–6 call for the readers to manifest in their behavior, both personal and corporate, the new life that they have been given in Christ. Here as throughout Ephesians, various kinds of traditional materials are in evidence, drawn from the Church's liturgy (5:14) and Scripture (4:8–10) as well as from its ethical codes (5:21–6:9).

Two special points should be noted about the outline that follows: (1) Although the thanksgiving (1:15–23) has been placed within the letter opening, it could also be regarded as the initial paragraph of the letter body. (2) The introduction to the prayer and doxology of 3:14–21 actually begins in 3:1 (cf. vv 1 and 14), only to be broken off abruptly in favor of several important declarations about Paul's stewardship (vv 2–13). Formally, then, vv 2–13 constitute a digression interrupting the prayer and doxology which conclude the first part of the letter body.

I. Letter Opening, 1:1–23
A. Address, 1:1–2
B. Blessing, 1:3–14
C. Thanksgiving, 1:15–23

II. Letter Body, 2:1–6:20
A. Affirmations about the mystery of Christ, 2:1–3:21
1. Resurrection and reconciliation, 2:1–22
2. Paul's stewardship of God's grace, 3:1–13
3. Prayer and doxology, 3:14–21
B. Exhortations to lead a Christian life, 4:1–6:20
1. Fundamental appeals, 4:1–24
a. Maintain the unity of the Spirit, 4:1–16
b. Put off the old nature, 4:17–22
c. Put on the new nature, 4:23–24
2. Specific appeals, 4:25–6:9
a. Various topics, 4:25–5:20

b. Life in the household, 5:21–6:9
3. Concluding appeals, 6:10–20
a. Put on the whole armor of God, 6:10–17
b. Pray in the Spirit, 6:18–20
III. Letter Closing, 6:21–24
A. Commendation of Tychicus, 6:21–22
B. Benediction, 6:23–24

B. Style and Character

Ephesians is distinguished by a pleonastic, ornamented style (Percy 1946: 185–91). There are a striking number of sentences of extraordinary length (1:3–14 and 4:11–16, each of which is just one sentence in Greek), liberal use is made of prepositional phrases (4:12–16), relative clauses often follow one after another (1:6, 7, 8; 2:2, 3), and there are many constructions which employ participles (2:14–16; 4:18–19) or infinitives (4:22–24). Synonyms abound, often expressed in a genitive construction ("the counsel of his will," 1:11; "the working of the strength of his might" [RSV: "the working of his great might"], 1:19; "the law of commandments," 2:15; "the spirit of your minds," 4:23; "in the strength of his might," 6:10). Adjectives tend to pile up, especially with reference to the attributes of God ("the immeasurable greatness of his power," 1:19; "the immeasurable riches of his grace in kindness," 2:7), and there is a tendency toward tautology ("a spirit of wisdom and of revelation in the knowledge of him, having the eyes of your hearts enlightened," 1:17–18; "we all once lived in the passions of our flesh, following the desires of body and mind," 2:3).

This ponderous, redundant style is attributable in part to the fact that certain liturgical and confessional traditions have been used in Ephesians, not only in 5:14 (where a liturgical acclamation is introduced by "it is said"), but perhaps also in 1:20–23 (Deichgräber 1967: 161–65) and 2:14–16 [18] (Sanders 1965: 216–18). Some interpreters believe that traditional materials also lie behind such passages as 1:3–14 (Schille 1965: 65–73), 2:4–10 (Schille 1965: 53–60), and 4:5–6 (Fischer 1973: 137–38); but even if they do not, here as elsewhere in Ephesians the stereotyped language of the Church's traditions has left an imprint.

Not only the style but also the fact that no specific congregational issues seem to be in view set Ephesians apart from the rest of the Pauline Corpus. Despite its epistolary opening and closing, it is a "letter" only in a highly qualified sense. Ephesians has been characterized by many as a theological "tractate" or "manifesto" (Moffatt 1918: 388; Lindemann *Der Epheserbrief* ZBK, 14, 127; Fischer 1973: 104; Schnackenburg *Epheser* EKKNT, 19), and by numerous others as a "meditation" (Martin 1968: 302; Marxsen 1978: 194; Barth *Ephesians* AB vol. 1, 58). Pokorný (1962: 178) and Gnilka (*Der Epheserbrief* HTKNT, 33) refer to it as a "homily," while Schlier characterizes it as a "wisdom speech" (1963: 21–22; Conzelmann 1966: 234).

Taylor (*Ephesians* Augsburg, 22–24), prompted by Dahl's observation that Ephesians is in part a letter of "congratulation" to those who have left their gentile ways for the gospel (Dahl 1977: 314; *IDBSup*, 268; Lincoln 1982: 46), classifies Ephesians as an example of "epideictic" literature. As defined by ancient rhetoricians, an epideictic composition uses praise or blame as the basis for some kind of an appeal. In Ephesians, however, the praise is much less specific and the appeals are much more extensive than in typical "letters of praise" (*epainetikai;* Stowers 1986: 77–85). Moreover, the writers of epideictic letters ordinarily understood themselves as either inferior or equal to those whom they addressed (Stowers 1986: 79)—which is by no means the case in Ephesians, where much is made of Paul's unique status and role (chap. 3).

Ephesians does not, in fact, fit readily into any of the standard literary genres of its day, and not much is gained by trying to force it into one. It is best to describe it rather more loosely as a treatise, presented in the form of a letter, which combines edifying affirmations (chaps. 1–3) with exhortation (chaps. 4–6).

C. Relation to Colossians

One of the most striking features of Ephesians is the extent to which it is similar in both overall structure and particularly in contents to Colossians (for listings and displays of the verbal parallels, see

Mitton 1951:279–321). It has been calculated that more than one-quarter of the words in Ephesians appear as well in Colossians and that more than one-third of the words in Colossians appear in Ephesians (Mitton 1951: 57). In addition to the particularly close parallelism of Eph 1:1–2 with Col 1:1–2 and of Eph 6:21–22 with Col 4:7–8, the following examples may be noted: Eph 1:22–23 and Col 1:17–19; Eph 2:13–18 and Col 1:20–22; Eph 4:16 and Col 2:19; Eph 5:19–20 and Col 3:16; Eph 5:22–6:9 and Col 3:18–4:1. Moreover, certain concepts and terms are prominent in both letters, including the idea of Christ as "head" of the church, which is his "body" (*kephalē/sōma;* Col 1:18; 2:19; Eph 1:22; 4:15–16; 5:23), of a divine "fullness" (*plērōma;* Col 1:19; 2:9; Eph 1:10, 23; 3:19; 4:13), of a profound "mystery" (Col 1:26–27; 2:2; 4:3; Eph 1:9; 3:3, 4, 9; 5:32; 6:19), of "reconciliation" (Col 1:20, 21–22; Eph 2:16), and of the believer's resurrection with Christ as an event already experienced (Col 2:12–13; 3:1; Eph 2:4–7).

There are also some important differences between Colossians and Ephesians, however. Unlike Colossians, Ephesians seems not to have been intended for a particular congregation or to have any specific kind of "false philosophy" in view. Of the twelve friends and associates mentioned in Colossians (including Timothy, who is identified as the co-sender of that letter, 1:1), only Tychicus is named in Ephesians (6:21). Whereas Scripture is never cited and there are few scriptural allusions in Colossians, scriptural passages are drawn on several times in Ephesians (2:17; 4:8–10; 5:31–32; 6:2–3; less directly in 1:20, 22), and there are a number of scriptural allusions (Lincoln 1982). Whereas in Colossians interest is particularly focused on the cosmic role and significance of Christ, in Ephesians special attention is given to the cosmic role and significance of his body, the Church (cf. Col 2:9 with Eph 1:22–23). Only in Ephesians is there any reference to the law (2:15) or to righteousness (4:24; 5:9 [RSV: "right"]; 6:14). Moreover, certain key terms are used somewhat differently; for example, in Colossians the "mystery" now disclosed is Christ himself (2:2; 4:3), especially as he has been preached among the gentiles (1:26–27), but in Ephesians it is primarily understood to be God's plan for the inclusion of Jews and gentiles within the one body of Christ (3:2–6, 9; cf. 1:9); in Col 1:25 the word *oikonomia* refers to the "divine office" (RSV) which God has given to Paul, but in Ephesians it is used of God's "plan" (RSV) of salvation (1:10; 3:9; cf. 3:2, where it is not the *oikonomia* but the "grace" which Paul has been granted); and although the term "fullness" has an exclusively christological reference in Colossians (1:19; 2:9), that is not the case in Ephesians (thus 1:10, "the fullness of time"; 3:19, "the fullness of God").

If both Ephesians and Colossians are accepted as Paul's own letters, then the similarities between them would probably be due to their having been written at about the same time (presumably during the same period of imprisonment) so that the apostle still had the phrasing of the one letter in mind while he was writing the other. In this case, however, the differences are not easy to explain (see the discussion of authorship below). Numerous scholars hold, therefore, that one or the other of the letters is pseudonymous. Thus Mayerhoff—accepting the Pauline authorship of Ephesians—argued that the similarities and differences are due to the fact that Colossians is a secondary reworking of Ephesians by a later writer (1838: 72–106). De Wette, however, argued that the reverse is the case, Ephesians having been written in imitation of the authentically Pauline Colossians (1843: 79–81; 1858: 277–85). H. J. Holtzmann (1872) accepted neither Colossians nor Ephesians as authentic. Building on a hypothesis first advanced by Hitzig (1870: 22–33) that an authentic Pauline letter lies behind Colossians, he advanced the theory that a later writer used this proto-Colossians to create Ephesians (Holtzmann 1872: 131–48); then subsequently, according to this view, the same writer used Ephesians to interpolate and elaborate proto-Colossians, thus creating our present canonical Colossians (Holtzmann 1872: 148–68).

Because it was based on a number of highly subjective and questionable judgments, Holtzmann's complex theory never gained a following, and with only a few exceptions (Coutts 1958) scholars now agree that there is little evidence to support Mayerhoff's view that Colossians is later than and dependent on Ephesians. Those who regard both letters as authentic generally hold that the similarities between them demonstrate common authorship, and tend to dismiss the differences as relatively few and unimportant (Percy 1946: 360–433; Guthrie 1970: 492–502; van Roon 1974: 192–95).

It is probable that some of the similarities and differences between the two letters resulted because common traditions have been adapted differently in each (Schille 1957; Dahl 1963: 72). Beyond this,

however, most scholars are now agreed that one must reckon with the literary dependence of one letter on the other, and specifically of Ephesians on Colossians (Mitton 1951: 68–74; Lindemann 1975: 44–48). (A) It is easier to conceive of the author of Ephesians generalizing the more specific teachings of Colossians for a wider audience and eliminating the sharp polemic than to conceive of the author of Colossians adapting Ephesians in order to address a specific local situation. (B) The thought of Ephesians represents a development beyond that of Colossians (e.g., the cosmic Christology of Colossians has become the basis for a cosmic ecclesiology; in Colossians the expectation of Christ's future return has receded, but it is not present in Ephesians). (C) Certain passages in Ephesians read like elaborations of passages in Colossians (Eph 2:1–10 of Col 2:12–13, and Eph 5:21–33 of Col 3:18–19). (D) Certain other passages in Ephesians seem to represent the conflation of two passages from Colossians (Col 1:14 and 1:20 in Eph 1:7; Col 1:9 and 1:4 in Eph 1:15–16; Col 2:13 and 3:6 in Eph 2:1–5). That one must reckon with a specific literary dependence of Ephesians on Colossians is indicated by various passages in which there is extensive verbatim agreement between the two letters; for example, between Eph 1:1–2 and Col 1:1–2; Eph 6:21–22 and Col 4:7–8; Eph 1:7, 10 and Col 1:14, 20; and Eph 4:16 and Col 2:19.

D. Relation to other NT Writings

There are also parallels between Ephesians and the other letters of the Pauline Corpus, although these are neither so striking nor so extensive as those between Ephesians and Colossians (Mitton 1951: 98–158, 173–75, 333–38). In many of these instances one may be dealing only with widely used stock phrases (Eph 4:17–19 / Rom 1:21–24; Eph 1:13 / 2 Cor 1:22; Eph 5:2, 25 / Gal 2:20). Other parallels, however, particularly in Romans and 1 Corinthians, suggest a specific dependence on the part of Ephesians (of Eph 2:8 on Rom 3:20–27; of Eph 4:16; 5:23 on 1 Cor 11:3; of Eph 3:8 on 1 Cor 15:9–10; of Eph 1:20–23 on 1 Cor 15:24–29). There may also be a literary relationship between Ephesians and the Pastoral Epistles, but in this case the dependence would be on the part of the Pastorals (of Titus 3:3–7 on Eph 2:3–7; Mitton 1951: 173–75).

It is sometimes held that there are echoes of Luke-Acts in Ephesians (Mitton 1951: 198–220) and echoes of Ephesians in the book of Revelation (Mitton: 170–73), but the evidence for both is slender. The parallels between Ephesians and 1 Peter are much clearer and more numerous (Eph 1:20–22/1 Pet 3:21–22; Eph 5:21–6:9/1 Pet 2:18–3:7), and some have argued that a literary relationship exists between these two letters (Mitton 1951: 176–79 holds that 1 Peter is dependent on Ephesians). The nature of the parallels, however, makes it more likely that they are the result of common reliance on widely circulating church traditions (Schenke and Fisher 1978: 175) than that they are due to one author's borrowing from the other.

E. Theme

In Ephesians as well as in Colossians, the Pauline image of the Church as the body of Christ (Rom 12:4–5; 1 Cor 12:12–27) has been expanded to include the idea of Christ as the "head" of that body (Eph 1:22–23; 4:15–16; 5:23; Col 1:18; 2:19). But while in Colossians attention is focused primarily on the cosmic status and role of Christ, the one great theme of Ephesians is the cosmic status and role of the Church. In Ephesians the word *ekklēsia* is never used of a local congregation (as in Col 4:15, 16), only of the Church universal (1:22; 3:10, 21; 5:23–32; cf. Col 1:18, 24). This church is understood to be part of the unity of "all things" which Christ's sovereign rule represents and to be in a sense the crowning instance of that unity (1:22–23); for in and through the Church the gentiles have become "fellow heirs, members of the same body, and partakers of the promise" bestowed upon the Jews (3:6)—reconciled along with them to God and therefore united with them in Christ (2:11–22).

This participation of the gentiles in the promises of God is perceived to be a fundamental part of the divine "plan" *(oikonomia)* "to unite all things in him [Christ], things in heaven and things on earth" (1:10). It is therefore the content of "the mystery of the gospel" (6:19) which is also called "the mystery of [God's] will" (1:9), "the mystery of Christ" (3:4; cf. "the unsearchable riches of Christ," 3:8), and simply "the mystery" (3:3). This "mystery plan" (3:9; RSV: "plan of the mystery") was hidden from all preceding generations (3:5), but now the Spirit has disclosed it to the Church's "holy apostles and prophets" (3:1–6). However, in Ephesians the Church is presented as not only the recipient and mediator

of this revelation but as a constituent part of it. Because it is the "fullness" of Christ, the Church shares his cosmic status (1:22–23); it is the place where a new humanity has been created and where a cosmic peace has been instituted (2:15–16); and it is central to the divine purpose that "through the church the manifold wisdom of God might now be made known to the principalities and powers in the heavenly places" (3:10, 11).

Because the Church is conceived here as being an integral part of the eternal plan and purpose of God, its existence transcends the boundaries of time as well as of space: believers were chosen for salvation "in the heavenly places … before the foundation of the world" (1:3–4), "destined" to be God's sons and to receive the grace bestowed in Christ (1:5–6), "destined and appointed" to live for the praise of God (1:12), and "created in Christ Jesus for good works, which God prepared beforehand" (2:10). Similarly, in Ephesians Christ's relationship to the Church is defined not with reference to his death (although there are references to this, formulated in traditional ways: 1:7, 20; 2:13, 16; 5:2, 25), but primarily with reference to his timeless cosmic rule. By raising him from the dead and seating him "at his right hand in the heavenly places," God has enthroned Christ as "the head over all things for the Church" (1:20–23; 4:10); and by the bestowal of his power also upon the believers (1:19), God has "raised [them] up with [Christ], and made [them] sit with him in the heavenly places in Christ Jesus" (2:6). Thus the baptized have already been "saved" (2:4–6) and the "hope" which belongs to their calling is already fulfilled (1:18–19; 2:12–13; 4:4; cf. 1:12), their "inheritance" (1:14, 18) already given, the kingdom "of Christ and of God" (5:5) already present. Because it is through their incorporation into Christ's body the Church that believers come into possession of their true inheritance, one may properly describe the eschatology of Ephesians as "ecclesiological" (Lona 1984:442–48). There are, to be sure, traces of a more traditional Jewish and Christian eschatological perspective in the letter (1:13–14, 21; 2:7; 4:30; 6:17). These, however, are hardly more than terminological traces and provide not even a hint that Christ's return is expected.

Although believers have already experienced resurrection with Christ to "the heavenly places," they nonetheless have a "calling" (4:1) to fulfill within history, and the various exhortations of chaps. 4–6 are intended to make this apparent. Even these, however, must be read in the light of the earlier affirmation that believers were in fact "created in Christ Jesus for good works, which God prepared beforehand, that [they] should walk in them" (2:10). Similarly, the closing appeal to "put on the whole armor of God" in order to withstand "the principalities, … the powers, … the world rulers of this present darkness, … [and] the spiritual hosts of wickedness in the heavenly places" (6:10–17; cf. 3:10), must be read in light of the earlier affirmation that Christ already has been exalted as sovereign above all other powers (1:20–22) and that his cosmic rule of peace has been established (2:14–18).

F. Conceptual Backgrounds

It is clear that Ephesians stands within the Pauline tradition and is, if not the apostle's own letter, at least indebted to his thought. It is also clear, however, that other contemporaneous religious traditions have influenced the way certain ideas, including that of the "body of Christ," have been developed.

1. Sectarian Judaism. Some interpreters have emphasized the importance of Semitic and Jewish influences. One can no longer argue that the "body of Christ" motif reflects a sense of "corporate personality" and therefore an essentially "Hebraic" way of thinking (Best 1955), since the "corporate personality" concept as developed by H. Wheeler Robinson has been largely discredited (Rogerson 1970). There are, however, manifest similarities between some of the other ideas in Ephesians and the teachings of the Jewish sectarian community at Qumran (Kuhn 1968; Mussner 1968). For example, one prominent theme in these sectarian writings, as well as in Ephesians, is the present disclosure to the elect community of the "mysteries" (almost always the plural) of God's grace, wisdom, and purposes (1QS 4.6, 18–19; 11.5–8; 1QH 4.27–28; 7.27; 10.4–5; 11.9–10; 12.20; 13.13–14); and here, as in Ephesians, community virtues like humility and kindness are especially valued (1QS 2.24–25; 5.25–6.1; cf. Eph 4:2, 3, 25–26).

More fundamentally, a similar kind of dualism seems to underlie the community rules of Qumran and the exhortations in Ephesians. This dualism is expressed in both instances as a struggle between God's elect and the hosts of wickedness (1QS 3.13–4.26; Eph. 6:10–17) who are commanded, respectively, by "the spirits of light and darkness" (1QS 3.25; cf. Eph 6:12, "the world rulers of this present darkness," and

2:2, "the prince of the power of the air, the spirit that is now at work in the sons of disobedience"). The "sons of light" who "walk in the light" (1QM 1.1, 3, 9, 11, 13; 1QS 1.9; 2.16; 3.13, 20, 24, 25; in Eph 5:8, the "children of light") are therefore distinguished from the "sons of darkness" who "walk in the darkness" (1QM 1.1, 7, 10; 3.6, 9; 13.16; 14.17; 1QS 1.10; 3:21; 4:11–12; cf. Eph 2:2 and 5:6 [the "sons of disobedience"]; 5:11–12), and the former are required to keep themselves separate from the latter (1QS 5.10–20; cf. Eph 5:3–14).

2. Hellenistic Greek and Jewish Thought. Before anything was known about the Qumran sectarians, W. L. Knox had referred to the "general Hellenistic outlook" of Ephesians (1939: 184, 203) and, with numerous others, had identified the body concept which is so central to its thought as deriving ultimately from Stoicism (Knox 1939: 161). In fact, various aspects of the concept as it is found in Ephesians recall ideas that are present in the Greek tradition beginning at least with Plato (*TDNT* 7/1025–44 offers an extensive survey). Among these are: (A) an assembly *(ekklēsia)* as a body which is more than the sum of the individuals who compose it, (B) the cosmos as the body (or "image") of God, (C) the unity of the cosmic body (Hanson 1946: 46–57), and (D) the rule of the cosmic body by a divine "head."

To the extent that Hellenistic concepts have helped to shape the thought of Ephesians, they could have done so in part by way of Hellenistic Judaism (Hegermann 1961; Colpe 1960). Philo, for example, can describe the world *(kosmos)* as a body with many members (*Plant* 7), ruled by the divine Logos who is its head (*Somm* I.128; *Spec Leg* I 147; 3.184; *On Flight and Finding* 108–110), and in whom the members are knit together into "a mutual harmony and unity" (*Fuga* 112; *Migr* 220; *Qunes Ex* II 74). One may also compare Philo's description of God as one who "fills all things" in that the whole of the universe is penetrated by his power and presence (*Conf* 136; *Leg All* III 4; *Vita Mos* II 238; *Somm* 2.221), with statements in Ephesians about the divine "fullness" with which both Christ and his church are associated (1:23; 4:10; cf. 3:19; 4:13). A similar idea is present even in the Greek Bible (Wis 1:7).

3. Gnostic Thought. A number of interpreters have concluded that the author of Ephesians is more indebted to the cosmological and soteriological ideas of gnostic thought than to either sectarian or Hellenistic Judaism (Schlier 1930; Pokorný 1965). For example, the interpretation of Ps 68:18 in Eph 4:8–10 has been compared with the gnostic idea of the heavenly ascent of the redeemer (Schlier 1930: 1–18; Käsemann 1933: 138), and the conception of a "dividing wall" broken down by Christ (Eph 2:14–16) has been compared with the gnostic view that a wall separating the heavenly realm from the earthly has been destroyed by this redeemer (Lindemann 1975: 162–64 cites *Psalms of Thomas* 1.3–5, according to which, also, the righteous are granted unity and peace). Further, an apparent preference for spatial over temporal categories (Eph 1:20–23) has been compared with the gnostic notion of salvation as deliverance from this world (Lindemann 1975: 237–59), and the emphasis on incorporation into the unity of Christ's body has been compared with the gnostic theme of incorporation into the cosmic body of the heavenly man (Käsemann 1933: 59–97, 138–59; Pokorný 1960).

4. Conclusion. Nothing suggests that the author of Ephesians is directly dependent on any non-Christian source (other than the Jewish Scriptures). The sources on which he is directly dependent are Christian, and it is primarily with reference to the Pauline tradition—above all to Colossians—that his thought should be assessed. Nevertheless, other contemporaneous religious traditions have undoubtedly helped to shape his thinking, even though indirectly and less decisively. It is difficult and probably unnecessary to single out one of these as more important than the others. He seems to have been an "eclectic" thinker, influenced by several different kinds of conceptual models (Lindemann *Der Epheserbrief* ZBK, 121—who, however, emphasizes the special importance of gnostic concepts).

G. Authorship

1. Reasons for Presuming Pauline Authorship. Paul's name stands in the salutation as the writer of this letter (1:1) and it appears again in 3:1. The comments about his apostolic status and role in 3:2–13 are formulated in the first person singular, as is the reference in 4:1 to his present imprisonment (3:1; Phlm 1, 9). The dispatch of Tychicus, who is identified as a trusted associate (6:21–22) also suggests the apostolic origin of this letter (Col 4:7–8; Acts 20:4).

The Pauline authorship of Ephesians seems never to have been doubted in the early Church. The earliest specific references to the letter all presume that it is Paul's (Irenaeus, *Her.* 5.2.3—who uses Paul's name in citing Eph 5:30 [cf. 1.8.4–5]; Clement of Alexandria, *Str.* 4.65; Tertullian, *Against Marcion* 5.11.17; 5.17.1). Ephesians is listed among the apostle's letters in the Muratorian Canon (usually dated to the late 2d century), and (according to Tertullian in the passages already cited) it was also accepted as Paul's by Marcion (even though he identified it as a letter to the Laodiceans). There could be echoes of Ephesians as early as *1 Clem* (36:2 [cf. Eph 4:18; 1:18] and 46:6 [cf. Eph 4:4–7]) and it seems probable that Ignatius was acquainted with it (in the inscription of *Ephesians* [cf. Eph 1:3–23]; Schoedel *Ignatius of Antioch* Hermeneia, 9–10, 37). Alleged echoes in other Apostolic Fathers (*Barnabas*, *Hermas*, Polycarp) are not as clear, but from the end of the 2d century Ephesians is frequently cited in the patristic literature.

Further, some typically Pauline ideas seem to be present in Ephesians, among them that salvation is not by works but by God's grace through faith (2:5, 8–9), that the secret wisdom of God has been disclosed to the apostle by the Spirit (3:5, 9–10; cf. 1 Cor 2:6–7, 10), that believers have been reconciled to God through Christ's death on the cross (2:16), and that the various gifts with which the members of Christ's body have been graced come from the one Spirit, and are to be employed for a mutual upbuilding in love (4:1–12; cf. 2:18–22; 4:16).

2. Reasons for Questioning Pauline Authorship. In a monograph published in England in 1792, the Anglican cleric Edward Evanson had pronounced Ephesians (as well as most of the other NT writings) a forgery. The first careful arguments against the letter's authenticity were formulated by De Wette, initially in his introduction to the NT (1st ed. 1826; the English trans. of 1858 is based on the 5th German ed. of 1848) and subsequently in a brief commentary on the letter (1843). The objections to Pauline authorship raised by De Wette are still matters of discussion and, along with further points developed since his day, may be summarized under four headings: (a) style and vocabulary, (b) theological viewpoint, (c) portrayal of Paul, and (d) dependence on Colossians.

a. Style and Vocabulary. Beginning with Erasmus (*Annotationes in Novum Testamentum*, 1519), virtually all students of Ephesians have acknowledged that its extraordinarily long sentences, its pleonasms, and its numerous prepositional, genitival, participial, and infinitive constructions set the letter apart stylistically from most others in the Pauline Corpus. The statistics on sentence length, for example, are striking. Morton and McLeman (1966: Table 51) have counted 9 out of 100 sentences in the Greek text which have more than 50 words, whereas the incidence of sentences of this length in the letters certainly written by Paul is much lower: 3 of 581 sentences in Romans 1–4; 1 of 621 sentences in 1 Corinthians 1–4; 2 of 334 sentences in 2 Corinthians 1–3; 1 of 181 sentences in Galatians; 1 of 102 sentences in Philippians; and 1 of 81 sentences in 1 Thessalonians.

The distinctiveness of the vocabulary used in Ephesians also gives pause. There are about 116 words which are not found in the letters of unquestioned Pauline authorship (Percy 1946: 179, 180), and some of these are associated in particular with Christian writings of the late 1st and early 2d centuries (Mitton 1951: 8–9). Moreover, some terms found in the undisputed letters are used differently here, including *ekklēsia* ("church," which Paul uses primarily with reference to specific congregations), *mystērion* ("mystery," which even in Rom 11:25 does not refer specifically to the inclusion of the gentiles within the Church, but to the "hardening" and temporary exclusion of Israel), and *oikonomia* (which in 1 Cor 9:17 [cf. 4:1, 2], as in Col 1:25, refers to Paul's apostolic "commission").

b. Theological Viewpoint. When compared with the certainly Pauline letters, much of the teaching in Ephesians is distinctive. For example, special emphasis is placed on Christ's exaltation, enthronement in "the heavenly places," and cosmic rule (1:3–4, 9–10, 20–23; 2:6; 4:8–10); the Church is viewed as a cosmic entity built on the foundation of the apostles and prophets (contrast Eph 2:20 with 1 Cor 3:10–11); Christ is portrayed as standing over the Church as its "head," which thereby distinguishes the head from all the other members of that "body" (contrast in particular Eph 1:22 with 1 Cor 12:12–27, esp. v 21); and believers are exhorted to have nothing to do with outsiders (contrast Eph 5:6–11 with 1 Cor 5:9–12). Moreover, while the concern for the unity of Jew and gentile within the Church is certainly consonant with Paul's conviction that in Christ "there is neither Jew nor Greek" (Gal 3:27–28), the presupposition in

Ephesians seems to be that controversy over the law is a thing of the past (2:15), and that the Church is now composed primarily of gentiles. It may be significant that the parallel to Gal 3:28 in Col 3:11 is not picked up in Eph 4:22–32, which is clearly dependent on Col 3:5–12.

Of greatest significance, however, is the altered eschatological teaching of Ephesians, which includes no mention of Christ's expected return (there is no parallel to Col 3:4), and according to which believers have already been "saved" and resurrected with Christ (contrast Eph 6:17, "And take the helmet of salvation," with 1 Thess 5:8, "and [put on] for a helmet the hope of salvation"; and Eph 2:4–8 with Rom 6:5, 8; 1 Cor 15:51–54; 1 Thess 4:16–17). The reference in Eph 3:21 to future generations of believers, and the evident concern for social order in the domestic code of 5:21–6:9, presume—contrary to Paul's comments in 1 Cor 7:31 and Rom 13:11–12—that the form of this world is not passing away and that the end of the age is not at hand.

c. Portrayal of Paul. Beyond the fact that the reference to "holy apostles" (Eph 3:5) is more in keeping with the viewpoint of the later church ("holy presbyters" in *Ign. Magn.* 3:1) than with Paul's own conception of apostleship (his description of them as "earthen vessels," 2 Cor 4:7), one must note that Paul is accorded a unique status within this group. To him in particular God has entrusted the mystery of Christ and granted insight into the meaning of that (3:3–4, 7–9). Thus he is portrayed here less as a missionary than as a mystagogue (Pokorný 1962: 181; Fischer 1973: 99), as one whose task is not just to convert the gentiles (as in Rom 15:15–21 and Col 1:25–29) but to "enlighten" them about and initiate them into the mystery of Christ and his church (1:15–23). It is clear that the readers of Ephesians are to regard Paul as the apostle for the Church universal and not just for the congregations that he himself has founded.

Paul's distinctive apostolic role is also emphasized when he is identified as "the prisoner" for Christ (3:1 and 4:1; the definite article, which has been left untranslated by RSV in Eph 3:1 and 4:1, is not used by Paul in Phlm 1, 9), although little is said about the meaning of his suffering (contrast 3:13 with Col 1:24). Moreover, neither Timothy's name (Col 1:1) nor that of any other associate appears alongside Paul's in the salutation of Ephesians; the great apostle is without peer. Even the statement of Eph 3:8, "To me, though I am the very least of all the saints, this [God's] grace was given, to preach to the gentiles …," seems to betray a later idealization of the apostle (1 Tim 1:15). Paul's remark in 1 Corinthians 15 that he is "the least of the apostles" is not only more measured but is prompted by criticism of his apostleship and tied specifically to his having once been a persecutor of the Church (vv 9–11; see Fischer 1973: 95–96; Gnilka 1981: 187).

d. Dependence on Colossians. There can be little doubt that the author of Ephesians has borrowed ideas and even terminology from Colossians. Thus one is bound to ask whether, if Paul wrote Colossians, he could also have written Ephesians. Can the borrower and the lender be the same person? Even if he has retained some kind of copy of an earlier letter, why would Paul be moved to borrow not only ideas but even phrases and on occasion whole sentences from himself—especially when he has to generalize and otherwise adapt those to serve a new theme?

3. Conclusion. (A) The non-Pauline vocabulary and stylistic features of the letter may be due in part to the author's use of traditional language and materials. However, if all or even most of these non-Pauline features are attributed to reliance on the tradition, then one only has further reason to question Pauline authorship; such wholesale employment of traditional language and materials is not a characteristic of the undisputed letters (Dahl 1963: 76–77). The suggestion of Guthrie (1970: 491–92) that the circumstances of Paul's imprisonment or his mood could have affected the way he wrote not only is fanciful, but it must also reckon with the fact that Philippians, which would have been written during the same imprisonment, as Guthrie himself holds (515–16; 535–36), shows no such marked divergence from the apostle's style. (B) The theological differences between Ephesians and the undisputed letters are so extensive and significant that it does not suffice to say simply that the apostle's thought is "more developed" here (Guthrie 1970: 504, referring to the doctrine of the Church); and again, Philippians does not show the same kind of theological "development." (C) The portrayal of Paul's status and role, especially in chap. 3, is without parallel in the undisputed letters and is most reasonably explained as reflecting the point of

view of the later church. (D) If Paul wrote Colossians, then it is unlikely that he also wrote Ephesians, since the latter borrows so extensively from the former. Indeed, if Paul did not write Colossians, then it is certain that Ephesians too is pseudepigraphical.

There is broad scholarly agreement that the author of Ephesians was, like Paul himself, a convert from Hellenistic Judaism. The style of the letter, the affinities of this author's thought with the teachings of both Qumran and Philo, and his way of interpreting Scripture (in its Greek version) all point in this direction. No more precise identification of the author is possible.

H. Occasion and Purpose

The affirmations and appeals of this letter are formulated in such general terms that nothing very specific can be determined about its occasion and purpose. It is clear that the author—whether this is Paul or someone else—wants to lead his readers more deeply into "the mystery of Christ" (3:4), and therefore into a better understanding of what it means to be incorporated into Christ's church as fellow heirs with the Jews (3:6; 2:11–22). If he has taken up this theme in order to oppose some errant teaching (4:14), or in response to some particular crisis (Lindemann 1976: 242–43, referring to 6:10–17, suggests persecution), the letter gives scant indication of this. One can only say that it is written primarily for gentile Christians (2:11) who, the author presumes, have been instructed already in Christian "truth" (4:20–21), but who, in the author's judgment, need further teaching and encouragement.

There is little to support the hypothesis, first proposed by Weiss (1900: 556; *RGG*[1] 3/2209; Jülicher 1906: 127), that Ephesians was composed by the redactor-collector of the Pauline letters in order to give them a more "catholic" aspect. As developed by Goodspeed (1933; 1937: 210–39), this hypothesis holds that Ephesians was written (perhaps by Onesimus, Phlm 10; Col 4:9) as a covering letter for the collection in order to introduce the apostle's writings to the Church as a whole (hence the lack of a specific address in 1:1). The case for this hypothesis is not convincing, however: (1) One does not choose the pseudepigraphic form in order to introduce the person in whose name one writes; Ephesians is composed in Paul's name precisely because the writer can assume that the apostle's authority is already well established (Fischer 1973: 95–96, n. 1). (2) Contrary to the claims of those who have advocated this hypothesis or some modification of it, Ephesians does not provide a comprehensive summary of Paul's thought or even a good introduction to it. Indeed, a distinguishing feature of the letter is its sustained development of one fundamental theme (the mystery of Christ and his Church). (3) There is no evidence that Ephesians was ever circulated as the first letter of the collection, a position which Goodspeed's hypothesis must only presume that it once had.

I. The Date and Place of Writing

Those who accept the letter as Pauline ordinarily regard it as having been written during the apostle's imprisonment in Rome (ca. 62 C.E.). Had it been written during an earlier Ephesians imprisonment, one could hardly explain its distinctive theological viewpoint as a "development" of the apostle's earlier thought.

If Ephesians is pseudonymous it must have been written sometime before 100, since it was probably known to Ignatius, and sometime after the composition of Colossians, to which its author is heavily indebted. Colossians, if Paul's, was probably written ca. 62, and if post-Pauline, no earlier than ca. 65. Thus Ephesians could be broadly dated between ca. 70 and ca. 95, although its general point of view suggests a date fairly near the end of this period. The only clue as to the place of writing—if Ephesians is judged to be pseudonymous and if it was not originally addressed to any specific congregation—is the author's use of Colossians, which is addressed to a congregation in SW Asia Minor.

_____

A. Geographical Features

Like most Greek colonies in Anatolia, Ephesus was located along the coastal region. It was situated near the nexus of the Cayster river and the Aegean Sea. The earliest evidence of occupation is reflected in a Mycenaean grave dating from ca. 1400–1300 B.C. The history and development of the occupied site can be divided into four eras, together lasting two millennia. These four periods can be traced by their relationship to three topographical landmarks. These landmarks are the three small hills known in modern Turkish as Bülbül Dagh, Panayir Dagh, and Ayasoluk. The first period is that of the old Ionian city. According to Strabo (*Geog.* 640) the Greek colonists from the time of Androclus to the period of Croesus' hegemony (ca. 1000–550 B.C.) settled at the N base of Panayir Dagh. The second period, that of the Greek city, lasted from the time of Croesus to Lysimachus (ca. 550–300 B.C.), during which time the population inhabited the region near the Artemision, SW of Ayasoluk. During the third period (Hellenistic–Roman–Early Byzantine) the city was located, as a result of Lysimachus' efforts, in the valley between the two hills Panayir Dagh and Bülbül Dagh and was protected by the impressive Lysimachan city wall. The final era of the city's history was late Byzantine, when the city forsook the boundaries of the Lysimachan city. During this final period the population was divided among those who chose to remain within the walls of Byzantine Ephesus and those who decided to relocate at Ayasoluk.

In addition to the hilly terrain, the river and harbors of Ephesus also affected the urban development of the city. One of the harbors was called Panormus by Strabo (*Geog.* 639). Additional harbors included one mentioned by Athenaeus (*Deipn.* 8.361d) as a sacred harbor. There was also the major commercial harbor for the Greco-Roman city (Meric 1985: 30–33). According to Strabo (*Geog.* 641) alluvium from the Cayster river caused navigation problems in this commercial harbor long before Rome's acquisition of Asia in the latter half of the 2d century B.C. Some scholars have misinterpreted this alluvium problem and have incorrectly concluded that, "by NT times, however, the great days of Ephesus' trade were long past" and "deepening economic depression and decline must have been a feature of Ephesus' life over the last century B.C." (Blaiklock 1975: 324–26). Strabo's evaluation of Ephesus' mercantile prowess in the Augustan era, however, was that it was the largest commercial center in Asia Minor W of the Taurus (*Geog.* 641). Cicero likewise judged that the Roman province of Asia was without peer with regard to its natural resources. Moreover, literary (Tac. *Ann.* 16.23) and epigraphic documents (*IvEph* 23, 274, 2061, 3066, 3071) testify to major efforts at keeping the harbor serviceable during and after the period of Paul's ministry there. These dredging operations were apparently successful since Aristides (*Orat.* 23.24) of the 2d century A.D. and documents of the 5th-century Council of Ephesus refer to the accessibility of Ephesus' harbors (Foss 1979). Moreover, one must reckon with the fact that the alluvial sediment "in the Kücük Menderes delta at Ephesus" was the greatest during the Hellenistic rather than during the Roman period (Brice 1978: 62, 71 fig. 2).

The positive sentiments of the Ephesians toward the natural resources of the Cayster river, the sea, the ocean, Mt. Pion (Bülbül Dagh) as well as local brooks were evident in their mythological use of these resources and also in their personification of them on imperial Ephesian coinage (Imhoof-Blumer 1924: 278–80; Paus. *Descript.* 7.2.7; 7.5.10).

Strabo (*Geog.* 641–42) was correct in noting the significance of Ephesus' location as one of the many reasons for its commercial growth. In addition to its propitious littoral situation, it was also part of a principal trans-Anatolian highway system that had been in use for centuries (Birmingham 1961). In Strabo's words it was a "common road constantly used by all who travel from Ephesus toward the East" (*Geog.* 663). The fact that Republican period milestones from Asia used Ephesus as the point of origin for measuring distances portrays the continuing significance of this site as a travel hub at the period contemporary with nascent Christianity. Furthermore, the city was also the hub of regional urban development. Ephesus had successfully annexed several adjacent suburban areas; NW to Metropolis, S toward Magnesia and Priene, and E 40 km into the Cayster valley. However, unlike other Ionion cities such as Miletus (Boardman 1980: 238–55), Ephesus is not known to have established colonies in other regions, though Hecataeus notes an island in the Nile river named Ephesus.

B. Historical Survey

Greek migrations to Ionia seem to be the best explanation for the beginnings of Ephesian settlement in the LB, though the presence of Mycenaean artifacts suggests some form of pre-Greek occupation, a perspective preserved in Pausanias' account (*Descript.* 7.2.6–8). The extant legends place the influx of Greek settlers at the dawn of the 1st millennium under the direction of Androclus, son of the Athenian king Codrus (Strabo *Geog.* 633). The 12 cities colonized comprised the Pan-Ionic League, with Ephesus serving, in Strabo's words, as "the royal seat of the Ionians" (*Geog.* 633). In the late Archaic Period Ephesus, as other Ionian cities, came under the influence and control of the Lydian kingdom. The city itself was beseiged by the last Lydian king, Croesus, who, in spite of harsh treatment of the Ionians in general, was a primary benefactor in the construction of the temple of Artemis at Ephesus. This Lydian influence "produced at Ephesus a more thoroughly mixed culture, part Greek, part Asiatic, than we know anywhere else in the Greek East" (Dunbabin 1957: 63). After the defeat of Croesus by Cyrus and during subsequent Persian hegemony, Ephesus enjoyed better relations with the Persians than did other Ionian cities. Between the time of the defeat of the Persians at Salamis (480 B.C.) and the later ascendancy of Alexander's successor, Lysimachus (ca. 290 B.C.), over Ephesus, the city was involved in various internecine Aegean conflicts.

Under Lysimachus' insistence the city of Ephesus was relocated to the area between two hills, Panayir Dagh and Bülbül Dagh. The residents were reluctant to move, but Lysimachus' strategy of flooding the city's streets forced its denizens to relocate. Lysimachus' new city was arranged according to the Hippodamian plan, and this arrangement was to remain the warp and woof of civic administration and urban life for well over half a millennium (Paus. *Descript.* 1.9.7; Strabo *Geog.* 640). Lysimachus also enclosed the city within an impressive city wall, stretching approximately 9 km over hills and valleys and standing 7 m tall and 3 m thick, parts of which are yet in situ. Between the death of Lysimachus (ca. 280 B.C.) and the Roman acquisition of all Asia in the will of Attalus III (133 B.C.), both the Seleucids and the Ptolemies forcefully exerted their control over Ephesus and W Anatolia.

During the Roman Republic Ephesus vacillated in its relations with Rome. On the one hand, there was veneration of Dea Roma and Roman officials during the final century of the Republic. On the other hand, the city suffered from the fallout of troubles in Italy as well as insurrection in the provinces. The city had to pay a high price for its collaboration with the supporters of Mithridates, king of Pontus, who fomented revolt that eventuated in a one-day slaughter of 80,000 Romans in Asia. Moreover, the city ceremoniously welcomed visits from the soon-to-be-vanquished Antony and Cleopatra as late as the winter of 33–32 B.C.

Beginning immediately with Augustus' ascendancy, Ephesus entered into an era of prominence and prosperity. It served as the capital of the Roman province of Asia and received the coveted title "First and Greatest Metropolis of Asia." The elevation of Ephesus in the dramatic urbanization policies of Augustus is revealed in its architecture. This revitalization included construction of aqueducts, repavement of

streets, and Hellenization, including at times enlargement of agoras. As the political centerpiece of the province of Asia, Ephesus' burgeoning architectural program also encompassed triumphal monuments honoring C. Memmius, son-in-law of the Roman general Sulla, and M. Vipsanius Agrippa, adopted son and ally of Augustus. The new political realities of the early Empire were strikingly evident in the comprehensive romanization of the civic space in the State Agora (58 × 160 m). This "strategy of incorporating the emperor into the public space" (Price 1984: 143) is reflected in the juxtaposition of the Royal Basilica, the temple of Roma and Julius Caesar, the temple of the Flavians (= "Domitian's temple"), and the temple of Augustus with the city's pre-Roman Prytaneion, Bouleterion, and agora.

Beginning in the late 1st century A.D., Ephesus received its first of four imperial Neocorate temples. On a rotating basis Ephesus also served as the seat for the long-standing and very influential provincial institution known as the Koinon of Asia. The office of high priest of Asia in the Ephesian imperial cult was filled by both men and women of Ephesus, demonstrating anew that women of the period held public office (Magie 1950: 1518, n. 50). Reexamination of inscriptional evidence vitiates the traditional view that the high priestesses of the imperial cult in Asia held that title only because of their marriage to the high priest of the imperial cult. Recent investigations of the numismatic and epigraphic evidence are also calling into question the older majority view that the office of provincial high priest was identical with that of the Asiarch (cf. Acts 19:31; Kearsley 1986: 183–92; 1987; see ASIARCHS).

Generally speaking, Ephesus prospered under the succession of various Roman emperors from late 1st century B.C. up to the mid to late 2d century A.D. The plague brought back by Roman troops in the latter half of the 2d century A.D. following the Parthian victory of the emperors Verus and Marcus Aurelius was virulent. Ephesus, along with the Empire in general, was better able to cope with a short-lived, albeit ravaging, plague than with the increasing incompetency and cruelty that characterized the stream of Roman emperors in the late 2d and 3d centuries. A cluster of misfortunes led to the deterioration of the E frontier of the Roman Empire in the 3d century. This included a depletion of political and administrative leaders through assassination, aggressive pogroms against Christians, and the increase of foreign intervention from Parthians in Mesopotamia and from Goths in S Russia. In these matters Ephesus suffered along with the rest of the Anatolian cities. It was during one of these sea attacks from Gothic invaders that the temple of Artemis was heavily damaged, never again to be restored to its former glory. The severity of the situation in the mid-3d century is captured in the observation of D. Magie: "It was the first time that the country had been invaded by an enemy from outside since the Parthian army had overrun it in 40 B.C. and the first time that it had suffered from northern barbarians since the raids of the Galatians in the 3d century before Christ" (1950: 705). The impact of severe earthquakes in the late 4th and 7th centuries led to the partial desertion of the Lysimachan city. In comparison, however, to the fate of cities such as Sardis and Pergamum, Byzantine Ephesus was relatively viable, with one center of city life located near the harbor within the reduced walled city and a second center on the hill of Ayasoluk.

C. History of Excavations

The 18th and 19th centuries saw numerous explorers and dilettantes visit Ephesus. The first serious exploration and quasi-archaeological effort there occurred in the years 1863–74 under the guidance of John T. Wood, an architect who had a long fascination with ancient Ephesus. Wood was commissioned by the British Museum to locate the ancient temple of the Ephesian Artemis. Through the fortuitous discovery of an imperial inscription that adumbrated the route of the Via Sacra leading from the temple of Artemis to the theater at Ephesus and back again by a different route, Wood was able to locate the foundations of the Artemis temple 20 feet beneath the topsoil. His work there also included excavation of the theater and Odeon. With the departure from Ephesus of J. T. Wood, the British Museum terminated support of excavations there, with the exception of the brief work at the site of the Artemis temple conducted by David G. Hogarth in 1904–5.

In 1895 the Austrian Archaeological Institute (Vienna) received permission to begin systematic exploration at the site of Ephesus and has continued to excavate there, interrupted only by world wars and outbursts of regional strife. With the commencement of its excavations, the Austrian Archaeological Institute begin publication of two serial works which have continued to be the principal outlets for the

publication of epigraphic, numismatic, architectural, and plastic artifacts. These are the *Jahreshefte des Österreichischen Archäologischen Instituts* (annually) and *Die Forschungen in Ephesus* (irregular). Annual excavation reports are also published in *Anzeiger der österreichischen Akademie der Wissenschaften* (Phil.-hist. Klasse), Vienna. The inscriptions are now collected and published in the multivolume *Inschriften von Ephesos* (= *IvEph*), which is part of the series Inschriften der griechischen Städten Kleinasien.

D. Major Excavations and Restorations

1. Temples and Shrines. a. Imperial Temples. At the base of the S slope of Panayir Dagh along the Curetes Street lies a cluster of buildings used to quarter the city's Prytaneion and Bouleterion. Between these two was the single temple for Dea Roma and Divus Julius, probably representing the provincial desire, shortly after Actium, to venerate Augustus. According to Dio Cassius (*Rom.* Hist. 51.20.6) Augustus allowed the Ephesians to erect a sacred precinct for the veneration of Dea Roma and Divus Julius.

Westward along the Curetes Street and situated at the foot of Bülbül Dagh is an immense temple, traditionally called "Domitian's temple." The temple, the altar, and a colossal statue were placed upon a substructure measuring 50 × 100 m and which contained underground shops. Only the foundation of the temple is preserved, indicating a stylobate of 34 × 24 m. With the *damnatio memoriae* of Domitian, his name was removed from all the inscriptions and replaced with the name of Vespasian. Some have suggested that it was at this time Domitian's (?) colossal statue was removed to the subterranean compartments (crypto-porticus) of the terraced area. This temple was apparently the first of several Neocorate temples of the imperial cult in Ephesus. Magie (1950: 1432–34, 18) suggested that the Neocorate temple was originally dedicated to the earlier emperor Vespasian, later usurped by Domitian, and then returned to Vespasian at the time of Domitian's *damnatio.* A collage of weapons and armor covers the remains of the altar of this temple.

Farther westward along the Curetes Street lies "Hadrian's temple." It was constructed no later than A.D. 127 and its diminutive size suggests that it surely was not a Neocorate temple. Considerable controversy yet surrounds the proper nomenclature for this edifice dedicated to the Ephesian Artemis, to the emperor Hadrian, and to the Neocorate people of the Ephesians (*IvEph* 429).

b. Traditional Cults. (1) Artemis. The pinnacle of Ephesus' sacred architecture was the temple of Artemis, largest Greek temple in antiquity, and one of the Seven Wonders of the ancient world. In its 1200 year history the sanctuary of the Ephesian Artemis underwent fundamental evolution and expansion. Typically the temple's history is divided into five successive periods, temples A–E respectively. Temples A–C were pre-Croesus and are known by only the most meager evidence. Temple D, on the other hand, can be evaluated on the basis of more artifactual evidence as well as ancient literary discussion of the temple. Herodotus noted that King Croesus had donated most of the columns for the new temple (*Hist.* 1.92), a fact supported by the discovery of column fragments from the Artemis temple which read "donated by King Croesus." Strabo (*Geog.* 640) and others report that the Croesus temple was destroyed by an arsonist named Herostratos in 356 B.C. Temple E was standing during the period of nascent Christianity, finally falling as a result of Gothic plunder (ca. A.D. 262) and Christian looting. Its dimensions were 70 × 130 m and it contained 127 columns, each approximately 2 m in diameter and 20 m high. There were originally 36 column bases with relief carvings *(columnae caelatae);* one has been unearthed and is now in the British Museum. Even though the temple foundation was discovered over a century ago by J. T. Wood, it was not until 1965 that the foundation of the temple's altar outside the temple was unearthed. This horseshoe-shaped altar was erected on an area 32 × 22 m. Since most of the temple was plundered, scholars have relied on literary and numismatic evidence for supplementary information. The typanum of the temple's pediment suggests the presence of an epiphany window for the goddess, a motif preserved in numismatic iconography.

(2) Temple of Hestia. At the S foot of Panayir Dagh and directly N of the State Agora lies the Prytaneion, Ephesus' city hall. As goddess of the city's sacred public hearth, Hestia is mentioned in numerous inscriptions excavated at the Prytaneion, where her eternal flame was housed (*IvEph* 1058,

1060, 1070). Certain cosmic qualities were also attributed to Hestia because of her identification with the pervasive and cosmic element of fire.

(3) Temple of Serapis. This temple was located on the SW corner of the Square Agora. It is traditionally interpreted to be a temple of Serapis because of fragmentary inscriptional remains that refer to Serapis and other Egyptian deities and also because of the enormous size of the extant columns and the immense proportions of the overall structure. The forecourt was 16 × 107 m. The entrance to the cella was 5 m wide with a lintel weighing approximately 5 tons. There were eight monolithic-form columns 15 m tall, weighing 57 tons. Since Egyptian cults relied heavily upon the use of sacred water rites, the abundance of water basins and of the symmetrical water canals has also contributed to the Egyptian interpretation of this structure. As the presence of a presbyterium and baptistery demonstrates, this temple was later adapted for Christian usage.

(4) Sanctuary of Zeus and Mother Goddess. On the N face of Panayir Dagh were discovered, some in situ, several archaic inscriptions dedicated to Zeus and the Phrygian mother goddess. The reliefs typically depict a trinity consisting of Cybele the mother goddess, a younger male deity, and an older bearded male deity (perhaps Apollo and Zeus).

2. Private Dwellings. The remains of several important residences have been discovered at Ephesus. Situated above the theater on the W face of Panayir Dagh is the foundation of a peristyle residence 20 × 20 m. The splendid location and size of this residence have suggested to some archaeologists that it may well have been the home of the proconsul. During the Byzantine era a small chapel was erected at this site, including pews and a presbyterium. The partial remains of a small structure with a basin for bathing were also discovered nearby.

The most significant dwellings so far excavated are the slope houses situated adjacent to the temple of Hadrian and the Scholasticia Baths but on the S side of the Embolos (Curetes Street). This area contained two insulae occupied from the late Roman Republic until the late 6th–early 7th centuries.

Insula 1 (East Slope House) was trapezoidal, measuring 47 (S) × 54 (E) × 75 (W) × 50 (N) m, and containing peristyle courtyards with pool, fountains, sleeping quarters, and a *cenatorium* (dining hall). Separating insula 1 and the Embolos was a colonnade consisting of a series of 12 shops *(tabernae)* which were built and renovated from the 1st through 6th centuries. Some contained stairways leading to second floor dwelling quarters. The mosaics of this colonnade were commissioned by a certain Alytarchus and date from the 5th–6th centuries.

Insula 2, situated to the W, has revealed seven opulently decorated peristyle dwellings with no adjoining shops. Dwellings nos. 1 and 2 lay on the S side of insula 2 and were two-story. Dwelling no. 1 contained approximately 700 sq. m of living space. This house contains frescoes with scenes from works of Menander and Euripides as well as typical scenes from mythology. Bedrooms, bathroom (with bathtub), *triclinium* (dining hall with couches), kitchens, and other rooms were discovered in dwelling no. 1 of insula 2. Insula 2, dwelling no. 2 contained approximately 900 sq. m of living space and was originally built in the 1st century A.D. Dwelling no. 2 likewise contains frescoes and mosaics dating from the Roman and Byzantine periods. Dwelling no. 4 dates from the late Roman Republic and later underwent extensive renovation. One of its more interesting rooms is the Socrates room, so named because of a fresco consisting of a stereotypical depiction of the philosopher Socrates. The presence of Socrates' name removes any doubt regarding whom the original artist was intending to depict.

3. Theater. The major theater at Ephesus, seating 25,000, was built in the Hellenistic period into the W face of Panayir Dagh. Major structural alterations were carried out on the theater during the reigns of Claudius, Nero, and Trajan in order to bring it into line with the ideals of Roman theaters. Efforts at modernization included deepening the stage by extending its front edge 20 feet into the orchestra, constructing an impressive *scaenae frons* "stage front," and enlarging the orchestra at the expense of the front seats so that animal fights and gladiatorial combat could be accommodated (Bieber 1961: 213–20). Fragments of winged Erotes, Amazons, and satyrs, friezes with tragic masks, numerous inscriptions, and a "throne of honor" for prestigious individuals were found among the theater ruins during its original excavations (1897–1900).

As in all cities, the theater at Ephesus served as the site for theatrical performances, for the regular meeting of the city's ecclesia (*IvEph* 27, passim), and for city meetings in times of urban crisis (Acts 19: 23–41). Epigraphic data indicate that Nikes and Erotes were dedicated there (*IvEph* 724); the city's Ephebes conducted their songfest to the emperor Hadrian there (*IvEph* 1145); religious awards (*IvEph* 27, passim) and civic ceremonies (*IvEph* 1408, 1411, 1440, 1452, 1453, 1457, 2003) occurred there. Notwithstanding the widespread notion in popular and scholarly works, there is no historical evidence that the apostle Paul even once preached in the theater at Ephesus. The only text that mentions both Paul and the theater explicitly states that he did *not* go into the theater to preach and defend the gospel (Acts 19:30).

4. Agoras. Two agoras have been located and partly excavated at Ephesus. One is located S of the base of Panayir Dagh and is known as the State Agora. The State Agora is bounded on the W by the monument of C. Sextilius Pollio and the Domitian temple, on the S by the fountain of C. Laecanius Bassus and the Nymphaeum, on the NE by the so-called Varius Baths, and on the N by the Agora Basilica (Alzinger 1974: 26–37; and *IvEph* 404), which separated it from the Bouleterion and Prytaneion, situated at the S base of Panayir Dagh. Begun in the Hellenistic era, the State Agora was modernized in the Roman period. In the Imperial period this agora was 58 × 160 m. A temple foundation 15 × 22 m, dating from the late Republic, was located in the W end of this agora. Some have suggested that it was perhaps dedicated to Egyptian deities, possibly under the influence of Antony and Cleopatra. More recently, scholars suggest that it was the city's temple of Augustus. A Byzantine inscription cleared from the theater by J. T. Wood refers to a forum of Theodosius; some have speculated that the State Agora later carried this appellation.

The second agora is located on the W side of the Marble Road, SW of the Ephesian theater and N of the Celsus Library. Inscriptions refer to this agora as the Square Agora (*tetragona agora; IvEph* 3005, 4123), a term also used in other cities for their agoras. This Square Agora, or commercial agora, arose in the Hellenistic period and was 112 × 112 m. This agora was surrounded on all sides by shops which had arched roofs and were about 12 m deep. The recently restored Mazaeus-Mithridates Gate, named after the two freedmen of Agrippa who paid for its construction, connected the Square Agora with the plaza to the S that was adjacent to the Celsus Library. The agora also had gates on its N, S, and E sides, though these have not been as well excavated and restored as the Mazaeus-Mithridates Gate. The proximity of this agora to the harbor and to its numerous adjacent shops testifies that it was clearly the city's commercial agora. A sundial (*horologion; IvEph* 3004) and numerous statues (cf. *IvEph* 3007, 3019, 3031, 3046, 3047, 3064, 3065, 3067, 3069) originally embellished the Square Agora. It underwent significant modernization under the reign of Caracalla (A.D. 211–17).

5. Library of Celsus. The Celsus Library at Ephesus is one of the visual highlights of the restored city; the approximate dates of construction are A.D. 115–125. It is "thought to represent the standard monumental form of the Roman library" (Johnson 1984: 11). Its facade (21 m long and 16 m high) is over 80 percent original stone. It lay to the S of the Square Agora and E of the Serapis temple. Its facade was oriented toward the E, probably for better lighting (Vitruvius, 6.7.3 *ad orientem autem byblioteca*s). The interior area of the library was 17 × 20 m. Estimates of the Celsus collection at less than 15,000 rolls are small when compared to the hundreds of thousands of rolls collected in the libraries of the Ptolemies and Attalids (*Kl.Pauly* 1: 892–96).

The library was dedicated to Tiberius Julius Celsus Ptolemaeanus, proconsul of Asia, by his son Tiberius Julius Aquila. Aquila's largess paid for the construction of the library (concluded by his relatives after his death), an operations budget for library staff and new acquisitions, and, in addition, annual choral performances in his father's behalf. Impressive statuary was also part of the original dedication. The function of the library as a memorial to Celsus is highlighted by the fact that his sarcophagus was located under the apse (Pliny *Epist.* 10.81.7). In the late 4th–early 5th century it was filled in with debris, while the magnificent facade became the backdrop for a monumental fountain. This remodeling was accomplished under the Christian proconsul Stephanus (*IvEph* 5115).

6. Gymnasiums and Baths. The gymnasium "was a center for mental as well as physical training, and inevitably became a center of general social life, like the agora and the stoas" (Wycherley 1962: 139).

Roman imperial urban life depended upon the baths and gymnasiums to furnish a place for education, relaxation, contemplation, entertainment, admiration of plastic and performing arts, public hygiene, exercise, and intensive athletic training and competition. Even before the excavation of certain Ephesian bath-gymnasium complexes, several references to these had appeared in literary and epigraphic sources. These references mentioned an "old gymnasium," the "upper gymnasium," the "Emperor's gymnasium," the "Koressus district gymnasium," and the "new gymnasium." In all probability some of these coincide with extant gymnasium ruins, though the identifications are tenuous at times. All six baths which have been uncovered in Ephesus come from the 1st or 2d century A.D. and have acquired the following names in modern literature: (1) Harbor Gymnasium and Baths, (2) Vedius Gymnasium, (3) Theater Gymnasium, (4) So-called Varius Baths, (5) Scholasticia Baths, and (6) East Gymnasium.

The state of preservation and extent of excavation of these six vary significantly. Each one, nevertheless, conforms to one of two architectural patterns. The first pattern is the symmetrical axis pattern where identical rooms were constructed symmetrically on both sides of an axis which divided the baths. This convention characterized the Harbor Baths, Theater Gymnasium, East Gymnasium, and Vedius Baths. The less dominant style was asymmetrical (Scholasticia and "Varius Baths") so that the bather could enter and leave the baths through different doors without having to retrace his steps on departure.

The normal configuration of rooms of a Roman bath included: (1) caldarium (warm water), (2) tepidarium (mild water), (3) frigidarium (cold water), (4) apodyterion (changing room with lockers), (5) latrine, (6) natatio (swimming pool), and (7) unctorium or elaethesium (rooms for anointing with oil and unguents). Several Ephesian inscriptions mention oil donations given by benefactors to all the local gymnasiums (*IvEph* 644, 661, 926, 3014; Vitruvius 5.10.1–5; 5.11.1–4; Lucian *Hippias* 4–8 for literary evidence regarding Greco-Roman baths and gymnasiums).

The Greek gymnasium (palaestra) was often attached to a Roman bath and included an expansive area for exercise, jogging, and athletic competition. There were often rooms and auditoriums for rhetorical and musical performances and an "imperial room" usually containing the bust of the emperor and other leaders who perhaps endowed the construction and maintenance of the gymnasium. In this regard the excavation of Ephesian gymnasiums has yielded an impressive collection of statuary and busts.

a. Vedius Gymnasium. This building complex—gymnasium with palaestra and baths—was built in the mid-2d century by the Ephesian couple Publius Vedius Antoninus and Flavia Papiana. The inscription indicates that it was dedicated to Artemis and to the emperor Antoninus Pius. There were altars and statues of Antoninus Pius and later emperors. The gymnasium was 75 × 135 m and located directly N of the city stadium in the vicinity of the Koressian Gate. A latrine in the gymnasium's SW corner served both the street traffic and those from the inside. The complex contained an exercise room, changing and locker rooms, swimming pool, frigidarium, caldarium, and small shops.

b. Harbor Gymnasium. This large complex (240 × 356 m) was not a single structure architecturally, but rather consisted of three components. The tripartite structure was situated close to the harbor, directly N of Arkadiane Street and was arranged, moving from E to W, with the Verulanus Hall, the gymnasium, and baths. The Verulanus Hall (200 × 240 m) takes its name from a benefactor, Claudius Verulanus, high-priest of Asia, who paid for the marble veneer of the hall during the reign of Hadrian. The hall's principal entrance was situated on the E. The inside roofed perimeter of the Verulanus Hall was used for races and jogging (Vitruvius 5.11), while the uncovered center portion provided the location for training and athletic competition. It was in the Verulanus Hall of this sports complex that Apollonius of Tyana purportedly received a vision of the assassination of the emperor Domitian (Philostratus *Vita Apoll* 8.26). The gymnasium, dating at least from the time of Domitian, contained an inner square 88 × 88 m enclosed by surrounding colonnaded hallways 11 m wide. On the N and S sides lay marble rooms (16 × 32 m) used for the emperor's statue, works of art, and rhetorical presentations consistent with the pedagogical function of Roman gymnasiums.

The baths themselves (70 × 160 m) consisted of dressing rooms, caldarium, tepidarium, and frigidarium. With the discovery of a statue base of the proconsul P. Calvisius Ruso, dated ca. A.D. 93, previous efforts

to date the baths in the late 2d century have been abandoned. The baths were renovated in the mid-4th century.

c. East Gymnasium. Located at the base of the SE face of Panayir Dagh and adjacent to the Magnesian Gate, the East Gymnasium was rectangular (50 × 75 m), with a palaestra in the S end of the complex. The East Gymnasium contained the rooms typical for such a complex and was completed probably by the middle of the 2d century A.D.

d. The "Varius Baths." So-called Varius Baths (54 × 100 m) lay immediately E of the State Agora. They were apparently constructed in the 2d century A.D. However, the fragmentary nature of the ruins and the architectural deviations evident in the extant foundation make detailed suggestions tenuous.

e. The Scholasticia Baths. Located adjacent to the "temple of Hadrian" along the Curetes Street, they were, in all probability, constructed during the reign of Trajan or Hadrian. The Scholasticia Baths were laid out differently from most of the Ephesian bath complexes but contained the appropriate rooms for changing clothes, bathing, and swimming. The modern nomenclature, Scholasticia, derives from the name of a Christian woman of the late 4th century who rebuilt the baths and whose statue was erected in the entrance room.

7. Fountains, Wells, and Aqueducts. The water requirements of the earliest settlement at Ephesus were probably met by the water source mentioned by Creophylos (Athenaeus *Deipn.* 8.361c–e) and by the collection of rainwater. In this latter case an Ephesian inscription (A.D. 92) is instructive regarding the volume of rain runoff in the area. In an epigram Claudia Trophime mentions that Mt. Pion drinks in so much rain water and stores it in its ravines, that it is comparable to the greatness of the sea (*IvEph* 1062; Engelmann 1987: 149–50). In the Hellenistic-Roman period the local river Marnas (*IvEph* 414, 415–17, 1530, 4105) and waterway Klaseas (*IvEph* 415–16) were channeled into the city's fountains and gymnasiums; these were celebrated for the first time on coinage during the reign of Domitian.

The early Empire saw the construction of three aqueducts at Ephesus. The emperor Augustus contributed to the construction of the Aqua Iulia (*IvEph* 401) and the Aqua Troessitica (*IvEph* 402), thereby reflecting his well-known attentiveness to the water supply of cities (*Res Gestae Divi Augusti,* 20). The wealthy benefactor C. Sextilius Pollio also paid for the construction (ca. A.D. 4–14) of the aqueduct that can still be seen today approximately 4 km S of Ephesus (*IvEph* 3092; Alzinger 1974: 1.21–23). Excavations among private dwellings (e.g., slope houses) reveal the presence of numerous cisterns and fountains.

The most important public fountains and wells in use in the imperial era include:

1. Fountain of C. Laecanius Bassus, built in ca. A.D. 80 (*IvEph* 695).
2. Nymphaeum (S of State Agora), built sometime in 2d century A.D. (*IvEph* 414, 1316–17).
3. Fountain in honor of C. Sextilius Pollio constructed in A.D. 93 (*IvEph* 413, 419).
4. Fountain attached to Memmius Monument. The fountain dates from early 3d century A.D. (*IvEph* 435).
5. The impressive Trajan Fountain was constructed ca. A.D. 110 (*IvEph* 265).
6. The Hellenistic Fountain, located at the NW foot of the city theater, was built sometime in the 3d–2d century B.C.
7. Roadside Fountain (Strassenbrunnen) was constructed during the reign of Trajan, excavated and reconstructed in 1927 by the Austrian Archaeological Institute, and completely demolished in 1955 by a Turkish road crew in order to construct a highway (*IvEph* 424a; Keil 1964: 138–39).

E. Ephesian Religions

1. Paganism. a. Artemis of Ephesus. Religion was of paramount significance to the city of Ephesus. The city was the cult center of the worship of the Ephesian Artemis. When called upon to do so, the city would vigorously defend the goddess against impious detractors. The origins of the Ephesian goddess are lost in the undocumented centuries of early contacts between the Greeks and their Anatolian neighbors. During the Roman period several facets about the Artemis cult are salient: (1) the goddess was the tutelary deity of the city; (2) the goddess' cult was not characterized by base sensualism or a focus upon sexuality and fertility; (3) the goddess' influence was evident in the city's political, civic, cultural,

educational, and economic activities; (4) the goddess' religion was internationally recognized as a premier religion, and her temple was acknowledged as one of the Seven Wonders of antiquity; and (5) the goddess appealed to both the social need and to the personal pietism of the pagan Ephesians.

b. Traditional Deities. Ephesus' religious climate was similar to that of many other large cities in the Greek East. There is documentation—including literature, epigraphy, numismatics, sculpture, and architecture—of a plethora of Greco-Roman and, to a lesser extent, Anatolian deities. These include the following:

	DOCUMENTATION			
NAME	Literature	Coins	Epigraphy	Monuments
Aphrodite	*		*	
Apollo	*	*	*	*
Asclepius	*		*	
Athena	*	*	*	
Cabiri			*

Hecate	*	*	*	
Hephaestus			*	
Hercules	*	*	*	*
Mother goddess			*	*
Pluton			*	
Poseidon	*		*	
Zeus	*	*	*	*

c. Hero Veneration. The worship of select individuals, sometimes while they were yet alive but more often after death, was a common practice of Greek cities. The motivation for such veneration could be a pious and grateful response to unusual benefaction, to miraculous assistance, to extraordinary civic or political contribution, or to a unique role in the founding and history of the honoring city. Heroes at Ephesus include:

1. Alexander the Great, whose cult was still maintained into the 2d century A.D.
2. Androclus, regarded as the Greek founder of Ephesus
3. Apollonius of Tyana, a Neo-Pythagorean preacher and thaumaturgist, was venerated at Ephesus because of the exorcism he performed to rescue the city of Ephesus from a plague.
4. Pixodarus Evangelus was worshipped with regularity at Ephesus, under the auspices of the city magistrate, because of his singular role in discovering the marble quarry from which the city took the marble for the construction of the temple of Artemis.
5. There existed at Ephesus, even into the imperial era, a cult and priesthood for the former Roman proconsul of Asia (46–44 B.C.), Publius Servilius Isauricus. This honor was in all probability a response to this administrator's just treatment of the city and his advocacy of the city's interests in official issues.

2. Christianity. The early history of Ephesian Christianity can be divided, for the sake of convenience, into periods characterized by the influence of different Christian authors and leaders. The earliest period obviously falls to the apostle Paul. The text of Acts indicates that Paul's efforts played an important role

in the early spread of the Gospel in Ephesus (Acts 18–20). This city was not only the site of his longest missionary tenure, as presented in the scheme of Acts, but also was the base of operation for Paul and his associates as they spread the Christian Gospel into the adjacent cities and regions of Asia Minor (e.g., the Lycus valley). The Pauline Corinthian correspondence was written at a time contemporary with the apostle's Ephesian ministry and Romans was written shortly thereafter. Dogmatism in the matter of the provenance of the Pauline "Prison Epistles" seems inadvisable. Nevertheless, notwithstanding the complex issues of authorship, the letters of Ephesians, Colossians, and the epistles of 1 and 2 Timothy provide strong indications of the importance of Ephesus in the Pauline Anatolian ministry and the perception of such in the nascent Christian community.

Less well attested is the role of Ephesus in the final years and ministry of the apostle John. There is no internal evidence in either the Fourth Gospel or the Johannine Epistles that indicates their provenance or destination. While the Revelation of John was written from the island of Patmos, off the coast of W Anatolia, that geographical proximity does not intrinsically bespeak an Ephesian home of its author. In addition, there is no necessity based upon internal evidence of the documents themselves to identify the author of the Fourth Gospel with the author of the Revelation. The *onus probandi* for the historical reconstruction placing the apostle John (as the author of the Fourth Gospel, Johannine Epistles, and the Revelation) in Ephesus lies in the use of Christian literature of the 2d century. The consensus of 2d-century sources is in favor of placing John in Ephesus in his latter years. It was during these later years of his life that he was exiled to Patmos, wrote the Fourth Gospel, Johannine Epistles, and the Revelation, and combated gnostic heretics such as Cerinthus. However, the matter of John's tenure there was not without dispute in this early Christian period, with the result that certain Christian authors opted for the presence of two different Johns (and later their graves) in Ephesus.

The Ephesian Christian community of the 2d century is documented, in part, by the evidence available in the letter to it from Ignatius of Antioch. The name of the Christian apologist Justin Martyr was also associated with Ephesus in the first half of the 2d century A.D.

3. Judaism. While Judaism thrived in Greco-Roman Ephesus, especially under the legal protection of the Seleucids and Romans, firm evidence of its size, character, and role in Ephesian urban life is difficult to reconstruct. The term *Ephesus* occurs about a dozen times in Josephus, making his record the largest Jewish literary testimony concerning Ephesian Jews (*Ant.* 16 §27–65). Unlike certain other cities of W Asia Minor, Ephesus has yet to yield any synagogue remains. Moreover, there is a dearth of physical evidence (e.g., lamps) and of inscriptional evidence to the presence of Ephesian Judaism in the Greco-Roman era. Both the Pauline corpus and the Acts of the Apostles testify to Jewish-Christian hostilities in this region. For further discussion, see PWSup 12: 248–364, 1588–1704.

EPHLAL (PERSON) [Heb *ʾeplāl* (אֶפְלָל)]. Descendant of Judah (1 Chr 2:37) through Perez and the family of Jerahmeel. Considerable scholarly debate surrounds this particular family line. Some scholars maintain that the importance of these names in postexilic times stems from the possibility that they were not originally Hebrews but nomadic Edomites (Elmslie *Chronicles* IB, 353) settling in permanent kraals in S Judah about the time of David (Curtis *Chronicles* ICC, 86–87). The line of descent of which Ephlal is a part is of particular interest because of the prominent way in which women are noted in the genealogies. First, Atarah, the second wife of Jerahmeel, is named specifically. Secondly, Sheshan had no sons and thus gave his daughter, Ahlai, as wife to his Egyptian slave Jarha, from whose line Ephlal descends. Considerable scholarly debate surrounds the nature of these genealogies. While Curtis (*Chronicles ICC,* 83) considers vv 34–41 an appendix to the descendants of Jerahmeel, Braun (*1 Chronicles* WBC, 45) adopts a more cautious and less speculative approach. The meaning of Ephlal is highly speculative. Frequent suggestions include "nicked" and "judgment." It is possible the name comes from the root meaning "intervene" or "interpose" and producing such words as judge, intercede, and pray.
W. P. STEEGER

EPHOD (OBJECT) [Heb *ʾēpôd* (אֵפוֹד)]. An item of priestly apparel. As a noun it appears 49 times in the Hebrew Bible, and it occurs once as a denominative verb (Lev 8:7). In three more instances (Exod 28:8; 39:5; Isa 30:22), a slightly different form of the word is used to accommodate a suffix. Since the word *ephod* refers to a sacred vestment, most of the usages are in the priestly passages of the Pentateuch, mainly in the tabernacle texts of Exodus. However, other individuals involved in cultic activity—notably Gideon (Judg 8:27), the priest of Micah (Judg 17:5; 18:14, 17, 18, 20), Eli (1 Sam 14:3), Samuel (1 Sam 2:18, 28), and David or his priests (1 Sam 21:9; 22:18; 23:16; 30:7; 2 Sam 6:14; 1 Chr 15:27)—are associated with the ephod. In Hos 3:4 it is mentioned, along with the teraphim, independently of a priestly figure.

Most of the information about the ephod's appearance comes in the description of Aaron's wardrobe. Despite the enormous amount of detail provided (mainly in Exodus 28 = Exodus 39), a clear picture of what it looked like is difficult to obtain. It apparently was an apronlike garment, suspended from waist level downward and kept in place by shoulder pieces or straps; it probably completely encircled the lower

body. Two onyx stones, each engraved with the names of six of the Israelite tribes, were set into gold bracteates (RSV filigree) and attached to the shoulder pieces. The fabric of the ephod was of the most elaborate kind. It consisted of a multicolored mixture of wool and linen, but the predominant kind of thread woven into it was gold. Because it is mentioned first in the list of materials (Exod 28:8 = 39:2) and because it was evidently woven into all the individual threads of colored wool and linen (Exod 39:3), gold dominated its fabrication (Haran 1955) and certainly made it an object that was heavier and had more of a defined shape than do most items of apparel.

As a golden garment, the ephod clearly had special status in the elaborate series of undergarments, overgarments, and supplementary vestments and headpieces worn by the high priest. It is one of four items of apparel reserved for the high priest alone, in addition to what he wore in common with the other priests. Two other special items were intimately connected with the ephod: the breastpiece was attached to it (Exod 28:25); and one of the high priest's outer garments, "the robe of the ephod" (*me‹îl hā›ēpôd;* Exod 28:31) is designated in relation to it. All the items used in the priests' vestments and in the construction of the tabernacle belong to a sequence of workmanship and choice of materials, from simple to intricate, from common to costly (Haran 1978). The most elaborate items are the most holy ones, and the ephod clearly belongs to that category.

The prominence of the high priest's ephod relates to its function and also its symbolic nature. Because the breastpiece containing the Urim and Thummim are attached to it, the ephod is an essential part of the divinatory apparatus of the Israelite cult. That function is clear in many of the passages associating David with an ephod, in which he uses it to "inquire of the Lord" (1 Sam 30:7–8; cf. Judg 18:5).

The symbolic aspect of Aaron's ephod derives from its nature as a costly and intricate golden garment. As such, it is made of materials that, in both ancient Egypt and Mesopotamia, were reserved for garments that clothed either the statues of the gods or a very select group of high officials (royalty and top priestly ranks). Several old Assyrian texts from Cappadocia refer to a rich and costly garment called an *epattu* (*CAD* 4: 183), and Anath in Ugaritic literature apparently wears an *›ipdk* (Albright 1941). In addition, certain elaborate and distinctive items, known as "golden garments," were used in Mesopotamian ritual to drape the statues of deities (Oppenheim 1949). This practice endowed the garment with an aura of sanctity, since it was used to clothe the god or goddess in rituals meant to secure the deity's presence and availability. For ancient Israel, with its aniconic tradition, the use of a distinctive golden vestment for the highest cultic functionary provided an analogous purpose. No image of Yahweh could be specially robed in order to insure divine immanence. But the priest closest to Yahweh was so adorned as a way of symbolizing and securing God's presence.

The references to ephod outside the priestly texts do not say much about its appearance aside from several references to its linen fabric (Heb *›ēpôd-bād*). But they do indicate both cultic practice and priestly attire. Thus, while they may not refer to a physical item identical to Aaron's ephod, they belong to similar conceptualizations of sacred apparel. The same can be said for references to the ephod apart from a human wearer, as a item along with teraphim or images. Such passages may indicate the ephod's role as a garment for cultic statues that were part of Israelite religion at some stage.

Scholars trying to understand the wide array of biblical information about the ephod have made various proposals about its appearance and function. Because of the apparent incongruities between the ephod in the priestly writings and the ephod elsewhere in the Bible, some have argued that this item is a sacred garment in some places but some sort of distinct cultic object or even an idol in other places (e.g., May 1939; Morganstern 1943–44). Such speculation involves too rigid a classification of garment and cultic objects as separate categories. The ephod was both a special garment and a ritual object, and in either or both of these aspects it functioned symbolically to bring a human representative of the Israelite community into contact with the unseen God. See also BREASTPIECE.

EPHOD (PERSON) [Heb *ʾēpōd* (אֵפֹד)]. The father of Hanniel (Num 34:23). The latter was a leader in the tribe of Manasseh selected for overseeing the distribution of the land to the ten tribes. The name has been corrupted in the LXX to read variously *ouphi (d)* and *souphi.* The meaning of the name is obscure, but has been related to the ritual vestment worn by the priests, the ephod.
RAPHAEL I. PANITZ

EPHPHATHA [Gk *ephphatha* (ἐφφαθα)]. Found in Mark 7:34 in words attributed to Jesus and addressed to a blind man whom he was healing, the word is there given a Gk translation, *dianoichthēti,* "be opened." Since Wellhausen it has been widely regarded as reflecting the 2d person masc. sing. *Ithpeʿel* (reflexive-passive) of the Aramaic verb *ptḥ,* "to open," thus meaning "be opened." Wellhausen noted that in the Babylonian Talmud *ephphatha* was the usual contraction for the more formal and expected form [*ʾtptḥ*]. Against this view I. Rabinowitz argued that this contracted form did not occur in the Jerusalem Talmud, Midrashim, or the pentateuchal Targums. He proposed instead that it was a 2d person masc. sing. *Nipʿal,* imperative of the Hebrew verb *ptḥ,* namely, *hptḥ.* Z. Ben-Ḥayyim showed that in Samaritan Hebrew this form is pronounced *affeta.* Now the contracted form of the Aramaic is in fact found in the Palestinian pentateuchal Targum ms Cod. Vat. Ebr. 440 at Gen 49:1; whereas, Targum Neofiti has the full form at that point. Whatever else may be said, it is clear that the form in the Vatican Codex is supported by the pronunciation given in Mark 7:34. First century A.D. Palestinian Aramaic inscriptions preserved on four tombs (the Kidron Valley Dipinto, line 4; the Uzziah Tomb slab, line 4; the Kidron Epitaph, lines 2–3; and the Jerusalem Hypogeum Ossuary 1, line b) give what appears to be the contracted form of the *Ithpeʿel* infinitive of Aram *ptḥ,* namely, in the formula *lʾ lmptḥ* (instead of *lʾ lmtptḥ*), "not to (be) open (ed)." These inscriptions seem to confirm that in Mark 7:34, *ephphatha* reflects this assimilated pronunciation of the Aramaic. All this is consistent with the view that the word is part of the authentic speech of Jesus. The idea that in Mark 7:34 it is really a "foreign" word, part of the magician's art, has met with support in a number of places but has an air of unreality about it in that such an Aramaic word can scarcely be "foreign" in the setting given to it by Mark.
MAX WILCOX

EPHRAEMI RESCRIPTUS. See CODEX (EPHRAIMI RESCRIPTUS).

EPHRAIM (PERSON) [Heb *ʾeprayim* (אֶפְרַיִם)]. EPHRAIMITES. The second son of the biblical patriarch Joseph, and the eponymous ancestor of the tribe bearing this name. The central hill country of Palestine was called Ephraim after the tribe associated with that region. This entry consists of two articles, one focusing on the topography and history of the region, and another discussing archaeological survey work in the region.

EPHRAIM IN THE BIBLE

A. The Name

The original etymology of the name Ephraim is unknown. The derivation from Heb *prh,* "to be fertile," is based on a popular etymology (Gen 41:52; Hos 13:15). The ending *-ayim* indicates a place or geographical name. Noth (*Joshua* 145) translates the construction *har ʾeprayim* (Josh 20:7) as "pasturage mountain" (Ger "Weideland-Gebirge"). More plausible is the derivation from *ʾeper* in the sense of "region" (cf. Akk *epēru*), plus the locality ending *-ayim* (Gesenius 1987: 91). But a reliable translation of "Ephraim" would seem impossible.

Ephraim is the proper name of Joseph's second son (Gen 41:52; 46:20), who receives the blessing of the firstborn instead of Manasseh (Genesis 48); thus he received a share of Jacob's inheritance and is reckoned among the tribal eponymous heroes. The tribal territory named after him is situated in the S part of the central W Jordanian massif (the *har ʾeprayim:* Josh 17:15; 19:50; 20:7; etc.); its borders are

described in Josh 16:5–10. In connection with Ephraim's N neighbor, Manasseh, the Bible speaks of "the land of Ephraim and Manasseh" (Deut 34:2 and 2 Chr 30:10). In numerous passages in the prophetic writings, "Ephraim" designates the N kingdom of Israel, since Ephraim actually encompassed the real territorial center of this geopolitical region (cf. esp. Isa 7:2, 5, 8, 9, 17; 9:8, 20; 11:13, etc.; see also Jer 31:9, 18, 20; Ezek 37:16, 19).

B. Topography

The region designated by the name Ephraim was considerably larger than the territory originally inhabited by the tribe of Ephraim (cf. 1 Kgs 4:8; Josh 17:15). The "mountain of Ephraim" was made up of the W Jordanian mountainous country stretching approximately from Bethel in the S to the plain of Jezreel in the N; in the NW, Mt. Carmel and, in the NE, Gilboa are probably to be reckoned to the territory as well. The town of Shechem, situated in a valley between Mt. Ebal to the N and Mt. Gerizim to the S, is probably to be seen as the real center of the region. The *har ṣalmôn* mentioned as being in the vicinity of Shechem in Judg 9:48 is not identifiable today. The mountain *gaʿaš* is located in the SW part of the Ephraimite massif, near Joshua's home at Timnath-Serah (Josh 19:50; 24:30). Although certainty in the matter is impossible, the mountain *ṣĕmārayim* (2 Chr 13:4), like the site of the same name (Josh 18:22), was presumably located in the SE part of Ephraim.

From the border of Benjamin in the S until around Shechem the Ephraimite massif is higher than the N section and can only be traversed with difficulty on the E–W axis. Its highest landmark, Baal-Hazor (modern Tell ʻAṣur or *Jebel el-ʿAṣūr*), about 8 km NE of Bethel (mentioned in 2 Sam 13:23), reaches a height of 1011 m. This S part of the Ephraimite massif was the settlement area of the tribe of Ephraim. It is a fertile region, largely composed of cenomanite, an erosion-resistant hard variety of limestone. The main line of communication through the region is the road which traverses the sometimes difficult terrain running N–S along the watershed.

The N part of the Ephraimite massif consists mainly of the rather softer limestone known as senonite, and is not as fertile as the S part. Numerous valleys offered suitable paths of communication for local traffic and thus encouraged the development of urban centers. In addition to Shechem, mention should be made of Tirzah *(tell el-Fārʿa),* at the E reach of the Wâdī el-Fārʿa, Dothan in the NW, and to the S, in an especially favorable location on a hilltop in the midst of a kettle-shaped valley, the city of Samaria.

C. History

Ephraim is regarded as the heartland of Israel. It was here, in a fashion entirely independent of developments in Judah to the S, that the history of what was later to develop into the entire people of Israel began. Bethel and Shechem appear as the main loci of the Jacob traditions (Gen 28:10–22; 33:17–20; 34; 35), but some of the narratives connected with Abraham (Gen 12:16; 13:3) also lead through Ephraimite territory. The sanctuary at Shechem was the scene of important symbolic events of great significance to the development of the supratribal "Israel." Joshua's tribal assembly in Shechem (Joshua 24) and the ceremony of curse and blessing on the mountains of Ebal and Gerizim (Deuteronomy 27; cf. also Josh 8:30–35) are among the more solid traditions of the central Palestinian tribal league which was also known as the "house of Joseph" (Judg 1:23) and included both Ephraim and Manasseh (Deut 33:17). In the tribal blessings in Gen 49:22–26 and Deut 33:13–17, Joseph receives both a place of honor and a favorable comment.

Shechem was already a political center at an early date. If the reading of the Execration Texts is correct, it was mentioned in them, as well as in the burial inscription of the Egyptian functionary Khu-Sebek, in the days of Sesostris III (ca. 1880–1840 B.C.E.; cf. *ANET*, 230–31). In the Amarna Letters the city is known as the home of the rebellious governor and king (?) Labayu; it possessed an aristocratic organization (cf. Judges 9) until Israelite times, when that organization was ultimately dissolved. However, Shechem did not achieve political ascendancy during the time of the N kingdom in spite of her favorable situation in the center of the region. Instead, the city remained an "uncrowned queen" among the cities of Israel and Palestine (Alt 1925a: 4). Already the first N kings after the partition of the empire established themselves at, first, Tirzah *(tell el-Fārʿa)* and then Penuel *(tulūl eḏ-ḏahab),* until Omri finally purchased the hill of Samaria and there, in the borderland between Israelite and Canaanite influence,

constructed his residence (1 Kgs 16:24; on the fate of the site described and evaluated in detail, see Alt, *KlSchr* 3: 298–302).

In the course of his conquests, probably around the year 733 Tiglath-pileser III appropriated the border regions of the N kingdom and incorporated them as provinces of his empire under the designation *Magiddū* (Megiddo). The regions included were Galilee, *Gal›azu* (Gilead) in the region E of the Jordan (although whether this was an independent province is contested), and *Dū›ru* (Dor), a coastal province S of Carmel. The central region of Ephraim, consisting of Samaria and its immediate environs (often called the "rump state" of Ephraim), was retained by King Hosea until, after the fall of Samaria in 722–721, it, too, became Assyrian.

The attempts by King Josiah, as Assyrian power collapsed at the close of the 7th century, to unify the N kingdom with Judah foundered on the early death of the king (in 609 at Megiddo, at the hands of the N-bound Egyptians) and the subsequent transition of suzerainty over the region to the Egyptians and, later, to the Neo-Babylonian Empire under Nebuchadnezzar.

Probably as a continuation of the efforts of the Babylonian administrators, the Persian province of Samaria arose and attempted to maintain its independence of Judah and Jerusalem. After the conquests of Alexander the Great in Palestine during the last third of the 4th century, the final separation of the Samaritan cultic community from the Judaism which was centered on the temple in Jerusalem took place. When this occurred, an administrative and religio-political opposition between "Judea" and "Samaria" arose and extended into the Roman period. The Romans, however, partitioned off large parts of the areas won from the Hasmoneans in Judea. These included, in addition to the coastal cities and the region of the later Decapolis in the N part of the territory E of Jordan, on the W side of the Jordan also Samaria and its environs. The entire Syro-Palestinian region became the province of Syria and was subject to the rule of a governor.

D. Archaeology

At the beginning of the 20th century, the archaeological exploration of Palestine was concentrated on prominent sites in Ephraim and its periphery. American, British, German, and Danish archaeological societies and institutes, supported by both public and private funding, were involved in the effort. The work continued between the two world wars; it has been intensified since the foundation of the state of Israel and, in the wake of the events of 1967, the entire territory of Ephraim became open for study. Israeli, American, and European archaeological teams have since then participated.

Among the sites that were excavated early on were, above all (including mention of the excavational seasons): SHECHEM *(Nâblus; Tell Balāṭa)*, 1913–14, 1926–27, 1956–69; SAMARIA, 1908–10, 1931–33, 1935; MIZPAH *(Tell en-Naṣbe)*, 1926; SHILOH, 1926, 1929, 1932, 1963, 1981–84; 1933–35, 1964–69; TAANACH, 1902–3, 1904, 1963–64, 1966, 1968; MEGIDDO, 1903–5, 1907–9, 1934; DOTHAN, 1953–60; TIRZAH, 1946, 1950–51, 1954, 1958, 1960. (For the early period of excavation, see Thomsen 1932.)

In recent times further excavations have been undertaken, principally including: Khirbet Raddana on the W side of el-Bireh, 1971–75; BETHEL 1934, 1954, 1957, 1960; ‹IZBET ṢARṬAH, 1976–78; MT. EBAL, 1983–85. On these recent excavations, with inclusion of the Israelite Conquest in Ephraim, see Finkelstein (1988). In all brevity these studies allow us to conclude the following: the sites mentioned in the Conquest Narratives reveal no traces of the "remains of the Late Bronze period" (Finkelstein 1988: 352–56). Among the regions so thickly settled by Canaanites, there "is virtually no evidence of Israelite settlement prior to the 10th century B.C.E." Recent sociological studies have conjectured that the Israelites emerged at the close of the Bronze Age from the sociopolitical organization of Canaan (see Gottwald 1979; differently, Lemche 1985, 1988). Against this it can be shown that the new inhabitants of the hill country of Ephraim and Manasseh in the Iron I period came from a pastoralist background. The beginning of Israelite settlement of the region cannot have taken place earlier than the 12th century B.C.E. Ten Iron I sites in Judah and about 12 in Benjamin must be compared with about 120 in Ephraim and about 100 in Manasseh. It can be shown that the ethnic composition of Ephraim during the Iron I period was strongly homogeneous. Although the settlement was regionally diverse, in general the new settlers either

established themselves among the earlier populace or else settled in the thinly populated mountainous highlands. Taken together, these observations, which allow us to conclude that the population grew at the beginning of the Iron I period, coincide temporally and spatially and agree with the biblical information concerning the Israelite Conquest. They point to a largely peaceful process of settlement and are accordingly suitable archaeologically to confirm and support a number of observations and conjectures which Alt (1925b, 1939) had made concerning the essential character of the first stage of the course of the settlement. For a more extensive discussion of the archaeological survey of the Ephraimite territory, see below.

ARCHAEOLOGY OF EPHRAIM

Since 1980, area of the ancient land of Ephraim has been the object of an intensive archaeological survey. Headed by I. Finkelstein, the survey covers an area of approximately 1050 km^2. Its boundaries, which correspond roughly to the biblical borders of the inheritance of Ephraim, run along the Beth-horon–Ramallah–Deir Dibwan road in the S, the Kanah brook and the northernmost reaches of the valley of Beit Dajan in the N, and extend beyond the easternmost of the permanent settlements of the desert fringes in the E; the W border is demarcated by the foothills of the Shephelah. See Fig. EPH.01. The major biblical sites located within the survey area include Bethel, Shiloh, and Tappuah, while Shechem lies just beyond its N border.

To the end of 1985, some 95 percent of the sites in the survey region have been investigated (including the Arab villages) and about two-thirds of the area has been surveyed in detail. A total of some 550 sites have been discovered, enabling a reliable picture of the pattern of settlement to be drawn for each of the various periods of occupation.

The land of Ephraim is located in the heart of the central hill country, a marginal zone for agriculture, since it has neither the arable mountain plateaus of Benjamin nor the broad alluvial valleys of Manasseh. Lithologically, most of the region consists of hard limestone formations, which make it difficult to till the

soil. In ancient times much of the region was covered with dense forests, with *Quercus caliprinos* (Kermes oak) and *Pistacia palaestina* (terebinth) predominating, as inferred from the remnants of these forests today and paleobotanical samples from excavated sites. Since these forests had to be cleared before crops could be sown, the presence of these forests was another disadvantage for agricultural settlement.

In order to understand the pattern of settlement through various periods, it is helpful to divide the region into six geographical subunits, each of which has its own distinctive morphological, ecological, and demographic-economic characteristics. (1) The desert fringe on the E is a long, narrow strip between the central mountain range and the Samaritan desert. The land is marginal but has some arable plots. (2) The N part of the central range is a large unit in the heart of the hill country and is characterized by small fertile valleys suitable for agriculture, extending from the valley of Shiloh in the S through the valley of Beit Dajan in the N. (3) The S part of the central range is a high plateau in the Bethel hills, which is a continuation of the plateau of the land of Benjamin. Topographically, it is an attractive area for settlement. (4) The N part of the W slopes is a hilly zone between the brook of Shiloh and the brook of Kanah. (5) The S part of the W slopes is a topographically wild zone lying S of the brook of Shiloh, consisting of an E–W series of steep scarps and deep wadis. This is the most difficult area for settlement in the land of Ephraim. (6) The foothills area is a long, narrow strip in the W with low rolling hills descending westwards towards the coastal plain. The central mountain range and the S part of the W slopes are rich in springs; whereas, there are almost no perennial water sources in the desert fringe, the N part of the W slopes, and the foothills.

The subsistence economy in ancient times may be reconstructed for each subregion by analogy with the sources of livelihood of the Arab villages at the beginning of the present century. The villagers living in the E desert fringes were supported by cereal cultivation and grazing. In the interior valleys of the N–central mountain range, the viability of raising field crops is also evident. In the S part of this range, the N part of the W slopes, and the foothills, acreage was divided equally between cereal crops and olive plantations. In the S part of the W slopes, the economy was based mainly on horticulture (olive groves today, in the past olive groves and vineyards). The sites on the E side of the central range had the advantage that they were able to diversify their economy into the three traditional components: cereal cultivation, horticulture, and grazing.

The first significant human activity known in the land of Ephraim began in the EB Age. So far, some 30 settlements are known from this period; the only large fortified city, however, was Khirbet et-Tell (biblical ʿAi); the rest of the sites were rather small, with an area generally not exceeding 2.5 acres. The sites are concentrated along the desert fringes, the central mountain range, and the foothills. No signs of intensive settlement have yet been discovered in the interior valleys of the N–central range nor on its W slopes, which are almost completely devoid of human occupation. Apparently, most of the region was still heavily forested at this time, and the inhabitants were active mainly on its peripheries without attempting to contend with those areas that were difficult for habitation.

Most of the MB I remains are burial concentrations on the edge of the desert and along the central range. The largest burial site was around ʿAin Samiya. The location of the cemeteries may indicate that the population lived from seasonal pastoralism, transmigrating between the marginal zones in the green, wet winter season and the cooler central range in the summer.

During the MB IIB–C a large settlement wave swept over the region, including the hill country of Manasseh. Almost 60 sites from this period are known, most of them concentrated in the desert fringes, the interior valleys of the N–central range, the NW slopes, and the Bethel hills. During the MB IIB, according to the survey results, small open settlements were established throughout the region. However, many of these settlements were abandoned in the next phase (MB IIC), and their inhabitants concentrated in a smaller number of central sites, some of them fortified. The main fortified sites, which usually extend over 4–5 acres, are Bethel, Khirbet Marjama, Shiloh, Sheikh Abu Zarad (biblical Tappuah), and Khirbet ʿUrmah (biblical Arumah).

During the LB Age there was apparently a serious settlement crisis in this and other parts of the hill country. Only five of the MB centers remained, and most of these seem to have decreased in size and importance. In one of them, at least (Shiloh), there was no real settlement but only a cultic place, as revealed by the recent excavations.

Intensive settlement was renewed in Iron Age I. So far, 110 sites of the settlement period have been surveyed (another 6 are known on the periphery of the coastal plain in the vicinity of ʿIzbet Ṣarṭah). Some 25 of these can be classified as large villages (ca. 1.5 acres each, sometimes larger); another 30 are small villages or hamlets (occupying 0.5–1 acre); and the rest are isolated farmsteads or seasonal campsites. Settlement at this time was concentrated along the desert fringes, around the small valleys in the N–central range, on the Bethel plateau, and on the NW slopes. The settlement pattern, both in its local and overall aspects, indicates a clear preference for cereal cultivation and animal husbandry instead of for orchards and vineyards. A particularly large number of settlements is observable around Shiloh, the religious and political center of the central hill country at this time. Other important sites excavated over the years include ʿAi, Khirbet Raddana, Bethel, and ʿIzbet Ṣarṭah. In the hill country of Manasseh, to the N of Ephraim, there are also a large number of Iron Age I sites. Together these two regions contain nearly 90 percent of the Iron Age I sites of the hill country and some 75 percent of the total number of Israelite settlements W of the Jordan River. It would appear therefore that the N part of the hill country was the focus of Israelite settlement. Its density in the land of Ephraim accords well with the importance attributed to the tribe of Ephraim in the biblical tradition.

During Iron Age II the magnitude of Israelite settlement reached unprecedented proportions. So far, some 185 sites are known in Ephraimite territory, including the majority of the Iron Age I sites. About 15 of these are very large (5 acres or more), another 15 are medium sized (2.5 acres or more), and the rest are small villages (less than 2.5 acres). Population density is particularly observable in the N part of the region. However, fairly vibrant activity also begins in the S part of the W slopes—a classic area of olive groves, fruit orchards, and vineyards. Several olive oil production installations have been found here. In contrast to the increase in the overall number of settlements in our region, there appears to be a decrease in the Bethel hills, perhaps because this was the area of the contested border between the kingdoms of Israel and Judah, a condition which resulted in political instability. The volume of activity in the land of Ephraim indicates that almost the entire region was cultivated and that the agricultural scene was fairly similar to that known today.

During the Persian period, after the downfall of the kingdoms of Judah and Israel, the population of this region decreased drastically. Only some 80 sites are known, most of them very small in comparison to those of Iron Age II. The center of gravity of settlement activity shifted westwards, perhaps because the coastal plain was flourishing.

During the Hellenistic period the area began to revive; and in the Roman period the number of settlements once again equaled that of Iron Age II, except they were more evenly distributed; and an intensive settlement wave also took place in the S part of the area, apparently due to the influence of the great metropolis of Jerusalem to the S.

Under the Byzantines, the number of sites reached 200 or more, the greatest population density in the history of the land of Ephraim. The center of gravity shifted clearly to the S, with settlement density thinning out in the vicinity of Shechem, probably because of the suppression of the Samaritans. In the SW of the region were a number of monasteries that were probably involved in the production of wine and olive oil.

ISRAEL FINKELSTEIN

EPHRAIM (PLACE) [Heb *ʾeprayim* (אֶפְרַיִם)]. **1.** One of the tribal territories of Israel, the name of which was often synonymous with that of the N kingdom of Israel. See the EPHRAIM (PERSON) articles.

2. An important town near Baal-hazor; it was at Baal-hazor that Absalom kept his sheepshearers and where he assassinated his half-brother Amnon to avenge the rape of his sister Tamar (2 Sam 13:23). Baal-hazor is usually identified with Jebel el-ʻasur (M.R. 177153), 14 miles NNE of Jerusalem. Some have suggested that this village of Ephraim (also N of Jerusalem) might be the same village to which Jesus retreated after raising Lazarus from the dead in Bethany and incurring the wrath of the chief priests and Pharisees in Jerusalem (John 11:45–54). Others, however, suggest that these are separate places (*ISBE* [1929], 963) and that the Ephraim of Absalom may be Eusebius' *Ephraim* (*Onomast.*, 90), 20 Roman miles N of Jerusalem, while that of Jesus may be identified with Eusebius' *Aphra* (*Onomast.*, 28), 5 Roman miles E of Bethel. (The latter may be the same "Ephraim" that Vespasian captured along with Bethel; *JW* 4.9.9 §551.)

Despite the marked difference in the initial consonants, this village of Ephraim has sometimes been equated with the "Ophrah" (Heb *ʿoprâ*) listed in the tribal territory of Benjamin (Josh 18:23), which is also mentioned in Judg 6:11 and 1 Sam 13:17 (Robinson 1856: 444–47). Likewise, Ephraim has been associated with "Ephron" (Heb *ʿprwn*), which lay near Bethel and vacillated between N Israelite and S Judean spheres of political and military control (2 Chr 13:19, note the Qere *ʿeprayin*). To this constellation some add the "Ephron" of 1 Macc 5:46 (in Transjordan), while others add the "Aphairema" of 1 Macc 11:34 (cf. *Ant* 13.4.9 §127), located between Samaria and Jerusalem.

Most scholars identify Ephraim/Aphairema with et-Taiyebeh (M.R. 178151), a village 4 miles NE of Beitin (Bethel) and 15 miles NNE of Jerusalem on a high hill overlooking the plains of Jericho and the Dead Sea to the SE. Albright (1922), however, distinguished between "Ephraim/Aphairema" on the one hand and "Ophrah/Ephron" on the other. While he felt the latter pair could be identified with et-Taiyibeh, he felt that the former pair should be identified with Ain Samieh (M.R. 182155), about 3 miles NE of et-Taiyibeh and closer to the Jordan valley. To Albright, John 11:54 suggested that Jesus needed a warm place in February to winter with his disciples: Ain Samieh (1400 ft. above sea level)—in a warm and secluded valley that was well watered and had numerous grottoes—would have been ideal, a better candidate than et-Taiyibeh (2850 ft. above sea level), where the temperature is often colder than Jerusalem. See also DHAHR MIRZBANEH.

Noting the abundance of tombs in the vicinity of Samieh, Albright suggested that originally a sanctuary of the ewe goddess Rachel (Heb *raḥel*, "ewe") was located here and that in time this came to be identified with the tomb of the matriarch Rachel, who died giving birth to Benjamin (1 Sam 10:2 locates Rachel's tomb in Benjaminite territory N of Jerusalem, although Gen 35:16–20 associates it with Ephrath in Bethlehem [v 19]). The similarity of the older names Ophrah and Ephraim N of Bethel (as well as Ephrath) to Arabic *ʾifrit*, "demon," may have led subsequent Arabs, through the practice of euphemism, to change the older name to et-Taiyibeh ('favor,' 'goodness'; cf. *LBHG*, 121; cf. also Ephron of 1 Macc 5:46, which was identified with the former Efreh, now Taiyibeh).

HENRY O. THOMPSON

EPHRAIM GATE (PLACE) [Heb *šaʿar ʾeprayim* (שַׁעַר אֶפְרַיִם)]. A gate of Jerusalem located immediately W of the temple precincts, where the Temple Mount gives way to the Central or Tyropoeon valley, and immediately N of the junction of Hezekiah's broad wall and the wall surrounding the Temple Mount. The Ephraim Gate was so named because it exited immediately to the central ridge route that led to the mountains of Ephraim via the central Benjamin plateau. The gate was first mentioned (2 Kgs 14:13; 2 Chr 25:23) during the reign of Amaziah (798–769 B.C.E.); it was rebuilt during the early return of the

exiles under Zerubbabel (ca. 539–536 B.C.E.?) and later dedicated (Neh 8:16; 12:38–39) by Nehemiah (ca. 446–434 B.C.E.).

During the reign of Amaziah, Jehoash of Israel destroyed 400 cubits (ca. 200) of the N defenses of Jerusalem between the Corner Gate and the Ephraim Gate, most probably along the line of Hezekiah's broad wall, built several decades later. The placing, by some, of the Ephraim Gate 200 m E of the Corner Gate is based on the assumption that the entire section of the wall between the two gates measured about 200 m and that Jehoash destroyed the entire section of the wall between these two gates. This is not supported by the texts (note the different prepositional prefix [*bĕša‹ar* in 2 Kgs 14:13 versus *mišša‹ar* in 2 Chr 25:23]; see also Avi-Yonah 1954: 243 and n. 25). Many, assuming that the two gates were 200 m apart, have placed the Ephraim Gate near Avigad's excavations in areas W or X–2 (Simons 1952: 234, 255 n. 5, 276, passim), while Avigad would rather identify these gates as Jeremiah's Middle Gate (area W) and Josephus' Gennath Gate (area X–2) (Jer 39:3; *JW* 5.4.2; Avigad 1980: 59, 69).

The reason Nehemiah mentions the dedication but not the rebuilding of this gate may be found in the first building activities of the early returnees under the direction of Zerubbabel (Sheshbazar) and Ezra (Ezra 1:5–11; 3:8). Upon arriving in Jerusalem with the temple treasures that were returned by Cyrus (Ezra 1:5–11; clay cylinder of Cyrus; *ANET*, 315–16), the returnees most probably secured a perimeter for the safekeeping of the temple utensils and for the guarding of the sanctity of the temple enclosure. This rebuilt perimeter may have included the Ephraim Gate years before Nehemiah's complete rebuilding of the walls.

DALE C. LIID

EPHRAIM, FOREST OF (PLACE) [Heb *ya‹ar ›eprayim* (יַעַר אֶפְרָיִם)]. The site of the battle where the forces of David defeated the men of Israel who had joined Absalom's rebellion (2 Sam 18:6–8). Presumably it was also there that Absalom met his death (vv 9–15). Because of the direction of David's earlier flight ("toward Mahanaim," 17:27), it would be logical to think that the forest of Ephraim was located E of the Jordan river (cf. 17:24 and 19:15). There may be implicit references to this forest in Josh 17:14–18, although there the forest is associated with the whole tribe of Joseph (both Ephraim and Manasseh), not just Ephraim, and is located in the land of the Perizzites and the Rephaim. Some scholars see these latter as being Transjordanian peoples (Og of Bashan was the last of the Rephaim; Deut 3:12). Leibel (1967) has even suggested that we should instead refer to the "forest of Rephaim" both in the Joshua 17 passage and in the 2 Sam 18:6 battle account. However, these peoples were not restricted to Transjordan: 2 Sam 23:13 refers to the valley of Rephaim near Jerusalem, while Josh 9:1 relates the Perizzites to the Jebusites, etc. Joshua's prediction that the Joseph tribe, in clearing out their new forest, would drive out the Canaanites also seems to point to a possible Cisjordan location (although the Canaanites may have had a broader range of territory). Thus the forest given to the tribe of Joseph and the scene of the battle between David's forces and Absalom's could be W of the Jordan river. However, the Lucianic LXX revised 2 Sam 18:6 to read "the forest of Mahanaim," thereby insisting that the battle was fought E of the Jordan.

Noth suggested that the forest should be identified with the wooded hills S of the Jabbok (*NHI*, 60–61, 201). This would account for the two different routes that the Cushite runner and Ahimaaz took to deliver the battle report to David in Mahanaim (2 Sam 18:19–23): the former ran due N through the forest and over the hills, while the latter ran by way of the Jordan valley ("the plain," v 23).

The nature of this "forest" has been another issue discussed by scholars. The name Ephraim comes from a root meaning "fruit bearing" (plural of Heb *parah*). Of course, by the time of David the name Ephraim may have been traditional, no longer designating an actual fruit-bearing forest. Some have argued that

since Absalom's head was caught in a great oak tree, the Hebrew *ya‹ar* refers to what in English is meant by "forest," a densely wooded area with many standing trees. Others, however, suggest that *ya‹ar* is cognate with Arabic *wa‹r,* "rough country," which refers to an area abounding in rocks, stones, scrub, and only occasional trees (*ISBE* [1929], 963).

HENRY O. THOMPSON

EPHRATHAH (PERSON) [Heb *›eprātâ* (אֶפְרָתָה)]. Var. EPHRATH. A wife of Hezron and subsequently of his son, Caleb. All the references to Ephrathah the person appear in the genealogical lists of 1 Chr 2:19, 24, 50; 4:4. At least three problems related to Hebrew genealogies make personal identification difficult: (1) their eponymous nature, (2) the practice of patronymy and papponymy, and (3) the use of *ben,* "son," "child," esp. in the plural, to mean "descendant" in general (see BDB, 120–21). A textual difficulty complicates Ephrathah's identity still further, but the passages do converge to yield a probable meaning consistent with the biblical use of EPHRATHAH (PLACE).

Judah and Tamar (Genesis 38) were the parents of Perez, who had a son named Hezron (1 Chr 2:3–5). The textually corrupt 1 Chr 2:24 (lit. "And after the death of Hezron in Caleb [Heb *bĕkālēb*] Ephrathah and the wife of Hezron her father and she bore to him Ashhur the father of Tekoa") should almost certainly be emended with *BHS* and RSV to read: "And after the death of Hezron, Caleb went in to [Heb *bā›* for *bĕ,* haplography, cf. LXX and Vg, and context v 21] Ephrathah, the wife of [omit *waw*] Hezron, his father [add *waw,* haplography], and she bore to him Ashhur, the father of Tekoa." Hence, it seems that Ephrathah was a wife of Hezron in the autumn of his life. After both Hezron and Caleb's wife, Azubah, had died (1 Chr 2:18–19), Caleb married Ephrathah, who was not his mother. Their son Ashhur is perhaps identical with their son HUR, a shortened form of the former (cf. 1 Chr 2:24, 50 [read "sons of Hur," plural, with and Vg], 4:4–5), though this is not clear. At any rate, Ephrathah is portrayed as ancestress of Tekoa and great-grandmother of Bethlehem, Kiriath-Jearim, and Beth-Gader [= Geder?] (1 Chr 2:50–51).

Ephrathah's prominent mention in the traditions of the Chronicler belies the memory of her as a matriarch of Israel. The messianic line passed through her (with Hezron) to Ruth, (with Boaz) to David and Bathsheba. Both her son Hur and her grandson Salma are called fathers of Bethlehem (1 Chr 2:51; 4:4). Mother Ephrathah would leave her name, not only to her clan, but to the region it inhabited.

LAMONTTE M. LUKER

EPHRATHAH (PLACE) [Heb *›eprātâ* (אֶפְרָתָה)]. Var. EPHRATH. EPHRATHITES. Area inhabited by the Judahite clan of the same name (Gen 35:16, 19; 48:7). The gentilic form, Ephrathite(s), in 1 Sam 17:12 and Ruth 1:2 (cf. 4:17) refers to the extended family of David from the village of Bethlehem in Judah, and the poetic parallelism of Ruth 4:11 pairs Ephrathah with Bethlehem. Thus it seems clear as a starting point that Ephrathah includes or is in the environs of the village of Bethlehem. (The gentilic form of Ephraim [RSV Ephraimite] spelled *›eprātî* in Judg 12:5; 1 Sam 1:1; and 1 Kgs 11:26 is an etymological coincidence.) Micah 5:1—Eng5:2—addresses Bethlehem Ephrathah as a clan (Heb *›elep*) within the tribe of Judah.

The Genesis occurrences of Ephrath (ah) may employ the *he*-locale (cf. BDB, RSV), but this is dubious given the *plene* spelling of the LXX in these verses and of the Hebrew occurrences everywhere else except 1 Chr 2:19 (where LXX also reflects the shorter variant). The only time the Hebrew text of Genesis actually records the abbreviated "Ephrath" is the second occurrence in 48:7 (absent in LXX), and this could easily be due to haplography.

According to the Genesis legend, Rachel died giving birth to Benjamin on the way to (Heb *bĕderek*) and a relatively short distance (Heb *kibrăt-hā›āreṣ*) from Ephrathah while traveling S with her husband, Jacob, from Bethel. The eponymous nature of the tradition would affirm that the patriarch was born in the Benjaminite tribal territory. 1 Samuel 10:2 likewise locates Rachel's tomb in the territory of Benjamin, and Jer 31:15 records a tradition that she was buried at Ramah, midway between Bethel and the

Benjaminite-Judahite border. Now 1 Chr 2:24, 50–52; and 4:4–5 recall Ephrathah as the matriarch of Kiriath-jearim, on the border between Benjamin and Judah; of Bethlehem, just S of Jerusalem; of Tekoa, just S of and visible, according to Jerome, from Bethlehem; and of Beth-Gader, which, if equal to Geder, was probably just W of Tekoa. In short, the memory of the region of Ephrathah is the Judahite area surrounding Bethlehem. This is congruent with a LXX verse (Josh 15:59a) lost to the MT due to homoeoteleuton, which assigns Ephrathah to the territory of Judah (see *BHS*, NEB). Similarly, Ps 132:6 pairs Ephrathah with Kiriath-jearim ('the fields of Jaar'), on the N border of Judah and the S border of Benjamin, in poetic parallelism.

This evidence renders von Rad's (*Genesis* OTL) suggestion that the Ephrath (ah) of Genesis is Ophrah, NE of Bethel, highly unlikely. LXX A of Josh 18:23 translates the Heb Ophrah as Aphra, though Gk text B reads Ephrathah; but LXX Judg 6:11, 24; 8:27, 32; 9:5 also translates Ophrah as Ephrathah, and this is clearly a different location. And while the Ephron (Heb *ʿeprôn*) of 2 Chr 13:19 may equal Ophrah, textual evidence does not equate it with Ephrathah: LXX transliterates as *Ephrōn* and the MT Qere is *ʿeprîn.*

A broader assessment of the history of traditions leads to the conclusion that Ephrathah was originally a Judahite clan named after its matriarch which settled in and around Bethlehem, stretching N of Jerusalem to the Benjaminite border at Kiriath-jearim and S to Tekoa; see EPHRATHAH (PERSON). The Davidic family of the clan came from the village of Bethlehem, a fact recalled by which translates Mic 5:1 with "Bethlehem, house of Ephrathah" (*oikos tou Ephratha,* Heb *bet-ʾeprātâ*). In other words, Bethlehem was a village locale within the greater expanse of the clan Ephrathah. As Israel's tribal structure gave way to the monarchy along with the rise of Ephrathah's most famous family as the dynasty, Ephrathah became more and more identified with Bethlehem, its royal village. Later glossators simply thought the two were synonymous (Gen 35:19; 48:7; Josh 15:59a [LXX]).

LAMONTTE M. LUKER

EPHRON (PERSON) [Heb *ʿeprôn* (עֶפְרוֹן)]. Son of Zohar, identified as a Hittite, who sold his field containing the cave of Machpelah to Abraham (Gen 23:8–17; 25:9; 49:29–30; 50:13). Abraham's wife Sarah had died, and he urgently needed a place to bury her. He negotiated with Ephron to buy just the cave of Machpelah, but Ephron insisted on selling the field and the cave for 400 shekels of silver. This was a very high price compared with other land sales, cf. Gen 33:19. Although Lehmann (1953: 18) has argued that the negotiations between Abraham and Ephron presuppose an extensive knowledge of Hittite laws and customs, Tucker (1966: 77–84) has convincingly argued that these customs are not specifically Hittite at all. Instead, they are not significantly different from local customs relating to real estate transactions. Furthermore, Hoffner (1969: 32) has shown that the names of persons called "Hittites" in the OT are almost all good Semitic names, e.g., Zohar, Gen 23:8; Judith et al., Gen 26:34; Ahimelech, 1 Sam 26:6; etc. Ephron is also a good Semitic name from *ʿpr* meaning "gazelle." Therefore it is most likely that Ephron was part of a group of Canaanites living in the hills near Hebron during the time of Abraham and not a Hittite from Anatolia.

JAMES C. MOYER

EPHRON (PLACE) [Heb *ʿeprôn* (עֶפְרוֹן)]. Three places in the Hebrew Bible and the Apocrypha have this name.

1. City captured by Abijah, king of Judah, along with its surrounding villages, from Jeroboam I, king of Israel (2 Chr 13:19). It is usually identified with the Ophrah of Josh 18:23 in Benjamin (not the Ophrah in Manasseh, Judg 8:32) and modern et-Taiyibeh about 4 miles NE of Bethel (M.R. 178151).

2. "The cities of Mount Ephron" (Josh 15:9). It is part of a boundary description of the territory assigned to Judah. This district has been difficult to locate precisely, but Boling and Wright (*Joshua* AB, 369) place it at el-Qastel, near Mozah.

3. A large and well fortified city which attempted to block the passage of Judas Maccabeus, who was on his way from Gilead to Judah along with his army. Judas captured the city, killed all the males, looted the city, and razed it to the ground (1 Macc 5:46–52; 2 Macc 12:27–29). It is located E of the Jordan river about 12 miles SW of the Sea of Galilee (M.R. 217216).

EPIC OF GILGAMESH. See GILGAMESH EPIC.

EPICTETUS. Epictetus was born between A.D. 50 and 60 in Hierapolis (Phrygia) and died between 120 and 140 in Nicopolis. As a youth he was a slave of Epaphroditus, a freedman of Nero. Epaphroditus was the one who enabled him to attend the philosophy lessons of C. Musonius Rufus and finally set him free. Therefore the well known story that Epictetus' lame leg was a result of torturing by his master (Celsus at Origen, *Cels.* 7.732) is hardly credible. First Epictetus himself taught philosophy in Rome; but when Domitian banished all the philosophers (A.D. 89), he transferred his school to Nicopolis (near Actium). His audience were part of the ruling class of the Empire (*Diss.* 1.11.1; 2.23.38; 3.4.1; 5.3; 7.1; 4.4.1–2).

Epictetus himself did not write anything. Of the originally eight books *Diatribai* (= Dissertationes) four have come down to us. They are notes of lessons, taken by Arrian, who also edited the famous *Encheiridion,* a compilation of the essential doctrines of Epictetus. The letter of dedication of Arrian to Gellius, which precedes the *Diatribai,* claims high proximity to the original lessons (accepted by Hartmann 1905 and the *communis opinio,* doubted by Wirth 1967). Apart from some redactional interferences by Arrian, the notes probably give us quite an authentic picture of Epictetus' philosophy and his way of teaching (Schmeller 1987: 164–66). The doctrine of Epictetus follows the Stoicism of Chrysippus to a great extent but also shows a certain Cynic influence (esp. in the Cynic ideal of the wise man, *Diss.* 3.22). Epictetus pursues popular philosophy, and so orthodoxy is irrelevant for him. Logic, physics, and the interpretation of philosophical texts must have been part of Epictetus' lessons but were apparently of very little importance (*Diss.* 1.4.5–17, 28–29; 17.13–19; 2.21.8–11). The only thing of value was the practical progress in the direction of one's *aretē,* "virtue" (esp. *Diss.* 1.4: *peri prokopēs,* "concerning moral progress").

The contents of Epictetus' philosophy are formed of two central themes, treated in multiple variations: the relation of man to the exterior things and to God. Fundamental to the first topic is his classifying of the reality accessible to man as "up to us" on the one hand (this is the realm of good and evil) and "not up to us" on the other hand *(ta eph' hēmin - ta ouk eph' hēmin)* (*Diss.* 1.22.10). The only thing which is up to us is the inner attitude to the ideas conveyed by our sense organs, the *chrēsis tōn phantasiōn,* "acquaintance of the mind" (*Diss.* 1.1.7): "conception, choice, desire, aversion, and, in a word, everything that is our own doing" (*Ench.* 1.1). Richness, fame, health, etc., however, are exterior and indifferent to man. Epictetus does not join the Stoics in their distinction within the "indifferent things," the *adiaphora,* between the natural and the unnatural ones: in his eyes there is only the one *diairesis,* "distinction," "reckoning," "classification" as one's own things or strange things (*Diss.* 2.6.24; 19.15.17); and happiness depends on the self-restriction to the former (*Fr.* 4; *Diss.* 1.1; 4.1; and often). Liberty consists in "desiring each thing exactly the way it happens. And how do they happen? As he that ordains them has ordained" (*Diss* 1.12.15; cf. 4.1.98–99; and often). The man who has aligned his own will with the divine will in this way is free from any determination by others and at the same time acknowledges the providence of God,

who has arranged and guides everything perfectly (*Diss.* 1.6; 16). Every destiny is destined by God (who bears nearly personal traits) and therefore man may, but also has to accept it trustfully (*Diss.* 2.16.42). This includes fulfilling one's duties to the fellow beings (*Diss.* 2.10). Not least because of their "diatribe" style the *Dissertations* are still today a most fascinating piece of literature.

THOMAS SCHMELLER

EPICUREANISM. A philosophical movement founded by Epicurus (341–270 B.C.). Born at Samos, Epicurus established a school of philosophy called "the Garden" (Gk *kepos*) in Athens after he settled there in 307–306 B.C. Only a few of his many writings have survived. We have three complete letters: *Letter to Herodotus,* a summary of his physics; *Letter to Pythocles,* a summary of astronomical and meteorological teachings; and *Letter to Menoeceus,* an introduction to his ethics. We also have a collection of sayings called *Kyriai Doxai (Authoritative Opinions),* another collection called "Vatican Sayings," and some fragmentary papyri; the most important papyri are the remains of his 37 books *On Nature.*

Epicurus' physical doctrines are the basis of his ethics. His physics is greatly indebted to Leucippus and Democritus, the founders of atomism in the 5th century B.C. Epicurus held that physical doctrines deal with things that cannot be perceived by the senses. These hidden things, he maintained, must be discovered by the faculty of reason, using as evidence the information provided by the senses. The universe is composed of empty space (void) and subperceptible bodies, atoms, which are indivisible and cannot change in any way. The atoms have only three properties, shape, size, and weight; they have numerous types of shape but no color, taste, or other perceptible properties. There is an infinite number of atoms, moving in an infinite void.

The atoms move extremely rapidly and collide frequently. By getting entangled with one another, they form complexes of various sizes. The largest type of complex is an entire world system. It is formed when a vast number of atoms come together and the heavier atoms gather in the center to form the earth, whereas the lighter atoms are squeezed out toward the periphery. This gathering and sorting of atoms may be described as a "chance" happening, since it is the spontaneous and necessary result of infinite atoms forming infinite combinations throughout an infinite time. There is an infinite number of worlds in the

universe, and worlds are continually being created and destroyed. Nothing is everlasting except the universe as a whole, the atoms in it, and the gods.

Epicurus thought that it is self-evident that there are gods. But since the universe consists of atoms and void and nothing else, the gods are nothing but complexes of atoms. They live outside any particular world system in the spaces that separate one world from another. Most important, the gods never intervene in the affairs of any world. They do not create or destroy worlds, and they have no concern whatsoever for human beings or anything else in the world. They do not punish or reward human beings. This doctrine is summed up in the most famous of Epicurus' sayings, "What is blessed and indestructible neither has trouble itself nor gives trouble to others, so that it is not subject to anger or favor; for all this sort of thing lies in weakness (*KD* 1)." The gods lead a perfectly happy life remote from the world, serving as models of happiness for human beings.

By his physics Epicurus hoped to free humans of their fear of the gods. He also hoped to free humans of their fear of death. The human being, he held, is composed of body atoms and soul atoms; and when a person dies, the soul is destroyed along with the body. There is no afterlife; hence "death is nothing to us" (*KD* 2). Freed of these fears, humans can devote themselves to the pursuit of their natural goal, pleasure. Epicurus held that the supreme good is pleasure, but his hedonism is modified by two considerations. First, he believed that the greatest pleasure is the absence of pain (*KD* 3). Second, he held that one must calculate pleasures carefully, so as to forgo some immediate pleasures for the sake of a maximum of pleasure. The source of all pleasures is a person's body; mental pleasures exist only insofar as they are thoughts about the condition of the body. It is not difficult to achieve a pleasant life since acute pains are of short duration and long-lasting pains admit of a preponderance of pleasure over pain (*KD* 4).

These first four *Kuriai Doxai* form the *tetrapharmakos*, Epicurus' fourfold remedy for leading a happy life. This remedy is the basis of Epicurus' ethics. It follows that justice, wisdom, and other traditionally recognized virtues are desirable only as a means to living a pleasant life (*KD* 5). Political life is to be shunned. The best life is a quiet life, among friends, devoted to the satisfaction of simple desires.

Epicurus' primary aim was to make people happy. To this end he directed his teachings at both the educated and the uneducated. His writings, which range from highly technical works to simple maxims, reflect this broad humanitarian concern. His followers gathered in groups to memorize and study his writings. After his death they celebrated his birthday each year. They regarded Epicurus as a savior who was more beneficent than any god was alleged to be. There was a tendency to accept Epicurus' doctrines as infallible; but there was also considerable dialogue with other philosophical schools, especially in the 2d century B.C. We know of this activity primarily through Philodemus and Cicero in the first century B.C. The best known follower of Epicurus is the Roman Lucretius (ca. 99–55 B.C.), who endeavored to convert the Romans to Epicureanism. He wrote a magnificent poem, *On the Nature of Things*, in which he set out in detail Epicurus' physics and extolled its ethical value.

Although Epicureanism enjoyed its greatest influence in the three centuries before Christ, it continued to have social and intellectual importance for some centuries afterward. The Epicureans continued to be denounced for denying providence and for making pleasure the goal of life. Because they rejected the influence of the gods in the world, they were often erroneously accused of being atheists. They were also denounced for denying the immortality of the soul and, in general, for being uneducated boors. But occasionally, even staunch opponents lauded Epicurus for the simplicity of his life, his courage in confronting a painful death, and his devotion to others. The Stoic Seneca, in particular, recognized ethical nobility in Epicureanism. The Epicureans seem to have gained a new vitality in the latter part of the 2d century (Lucian *Alexander* 61). Evidence of proselytizing activity is a long inscription of Epicurean doctrines put up by Diogenes (2d or 3d century) in the town of Oenoanda in Lycia, Asia Minor.

In Judaism there are traces of anti-Epicurean polemic in rabbinic literature (Bastomsky 1973; Fischel 1973). It is likely that Epicureanism had an influence on Wisdom (Reese 1970: 16, 65–66, 111–12). Philo opposed Epicurus' hedonism and denial of providence (Usener 1887). Josephus (*Ant* 10, §277–81) denounced the Epicureans for "throwing out providence" and "saying that the world moves spontaneously without a guide and administrator" (Unnik 1973). In Christian literature the Epicureans appear as

opponents of Paul (Acts 17:18). Generally, Christian writers are hostile to the Epicureans, although there are a few positive evaluations (Schmid *RAC* 5: 780–811). The similarities between early Christians and Epicureans were overestimated by De Witt (1954). There are common features, however, notably the rejection of divination and fatalism (Simpson 1941) and the instructional use of moral sayings (Betz 1985: 11–15).

ELIZABETH ASMIS

EPIGRAPHY, TRANSJORDANIAN. Transjordanian epigraphy was born in 1868 when a French missionary, Rev. Klein, found the famous Mesha stele at Dhiban (biblical Dibon). The inscription engraved on this stele is still the longest and the most important inscription ever found E of the Jordan. Ammonite, Moabite, and Edomite inscriptions were also discovered in controlled excavations, especially after World War II. The publication of many new seals and a careful analysis of their script and iconography, initiated by N. Avigad, permitted clear distinctions between the Ammonite, Moabite, and Edomite seals or seal impressions, the ductus of which are different from the Hebrew, Phoenician, and Aramaic seals.

Ammonite, Moabite, and Edomite epigraphy do not cover the whole field of Transjordanian epigraphy, either chronologically or geographically. These languages are represented in linear alphabetic inscriptions from the 10th century until about 500 B.C. The corpus under consideration thus does not include either the Deir ʿAlla tablets (Lemaire 1981: 98) or the Baluʿa stele (Drioton 1933; Ward and Martin 1964–65) (both of them still undeciphered and probably to be dated at the beginning of the 12th century B.C.). The Aramaic inscriptions from the Persian period and later (e.g., Ibrahim and van der Kooij 1983: 581; Milik 1958–59; 331–42) are not included here (see ARAMAIC SCRIPT), nor are the N Arabic inscriptions (mainly Thamudic and Safaitic; see INSCRIPTIONS, SAFAITIC).

Also excluded are Aram inscriptions from N Transjordan from the 9–6th century B.C., especially a few small incised inscriptions and the famous inscriptions on plaster found at Deir ʿAlla (Hoftijzer and van der Kooij 1976). The language of these last inscriptions is still a matter of dispute; there have been attempts to relate the language to Midianite, Ammonite, Gileadite, and Aramaic (e.g., Hackett 1984b, 1986, 1988; *BibAT*, 313–70; Puech 1987). According to this last attribution (Lemaire 1987a, 1988a; cf. Garr 1985; Kaufman 1988) the "*Book/text of Balaam son of Beor*, the seer of the gods" could be the oldest example of a literary Aramaic dialect of N Transjordan (Lemaire 1985; see DEIR ALLA [TEXTS]).

The Edomite kingdom, however, occupied not only part of S Transjordan, but also part of S Cisjordan from at least 734 B.C. (the capture of Elat by the king of Edom [2 Kgs 16:6; the reading "Edom" is to be preferred to MT's "Aram"]). Edomites occupied the Negeb in 597 B.C. and the S part of the Shephelah and the Judean mountains in 587 B.C. Edomite inscriptions can be found in Cisjordan as far N as a line from Lachish to Hebron and En-gedi.

Transjordanian paleography is not yet so well known as paleo-Hebrew epigraphy. However, it is possible to distinguish several features which show that separate script traditions arose for Ammon,

Moab, and Edom late in the Iron II period (Herr 1980; van der Kooij 1987). The linguistic features of Ammonite, Moabite, and Edomite show them to be Canaanite dialects closely related to Hebrew and Phoenician.

A. Ammonite Inscriptions

The identification and study of Ammonite epigraphy started about 1950 with the discovery of a few fragmentary inscriptions and the study of the characteristics of Ammonite seals (Avigad 1952). Today we can list the Amman citadel inscription, the Tell Siran inscription, the Heshbon, Tell el-Mazar, Deir ʿAlla, and Nimrud ostraca, a few fragmentary incised inscriptions, and about one hundred seals. To these texts in Ammonite script and language we may add a few Aram inscriptions containing Ammonite names.

1. Amman Citadel Inscription. This fragmentary stone slab (26 × 19.4 cm) was discovered in 1961 in the excavations of the SW crest of the Amman citadel in an Iron Age level. Now in the Archaeological Museum in Amman (J 9000), this inscription contains fragments of eight lines incised in limestone. The paleographic dating can only be approximate: from mid-9th century (Cross 1969a) to early 8th century B.C. (Horn 1967–68: 83; 1969: 8).

Because of the fragmentary state of this inscription, the reading of some letters is doubtful and the general interpretation unsettled. However, this inscription is probably a kind of building inscription, perhaps a royal inscription recording Milkom's oracle of "building instruction" for new defenses in case of a siege (diverted entrance, doors, ditches, or cisterns …) so that the country will be in security and peace.

2. Tell Siran Inscription. This inscription was discovered in 1972 in the excavations at Tell Siran (University campus), about 10 km NW of Amman. It is incised around a 10-cm-long bronze bottle which contained wheat and barley grains (Helbaeck 1974; Thompson 1983). Because the bottle was not found in a stratified context, the inscription's paleographic and historical dating can only be approximated in the late 7th century B.C. The text is complete and the reading certain:

1. "Deeds of Amminadab king of the Ammonites
2. son of Hizzilel king of the Ammonites,
3. son of Amminadab king of the Ammonites:
4. the vineyard and the garden (s?) and the *canal*
5. and the reservoir (s?).
6. May he rejoice and be glad

7–8. for many days and long years."

This inscription on a votive object records the foundation of a "garden of pleasure," a literary motive well known in Hebrew (Cant 4:12–15; 6:2.11; Qoh 2:4–6) and in Assyrian inscriptions.

3. Heshbon Ostraca. Several Ammonite ostraca, first published by F. M. Cross (1973b, 1975, 1976), were discovered in the Tell Heshban excavations (probably biblical Heshbon).

Ostracon 1 is a list of names: "Son of *Laha[y?];*" "ʿUzzîa (or ʿUzzîe[*l*]," "Son of *Rabe[l?]*," "Son of Psammî," "Nanaydan." It is probably to be dated ca. 525 B.C. Ostracon 2, probably also a list of names, though badly preserved, is of the same date.

Ostracon 4 seems earlier and could be dated ca. 600 B.C. It is a list of names connected with various items: small cattle, gum (?), silver, wine, hay (?), cakes (?) and cattle (?) Ostracon 11 (7th century B.C.) is fragmentary; it could mention small cattle and beasts of burden.

The ostracon most recently published by Cross (1986; Jackson 1983: 53–54), is likewise a list of names: "Elram son of *Hô[sha]l,* "Azarel son of […]," "Elazar son of Malakel," "*NQR* son of Elûr," "Elnadab (son of) Baraq …"

4. Tell el-Mazar and Deir ʿAlla Ostraca. Several ostraca dating from the 7th to 5th century B.C. have been found during the Deir ʿAlla (Ibrahim and van der Kooij 1983: 581) and Tell el-Mazar excavations: they are Ammonite or Aramaic. One of them, published by K. Yassine and J. Teixidor (1986; Yassine 1988) is a message with formulas close to those found in Phoenician, Hebrew, and Edomite epistolography:

" (Thus) said Palat: say to his brother to Abd*â*: are you well? And now …"

5. Nimrud Ostracon. Found in the Nimrud excavations in 1957, this ostracon (registered as ND 6231) carries a list of names written in columns on both its sides. Some of the names were identified as Transjordanian by P. Bordreuil (1979) and the whole list as Ammonite by J. Naveh (1980):

Recto: Column I. " (1) […] son of Anael, (2) Hananel son of Anael, (3) Manahem son of B*eya*del, (4) Shabel son of Uzzel, (5) Hananel son of Hazael, (6) GN' son of Menahem.

Column II. (1) Elnur son of Me (na)hem, (2) Elnur son of *Padi*el, (3) Zakarel son of Zinnor, (4) Nadabel son of Hannun."

Verso: " (1) Menahem son of Elyasha, (2) Elnur son of Mikael, (3) Ayanadab son of Haggay, (4) Eltamak (the launderer), (5) Akbar *s[on of E]l*natan."

Ostracon ND 6231 was probably found in the last Neo-Assyrian level of Fort Salmanasar. According to M. E. L. Mallowan (1966: 407) it could be "a list of foreign workmen employed by the Arsenal in the 7th century B.C." However the paleographic date of this ostracon is disputed and seems rather ca. 700 B.C.

6. Short of Fragmentary Incised Inscriptions. The Amman theater inscription, a triangular stone fragment, was discovered in 1961 in the course of excavations at the Roman Theater at Amman (Dajani 1967–68); it contains remains of two incised lines and is probably to be dated in the late 7th century B.C.

Three incised sherds from the Amman citadel, an incised sherd from Heshbon, an incised bronze cup from Umm Udheinah (Zayadine and Bordreuil 1986), and a still unpublished Deir ʿAlla sherd give the (fragmentary) names of the owners of the vessels.

Eight isolated letters were incised on the backs of the eyes of double-faced heads found in the Amman citadel (Zayadine 1973: 33–35; Bordreuil 1973b); they are to be dated in the late 8th or early 7th century B.C.

7. Ammonite Seals. Since the discovery of a few Ammonite seals in the Adoninur tomb (Driver 1953) and the first identifications of seals of unknown origin as Ammonite by Avigad (1952), the corpus of Ammonite seals identified as such by place of origin, paleography, onomastics, and iconography has continued to grow. The identification of seals as Ammonite according to these criteria can now be considered reliable, although the paleographic dating is still approximate. Several varieties of seals can be distinguished:

- 5 seals of "servants" (of a king): "Adonipelet servant of Amminadab" (ca. 667), "Adoninur servant of Amminadab" (ca. 667), "Beyadel servant of Padiel" (ca. 701), "Menahem son of Samak servant of (the) king" (ca. 700–650), "Milkomûr servant of Baalyasha" (ca. 587).
- 5 seals of various officers: "Abdâ steward *(nʿr)* of Elram" (7th century), "Battush steward of Barakel" (6th century?), "Hatay scribe of Adonur" (7th century), "Shôher the standard-bearer" (late 7th century), "Nazarel the gold/silversmith" (7th century).
- 2 seals of wives: "Alyah (maid)servant *(ʾmt)* of Hananel" (ca. 700–650), "Anamût (maid)servant of DBLBS" (ca. 700–650).
- 6 seals of women with a patronym: "Abyehay daughter of Yenahem" (ca. 700), "Elsagab daughter of Elshama" (ca. 700–650), "Biqeshat daughter of Abdyarah" (ca. 700–650), "Ala daughter of Amar" (ca. 700–650), "Abyehay daughter of Uzziyâ (ca. 600).
- 64 seals of men with a patronym.
- 27 seals with only one name.
- Several seals with various religious formulas: "[*To X son of*] Abnadab who made a vow to Asta (rte) in Sidon. May she bless him!" (late 7th century); "Seal of Mannuki-Inurta *blessed* by Milkom" (ca. 700–650).
- About 10 seals with partial abecedaries. The first four, five, eight, ten, or eleven letters of the alphabet are found. These seals were probably engravers' exercises.

From all these inscriptions, the Ammonite onomasticon is becoming better known (Jackson *WLSGF*, 507–21; O'Connor 1987). The god Milkom was the national god of Ammon, and is mentioned in blessing formulas, but does not figure in the onomasticon. El is the divine name used in many Ammonite personal names.

Ammonite script appears to be a branch of Aramaic script with certain local peculiarities, such as the square *ʿayin*, the flag-shaped *he*, the oval angular *ṭet* with one horizontal stroke, and the *kap* with triangular head. Most of the letters tend to be upright in stance, a feature also found in Phoenician and Aramaic writing. As in Aramaic, the heads of the letters with closed curves (*b, d, ʿ, r*) are no longer closed in examples datable to the end of the 7th century. The 6th-century Ammonite script so much resembles Aramaic script that in several cases only the language (e.g., Ammonite *bn* instead of Aram *br*) is a clear indication of a text's Ammonite origin.

The influence of Aramaic on the Ammonite culture is further attested by the sporadic use of Aramaic in inscriptions written by Ammonites. This seems the case with the Amman statue inscription (ca. 700 B.C.), which reads:

"*[I],mage* (or *[S]tatue)* of Yarahazar *[son of Za]kkur* son of Shani*p*."

This is probably the statue of a grandson of the Ammonite king Shanipu mentioned in the Annals of Tiglath-pileser III. The use of Aramaic by Ammonites seems also to be attested by a Neo-Babylonian seal (ca. 600) to be read: "To Tamakel son *(br)* of Milkom." After the fall of the Ammonite kingdom (582 B.C.), the Ammonites seem to have used Aramaic script and language with increasing frequency. So far, we have no evidence of the use of the Ammonite language after ca. 500 B.C.

B. Moabite Inscriptions

Since 1868 Moabite epigraphy has been dominated by the Mesha stele. However, other small inscriptions and several inscribed seals recently identified as Moabite have expanded understanding of Moabite epigraphy.

1. Mesha Stele. This famous stele, discovered in 1868 at Dhiban, was later broken by bedouin. C. Clermont-Ganneau succeeded in sending most of the pieces to the Louvre in Paris, where it was almost entirely reconstructed from a squeeze taken before the stone had been broken (Horn *WLSGF*, 497–505; see also MESHA STELE). The stele is a royal inscription of Mesha, king of Moab, glorifying the king and his accomplishments in the two fields of warfare and construction. This inscription seems to have been written towards the end of Mesha's long and successful reign: not only has the house of Omri been destroyed (by Jehu in 841), but also Israel itself has been annihilated (under Jehoahaz's reign [2 Kgs 13:3–7]); this latter political situation corresponds probably to ca. 815–810 (cf. 2 Kgs 13:20).

2. Fragmentary Inscriptions. Several small fragmentary inscriptions have been found in Dhiban (perhaps mentioning the "temple of Che[mosh]"), in Kerak (with the name of the father of Mesha: "Chemoshyat"), and in Balu'a (Zayadine 1986).

3. Moabite Seals. More than 30 seals can be identified as Moabite on the basis of their origin, paleography, onomastics, and iconography. The most important ones include a title: "To Chemosham (son of) Chemoshel the scribe," "Amoz the scribe," "To Paltî son of Maosh the herald *(mzkr)*," "To Menasseh son of the king." Several of the names include the theophorous element "Chemosh": "Chemoshmaosh," "Chemoshdan," "Chemoshzadaq," "Chemoshyahay," "Chemoshnatan." Most of the Moabite seals employ only one name.

Moabite script was close to Hebrew during the 9th and the beginning of the 8th century B.C., but at the end of the 8th and during the 7th century the ductus of Moabite underwent original development. The tails of letters became more curved, leaned to the left, and shortened, giving letters with descenders a squat shape; *mem* and *nun* developed large heads; and there developed a *ḥet* with the two vertical bars in the opposite direction. Later on, probably towards the beginning of the 6th century B.C., this script was influenced by Aramaic writing. Aramaic influence is perceptible especially in the *šin* executed in three strokes and in the open *ʿayin.*

No Moabite inscription currently known seems to be later than the 6th century B.C., but we know from an Aramaic inscription published by J. T. Milik (1958–59) that the cult of Chemosh was still attested in Moab in the late 4th–early 3d century B.C.

C. Edomite Inscriptions

The study of Edomite epigraphy is just beginning. Identification of inscriptions as Edomite is still largely conjectural.

1. Tell el-Kheleifeh Ostracon. The first Edomite ostracon was discovered at Tell el-Kheleifeh (no. 6043) and identified as Edomite by Naveh (1966: 28–30). The text is a list of ten names, the readings of which are sometimes uncertain: "Rael," "Bodqô[s]," "Shalem," "Qôsb[anah]," "Pagaqôs." Paleographically this ostracon is to be dated ca. 600 B.C.

2. Umm el-Biyara Ostracon. Discovered in Umm el-Biyara (Milik 1966), this ostracon contains the beginning of three lines difficult to read and approximately to be dated in the 7th century B.C.

3. Horvat ʿUzza Ostracon. Discovered in Khirbet/Horvat ʿUzza (a site in the Negeb) in a ca. 600 B.C. archaeological context, this ostracon is part of a letter:

" (Thus) said *Lumalak:* say to *Blbl.* Are you well? I bless you by Qôs.

And now, give the food …"

4. Fragmentary Inscriptions. An Edomite graffito was found on a small jar at Tell el-Kheleifeh; several fragmentary inscriptions come from Buseirah (Puech 1977); and at least two fragmentary inscriptions containing the DN Qôs have been found in the Edomite shrine of Qitmit in the Negeb (Beit-Arieh and Beck 1987). A small bronze weight inscribed *ḥmšt* (45, 35g) from Petra is difficult to classify: it may be Aramaic, Ammonite, or Edomite (Pilcher 1922; Bron and Lemaire 1983).

Other probable Edomite (or Aramaic?) ostraca have been found in the S Negeb: in Tell Aroer (Biran and Cohen 1982; Naveh 1985), and in Tell Malhata (Kochavi 1972).

5. Lachish Inscription (?). A small cuboid limestone incense altar found in Lachish is inscribed on one side; the script is Aramaic (end of 6th or beginning of the 5th century B.C.); but the language is probably Edomite or N Arabic: "Incense altar of Iyâsh son of Mahlay the *king*." After 587, the Edomites occupied S Judah and were later (after ca. 552) probably absorbed and controlled by the Arab confederation of Qedar. Accordingly *Iyâsh* could be either an Edomite prince keeping the title "king" within this confederation, or an Arabic king of Qedar (Milik 1958–59: 334, n. 4; Cross 1969b: 23; Lemaire 1974; 1988b).

6. Khirbet el-Kôm Ostraca? The relationship of the Khirbet el-Kôm ostraca to Edomite epigraphy has been disputed. If the categorization of the Semitic text as Edomite is sustained, the ostraca attest to the use of the Edomite language in Idumea in the early 3d century B.C. See KOM, KHIRBET EL- (OSTRACA).

7. Edomite Seals. About ten seals can be identified as Edomite. One, an early 7th century bulla with the inscription "To Qôsga[bar king of E]dom," is especially precious; the king Qôsgabar is mentioned in Sennacherib's annals (*LAR* 2 876 [667 B.C.]) together with Musuri, king of Moab, and Amminadbi, king of Beth-ammon.

Seven seal impressions on jars found at Tell el-Kheleifeh give us the name of a minister of the Edomite king: "Qôsanal servant of the king" (late 7th century?). A bulla with the same title was found at Buseirah.

Paleographically, the Edomite script seems to have been very close to Moabite and probably influenced by the Aramaic and Phoenician scripts from the 7th century on. However, Edomite script is the least attested of the Transjordanian scripts, making its typology difficult to describe. One feature of the ductus appears to be unique to Edomite: in most of the inscriptions from the 7th or early 6th century B.C., *dalet* is written with the tail pointing upwards, presumably to prevent confusion with *reš.*

Edomite names with the theoporic element "Qôs" appear, starting about the late 6th century, in cuneiform inscriptions (Dalley 1984; Joannes 1987), in Aramaic ostraca from Beersheba (Naveh 1979b) and Arad (Naveh 1981), and in Gk inscriptions (Milik 1958; 1960: 95–96; Israel 1979a) mainly from Marissa (Peters and Thiersch 1905; Oren and Rappaport 1984).

ANDRÉ LEMAIRE

EPILEPSY. See SICKNESS AND DISEASE.

EPIPHANES [Gk *epiphanes* (ἐπιφανες)]. An epithet or title assumed by various Eastern monarchs, it is in ordinary usage an adjective having such meanings as "evident," "conspicuous," "famous," "notable," "coming suddenly into view." Its common occurrence as a descriptive adjective modifying *theos,* "god," as well as, along with its cognate noun and verb, in descriptions of a manifestation of deity or of divine power, indicates that, even when used without *theos,* its full titular sense is "God Manifest."

The most notable, and apparently the first, to employ Epiphanes as a regal epithet were the Hellenistic kings PTOLEMY V of Egypt, who is so titled in the honorary decree of 196 B.C. that is recorded on the Rosetta Stone, and ANTIOCHUS IV of Syria, who ruled the Seleucid kingdom from 175 to 163 B.C. and is notorious in biblical history for his desecration of the temple at Jerusalem and his attempt to hellenize Judea (1 Maccabees 1–6; 2 Maccabees 4–10). Epiphanes was also frequently taken as a royal title by the

later Seleucids; and in Roman times we find it, for example, incorporated into the nomenclature of Antiochus Philopappus, the exile prince of Commagene in whose honor the Athenians erected in A.D. 114–116 the splendid monument the substantial remains of which are still in situ on the Hill of the Muses.

Official usage of *epiphanes* was not confined to regal titulature. In 48 B.C. the cities of the province of Asia set up an inscription at Ephesus in which they honored Julius Caesar as a *theos epiphanes,* and Eastern cities later made a practice of so honoring the Roman emperor and members of the imperial family. Hadrian's favorite, Antinous, is in fact described in such inscriptions by both *epiphanes* and its superlative, *epiphane-statos.*

In the NT, *epiphanes* occurs only at Acts 2:20, in the phrase "that … notable day of the Lord," quoted from the Septuagint (3:4) of Joel 2:31.

HUBERT M. MARTIN, JR.

EPISTLES, APOCRYPHAL. One of the literary genres of the writings commonly called "NT Apocrypha," along with apocryphal gospels, apocryphal acts, and several apocalypses. The Apocryphal Epistles appear to imitate the epistles in the canonical NT. However, the epistle form did not gain the popularity of other genres, and only a few letters are found among the apocryphal material (*NTApocr* 2: 90; and Enslin *IDB* 1, 166–69). Scholarly opinion as to the value and proper classification of the extant epistles varies greatly.

At one time the writings of the Apostolic Fathers were considered NT Apocrypha. Now there is general agreement that they constitute a separate category (Wilson *IDBSup* 34–36). Classification of the Apocryphal Epistles becomes even more difficult with the discovery of the Coptic gnostic library at Nag Hammadi. Several of these documents, such as the *Letter of Peter to Philip,* the *Apocryphon of James, Eugnostos the Blessed,* and the *Treatise On Resurrection,* are in epistolary form. Opinions vary as to whether the Nag Hammadi material should be included with NT Apocrypha, but the general consensus is that it should be classified separately (Wilson *IDBSup,* 35).

A fairly comprehensive list of Apocryphal Epistles includes: the *Epistle to the Laodiceans;* the series of 14 letters known as the *Epistles of Paul and Seneca;* the *Apocryphal Epistle of Titus;* the two short *Epistles of Christ and Abgarus* (Abgar); and the *Epistle of the Apostles.* Often a medieval document describing Jesus' physical appearance, known as the *Epistle of Lentulus,* is included among the Apocryphal Epistles. Several epistles are embedded in other writings. Thus *3 Corinthians* appears in the *Acts of Paul;* the *Epistle of Peter* is part of the *Kergymata Petrou;* and the *Epistle of Pontius Pilate to Claudius* is included in the *Acts of Peter and Paul.* English translations of these may be found in James (1924) and/or *NTApocr.*

Further, Schneemelcher (*NTApocr* 2: 91–93) calls attention to a few Apocryphal Epistles known only through references in other sources: Clement of Alexandria (*Prot.* 9.87.4) quotes from a *Letter of Paul to the Macedonians.* The Muratorian Canon mentions, by way of rejection, the *Letter of Paul to the Alexandrians.* A *Letter of Peter* may be mentioned in Opatus Milevis (*De schism. Donat.* 1.5), and a *Letter of John* is referred to in ps. Cyprian (*De Montibus Sina et Sion* c. 13).

DANA ANDREW THOMASON

EPISTLES, CATHOLIC. This term designates the group of seven NT documents consisting of James, 1 and 2 Peter, 1, 2, and 3 John, and Jude.

Toward the end of the 2d century the term "catholic" was utilized to describe an individual epistle. The first known example of this usage is by Apollonius (d. ca. 184 C.E.), who stated that the Montanist heretic "Themiso … dared to compose a catholic epistle imitating the apostle" (Eus. *Hist. Eccl.* 5.18.5), but it is not clear to which NT letter or apostle he is referring. Clement of Alexandria (d. 215 C.E.) called the letter arising out of the deliberations of the Council of Jerusalem in Acts 15:22–29 a "catholic epistle" written by "all the apostles" (*Strom.* 4.15). Origen, writing in the first half of the 3d century C.E., used "catholic epistle" several times to identify 1 John (*Jo.* 1.22.137; 2.23.149; *or.* 22.2.14–5; etc.) as well as 1 Peter (*Jo.* 6.35.175; *sel. in Ps.* 12.1128.56; cf. Eus. *Hist. Eccl.* 6.25.5). Dionysius, a pupil of Origen and later bishop of Alexandria (d. ca. 265 C.E.), suggested that John, the author of Revelation, was not "the apostle, the son of Zebedee, the brother of James, who wrote the Gospel entitled 'according to John' and the catholic epistle." Though Dionysius knew of 2 and 3 John, he evidently distinguished them from the Catholic Epistle of 1 John (Eus. *Hist. Eccl.* 7.25.7, 10–11).

It should be noted, however, that the term "Catholic Epistle(s)" was also used to describe extracanonical letters. Eusebius describes a highly esteemed collection of letters by Dionysius, bishop of Corinth (written ca. 170 C.E.), as "catholic epistles which he drew up for the churches," but they were not considered in any sense to be Scripture (*Hist. Eccl.* 4.23.1, 12). The term was also used for documents which may have been considered authoritative by some but which were later excluded from the NT canon. For example, Origen identifies the *Epistle of Barnabas* by this term: "Now in the catholic epistle of Barnabas, from which perhaps Celsus took the statement that the apostles were notoriously wicked men, it is recorded that …" (*Cels.* 1.63).

This early usage of the term to identify certain letters probably arose out of the theological use of "catholic" to distinguish the universal Church from a local congregation (Ign. *Smyrn.* 8:2; *M. Poly.* inscr.; 8:1; 19:2; cf. Cyr. H. *catech.* 18.23). 1 Peter and 1 John, the letter from the Council of Jerusalem, as well as some of the letters of Diognetus, and the *Epistle of Barnabas* were all written to a wider, more general audience. Therefore the term was originally used to identify the encyclical character of a document rather than its canonical or authoritative status. Later, in a work attributed to Leontius of Byzantium (d. ca. 543 C.E.), the author identified seven Catholic Epistles, and explained that "they are called catholic because they were not written to one group, as those of Paul, but generally [*katholou*] to everyone."

In the 4th century "Catholic Epistles" was used to identify the seven NT documents as a collection. After narrating the story of James, Eusebius (d. ca. 340 C.E.) explains that James is "the first of the epistles called 'catholic'. It is to be observed that its authenticity is denied, since few of the ancients quote it, as is also the case with Jude, which is itself one of the seven called 'catholic'; nevertheless, we know that these letters have been used publicly with the rest in most churches" (*Hist. Eccl.* 2.23.24–25; cf. 6.14.1). Athanasius, bishop of Alexandria (d. ca. 373 C.E.), lists the "seven epistles called catholic" in his NT canon (*Ep. fest.* 39.5; cf. *synops.* 28.292, 405; Epiph. *Haer.* 25.289; 31.251; 37.369; Gr. Naz. *Carm.* 474).

The use of "Catholic Epistles" to identify this collection of NT documents probably developed as a result of a number of factors. The other NT epistles had already been collected together and identified as "the epistles of Paul" (Eus. *Hist. Eccl.* 3.25.2; cf. 2 Pet 3:15–16). Certain of the non-Pauline epistles, notably 1 Peter and 1 John, had already been designated individually as "catholic," and the term could be used to describe the encyclical character of most of them (except perhaps 2 and 3 John, which are addressed to individuals; cf. comment above on Dionysius in Eus. *Hist. Eccl.* 7.25.10–11). As part of the canonical process, the collective designation was a natural development. But it also suggests that the significance of the term shifted to indicate not only their encyclical character but also their authoritative or canonical status, though this status was still under debate for certain of these documents (cf. Eus. *Hist. Eccl.* 3.25.2–4). This shift is reflected in the Western Church's use of the term *epistolae canonicae* to identify these same NT documents (e.g., Cassiod. *Div. lect.* 100.8; Childs 1984: 494–95; Kümmel 1975: 497–503).

As a collection, the Catholic Epistles were not always listed or placed in the same location in the NT canon. After the Gospels, Acts, and the epistles of Paul, Eusebius lists 1 John and 1 Peter, then

Revelation, and then the "disputed books" of James, Jude, 2 Peter, 2 and 3 John (*Hist. Eccl.* 3.25.2–3). Athanasius lists the Gospels and Acts and then places the seven Catholic Epistles before the epistles of Paul (*Ep. fest.* 39.5). This order is also found in several canon lists and mss. In fact, except for Codex Sinaiticus, all uncial mss which have both Paul's epistles and the Catholic Epistles place the Catholic Epistles first (Farmer and Farkasfalvy 1983: 7–48, cf. n. 2). Westcott and Hort attempted to restore this order because of its ancient attestation. However, the order still used today demonstrates the dominant influence of the canonical order found in Jerome's Vulgate (Zahn 1890: 376–83; Metzger 1987: 295–300).

As a term identifying this group of NT epistles, the traditional term continues to be a helpful designation. However, its use should not overshadow the specific and diverse situations faced by the different recipients, nor encourage neglect of the distinctive theology and ethical advice offered in each epistle.

On the character, contents, and canonical status of the individual epistles see their separate articles. See also CANON (NT).

ROBERT L. WEBB

EPITHETS, DIVINE. See NAMES OF GOD IN THE OT.

EPSILON. The seventh letter of the Gk alphabet.

ER (PERSON) [Heb *ʿēr* (עֵר)]. **1.** The firstborn son of Judah and a Canaanite woman named Shua, who married Tamar, possibly also a Canaanite, and who died childless in Canaan when Yahweh slew him for an unnamed wickedness (Gen 38:3, 6, 7; 46:12; Num 26:12; 1 Chr 2:3). The nature of Er's wickedness is unknown, although Skinner (*Genesis* ICC, 451) posits that it was simply an untimely, premature death, and not a crime, which would have indicated Yahweh's displeasure, while Braun (*1 Chronicles* WBC, 31) considers the reference unusual in light of the similar account regarding Onan and his sin, which may indicate haplography. On the origin of the Genesis 38 and 46 accounts see Skinner (pp. 449–50, 493) and Wilson (1977: 188–89). On possible origins of the Numbers account in Genesis 46 and the 1 Chronicles account in Genesis 38, see Budd (*Numbers* WBC, 286–88) and Braun (p. 30) respectively.

2. The son of Shelah, the son of Judah, and the father of Lecah (1 Chr 4:21). This Er is otherwise unknown, although Braun (p. 59) believes there is "nothing improbable in naming a child after his uncle" (see 1 above).

3. The father of Elmadam and son of Joshua according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:28). Manuscript D omits Er, substituting a genealogy adapted from Matt 1:6–15 for Luke 3:23–31. The name Er is unknown in the direct line of Jesus in any other biblical documents, including Matthew's genealogy, although the name is found elsewhere in the Bible (see above; Fitzmyer *Luke 1–9* AB, 501). Kuhn's (1923: 214–16) attempt to find in corrupted forms of names in 1 Chr 3:17–18 (MT) a source for Er as part of the group from Neri through Er is particularly unconvincing (even though it is endorsed by Schürmann *Luke* HTKNT, 201, n. 95); there is serious question whether the genealogy at this point is based on 1 Chronicles, which does not have Er in 3:17–18 MT or LXX (Marshall *Luke* NIGTC, 164; cf. Jeremias 1969: 295–96).

STANLEY E. PORTER

ER-BALA, DEIR. See DEIR ER-BALAH (M.R. 088093).

ERAN (PERSON) [Heb *ʿērān* (עֵרָן)]. ERANITE. The son of Shuthelah and the grandson of Ephraim who is the eponymous ancestor of the Ephraimite *mišpāḥâ,* "protective association or clan," the Eranites (Num 26:36). Noth (*IPN,* 208) claims that the information in Num 26:36 about the *mišpāḥâ* of Shuthelah and its subgroup the Eranites was not originally part of the basic clan list used to fashion the census list of Num 26:5–51 but was added to show that a segment of the *mišpāḥâ* of Shuthelah became independent. Noth's position is supported by the absence of Eran from the enumeration of Ephraimites in 1 Chr 7:20–29. Since 1 Chr 7:20–29 is generally regarded as an expansion of Num 26:5–51, the Chronicler probably had a version of the clan list in Num 26:5–51 from which Eran was absent.

The name Eran may mean "protector," "watcher." The LXX, Syriac, and Samaritan Pentateuch read Edan instead of Eran; this variant seems to be an instance of the confusion of *dalet* with *reš* in the old Hebrew script. The name Edan means "joy," "delight" (Noth, 223) and would have been given by parents to express their feelings about the newborn child.

DALE F. LAUNDERVILLE

ERASTUS (PERSON) [Gk *Erastos* (Ἔραστος)]. Name of three persons in the NT.

1. One of Paul's helpers who, along with Timothy, had been with Paul in Ephesus during his third journey (Acts 19:22). When Paul decided to leave there for Macedonia and Achaia, he sent Erastus and Timothy on ahead.

2. A person said by the author of 2 Timothy to have "remained at Corinth" (4:20). This implies he had been traveling with Paul and that after reaching Corinth Erastus stayed while Paul went on. The mention of Erastus in this epistle indicates he was known to Timothy.

Erastus no. 1 and Erastus no. 2 are very likely the same person, since both are traveling companions of Paul, both are known to Timothy, and both may be connected with visits to Corinth. The link to Corinth raises the question of whether Erastus no. 3, the city treasurer of Corinth (Rom 16:23), might not also be identical to Erastus 1 and 2; but this is uncertain. As will be noted below, he might have been a city-owned slave and thus hardly would have had the freedom to travel with Paul.

3. This man is listed among those sending their greetings to the readers of Romans (Rom 16:23). Since Paul quite certainly wrote Romans 16 from Corinth, Erastus must have been living there. Paul describes him as *ho oikonomos tēs poleōs,* which the RSV renders as "the city treasurer."

Theissen has observed that Paul normally does not speak of the worldly status of a member of the Christian community in his letters; he is usually interested only in services given to the congregation, although he does at times allude to social, for example, slave, status (1982: 75–76). Acts, on the other hand, often supplies such information (e.g., that Aquila and Priscilla were tentmakers, Lydia was a seller of purple). Theissen concludes that the exceptional instance in Rom 16:23 where Erastus' worldly occupation is noted "probably indicates status *worth* mentioning, that is, relatively high status" (1982: 76). Yet others, notably Cadbury, have held that Erastus in his municipal office of *oikonomos* would most likely have been a city-owned slave with very humble financial duties (1931: 51).

These differing assessments reflect a complex and ongoing debate over what can be known about Erastus. At issue is precisely what his social status and functions would have been as an *oikonomos,* a term whose meaning varied in time and place; it could denote either a high city office to which the person was elected or a far less significant post in financial administration normally held by a municipal slave. Related to the discussion about Erastus' role, and taking into consideration that Corinth in the mid-1st century C.E. was a Roman colony and therefore under *Roman* municipal organization, is the question of what Latin term corresponded to the Greek-named office of *oikonomos.* The witness of the Latin Vulgate, which translated the term as *arcarius,* figures prominently but not always conclusively in attempts to resolve that query. No consensus can yet be observed in studies on these matters and the controversy has been complicated by the possible relevance of an archaeological find.

In 1929 an inscription was uncovered in Corinth which mentions an Erastus who had the Latin-named municipal office of *aedilis,* a function usually translated into Greek as *agoranomos.* The inscription, dated to the mid-1st century C.E., is on a long paving block of Acrocorinthian limestone found near the theater where a street from the NE enters a square. The seemingly incomplete text refers to an Erastus who had had the street paved at his own expense in return for his aedileship. Should this *aedilis* be identified with the Erastus of Rom 16:23, i.e., was the Christian Erastus, the *oikonomos/arcarius (?),* the same man as Erastus the *agoranomos (?)/aedilis?* At issue is the question of identity between an *oikonomos* and an *aedilis,* and, most importantly, in the face of the probable non-equivalence of those offices, the question of whether the same person might have held both successively, the rank of *aedilis* being the higher.

For those who argue the improbability of the Erastus of Rom 16:23 and the Erastus of the pavement being the same person, e.g., Cadbury (1931: 58), the inscription of course adds nothing to our knowledge of the NT Erastus. But for some others who think it likely that the Christian *oikonomos* either (1) was at the time Paul mentioned him, or (2) later became an *aedilis,* the stone is illuminating. For example, Murphy-O'Connor, reflecting the first slant, has commented that since the responsibilities of an *aedilis* included the management of public markets, "it is not impossible that Paul first met Erastus in the latter's official capacity—that is when paying rent or taxes on his work space, which explains why he would call Erastus 'the treasurer of the city' " (1984: 155). Taking the second nuance is Theissen, who theorizes that Erastus could have been the *oikonomos* in the year when Romans was written and later have risen higher in his public career to the position of *aedilis* (1982: 83). This author points out that to be chosen *aedilis* one would have to have been a Roman citizen. Thus in his view Erastus was apparently a successful man who had risen into the ranks of local notables.

FLORENCE MORGAN GILLMAN

ERECH (PLACE) [Heb *ʾerek* (אֶרֶךְ)]. The biblical form of the Sumerian city of Uruk (the present-day Warka) built near the Euphrates on the left bank and undoubtedly on a subsidiary branch of that river. The name is cited only once, in Gen 10:10, where it appears with Babel and Akkad as one of the capitals of the country of Shinar, that is, of Mesopotamia. This unique reference does not correspond at all to the real importance of that city, which played an outstanding role in the process which led to urbanization and to what later became, perhaps for the same reason, one of the great religious centers of Mesopotamia.

First visited in 1849 by William K. Loftus, who conducted an investigation there for three weeks, then again in 1902 by W. Andrae, it was not until 1912 that regular excavations were initiated by J. Jordan on behalf of the German Oriental Society. Interrupted in 1913, the work was not resumed until 1928. From then until 1977, under the direction of A. Nöldeke, E. Heinrich, H. Lenzen, and J. Schmidt, excavations were carried out intensively, except between 1939 and 1954 because of World War II. But since the 33d expedition in 1977, ground surveying and other complementary works seem to have taken precedence over the intensive research and excavation. This is regrettable, given the number of remaining problems the solution of which would require additional study of that site.

The site is one of the largest in Mesopotamia. An irregular city wall almost 10 km long enclosed an area of nearly 5 km^2 which extended more than 3 km from N to S and over almost the same distance from E to W. Three main tells dominated the center of the site: one of these was occupied by the ziggurat of Eanna, the second by the sacred sector of the god Anu, and the last by a large temple from the Seleucid era, called the *Südbau* by the excavators. Nevertheless, these three focal points of the city did not contain all of the most important monuments, since the palace of Sin-kašid, the temple of Gareus, and the palace of the Parthian era had their place in the area which extended between the central sanctuaries and the city wall, an area where the living quarters and perhaps the gardens were found.

According to the investigation carried out in the Eanna sector, the history of this city began early in the Ubaid period in the 5th millennium B.C., but nothing is known of its real importance, or of its characteristics at that time. It was around 3700/3600 B.C. that forms of a new culture appeared which scholars have called "Uruk culture." Until now this is the site which has yielded the most precise information on this phenomenon, and phases 4 to 6 show very clearly the high degree of sophistication attained by the young city. Phase 3, which corresponds to the so-called Jemdet Nasr era, (at the very beginning of the 3d millennium B.C.), shows certain changes in its nature, but no decline. The city seems to have played an important role during the first half of the 3d millennium since the Sumerian King List cites Uruk as the second city after the Flood to have exercised hegemony. Furthermore, the legendary traditions of Enmerkar, Lugalbanda, and Gilgamesh all take place in and around Uruk, also attesting to its fame and importance. It was only during the ED period that the natural dynamism of the first city of Sumer seems to have weakened, but it was still from that place that the first abortive attempt was made to establish an empire by Lugalzaggesi (about 2400 B.C.). It was also this city which was the first to react after the dark era of the Guteans and that, about 2200 B.C., signaled the Neo-Sumerian revival, of which Ur rapidly became the actual center. It was not to play an important historical role from that time on, but continued as an active cult center the sanctuaries of which were the object of particular care by the rulers of the 3d Dynasty of Ur, Babylon, and Assyria.

The ziggurat which stood at Eanna was built on older terraces by Ur-Nammu, and important works of maintenance and restoration were carried out by Hammurabi (18th century B.C.) and later by Sargon II of Assyria (8th century B.C.) In the Seleucid and Parthian eras the city experienced increased economic activity because of the exploitation of its palm groves. The temples of Anu and Antum, the *Südbau,* and the Gareus temple testify to this vitality. Nevertheless, it was actually its role in the origins of urban civilization that gave Uruk its importance. The efforts of German archaeologists have rightly focused on this period by studying two different and complementary work sites, the Eanna and the White temple.

It was at Eanna that the archaeologists defined the phases of the Uruk civilization and the antecedents of the Ubaid period. For the first time Mesopotamia saw the development of complex constructions of several architectural units founded on the association of two types: the first was a tripartite plan inherited from the Ubaid period but pushed to an unequal degree of perfection. It was made up of a large central room of rectangular shape with buildings along the sides. These individual units were built in numbers of two, three, or more, around open spaces or joined to terraces covered by porticoes which represented the second type of construction: a mosaic decoration of cones or a set of redans and of abutments which adorned the front walls or the large indoor rooms. The quality and extent of this architecture, its requirements in lumber, and its suggestion of pomp lead one to think that only a really widespread political or religious power could have accomplished this work. But other novelties that can be understood only in such a context also made their appearance: such were the first cylinder seals which showed the growing role of trade as well as the birth of writing which, initially in the form of pictographs, was progressively transformed into cuneiform writing during the ED period. Economic life was based on the exploitation of the land, undoubtedly in the form of large areas with important shares belonging to the ruling power. But the role of trade in the development of urbanism should not be underestimated; for wood, metal, bitumen, and certain qualities of stone were totally lacking in Sumer; and the rise of the city could not come about without a regular supply of these raw materials. The birth of cities is as much the consequence of the development of agriculture as it is of trade.

There remains a problem that is not yet totally solved. The German excavators, and those who followed them, considered the buildings unearthed in the Eanna precinct as religious in nature. Nevertheless, a strict analysis of the given findings does not make for absolute certainty. Therefore that sector could also be interpreted as the political power center the religious function of which, while generally accepted, is certainly not certain.

On the other hand, the other major section of the city occupied by the White temple is certainly of a religious nature. The building itself clearly appears as a temple of the tripartite plan, equipped with two platforms, one with its back to the furthest wall, the other facing the first one in the position of an offering

table. The temple is set up on a terrace 10 m high, assuring it of a dominant position in the city. The divinity worshipped in this temple could have been Anu, the god of the sky.

Uruk is a key site of the Sumerian period for understanding the birth of urban civilization and also for elucidating the organization of sanctuaries and Middle Eastern forms of worship.

ERI (PERSON) [Heb *ʿērî* (עֵרִי)]. A son of Gad, grandson of Zilpah and Jacob, and ancestral head of the Erites. His name is entered in the fifth position among the seven sons of Gad in the list of the descendants of Israel that went to Egypt (Gen 46:16; cf., *Jub.* 44:20). Likewise, in the census reported in Numbers 26, he is the fifth mentioned of the seven descendants of Gad whose names were adopted as clan names (Num 26:16—LXX 26:25). The LXX readings in Gen 46:16 (*Aēdis*) and Num 26:25 (*Addei*) reflect the interchange of orthographically similar *reš* and *dalet,* which could easily have occurred at various stages in the development of the Hebrew script.

RICHARD W. NYSSE

ERIDU (PLACE). The name of the southernmost Sumerian city, the present-day Tell Abu Shahrain, situated on the right bank of the Euphrates, about 15 km SW of Ur in a region that was a complete desert at the beginning of this century. Located in a vast field of ruins measuring 5 by 4 km, Tell Abu Shahrain is of roughly circular shape, and about 600 m by 500 m across, and rises to more than 25 m at its highest point.

Archaeological interest was drawn to Eridu because even in antiquity the city was renowned for its old age. According to Sumerian sources it is the world's most ancient city, predating even the legendary Flood. The first campaign, reduced to an impressive number of small investigations scattered around the site, was conducted in 1918 by R. Campbell Thompson. No spectacular discovery was made, but the site's early date was established and the existence of a prehistoric phase was recognized. H. R. Hall led a second expedition there in 1919, lasting only two weeks. It was not until 1946 that another mission, led this time by the Department of Antiquities of Iraq under the direction of F. Safar and S. Lloyd was sent to Eridu. Its results were important for two basic reasons: (1) for the first time a ceramic sequence was established for the Ubaid period in S Mesopotamia and (2) a series of monuments found at the foot of the ziggurat provided data concerning the emergence and development of the Sumerian temple.

Regarding the first point, the stratigraphic sequence obtained at Eridu, the beginning of which shows similarities to the Samarra ceramics and dates back to the last centuries of the 6th millennium B.C., remained the sole source in the S until the undertaking of regular excavations at tell Oueli near Larsa in 1975. Its importance can be seen in archaeological literature; nevertheless, the research carried out over the last decade, particularly at Oueli, but also the comparative studies made with the N sites and with Susa, led the archaeologists to make slight changes in the sequence, and, at times, to modify more drastically the conclusions from the chronology of the Ubaid era based on the testimony of Eridu.

The conclusions concerning the emergence of the Sumerian temple based on Eridu must also be revised. The study of the front of the ziggurat of Ur-Nammu (ca. 2100 B.C.) had led excavators to engage in detailed research at the foot of the ziggurat. They had isolated 17 architectural levels on the elevation of the terrace which supported the temple. Going back in time, it was at levels 6, 7, 8, 9, 10, and 11 that a comprehensible architecture was discovered; levels 12, 13, and 14 showed a gap in the evolution; finally levels 15, 16, and 17 yielded elements of monocellular constructions which were considered to be the first temples. But numerous reasons (gap in the phases 12–14, absence of sacred morphological characteristics at levels 15–17, scantiness of excavated areas) led to a sure recognition of temples only in the buildings found at level 8 and also, probably, at levels 9–11 despite the gaps that characterize them. Under these

conditions, one would not find at Eridu the first stages in the formation of the temple: when the temple does appear, at level 8 and perhaps a little before, it already possesses its essential features.

Among the other discoveries at Eridu, mention must be made of a house from the Uruk period found in a good state of preservation because it had been filled with sand shortly after being abandoned. Also, a palace from the ED III period was unearthed on one of the tells near Eridu. It showed certain characteristics very similar to those of other palaces of that era, but the city associated with it is unknown; consequently, its role does not appear to be clear.

The site seems to have been more or less deserted in the 2d millennium B.C., but perhaps the worship offered to Ea was carried on in a city devoid of all other activity. Ea, whose Sumerian name was Enki, was in fact a very important god in the Sumero-Akkadian religion: the god of wisdom, friend of man, to whom the organization of the earth is attributed. It is possible that a scribal school functioned in the shadow of his temple, but, to the deep regret of various excavators, nothing of it has been found. Nor does anything prove that the exhumed temple at the foot of the ziggurat was even dedicated to Ea.

ESARHADDON (PERSON) [Heb *ʾēsar-ḥaddōn* (אֵסַר־חַדֹּן)]. The son of the Assyrian king Sennacherib, who ruled (ca. 681–669 B.C.) after his father's assassination (2 Kgs 19:37 = Isa 37:38). In Assyrian the name is spelled *Aššur-aḫa-iddina* and means "the god Ashur has given a brother." In other words Esarhaddon had one or more elder brothers, a fact borne out by other sources.

Ezra 4:2 provides information otherwise unknown from biblical or Assyrian records, raising some questions about Esarhaddon's relations with Judah. According to Ezra when the exiles were permitted to return to Jerusalem by the Achaemenid Persians, they began to rebuild the temple. The narrative then says "the adversaries of Judah and Benjamin" approached the newly returned exiles offering to participate in the construction program; for, they said, they had worshipped the same god since the days of Esarhaddon "who brought us here." The newly returned exiles refused cooperation and so "the adversaries" began to plot against them. The question is, who were these "adversaries"?

The kingdom of Judah is mentioned only once in the royal inscriptions of Esarhaddon (*ANET*, 291), according to which Manasseh, king of Judah, along with a number of other rulers in Syria-Palestine provided exotic building materials for the royal construction program at Nineveh. The implication is that all of these rulers, including Manasseh, were vassals of Assyria. This impression is borne out by the military activities of Esarhaddon, who campaigned through Syria-Palestine several times in his attempt to conquer Egypt but never mentions hostilities with Judah. Obviously he had a reasonably secure hold over the area.

Returning to the question of the "adversaries" and their claim that Esarhaddon had brought them to Judah, the following is a possible solution. Elsewhere (see SENNACHERIB), it was suggested that Sennacherib, the predecessor of Esarhaddon, led a campaign against Jerusalem late in his reign. In true Assyrian style some of the local population were carried off into exile and replaced by foreign immigrants. This process could have spread over many years into the early part of the reign of Esarhaddon. Relevant to this suggestion is the statement in 2 Chr 33:11–13 that the Assyrians took Manasseh as prisoner to Babylon. This may well have happened at the time that foreigners were

transported to Jerusalem in the early reign of Esarhaddon. This proposal is hypothetical, however, and we must await further evidence on this question. See *CAH* 3/2/23.
A. KIRK GRAYSON

ESAU (PERSON) [Heb *ʿēśāw* (עֵשָׂו)]. Son of Jacob and eponymous ancestor of the Edomites (Gen 25:25; 36).

A. Etymology

The etymology of the name Esau has not yet been clarified (cf. Nabatean: *ʿsw;* Thamudic/Safaitic: *ʿys* [?]; Minaean: *ʿysw* [?]). Uncertainty concerning the meaning of the name Esau is already evident in Gen 25:25 (cf. Gen 27:11–24), where the explanations of the name—"red" (Heb *ʾadmônî*) and "hairy" (Heb *śēʿār*)—are etymologically related, not to Esau, but to Edom (Heb *ʾĕdôm*) and Seir (Heb *śēʿîr*) respectively. Philo's attempts to provide a suitable etymology—"oak" (Gk *drys*) and "a thing made up" (Gk *poiēma*)—are linguistically unreliable (see also *Sacr* 17; *Congr* 61; *Fuga* 39:42).

B. Israelite Traditions

Esau was Isaac and Rebecca's firstborn son (Gen 25:25) and Jacob's older twin (Gen 25:22–25). In the OT he is described both as an individual person who represents a specific lifestyle (the hunter) and as the eponymous ancestor of a people (Edomites or Idumeans). These two variant representations are amalgamated in the different traditional compilations especially in the Pentateuch, and are seldom distinguished. At the same time the tradition is dominated by an additional theme of the unequal brothers, which, because of the one-sided perspective of the Israelite authors, leads to a relatively negative impression of Esau/Edom. See also Noth 1948: 103–11; Thompson 1974: 280–93; Westermann 1981: 54–62.

The contrast between the twins is already anticipated before their birth in God's proclamation that the older brother will serve the younger (Gen 25:23). The two brothers are clearly distinguished by their physical appearance (Gen 25:25; 27:11–23). The older son is his father's favorite (cf. later *Jub.* 35:13) while the younger is favored by his mother (Gen 25:28). Esau chose the profession of a hunter (Gen 25:27; 27:3, 7, 30), while Jacob became a shepherd, "a cultured man in tents" (Gen 25:27). The younger brother bargained for the older brother's birthright (Gen 25:29–34) in exchange for a dish of lentils, and deceitfully obtained the firstborn's blessing from Isaac (Gen 27:1–40) with his mother's help. Jacob fled to Harran (Gen 27:41–46; 28:1–5) to escape Esau's vengeance. In contrast to Jacob, Esau married several of the "daughters of Canaan" (Gen 26:34; 28:9; 36). After Jacob's return the brothers reconciled (Gen 32:1–22; 33:1–16) and settled in different regions: Jacob in the hilly central area of Palestine and Esau in Seir-Edom of S Transjordan (Gen 32:4; 33:16; 36).

The association of Esau with Edom, alluded to in Genesis 25, becomes the essence of Genesis 36 (cf. 1 Chr 1:35–54). Esau married Edah (36:2) and Basemath (v 3; as well as—in a secondary literary source—Oholibamah, cf. 36:2, 14). Esau's sons, Eliphaz and Reugël (vv 4, 10)—as well as Jeush, Jalam, and Korah (vv 5, 14)—issued from these marriages. The tribal constitution of Edom, wherein the inhabitants of Edom were divided into two tribal units, the "sons of Seir" ("Horites"), and the tribe of Esau, is evident in this schema. Esau appears as the eponymous ancestor both of the tribal units and of the people as a whole. Therefore his sons from Adah and Basamath appear as separate tribes—their sons in turn are considered secondary tribes and/or clans. Inasmuch as "Edom" refers to the name of a country, it is apt that Edom could either refer to the geographical boundaries of Edom or the people of Edom (see Gen 36:1, 8, 19; Jer 49:8, 10; Obad 6, 8–9, 18–19, 21).

The equation " (patriarch's son) Esau = country/people Edom" (Gen 25:30; 32:4; 36:1, 8; Jer 49:8, 10; Obad 6, 8–9, 18–19, 21; Mal 1:2–3; 1 Chr 1:35) and Esau's settlement in Seir (Gen 25:25; 27:11, 23; 32:4; 33:14–16; 36:6, 8; Deut 2:2–8, 12, 29; Josh 24:4) represent the Israelites' perspective of their neighbor. This perspective intends to explain the ethnic kinship of the two peoples on the one hand and their political differences on the other. It is probable that Esau, the patriarch's son, originally had little to do with the Edomite tribal ancestor or tribal unit. Like his brother Jacob, Esau was originally at home in Ephraim of Transjordan (cf. Gen 32:3, 31–32; 33:1–16). The negative theme of Jacob vs. Esau of Genesis

25 is especially evident in the political contrast between Israel/Judah and Esau = Edom (and later Idumea) delineated by the oracles about Edom in Jer 49:8, 10; Obad 6–21; and Mal 1:2–3. See Weippert 1971: 230–35, 437–62; *TRE* 9: 291–99; Kornfeld 1985; Maag 1957; Moritz 1926.

C. Jewish and Christian Traditions

God's proclamation transmitted in Mal 1:2–3—"and yet I love Jacob and hate Esau"—retained its effectiveness in numerous variants within many Jewish and Christian sources throughout many ages (cf. Rom 9:13; Ps-Philo *L. A. B.* 32:5). Therefore within Jewish and Christian literature Esau represents the godless and jealous individual who is rejected by God because of wicked deeds and evil disposition (*Jub.* 15:30; 35:13; *4 Ezra* 3:16; Philo *Leg All* III 2, 88–89, 191–93; *Sacr* 17–18, 81, 120, 135; *Ebr* 9–10; *Quod Det* 45–46; *Migr* 208; *Congr* 61, 129; *Fuga* 24, 39, 43; *Virt* 209–10; *Praem* 62; *Sobr* 26–27; *Quod Omn* 57; *b. Šabb.* 145b–147; *b. B. Bat.* 16b; *b. Sanh.* 12a; *b. Giṭ* 57b; Heb 12:16; *1 Clem.* 4:8; *Pre. Pet.* H II 16; *Ps-Clem.* 16:6; *Acts Thom.* 84). In the same manner Esau becomes the symbol for the corrupt age (*4 Ezra* 6:7–10), the evil passions (Philo *Heres* 251–54), or Rome (*j. Taʿan.* 4:8, 68d; *b. ʿAbod. Zar.* 2b; *Gen. Rab.* 65:21, 67:7; *Tanh. Ter.* 3). See also *EncJud* 6: 854–59.

One of the few positive treatments of Esau from this period comes thirdhand from Eusebius of Caesarea, citing a quotation of Alexander Polyhistor on the works of a 1st-century B.C.E. Jewish scholar, Aristeas the Exegete (*p.e.* 9.25.1). Aristeas uses a tradition where Esau marries Bassara from which marriage issues Job. However, other traditions of the period have Jacob killing Esau in a civil war (*Jub.* 37–38 esp. 38:2; *T. Jud.* 9; *b. Soṭa* 13a; *Gen. Rab.* 100: 63d).

The presentation of Esau follows a similar vein within the NT. In Rom 9:10–13 Paul interprets Esau's rejection typologically and undergirds his interpretation with two scriptural proofs (Gen 25:23 LXX; Mal 1:2–3 LXX). Esau and Jacob are children of the same father and mother as well as the same age; their paths of life, however, are completely different. God's sonship and promise, based solely on God's free choice and not on priority of birth or one's own merits, is exemplified in the destinies of the two brothers. Though in Heb 11:20 the author notes that Isaac blesses both Jacob and Esau, yet in Heb 12:16–17 the author maintains the normative Jewish interpretation of Esau. Because Esau's behavior led to a complete loss of God's blessing, he represents therefore the individual who is lewd and godless (see *TDNT* 2:953–54). See also *Bibel-Lexikon*^{2}, 428; *BHH* 1: 437–38.

ESCHATOLOGICAL MIDRASHIM. See FLORILEGIUM.

ESCHATOLOGY. Derived from the Gk word *eschatos,* meaning "last" or "final," eschatology is teaching about "the last things." It refers to a time in the future when the course of history will be changed to such an extent that one can speak of an entirely new state of reality. This entry surveys eschatological ideas in the biblical world, and it consists of three separate articles. The first focuses exclusively on the idea as it is expressed in the Hebrew Bible. The second, which picks up on the OT material, mainly surveys the so-called intertestamental writings. The third article focuses mainly on eschatology in the NT. See also APOCALYPSES AND APOCALYPTICISM.

———

A. Introductory Issues

At least three things should be said as part of the prologue to a discussion of OT eschatology: (1) the term *eschatology* is used with widely differing meanings; (2) the term, as applied to OT literature, dates only to the 19th century; and (3) despite the previous point, the term sounds vaguely archaic today, reminiscent of overly systematic treatments of ancient Israelite thought. Of these observations, the first especially requires some discussion. The word *eschatology* derives from the Greek term *eschatos,* which has a variety of meanings depending upon the larger frame of reference: farthest extent in space, final element of time, and last piece of money. The term *eschatology* has been prominent in theological discourse as a reference to the last things in a worldwide and historical sense, e.g., an apocalyptic, cosmic cataclysm and a new age of conflict followed by utopian bliss. Of course, it is possible to speak about an individual's ultimate fate, e.g., the afterlife, but this discussion *senso stricto* is not coterminous with eschatology, which is most often innately communal and cosmic in its reference.

Another preliminary issue involves the uniqueness of eschatological notion in ancient Israel. Any discussion of eschatology in the OT must raise the question of whether or not ancient Israel, as reflected in the OT, possessed eschatological notions which serve to distinguish it from other ANE cultures. This particular issue has been important since the earliest discussions of the topic of OT eschatology. For those interested in religio-historical questions, e.g., Gressmann and Gunkel, Israel's religion grew out of its larger ANE environment. Gressmann argued that OT eschatology derived from royal language and ideology common throughout the ANE; whereas, for Gunkel, this larger environment involved perceptions of an *Urzeit* and *Endzeit*, primal time and a return to such time in the final days. Discussions of eschatology were often couched in this conceptual framework. Wellhausen, on the other hand, sought to focus discussion of Israel's eschatology on the unfulfilled predictions of Israel's prophets. As a result, he had no particular reason to discuss eschatology within the larger ANE context. Now, many decades after the work of Gressmann, Gunkel, and Wellhausen, it seems appropriate to maintain that no evidence from ANE civilization attests the level of eschatological expectation which we find in Israel; but this may be a function of lack of evidence, rather than of something wanting in these cultures.

A related but by no means identical issue is the relationship between two conceptual terms *eschatology* and *apocalypticism.* At the outset it seems important to affirm that all apocalypticism involves eschatology, but not all eschatology involves apocalypticism.

All apocalyptic literature in the OT, which may be conveniently subdivided into early (e.g., Isaiah 24–27; Zechariah 9–14; Joel 3–4—Eng 2:28–3:21) and developed (Daniel 7–12), involves some notion of a momentous time during which Yahweh will act decisively to create a time of weal for Israel. Nonetheless, not all literature which has been labeled as eschatological shares the characteristics of this aforementioned apocalyptic literature, whether early or developed. Further complicating the relationship of eschatology and apocalypticism is the fact that whereas one may readily speak of apocalyptic literature, it is much more difficult to use the term *eschatological literature.* The term *eschatological* is not in the first instance appropriate as a literary description. Eschatological notions appear in prose and in poetic texts. There is

no constellation of characteristics for eschatology that allows regular literary classification; and this is in contradistinction to the use of the term *apocalyptic literature,* which refers to vision reports such as those found in Daniel 7–12. Nonetheless, it is rare to read a discussion of OT eschatology without finding reference to Amos 5:18–20, a text which is regularly termed eschatological.

B. Sources of OT Eschatology

If by eschatology one means a form of radical orientation to the future, which may involve a sort of social and/or cosmic arrangement fundamentally different from that which currently exists, then it is possible to speak about the development of an eschatological tradition complex in ancient Israel. To pose the issue in this way is to refine the discussion by a reference to a particular method of biblical study, that of tradition history. (See TRADITION HISTORY.) The ingredients which make up the development of an eschatological tradition complex in Israel are several. These elements, in conjunction with the message of the Israelite prophets as well as the catalyst provided by the events surrounding the year 587, the year in which Jerusalem fell, configured the eschatological tradition in its most vigorous form.

1. Patriarchal Promise Traditions. There are at least three important sources for the eschatological tradition complex. First, there are promise traditions often associated with the so-called patriarchs. Although there is considerable debate about the time during which these promises were conceptualized as well as debate about the most original elements of the promise, it seems clear that the form of the promise articulated by the Yahwist involved the promise of both land and progeny. This promise becomes much more specific, however, than the general terms of land and progeny would imply. After a careful examination of the relevant texts, one discovers that the land promised to the patriarchs is in fact the land that Israel controlled during the time of the united monarchy, so Gen 15:18–20. Moreover, the notion of progeny is defined in terms of "a great nation." This phrase, too, suggests a national context for the formulation of the patriarchal promise traditions. Quite apart from chronological considerations, this casting of the promise tradition holds out certain expectations for Israelite existence, national boundaries as well as national identity. From the perspective of the time of Israel's forebears, Israel's true existence lay in the future, namely, during the time of the Monarchy.

2. David-Zion Tradition. Another tradition important for the development of eschatology focuses on the Davidic line and the city of David, Zion or Jerusalem. Through the instrumentality of David and in terms consistent with the notion of the patriarchal promise, Israel secured a place on the ANE map as a nation with certain distinctive boundaries. However, the institution of monarchy in Israel involved more than matters of boundary and nationhood. There was, first of all, regnant in the S kingdom or Judah, the promise that a member of the Davidic line would always reign on the throne, so 2 Samuel 7. Such an expectation was based on the so-called Davidic Covenant or Davidic Promise, a grant by Yahweh to the house of David (see Ps. 132). Secondly, and more generally, the inception of monarchy itself in Israel meant the introduction of some central ANE concepts involving the king, so especially Gressmann. When a just king sat on the throne, there were certain expectations, projections into the future about what would occur—peace, fertility, righteousness, and justice in the land—to name some of the more basic features, cf. Isa 9:2–7; 11:1–9. A third part of the kingship tradition in Israel involved the particular seat of David's rule, the city of David, or Zion. There was, as Gerhard von Rad has clearly shown, a basic expectation concerning this cosmic mountain city upon which the Deity dwelt and from which the Davidic heir ruled. For the expectations concerning the Deity's dwelling, one need only look at Psalm 46 or 48 to discover the notion of the inviolability of this special divine and human royal residence. It was a city which, because of the presence of the Deity, could not be defeated. Such virtual mythic connotations created a special aura for the Davidic heir, as well as a certain expectation about the future fate of the city. In sum, the royal traditions in Judah and, more generally, the united Israel, involved expectations which were not difficult to speak about in the future tense: there would always be a Davidide on the throne, a just Davidide would engender future blessing for Israel, the city of David would exist securely in the future. This tripartite monarchic tradition in Israel involved notions not only specific to Israel, but common to ANE ideas about kingship and the inviolability of the divine dwelling as well. These future expectations

therefore entailed both powerful historic as well as mythic elements, linking as they do the patriarchal promise traditions to the inception of the institution of monarchy in Israel.

The Day of the Lord is prominent in many eschatological texts. This notion belongs to the monarchic tradition complex, representing the dual motifs of Yahweh's combat and ensuing victory along with the subsequent enthronement of Yahweh as king. For Israel this day was, early on, a cause for rejoicing. However, the Day of the Lord becomes as well a day of Yahweh's assault on his enemies both inside and outside Israel, see Amos 5:18–20; Isa 2:11–17; Zeph 1:11–2:3; Joel 2:1–2. In postexilic literature, the Day of the Lord entails both positive and negative consequences, e.g., Isa 61:2. The importance of the Day of Yahweh traditions in early apocalyptic literature is suggested by the prominence of the phrase "on that day" in the texts such as Zechariah 12–14.

3. Sinai Covenant Traditions. The third tradition, that of the Sinai covenant, which is important for an understanding of OT eschatology, is not linked genetically with either the promise to the patriarchs or the monarchic tradition complex. E. Sellin emphasized the importance of the Sinai tradition when he argued for the early and specifically Israelite origins of OT eschatology. See COVENANT. Moreover, this covenant tradition often seems to stand in tension with the two aforementioned traditions. The Sinai covenant tradition involved the contract which the people of Israel made with their god, Yahweh. This contract included at its core a series of stipulations which the people had agreed to obey. Put another way, this idea of treaty incorporated the notion of future compliance or noncompliance. These alternate future possibilities were spelled out in the treaty's blessings or curses. Should the people follow the treaty's dictates, then a blessed existence and proper relationship with the Deity would ensue (see Deut 28:1–14). Conversely, should the people not follow the treaty's dictates, then a cursed existence and an improper relationship would eventuate (see Deut 27:16–46). The Sinai covenant has a distinctive future orientation spelled out clearly in the treaty's blessings and curses. Thus, although the Sinai covenant created a community which might be construed as present or existing at any given moment, there were decisive future expectations about the existence of this community, expectations which could be discussed in terms of a blessed and/or a cursed existence in the future.

C. Prophetic Eschatology

1. Preexilic Prophets. All these ingredient traditions: patriarchal promise, monarchy, and Sinai covenant have expectations involving the future. It lay with Israel's prophets to sharpen and even to challenge some of these future expectations. Although it is possible to speak of a prophetic tradition, for the purposes of this discussion it will suffice to think about the prophets as spokesmen utilizing various traditions already identified, in particular, the Sinai covenant tradition. The prophets seemed to have functioned as those who articulated the ways in which Israel had violated the covenant and then spelled out the character of the forthcoming punishment, understood properly as the covenant curses. The character of the Day of Yahweh as a day of negative expectation resounds throughout the so-called classical prophets. In time, the negative picture of the Day of Yahweh becomes so bleak that it sounds as if an entirely new aeon will dawn, one of catastrophic punishment and of national annihilation, so especially the formulations of Amos, Zephaniah, and Ezekiel. Because the future foreseen by these prophets is so different from that which Israel had experienced and had expected—namely, these unexpected eventualities: the forfeiture of national existence, the defeat of Zion, the devastation of the temple, and the loss of a monarch—such views are, not without reason, construed as eschatological, that is, final or of an end time. The picture drawn by the prophets out of the covenant curse scenario does mean an end to a prior mode of existence. Here there was, as it were, a negative eschatology. The good expectations involving kingship, statehood, and a national peaceful existence, are abrogated. The closer one comes to the decisive defeats of Jerusalem in 597 and 587, the more decisive is the punishment for Israel as a nation. An end, an eschaton, of statehood is foreseen. This eschatology which the prophets articulated could be construed as stemming directly out of the Sinai covenant traditions. Nonetheless, at least one of the other traditions, that of monarchy, figured prominently as well. To be sure, there is negative judgment upon individual kings for not having performed their royal duties, so for example, the section on kingship in the book of Jeremiah (Jer 21:11–22:30). The last oracle of this Jeremianic text

would seem to preclude the possibility of any Davidide in the future. Nonetheless, this same prophetic tradition, in Jer 23:5–6, is able to foresee a time during which a Davidic heir will sit on the throne and will rule properly. The Davidic tradition would seem, almost inexorably, to provide not only a means for judging kings but also for thinking affirmatively about some future king who might preternaturally rule with justice and righteousness. Put another way, what seems at first glance to be a uniformly negative eschatology involves, almost inherently, positive future expectations for kingship as well. It is this component of the monarchic tradition which leads to so-called messianic expectations, namely, the expectation of some anointed human leader, in all likelihood a king, who will facilitate weal for Israel. See MESSIAH.

The Sinai covenant traditions, just like the kingship traditions, allowed for both negative and positive expectations. For most of the prophets and for most of the time prior to 587, it was appropriate to speak of covenant curses. According to their oracular preachments Israel had violated the covenant stipulations. And yet, for those Israelites who believed that the covenant relation was still in force even after the catastrophe of defeat and exile by the Babylonians, it became possible to think of a time in which covenantal blessings might be possible, so the exilic texts of Isaiah 35. Such conviction depended, of course, on the presupposition of radical covenant obedience as this was articulated in the texts which describe the so-called new covenant (Jeremiah 31 and Ezekiel 11). Concomitant with this expectation of covenant blessing in the exilic and postexilic periods, it became possible to iterate patriarchal promise traditions which now held out the hope for restored national boundaries and resettlement in the land. It is not too much to say that all three traditions so far adduced, patriarchal promise, monarchy, and Sinai covenant, figure prominently in the strong, positive hopes—one may even say eschatological expectations—which were evoked during the 6th century B.C.E. Prior to the national defeat Israel had expressed the language of eschatological doom. Then, at another and later time, the language of eschatological blessing became appropriate.

2. Postexilic Prophets. During the early restoration period Israel's eschatological traditions, which by this time entailed language of both weal and woe, began to develop in new and decisive ways. With the rededication of the temple, the stage was set for the realization of the eschatology of weal proclaimed most prominently by Deutero-Isaiah. Such realization did not, however, occur. In a dimly understood process, the eschatologies of weal and woe were conjoined and became what some have termed "early apocalypticism." This process in which the eschatological traditions intensified and coalesced was, no doubt, influenced by the frustrated expectations for restoration in the late 6th and the 5th centuries. All one has to do is compare the promises for blessing which date to the time of the Exile, e.g., Isa 54:11 ff., or from the time of the early restoration period, e.g., Hag 2:6 ff., with the realities of the late 6th and 5th centuries B.C.E. to appreciate the contrast between what was expected and what actually happened. The radically new "good time," with the streets paved with gold and with unprecedented crop yield, did not arrive for those who had returned to the land from exile. As a result, these expectations for a blissful restoration were frustrated, though still very much alive. Interestingly, in this development of eschatological traditions into apocalypticism as expressed in apocalyptic literature, the notion of a good future is linked with that of future doom. Zechariah 9–14, for example, envisions prospects for a glorious future, along with prospects for woe within Israel, so for example, Zech 14:2–5. Moreover, the character of what will happen moves beyond the world as humans had known it: "on that day there shall be neither cold nor frost, there shall be continuous day" (Zech 14:6–7a). Such expectations would seem to constitute a major step beyond the notion of a day of defeat or a day of radical covenant loyalty proclaimed by the preexilic prophets. One senses, in such texts as Zechariah 14, the notion of a fundamentally different sort of cosmic and social order, one in which the experience of time, natural order, social existence, religious affiliation, even Yahweh's lordship, will be of a fundamentally different sort from that which had existed earlier. Whereas earlier eschatology had focused on an "end," with apocalyptic literature a new age is foreseen. There is something beyond "the end." Concern with the new time appears as one hallmark of apocalypticism.

From this coalescence of earlier Israelite traditions into the eschatological tradition complex which developed in the late monarchic period, and then from the development of the eschatological tradition complex into apocalyptic literature in the early restoration period, the further step of fully developed apocalyptic visions, which were inherently eschatological, was not a large one. Here, with the eschatological visions of Daniel, there is a specific form—the apocalyptic vision—for articulating the complex conceptual apparatus of a radically new future, that of apocalypticism. With the configuration of the eschatological tradition complex into apocalyptic literature, the history of the development of OT eschatology is at an end. Postbiblical eschatology is prominent in the OT apocryphal literature, in the Dead Sea Scrolls, and in the NT.

D. Dynamics in OT Eschatology

1. Historical Development. At this point in the discussion it seems appropriate to make at least three fundamental observations. First, OT eschatology should be discussed within the context of historical development. Old Testament eschatology is best understood as a complex of traditions evolving out of earlier and discrete Israelite traditions. Old Testament eschatology is not essentially a systematic theological term, and therefore it is difficult to discuss eschatology as if one were describing one basic concept. Israel's eschatological expectations changed considerably over time. In this regard it is important to note that much of OT eschatology during, for example, the 6th century, was an intra-Israelite development. To be sure, there were notions about kingship which were common to the larger ANE environment. However, the patriarchal promise tradition as well as the traditions about the Davidic heir and the Sinai covenant were Israel-specific. Israelite eschatology becomes therefore much different from future expectations discernible in other Syro-Palestinian or Mesopotamian cultures.

2. Social Context. Second, not all Israelites shared OT eschatological expectations. There were other circles in Israel which, especially during the time of the Exile and, even more so, during the time of the restoration, did not use eschatological or early apocalyptic language. For example, the wisdom circles, as these are preserved in the books of Proverbs, Job, and Ecclesiastes, did not seem to share the notion of a radical historical judgment or a fundamentally different sort of future. Moreover, there were circles whose views are preserved in the book of Ezra-Nehemiah and also in the book of Chronicles, which perceive Israel's existence during the Persian period in noneschatological ways. The same may be said for the so-called Priestly circles associated with the P-source. Put another way, OT eschatology was not an all-Israelite phenomenon but was one important way of perceiving reality. In all likelihood the eschatological perception of reality was experienced by those who were not necessarily in charge of either Israel's political or religious institutions.

3. Historical Period. Third, OT eschatology, namely, the development of a certain tradition complex, seemed to evolve and intensify in particular historical conditions, conditions in which all Israel or even certain groups in Israel were not flourishing. For example, the intensification and the integration of the separate traditions during the time of the classical prophets occurred at a time during which Israel was under threat first by the Neo-Assyrian Empire and then secondly by the Neo-Babylonian Empire. This was a time of dire threat to the independence of Israel, and of course, eventuated in the demise of the nation-state. Then, too, the tradition complex of OT eschatology developed decisively in the Persian period. This too was a time in which the emergent identity of the restored Yahwistic community was under significant threat. Moreover, during this time there appeared to be fundamental dissensions occurring within the Yahwistic community, with various groups vying for leadership and authority. Threat to the community could come from without or from within. With this dual threat during the time of the Persian period, the specific historical contexts were set for the development of the eschatological tradition complex into apocalypticism and its literature configuration as apocalyptic literature.

E. OT Eschatological Expectations

Having described the development of the OT eschatology tradition complex, it is necessary to highlight briefly some of the major features in the fully configured eschatological tradition complex. The eschatological expectation is heavily dependent upon the notion of Yahweh's divine kingship and rule. Yahweh is expected to arrive again and act decisively in the future so as to effect the institution of his

realm. Military imagery is a prominent way of describing this action, though interestingly, "natural" events such as famine, drought, pestilence may create submission to his larger purpose. In fact, the entire cosmos may be affected by Yahweh's military action, e.g., Joel 3:15, Isa 34:4. During this conflict Yahweh's enemies, whether inside or outside Israel, will receive their just desserts. Only in later apocalyptic literature does the fate of those loyal to Yahweh become the subject of considerable reflection. Nonetheless, Isa 25:6–9 does hint at the fate of those upon whom Yahweh looks with favor. Since Yahweh's imperium is cosmic, all people have a place in it and therefore all people, including those outside the boundaries of Israel, may be construed as venerators of Yahweh (cf. Isa 2:1–4) and hence included in his kingdom.

With Yahweh enthroned, one expects a time of paradise or peace. Such good times may be understood in terms of the monarchic traditions, namely, through the expectations associated with a just and divine king on the throne. Such expectations include proper administration of justice, fertility for the land, and the lack of military confrontation. Although the emphasis in eschatological tradition is on Yahweh as king, there is on occasion a place for a righteous Davidide, one who will rule with equity and beneficence. This expectation gives rise to so-called messianic texts, literature which attests to the hope of a radically good Davidic ruler, Ps 18:50; Ezek 37:23–24. Yahweh remains, however, the ruler par excellence.

The future time may be described using the language of the covenant, so Isa 34:16, in which the future age is described with explicit reference to what is presumably a covenant text or book. The eschatological future is a time in which the covenant will be obeyed, so Jeremiah 31, which means *eo ipso* that covenant blessings will ensue. The specifics of covenant blessing language are not dissimilar to the sorts of things foreseen as part of Yahweh's just rule. So too, the patriarchal promise traditions figure in the eschatological scenario by indicating that Yahweh's rule will center not on a heavenly throne, nor just in the city of divine residence, but throughout the land which had been promised to Israel's forebears. That Israel will be great in number, the other side of the patriarchal promise, seems to be presumed in much of the eschatological tradition.

By way of summary, two texts, one which predates the destruction of 587 B.C.E. and one which dates to the postexilic era, may serve to encapsulate critical emphases in the OT eschatological tradition complex—Ezek 7:2b–3a, "An end! The end has come upon the four corners of the land. Now the end is upon you …"; Zech 14:9a, "Yahweh will become King over all the earth …" For further discussion see Smend *TRE,* 10: 254–64.

A. Introduction

Although the term *eschatology* does not occur in the ancient sources, its widespread use in modern criticism reflects the correct notion that the OT, the Jewish writings of the Greco-Roman period, and the NT frequently assert that God will act decisively in the future and that a different state of affairs will ensure. The term and its traditional use have been misleading, however, because they have often been governed by theological agendas that have attempted to extrapolate from the texts a unified and systematic doctrine about the "end of the world" or one's state and fate at the end of one's life. Also problematic is the implication that *all* the texts designated as "eschatological" envision a decisive end to the present order and the beginning of a totally new order.

Given the variety that contemporary scholarship has begun to discover in the sources, it is appropriate to hear the texts, each on its own terms, and to develop categories that reflect the differences and points of continuity—synchronically among contemporaneous texts and diachronically from the oldest OT strata through the noncanonical Jewish texts to the NT and beyond. This task, which awaits doing, is substantial; in what follows it is possible only to sample typical texts from the Hebrew Scriptures and from the Jewish writings up to ca. 100 C.E. Crucial in the analysis is the assumption that expressions of religious thought must be interpreted with a view toward the specific situations and experiences that gave rise to them and influenced their formulation.

B. The OT

1. Pentateuch. Composing their traditions when Israel already lived in its land, the authors of the J and E strands of the Pentateuch created a narrative world in which God, of old, had made covenant promises that would be fulfilled in the future, when Israel would be a great nation and inhabit the land of Canaan. While the fulfilled promise of land may have been understood as vindicating Israel's covenantal status, the promises of innumerable progeny and a superior relationship to the nations may well have been seen at times to await fulfillment in the future.

The inseparable relationship between present and future is a basic structural component in the covenantal scheme of the Deuteronomist. As initiator and overseer of the covenant, Yahweh deals justly with Israel in the present, rewarding and punishing the people for past action; or Yahweh is expected to do so in the future because of their present actions. This causal relationship between past and present or present and future is explicated in detail in Deuteronomy 28–30, according to two scenarios in chaps. 28–30 and chap. 32. Chapter 28 describes the blessings and curses that will be dispensed alternatively when Israel obeys and disobeys. Chapter 30 posits the chronological succession of blessing and curse, the latter culminating in exile; and it predicts that Israel will repent and God will restore the people to their land. In the Song of Moses (chap. 32) sin is punished through oppression by the enemy, but deliverance is not

triggered by repentance, which is never mentioned; the arrogance of the enemy provokes the divine judge to vindicate the blood of the people.

The Deuteronomic scheme, with and without the element of repentance, becomes paradigmatic for later writers; and Jewish texts from the Greco-Roman period explicitly refer to Moses and Deuteronomy to explain or speak to their present situation. The connection between past and present or present and future is cited in several ways. Present prosperity is evidence of Israel's faithfulness and God's blessing, and present calamity indicates a sinful condition that calls for repentance. Alternatively, in good times one may use the threat of punishment to effect repentance of perceived sin, while in bad times one may encourage the righteous to be faithful and await intervention by the vindicator of the covenant.

2. Eighth-Century Prophets. Although the 8th-century prophets (Amos, Hosea, Isaiah, and Micah) were not primarily predictors of the future, such prediction was essential to their role as critics of a society which they perceived to be violating the stipulations of the covenant. The sinful nation could expect divine punishment.

The time of that punishment is usually vague, but it is imminent enough to constitute a threat to the prophets' audiences. According to Isaiah God will shave Israel with a hired razor (Assyria) before a child soon to be born reaches the age of moral discrimination (7:14–16). Amos warns those who are anticipating salvation in "the day of the Yahweh" that they will experience terror and death (5:18–20); and in a rare usage, he warns of the "end" (*qēṣ*) that awaits the people (8:2).

Occasionally these prophets anticipate divine blessing when Israel's punishment is sufficient and the people have returned to Yahweh. An important aspect of such consolation is the idea that God's action in the future will replicate the past. For Hosea, after a return to the wilderness, Israel will be betrothed again to God, and this covenant will restore primordial peace on the earth (2:14–23). Although an "end" is not mentioned, a new beginning lies in the future.

3. Exilic and Postexilic Prophets. a. Jeremiah. Although the final literary form of Jeremiah interweaves oracles of the 6th-century prophet with Deuteronomistic interpretations, later writers treated it as the work of "Jeremiah." Thus, Jeremiah decries the sins of Judah and Jerusalem and announces that in the imminent future Judah's leaders will be exiled, the temple and city will be destroyed, and the people will go into captivity.

The prophet also anticipates a restoration of the former state, when the dispersion of Israel and Judah will return to the land from which they had been exiled (23:1–8; 29:10–14), Jerusalem will be rebuilt (31:38–40), and the Davidic king will rule (23:5–6). Like Hosea, Jeremiah expects a replication of the past; but God's new event will supersede the old. The God of the Exodus will be known as the God who has returned the dispersion (23:7–8). In the new covenant with the house of Israel and the house of Judah, the Torah will not have to be taught, because it will be written in human hearts (31:31–34). Different from the earlier prophetic books, Jeremiah specifies when the people will return from captivity—after 70 years are completed (29:10), when "you seek me with all your heart" (29:13; cf. Deut 30:2). Although, for Jeremiah, Yahweh is the executor of covenantal curses and blessings, the prophet also depicts this God as the universal judge of the whole human race ("all flesh"; 25:30–33).

b. Ezekiel. Prophesying in Babylon between 593 and 571 B.C.E., Ezekiel interprets the Exile as punishment primarily for idolatry and anticipates an end to that punishment and the return of God's blessing. In his oracles about the future (chaps. 34–37), he elaborates motifs found in Jeremiah. The sheep of Israel, abused by their shepherds and devoured by the wild beasts (the nations), will be sought out by God and returned to the mountains of Israel. There God will make a covenant of peace with them, banish the beasts from the land, and nourish and lead them, placing them under the care of the Davidic shepherd (chap. 34). In 36:22–36 God's restoration is described as a new creation. God will cleanse Israel of its sin, put a new spirit in its people, and replace their heart of stone with a new heart; the desolate land will be made like Eden. Chapter 37 extends the metaphor, describing the resurrection and re-creation of the dead nation. Then Israel and Judah will return to their land and be joined as one nation, governed by the prince and shepherd David in the presence of the God who makes an eternal covenant of peace with them and dwells among them in the sanctuary. The importance of the city and sanctuary are evident in chaps. 40–

48, where Ezekiel records an extensive vision that balances chaps. 8–11. The old polluted sanctuary from which God's glory departed (chap. 10) will be replaced by a new temple to which the glory will return (43:1–9). Like Jeremiah, Ezekiel calculates the time when the punishment of Israel and Judah will be complete (4:5–6).

c. Isaiah 40–55. The oracles of this unnamed prophet of the Exile (usually called "Second Isaiah") are devoted entirely to the good news of Israel's deliverance and the punishment of its captor, Babylon. Different from Jeremiah and Ezekiel, this text does not mention the return of the N tribes; central are Mother Zion and her children (51:17–52:3) and the anticipated restoration of Jerusalem (54:11–12), to which God now returns (40:2–5, 10–11).

As in all the earlier texts, the Exile is punishment for sin—now paid in full, indeed doubly (40:2). Thus the return is an act of divine justice, in which Yahweh sets things right with Judah, having also recompensed Babylon, the arrogant and idolatrous conqueror (chaps. 46–47; cf. Deut 32:26–43).

The notion that God's act of deliverance will replicate the past is elaborated as the essence of the text. Constitutive for Israel is the Exodus, which is described, however, in language that is at home in Genesis 1–2; God has "created," "formed," and "made" Israel. God's creation of Israel in the past is the guarantee of the coming salvation, which is depicted in heavily mythical language as a new Exodus led by God (52:11–12; 40:3–5, 9–11) and as a new creation in which the old dragon is conquered (51:9–11), the world is reshaped (40:4; 45:2), and the wilderness is made fertile like Eden (51:3; see also Isaiah 34–35, which derives from this prophet or a disciple). The former things that God did and declared of old are contrasted with the new things God creates and declares (49:3–7). In another metaphor Israel's vindication is described as the servant's resurrection from death (52:13–53:12; cf. Ezekiel 37). As in Jer 23:7–8, Yahweh's new act of salvation will vastly overshadow the old (Isa 43:18–19). One may debate how literally to interpret the prophet's mythical language about re-creation; however, the use of this imagery about the past to color the picture of the future indicates that a new beginning is clearly envisioned.

Although Second Isaiah frequently refers to Yahweh as king—a staple in Israelite royal ideology—these chaps. give no hint that the prophet expects a restoration of the Davidic dynasty. To the contrary, Cyrus is identified as Yahweh's anointed one (45:1), David is demoted to "a witness to the people, a leader and commander for the people" (55:4), and the everlasting covenant with David is democratized and applied to the nation as a whole (55:3).

Whereas earlier prophets were vague about the time of God's future act of judgment and Jeremiah and Ezekiel specified the time of its consummation, Second Isaiah takes the radical step of identifying God's great act of deliverance with a historical event, the rise of Cyrus, the king of Persia. The future has broken into the present.

d. Isaiah 56–66. A disciple of Second Isaiah (called "Third Isaiah") composed these oracles in Judea in the decades following the return from Babylon. The style, vocabulary, literary forms, and concerns of the master have been radically transformed by bitter disappointment; the oracles of hope and promise have not been fulfilled. In the place of Israel, God's "servant" and "chosen one," we hear of the "servants" and "chosen ones," who stand in opposition to the sinners (65:1–16), whose misdeeds in Jerusalem are catalogued at length (chaps. 56–59; 66:1–3). The situation is reflected in mixed oracles of salvation and judgment. In contrast to Second Isaiah's optimistic announcement of the imminent theophany and triumphant return to Jerusalem, this prophet confesses the sins of an impure people and desperately appeals for a theophany (63:15–64:12), in which Yahweh will come with fire and storm to execute judgment on "all flesh" (66:15–16; cf. Jer 25:30–33). This judgment is associated with God's creation of new heavens and a new earth (65:17; 66:22) and a new Jerusalem (65:18–25; see also chap. 60), in which the righteous will live to old age and enjoy the covenantal blessings in a world that will revert to the peace of Paradise (65:25). Like Second Isaiah there is no place for a Davidic king in Israel's future; the prophet is the one who is anointed (61:1).

Essential to Third Isaiah's message is a sharp contrast between the present evil time, which will end in a universal judgment that will eradicate evil, and the creation of a new cosmos (heavens and earth) in which

God's primordial intentions are realized. Although the prophet does not mention an "end" and a new "beginning," the contrast between the present and a future that returns to primordial beginnings seems to justify the term *eschatology.* The term *apocalyptic eschatology* (Hanson 1975) seems problematic, however. Third Isaiah's situation and message have clear parallels in the early apocalypses (see below, C.1); but Isaiah's message is not embodied in the form of a mediated and interpreted revelation (apocalypse), as is the case in the later works. To preserve this distinction, which is an important fruit of recent scholarship (see the articles on APOCALYPSES AND APOCALYPTICISM), it seems better to define Third Isaiah's eschatology as "dualistic," emphasizing the contrast and caesura between old and new, or as "mythical," highlighting the appeal to primordial beginnings.

e. Isaiah 24–27 ("The Isaiah Apocalypse"). This text is actually not an apocalypse but is a collection of prophetic materials of disputed date, placed variously between 500 B.C.E. and the 3d century. Several features are of significance. The description of a broken and disintegrated cosmos exceeds the mythical language of Isaiah 34. Against this background the prophet anticipates a divine judgment that will replicate the Deluge and eventually punish the rebellious hosts of heaven and kings of the earth (24:17–23). The finality of this judgment and of the concomitant punishment and salvation is indicated in the prediction of a resurrection of the righteous in 26:19. Although this could be a metaphor for national restoration (as in Ezekiel 37), the promise that God will swallow up death, the great swallower (25:8), suggests a finality that merits the term *eschatology.* In any case later authors will draw on these texts in Isaiah to inform their descriptions of a resurrection of those who are physically dead.

f. Haggai and Zechariah. These two Judean prophets agree and also significantly disagree with their contemporary, Third Isaiah. Haggai expresses his chagrin over the returnees' failure to rebuild the temple (1:2–6); and like Second and Third Isaiah he uses language of cosmic disturbance to describe the events that will attend its rebuilding (2:6–8), which he and Zechariah anticipate in the very near future. However, different from Second Isaiah and Third Isaiah, Haggai and Zechariah tie their hopes to the Davidide Zerubbabel, whom Zechariah identifies as "the Branch" predicted by Jeremiah (Zech 3:8; 6:12–13; cf. Jer 23:5) and whom Haggai identifies as God's servant and chosen one (2:23). Together with the anointed high priest Joshua, who will preside over the cult, Zerubbabel—like Solomon—will build the temple and sit on the royal throne (Zechariah 3; 6:9–14). Thus, different from Third Isaiah, both prophets see in the present situation and in known historical personages the imminent fulfillment of the exilic prophets' predictions of restoration and rebuilding.

4. The Legacy of Prophecy. The prophets of the 6th century created high expectations through their fantastic and sometimes heavily mythicized scenarios of the future. Among the staples in these scenarios (although they are not always present) were the return of the N and S dispersions; the glorious rebuilding of Jerusalem and its temple; the restoration of the Davidic dynasty and the united kingdom; the universal sovereignty of Yahweh, Yahweh's anointed one, and Yahweh's people; and the gathering of the nations to worship the one God.

The rise of Cyrus and the beginning of a return to Judah were seen as the beginning of the fulfillment of these prophecies and hopes. But the historical experience of the returnees clashed with their expectations, as is evident, for example, in the differences between Second Isaiah and Third Isaiah. As time passed, moreover, it must have become painfully evident that specific predictions had not been fulfilled as expected. Zerubbabel the Davidide disappeared from the scene; much of Israel and Judah remained in dispersion; the scenarios of a new, sinless, and peaceful creation were not being played out. Much of the substance of the divine promises, as enunciated by the prophets, was held in abeyance.

Further evidence for this state of affairs is provided by the 5th-century writings of Malachi, Ezra, and Nehemiah. The contrast between the prophecies of Haggai and Zechariah and the oracle of Malachi could scarcely be greater. In Malachi the restored temple, cult, and priesthood are seen to be polluted (chaps. 1–2), and the people violate the Torah (3:5). As a result, the nation suffers the curses of the covenant. The prophet appeals for the repentance that will restore the divine blessings promised in Deuteronomy (Mal 3:6–12). Additionally, the prophet anticipates the epiphany of God's messenger (Malachi, "my messenger," 3:1; cf. Exod 23:20 for the angel of the Exodus), who will cleanse the priesthood, and then

the appearance of Yahweh, who will judge between the righteous and the wicked (3:16–4:3). In a late appendix to the book, the messenger and preacher of repentance is identified as the ancient prophet Elijah (4:5–6).

The writings of Ezra and Nehemiah also reflect a critical assessment of the postexilic situation in Judah. The mixed marriages of priests and laity, as well as other sins, violate the Torah and have delayed a return of the covenantal blessing. Both books preserve extensive scenes and prayers of repentance and rededication to the Mosaic Torah (Ezra 9–10; Nehemiah 8–10). While this activity anticipates the return of God's favor, neither Ezra nor Nehemiah, nor indeed Malachi, suggests that the nation's future includes a place for the restored monarchy.

Although Malachi, Ezra, and Nehemiah did not appeal to prophetic scenarios as a source of hope, the optimistic promises of Israel's prophets were not lost and forgotten in the Persian period. To the contrary, the oracles were gathered and edited into written collections, which would emerge by ca. 200 B.C.E. as authoritative deposits of divinely inspired oracles. In the meantime the content of the promises was in the awareness of the collectors, although it is uncertain how these promises may have been mediated to the people. The Psalms, on the other hand, were used in public worship; and in the case of the royal psalms, their ideology and references to the eternal Davidic covenant would have been repeatedly impressed on the minds of the worshipping community. In the absence of a royal incumbent, one would consider the promise to have been empty or to await fulfillment in the future.

Thus a substantial part of the texts that would eventually emerge as Israel's Scripture were considered to be a corpus that contained divine promises which provided a scenario that awaited fulfillment. *In the Torah* were the promises to the patriarchs and the future-oriented final chaps. of Deuteronomy; *in the prophets* there remained many specific unfulfilled prophecies; *in the psalms,* one found allusions to, or citations of, the royal oracles. The Jewish writings of the Greco-Roman period indicate that these texts were being read in this manner.

C. Jewish Writings of the Greco-Roman Period

Less than a century after the time of Ezra and Nehemiah other Jewish texts which would later be excluded from the Hebrew canon were being composed. Historically, we must consider their views about the future in continuity with texts that were later declared to be canonical.

1. Early Apocalyptic Writings. a. *1 Enoch* 1–35 and 85–105. The early strata of *1 Enoch* indicate significant points of continuity and contrast with the prophetic tradition in particular. First, these authors are aware of most of the texts that will constitute the Hebrew Scriptures. Second, because the fictive setting of these texts long antedates the time of the prophets, the authors never explicitly quote the prophets or employ the pattern of prophecy and fulfillment. Instead, they see in the prophetic texts a valid description of times still to come, and they weave the literary forms and the language of the prophetic texts into their own creations. Third, a major motif that runs through almost all the strata of *1 Enoch* is the coming of the great judgment. Fourth, this judgment forms a caesura between the present time, which is coming to an end, and the future, which constitutes a new beginning. In a clear and meaningful way, one can speak here of "eschatology"—teaching about the end. Finally, for all of their use of prophetic material and motifs, the Enochic texts have almost no place for a Davidic king in their scenarios of the future (the exception is probably 90:37–38).

Although the roots of the myths in chaps. 6–11 are lost in the mist of oral tradition, the present form of the myths was extant in the early 3d century B.C.E.; and the Šemiḥazah story, which forms the narrative framework for these chapters, must have had a viable function during the wars of the Diadochi, ca. 300 B.C.E. Several factors are central to the author's perception of his world: the violence of war threatens the existence of the human race and its environment; the earth (or the Holy Land) is ritually polluted; the revelation of arcane knowledge has broken the appointed boundary between heaven and earth. In a radical appeal to the primordial past, the author parallels the present time with the period before the Flood and posits a new judgment that will exterminate the whole human race, except a righteous remnant, who will begin a new creation. A cue for this idea appears already in Gen 9:1, where Noah and his family, as the first parents, are given essentially the same command (cf. Gen 1:28).

Two peculiarities characterize this author's use of the Genesis traditions. What Genesis places near the beginning of human history is here a transparent fiction for the present time; in this time one anticipates another, imminent end and, beyond it, a new beginning. The latter point is evident, above all, in *1 Enoch* 10. In the new creation that will appear after the judgment, all humanity including the gentiles will become righteous and worship the one God, all evil and defilement will be permanently banished, and blessing, truth, and peace will reign forever. This scenario is fleshed out through the use of language and motifs from Third Isaiah's picture of the new creation and new Jerusalem (Isaiah 65). Like Jeremiah and Ezekiel, who specified times for the end of Exile, the author of *1 Enoch* 6–11 speaks of "70 generations" until the consummation of the great judgment (10:12). The specification of the number suggests a predetermined scheme of ages between the primordial sin of the watchers with its first punishment in the Flood and the time of final judgment.

Several basic features of this text parallel Isaiah 24–27: a time of great evil and oppression that threatens the existence of humanity and the earth; a great judgment like the Flood (Isa 24:18–20); the earth's disclosure of shed blood (26:21); the punishment of the hosts of heaven and the kings of the earth and an extended period of imprisonment in the pit before the final punishment (24:21–22). This last feature, which is a function of *1 Enoch*'s real and fictional time references to primordial and present times, has no clear rationale in Isa 24:21–22. This, along with the other parallels, could indicate that the Isaianic author knew something like the Enochic myth.

According to the account of Enoch's call (chaps. 12–16), the death of the giants releases their ghosts as a host of evil spirits who plague humanity until their judgment and extinction at the end. Thus the postdiluvian world did not provide a new beginning with promise; it began a plague-ridden evil age which a just creator must eventually bring to an end. The promise of that end is guaranteed in a new way in chaps. 17–19; angels conduct Enoch on journeys across the earth, where he sees the places where the angelic sinners are already suffering punishment. A similar tour is recounted in chaps. 20–36, where Enoch sees places of eschatological import for the judgment and final salvation or punishment of human beings. In the segments in chaps. 24–27, Enoch sees the mountain of God and the tree of life, as well as the new Jerusalem, where, at the "consummation," the righteous will live long lives and the blasphemers will suffer in the valley of Hinnom. These visions are described in part with language that is drawn from Isaiah 65–66 (*1 En.* 25:5–6; 27:2–4; cf. Isa 65:18–22; 66:14, 24). Different from Third Isaiah, however, this author uses the form of an apocalypse—a guided tour for the primordial patriarch interpreted by an angel—to undergird the certainty of the oracle uttered by the prophet. Mythical eschatology has become apocalyptic mythical eschatology.

Chapters 1–5 were composed as an oracle to introduce chaps. 6–36 by focusing on the coming judgment of "all flesh." The literary form of the oracle, with alternating blessings and curses, is paralleled in the oracles of Third Isaiah, on the words of which it is often dependent. Different from the prophetic prototypes, its central section of wisdom material emphasizes the faithfulness of the nonhuman creation as a foil to the human sins that will be punished in the great judgment that will usher in a new creation. The notion of replication appears in 1:1, 3–4, 9, which use the description of the Sinaitic theophany in Deut 33:1–2 to depict God's imminent appearance as judge. Similarly, 1:2–3 recasts the language of the Balaam oracle (Num 24:15–17) so that "Enoch" speaks "not for this generation, but concerning one that is distant …," the time of the righteous and chosen. This fiction asserts that another ancient prophecy was uttered with a conscious view toward its fulfillment at the time of the great judgment of all flesh, which will usher in the new creation envisioned by Third Isaiah (*1 En.* 5:5–9; Isa 65:13–23).

For the author of the Epistle of Enoch (chaps. 92–105), the unrequited sins of the wicked and the related victimization of the righteous are cause for a great judgment, and the deeds and their judgment are described or implied through the use of traditional prophetic forms. The eschatological character of the real author's time and the expected judgment are indicated in the Epistle's superscription, which takes up the motif in 1:2; the patriarch addresses his sons but mainly "the latter generation who will observe truth and peace" (92:1). Characteristic of this time is the existence of the community of the righteous, who receive a revelation about the character of good and evil and their reward and punishment in the judgment

(94:1–5; 104:12–13, a reprise of 92:1). This is explicit in the Apocalypse of Weeks (93:1–10; 91:11–17), which places the revelation in the 7th week and a subsequent revelation to the gentiles in the 9th week (cf. 105:1–2), both in conjunction with a series of judgments that precede the renewal of the earth and the creation of new heavens. The symmetry of the apocalypse's 10 "weeks" or heptads suggests that the author has in mind a scheme similar to the 70 generations of chap. 10. The predetermined character of the scheme is implied by the prediction's fictive origin in primordial times and by the claim that Enoch's information was derived from heavenly tablets (93:2; see explicitly 81:1–4). Because Enoch mediates heavenly knowledge that was interpreted by angels, we may describe his eschatology as "apocalyptic." The deterministic character of Enoch's eschatology perhaps stands in tension with the epistle's assertions that the prayer of the righteous can trigger divine intervention (97:3–6; 99:3; 104:1–3). In any case the claim that the heavenly apparatus for judgment is already in motion (104:1–8) adds a note of imminence to the promises of judgment.

That the course of history is fixed and that the author's own time is the predetermined end time is expressed nowhere as clearly as in the Animal Vision (*1 Enoch* 85–90). Already in Enoch's time God revealed the events to come, which would culminate in a great final judgment. The primordial rebel watchers will be punished. There will be an end to the long-standing victimization of the Israelite flock by the gentile beasts and the more recent abuse by the 70 shepherds. The present pollution of the cult will cease as a new Jerusalem and temple are built by the God of Israel. To that Jerusalem the gentiles will come, to be subject to Israel; and the dead and dispersed of Israel will return. Then all of humanity, Jews and gentiles, will be transformed to their primordial purity and unity. In this explicit way the seer envisions the end as a return to the very beginning.

Like other parts of *1 Enoch*, this vision employs imagery known from the prophetic texts, especially Ezekiel 34, and the more general expectation of a new Jerusalem. But at one point the author appears to espouse the notion that the end time brings the fulfillment of prophecy. The scheme of 70 successive angelic shepherds, whose periods of influence conclude with the judgment and restoration of Jerusalem, appears to be an interpretation of Jeremiah's prediction of 70 years, which may have been reshaped by the totally different scheme of four kingdoms (see below).

b. Book of *Jubilees.* In this selective paraphrase of Genesis 1–Exodus 15, which purports to be a revelation given to Moses on Mt. Sinai, the author twice summarizes the history of Israel according to the schema of the latter chapters of Deuteronomy. Chapter 1 presents an overview of that history, from Sinai through the occupation of the land, and Israel's sin, and its punishment in the Exile, to the people's repentance and the return from the dispersion, and beyond that to the time of the new creation of the heavens and the earth. The summary in 23:11–31 focuses on the sins of postexilic Israel, which culminate in crisis of the Hellenistic period and specifically in the events of 200–150 B.C.E., during which time the book was composed. Repentance occurs when the people "begin to study the law and seek the commandments and return to the way of righteousness" (23:26), that is, when they discover, accept, and obey the Torah as expounded in *Jubilees' hălākâ* (specific legal prescriptions). Such obedience will lead to the renewal of the creation, which is briefly described in language drawn from Isaiah 65–66. In what way the author's view of the future is locked into a predetermined scheme of ages, or jubilees, is debated. However, the book is significant because Deuteronomy's categories of sin, punishment, repentance, and future salvation are interpreted in terms of the rejection and the return to a very specific understanding of the Torah. History, *hălākâ,* and eschatology are explicitly linked.

c. *Testament (Assumption) of Moses.* For this author history stretches from "the beginning of the creation of the world to the end of the age" (12:4), "the consummation of the end of days" (1:18). All the events of this history and their time frame (10:13) were foreseen by God from the foundation of the earth (12:4–5; 1:13–14). The notion of a real end is tied to the fulfillment of prophecy, which is expressed in the literary form of the book. Writing at the time of Antiochus Epiphanes (ca. 168 B.C.E.) in the name of Moses, the author recasts the last chapters of Deuteronomy so that Moses foretells in detail the events of ca. 200–168 B.C.E., which time is identified as the consummation. Thus Moses' prophecy points to the end and provides a scheme for interpreting the events that lead up to it. The finality of imminent events is

indicated in chap. 10, where history gives way to a mythical description of the judgment and its consequences. The agents of the judgment are a chief angel and the Deity rather than a human messiah. The sequence—angel and God—is reminiscent of Malachi. Associated with the judgment is the appearance of God's reign (or kingdom) throughout the creation; and after cosmic upheaval and the destruction of Israel's gentile enemies, Israel will be lifted up from earth to the heavenly, immortal realm of the stars. Thus a historical caesura is combined with a cosmic one. The notion of a new creation of heaven and earth is replaced by a division between earth, turned into the place of punishment, and heaven, the realm of salvation (10:9–10).

d. The Book of Daniel. The eschatological ideas in the *Testament of Moses* appear also in the various strata of the contemporary apocalypse, the book of Daniel. Both Nebuchadnezzar's dream about the colossus (chap. 2) and Daniel's night vision (chap. 7) depict a succession of four kingdoms that will end with God's judgment and the inception of God's universal reign. In chap. 7 the bearer of that reign is a high angel—one who looks "like a Son of Man"—whose heavenly exaltation is simultaneous with the beginning of the everlasting earthly preeminence of Israel, "the people of the holy ones of the Most High" (7:7–14, 26–27). That the details of history are, allegedly, foreseen is evident in the extensive revelation which the angel gave to Daniel in the Exile, forecasting events up to the time of the author (chaps. 10–12). As in the *Testament of Moses,* these events, described in prose, give way to a poetic description of the judgment and its consequences (12:1–3). These verses, presuming the scenario in *1 Enoch* 24–27, allude to the long life of the righteous in the new Jerusalem and to the ongoing contempt to be heaped on the apostates. A decisive break between historical events and that future is indicated by the references to resurrection (12:2) and to the exaltation of the righteous leaders of the community into the realm of the stars (12:3). Although the fulfillment of prophecy does not structure the form of the book, the Deuteronomistic scheme of sin-punishment-repentance-salvation appears in chap. 9 (vv 4–19). Israel's present plight and its future resolution are related to both Moses' prophecy in Deuteronomy and Jeremiah's prophecy about 70 years (9:2, 11–13). Jerusalem is desolate because the people are suffering the covenantal curses foretold by Moses. The length of their period of punishment is calculated through a reinterpretation of Jeremiah's prophecy; 70 weeks of years (490 years) must pass between Manasseh's sin and the restoration of Jerusalem (cf. *1 Enoch* 85–90). Like the *Testament of Moses,* Daniel's revelation has been recorded in order to be revealed at the end time (12:9; cf. *T. Moses* 1:17–18).

e. Parables of Enoch (*1 Enoch* 37–71). This longest of the sections of *1 Enoch* was probably composed in the decades preceding the turn of the era. Its central and all-pervasive theme is the great judgment that will befall "the kings and the mighty," the gentile rulers who are oppressing "the righteous and the chosen." The time of that judgment is tied to an invasion of Israel by the Parthians and Medes (56:5), although the only indication given for the source of this prophecy is the pseudonymous revelation itself. In God's scheme, however, the time is related to the predetermined number of the righteous who must die (47:4). The agent of God's judgment is a transcendent figure who combines the attributes and functions of the Davidic king, Second Isaiah's servant of Yahweh, and Daniel's "one like a Son of Man." Although the author never uses terms like *last, latter,* and *end* in a temporal sense, the events described clearly constitute the end of the present time and the beginning of a new and permanent order. Narrative material about Noah provides a paradigm for the coming judgment (54:7–55:2; 60:1–10; 65–68). Constitutive in the judgment will be a resurrection of the dead (51; 61:1–5), after which the righteous and chosen will dwell on a newly created earth, from which the sinners have been permanently expelled to the darkness and torture of Sheol (38; 45; 50; 58; 54; 63). Although fulfillment of prophecy cannot be an explicit category in this pseudonymous text, the language of Third Isaiah is evident; and the heavenly Chosen and Anointed One is seen as the referent of biblical descriptions (understood as prophecies) of the Davidic king and the Servant of the Lord. Just as important, this author is a bearer and transformer of the traditions generated in the names of Enoch and Daniel.

2. Tobit, Sirach, and Baruch. The fulfillment of prophecy is an explicit category in three texts that are normally categorized as "wisdom" writings. The earliest of these is the book of Tobit (3d century B.C.E.). The central tale about the suffering and healing of Tobit and Sarah is recounted within the context of the

broader saga of the Exile and dispersion, which constitute a problem to be resolved in the future, when the nation's chastisement is removed by God's mercy. This future salvation has been predicted by the prophets, whose words await fulfillment in their time (14:5; cf. v 4). The succession of events forecast in 14:4–7, with its remarkable parallels to the Apocalypse of Weeks (*1 Enoch* 93:1–10; 91:11–17), reflects a kind of determinism usually associated with apocalyptic thought rather than Wisdom Literature. Similarly, the language of 14:5 suggests that the times are fixed, although—different from some of the apocalypticists—this author does not indicate that the times themselves have been revealed to human beings. Tobit's scenario for the future culminates in the restoration of Jerusalem and the temple to their former glory, an event which is described in language drawn from Third Isaiah but not ascribed to "Isaiah." Because this restoration is seen to be permanent (13:10; 14:5), one may properly speak of Tobit's eschatology. Consonant with Tobit's dependence on Third Isaiah is the omission of any reference to a restoration of the Davidic dynasty.

For Joshua Ben Sira (*floruit* 198–175 B.C.E.), the prophets are an important group among Israel's heroes (Samuel, Nathan, Elijah and Elisha, Isaiah, Jeremiah, Ezekiel, and the Twelve; 46:13–20; 47:1; 48:1–14, 22–25; 49:6–10). Although they spoke primarily to their own situations, they uttered predictions that were shown to be trustworthy (46:15; 49:6). Isaiah, however, "saw the latter things (*ʾḥryt*), and comforted those who mourned in Zion, [and] revealed what would happen forever (*ʿd ʿwlm*) and the hidden things before they came to be" (48:24–25). This brief summary of Second and Third Isaiah reflects the notion that the prophets forecast hidden events that still lie in the future. Similarly, the prayer preserved in 36:1–7 laments the Jews' subjugation to the nations, the dispersion, and the present state of Jerusalem; and it awaits the return of God's glory. Thus the sage appeals to God to fulfill the ancient prophecies and thus to reward those who wait for God to vindicate the trustworthiness of the prophets (36:15–16). Ben Sira's scenario of the future includes the reappearance of Elijah, who will calm God's wrath, bring repentance to Israel, and restore the dispersion (48:10; cf. Mal 4:5–6). He also anticipates a restoration of the Davidic dynasty, in keeping with the eternal covenant with David (47:11, 22). By associating this covenant with the priestly covenant with Phinehas (45:24–25; cf. Num 26:10–13), Ben Sira indicates a conscious pairing of the anointed priest and king, first indicated in Zech 4:14 and later developed in the Qumran Scrolls (see below).

Like Tobit, Baruch is a pseudepigraphic text (probably from the 2d century B.C.E.) that is deeply impressed with the problem of exile and that construes the future in terms of a restoration of Zion. Speaking in the Jeremianic tradition, "Baruch," in the context of prayers that parallel Dan 9:4–19, describes the Exile as realization of the curses that Moses had predicted in Deuteronomy (Bar 1:20; 2:2, 28). But following the scenario in Deuteronomy and the prophecy in Jer 29:10–14; 31:31–34, he anticipates that God's mercy will appear and an everlasting covenant will be made when the people repent in the land of their exile (2:30–35). Identifying Torah as divinely given Wisdom, the author interweaves a traditional wisdom poem (cf. Sirach 24) with the diction of Deut 28–33 (3:9–4:8). The last two chapters employ the language and imagery of Second and Third Isaiah to describe the return of Zion's children and the glorification of Jerusalem (4:9–5:9).

3. The Qumran Scrolls. The collections of texts found at Qumran include works of diverse origin, date, and genre. Some antedate the founding of the community in the mid-2d century B.C.E.; others of later origin may have been brought to Qumran by new members. Although the presence of such texts may indicate what was considered to be compatible with the sect's religious thought and practice, one must exercise caution in using them as evidence for the group itself. Moreover, even the texts that were probably composed by members of the sect do not provide a single witness. They are of diverse authorship and were written over a period of perhaps a century and a half, and they do not clearly speak with one voice on major issues. Finally, of special significance is the evident fact that the Qumranites themselves authored few, if any, apocalypses—the genre that self-consciously presents detailed scenarios of the future.

These difficulties and cautions notwithstanding, it is possible to identify some texts that seem to reflect a coherent sense of how their authors understood their community to be a unique phenomenon of the end

time; and it is useful to indicate some points at which these texts agree and diverge in their pictures of the future.

a. Structure of the Ages and God's Foreknowledge. God's foreknowledge of historical events and human deeds and God's foreordination of the structure of the ages are a common topic, expressed in stereotyped language, in at least five Qumran texts: 1QS 3–4; CD 2:3–10; 1QH 1:7–8, 23–25; 4Q180 1; and 1QpHab 7. According to the *Rule of the Community,* "the God of Knowledge" established (*kwn*) the shape of all things before they came to be and appointed (*śym*) two spirits to govern humanity (3:13–16). He has also set a fixed time or end for the existence of perversity (*ntn qṣ*) (4:18). The *Damascus Document* (CD) also ascribes "knowledge" to God (CD 2:3) and then expounds the idea: God knew human deeds before they were created, and God knew the times of their coming and the exact length of their times for all ages (2:9–10). The first column of the *Hymn Scroll,* which may depend on 1QS 3–4, describes God's foreknowledge of human deeds before creation (1QH 1:7–8) and God's creative activity, including the apportionment of the two spirits (1:15–20). Human deeds and the times of their accomplishment, moreover, "are engraved before you on a written reminder" (*ḥqwq lpnykh bḥrt zkrwn,* 1:23–24). The language presumes the existence of written tablets that stand in God's presence. The same notion is evident in 4Q180 1 ("the Ages of Creation"), where the tablets are said to contain a record of the successive ages (*qṣ*) that God has established for the orderly structuring of human history. The commentary on Habakkuk presumes a similar notion: "all the ages (*qṣ*) of God come to their fixed place (*tkwnh*) as he has decreed (or "inscribed," *ḥqq*) them in the mysteries of his wisdom" (1QpHab 7:13–14).

Although these assertions are not made in accounts of revelatory visions, their content parallels the pseudepigraphic historical apocalypses attributed to Enoch and Daniel, as well as Enoch's vision of the heavenly tablets in *1 En.* 81:1–3. The claim of revelation is also present. According to 1QpHab 7:1–5 God "did not make known" to Habakkuk "the end of the age" (*gmr hqṣ*), but God did "make known" to the Teacher of Righteousness "all the secrets of his servants the prophets." Similarly, according to 1QH 1:21, "these things I know through your wisdom because you have opened my ears to your marvelous secrets." In the same vein 4Q180 appears to have been an interpretation (*pšr*) of an authoritative text that laid out the structure and length of the ages, perhaps according to a scheme similar to the Enochic Apocalypse of Weeks (Milik 1976: 251–55).

b. The Community's Place in the Last Times. The scrolls widely attest the belief that the Qumran Community was living in the last part of the ages that God had predetermined and created. This belief is reflected in the authors' terminology ("latter generation[s]," "latter days," "latter age," "the age is consummated"), and it is bound up with the conviction that the prophetic oracles described this latter time.

(1) The Qumran Commentaries. This conviction is explicit in the commentaries on the prophets and the Psalms—which are also considered to be prophetic. Running sections of text are quoted and then followed by interpretations that show how the text foretold in detail specific events in the life of the sect. The theory underlying this type of interpretation is spelled out in the exposition of Hab 2:1–2 (1QpHab 7:1–5). Prophecy refers to the last times; the "when" of those times was a "secret" the interpretation of which was revealed to the Teacher. The theory is applied throughout the commentaries, as their authors, following the tradition of the master, see prophecy unfolding in their communal life, which is by definition set in the latter generations.

(2) The *Damascus Document* (CD). Although this text is not a historical apocalypse, it frequently refers to the passing of time and to certain termini which are denoted by the conjunction "until" (*ʿd*). The historical context of the rise of the Qumran community is located in the latter times and associated with the fulfillment of prophecy. Four passages make basically the same point.

In CD 1:1–2:1 the beginnings of the sect are placed at the end of "the age of wrath, three hundred and ninety years after [God] delivered" Israel to Nebuchadnezzar (1:5–6). When the period of punishment predicted in Ezek 4:5 is completed, in a time of wickedness and apostasy described in Hos 4:1–6 and Isa 30:10–13, God initiates a new beginning by causing a root to spring up from Aaron and Israel—a remnant

who repent of their sin and seek (*drš*) God with their whole heart (1:10; Jer 29:13). To this "latter generation" (1:11–12) God sends "a Teacher of Righteousness" to reveal God's way (cf. Isa 30:19–20).

In 3:9–5:19 the author focuses again on the span between the Exile and the rise of the community in the end of days, before the age is consummated (*šlym hqṣ*). It is a time of terrible evil instigated by Belial and marked particularly by fornication, the abuse of wealth, and the profanation of the temple. God makes a covenant with the community and reveals to them the hidden things of the Torah, especially laws about the observance of the Sabbaths and feasts.

A similar collocation of ideas occurs in CD 5:20–6:19, which finds its scenario in Num 21:18; Amos 9:11; and Isa 54:16. The men of Aaron and Israel, "the converts of Israel," have left Judah and the profaned temple in order to sojourn in "the land of Damascus," where they enter the new covenant during "the time of wickedness." To them comes "the interpreter [lit. "seeker"] of the Torah," who may or may not be identical with "the one who teaches righteousness at the end of days." They dig the well of the Torah (cf. 3:16–17), taking heed particularly of purity regulations and the right observance of the Sabbaths and feasts.

An explicit reference to Amos 5:26–27, the source of the references to "the land of Damascus," appears in CD 7:13–21, where "the Interpreter of the Law" is said to be followed by "the prince of the whole congregation," evidently the Anointed One of Judah (Num 24:17).

The last part of this time span is perhaps referred to in CD 19:35–20:1 and 20:13–22—the 40 years (20:15) between the death of "the Teacher of the Community" and the coming of "the Anointed One of Aaron and Israel" (20:1) and, evidently, the great judgment (20:17–22; cf. Mal 3:16–18), when God's glory will be manifest (20:25–26).

In summary, the prophets foretold a latter time, in which God would create a remnant of penitents, to whom would be revealed the right understanding of the Torah. This they would obey (though not without periods of lapse) during a period of unmitigated wickedness, which would conclude with the appearance of the Messiah and with God's visitation of the earth (7:9; 8:2). Beyond that judgment were the ultimate punishment of the wicked (2:5–6) and eternal or long life for the righteous (3:20).

(3) The *Rule of the Community.* In 1QS 8:1–9:11 the community is also placed in an eschatological context. Employing language from Isaiah 28, with its indictment of the rulers of Jerusalem and its announcement of the new cornerstone to be laid in Zion (v 16), the author describes "the council of the community" as a temple that will atone for the land and as the chosen of God's good will (the servant of Isa 42:1), who will function as witnesses and agents of God at the judgment (cf. *1 En.* 93:10). In the meantime they have separated themselves from the wicked to devote themselves to "the study [lit. "the searching"] of the Torah" (*midraš hattôrâ,* 8:15), in keeping with the prophecy in Isa 40:3–5. This situation will continue "until there shall come the prophet and the anointed ones of Aaron and Israel" (9:11). As in the *Damascus Document* (CD), the community is composed of converts who have "entered the covenant" and live in accordance with the right and revealed interpretation of the Torah during the time of Belial's dominion (1:1–3:12; 5:1–20).

c. The Community as the Present Locus of Eternal Life. Since the Qumranites' particular observance of the Torah is based on an eschatological revelation, they can speak of the community as the locus of eschatological covenantal blessings. Several texts in the *Hymn Scroll* employ such a rhetoric (1QH 3:19–38; 6:1–7:5; 11:3–14). Outside the community is the sphere of death and damnation, where one is subject to the eschatological fury of Belial. When one enters the community, one is raised from the destructive Pit (Sheol) to a heavenly height and from dust and worms to the knowledge of God and the company of the angels. Thus entrance into the covenant (1QS 1–2, 5) is here construed as a resurrection from death to the life that is normally placed after the great judgment.

d. The Tension Between Present and Future. The eschatological quality of life in the community does not eliminate the reality of evil in the present time. Even for the authors of the hymns, the consummation lies in the future, as is evident in a number of stylized passages in the *Hymn Scroll* (1:21–23; 3:23–28; 4:29–40; cf. 1QS 11:9–22). The problem is stated in anthropological terms. Although the sectarian has been justified by God and has received the knowledge that saves, he continues to exist as

"flesh" and "dust." This notion is explicated in the two-ways section of the *Rule of the Community*, which emphasizes the future dimension of eschatology (1QS 3:13–4:26). Although the Sons of Light and the Sons of Darkness are subject to the respective dominions of the Prince of Light and the Angel of Darkness, the evil spirit wars against the Angel of Light even in the hearts of the "Sons of Light" (1QS 3:21–24). The respective rewards and punishments of the Sons of Light and the Sons of Darkness, described in language found in some of the apocalypses (eternal life, unending light, the garments of majesty; punishing angels, torture in the flames and dark regions of Sheol), lie in the future (4:15–26). At the time which God has determined for the judgment, those who have been chosen for the everlasting covenant will be purified and given the primordial glory of Adam, and evil and the Angel of Darkness will be definitively annihilated. Until then the battle continues.

e. The Future in Qumranic Eschatologies. Although it is not appropriate to conflate details from the many Qumranic documents into a single detailed picture of the future, a few items call for comment.

(1) The *War Scroll.* A common feature in Jewish writings is the contest between angelic attorneys or chieftains (Nickelsburg 1972). The judicial nature of this contest, attested as early as Zechariah 3, is almost always present in later texts. Increasingly, however, the setting becomes the final judgment, and the opponents are depicted as chieftains of warring armies of angels and demons. This opposition is fundamental in *Jubilees* and the *Melkî-ṣedek/Melkî-reša*ʿ documents—both found at Qumran—and is central to the two-ways section of the *Rule of the Community.* All of these texts feature a dualism that makes human beings the point of contention between opposing angelic chieftains and their benevolent or demonic hordes.

This battle's culmination in the final judgment is the focus of the *War Scroll*, the seven Qumran copies of which indicate its significance for the sect's eschatology. The setting is the End, and the judgment is enacted in a great war, in which the sectarians are co-opted as major functionaries. The scroll's viewpoint stands in an ambiguous relationship with the Enochic writings and the book of Daniel. The warfare between angelic armies parallels Daniel 10–12, but the notion of human participation conflicts with Daniel's more pacifist viewpoint. A military interpretation of angelic activity is less evident in *1 Enoch*, but the Epistle of Enoch (*1 Enoch* 92–105) does espouse such an ideology, and the final form of the Animal Vision (chaps. 85–90) celebrates the activities of Judas Maccabeus.

(2) Messianic and Non-messianic Eschatological Figures. Traditional Christian categories have led scholars to generate a plethora of literature on Qumranic "messianism." What is striking is the variety that, on present evidence, escapes clear and certain categorization and chronological definition. Yet a few tendencies are evident.

Three texts tie their hope of a future Davidic king to biblical prophecy. Thus 4QPBless interprets Gen 49:10 with reference to Jeremiah's prophecy about the "Righteous Branch," who will sit on the Davidic throne in accordance with the covenant recorded in 2 Sam 7:13. A commentary on Isaiah 11 sees in that passage a prediction of the Davidide, "who will arise at the end of [days] and rule over all [the nations] … and … execute judgment on [all] the peoples (4Q161). The "Florilegium" (4Q174) also interprets 2 Sam 7:13–14 of the "Branch of David who will arise with the Interpreter of the Law … and … save Israel." To this is added an interpretation of Ps 2:1, referring it to the eschatological battle against the elect ones of Israel. These texts emphasize the king's function as ruler, but also as judge and as Israel's military deliverer from its enemies.

Alongside these texts, which *focus on* the future Davidic king, a significant group of texts *presume* a more complex messianism. Twice, and perhaps three times, the *Damascus Document* (CD) cites the coming of the anointed one of Aaron and Israel as a terminus for the end of the present age ("until the anointed one … arises" [*d* ʿ*mwd mšyḥ*]; 20:1; 12:23–13:1; 14:19). A similar formula occurs in 1QS 9:11, which mentions two anointed ones, of Aaron and Israel, along with "the prophet." The triad of prophet, king, and priest (along with their opponent) is presumed in the Testimonium (4Q175) and is tied to Deut 18:18–19; Num 24:15–17; Deut 33:8–11. The first addition to the *Rule of the Community* (1QSa) anticipates two anointed figures who will be present in the community in the last days. In none of this

group of texts are the functions of the messianic figures spelled out; it is sufficient to cite their arrival as a highly significant event of the end time.

This Qumranic messianism must be placed in the context of the community's eschatological self-understanding. Because the rise of the community is itself an event of the end time, the Teacher and the other figures mentioned in the *Damascus Document* (CD) are also viewed as eschatological figures of soteriological significance. Their role is to elicit the repentance and obedience that will enable the members of the community to survive the divine judgment that separates the righteous and the wicked. In this sense they are analogous to the messenger of the Lord in Malachi.

Commentators on the scrolls have often noted that the rich collection of Enochic literature at Qumran contains no single ms of the Book of Parables. Also lacking therefore is the transcendent judge and deliverer who dominates this text, the Chosen One, Son of Man, and Anointed One. What is usually not noted, however, is the prominence of another angelic figure, who appears in a number of the scrolls, exercising functions elsewhere attributed to priest and king. In 11QMelch, *Melkî-ṣedeq,* who is evidently identified with Michael, is the opponent of Belial and carries out military and priestly roles. In 4QAmram he is the judicial opponent of *Melkî-rešaʿ*. This military and judicial opposition parallels the Michael-Satan antagonism in the *War Scroll.* The quotation of Isa 52:7; 61:2–3; and evidently Dan 9:25 in 11QMelch may indicate that the term "anointed one," used in that text, does in fact designate a heavenly deliverer, as in the Parables of Enoch. On the other hand, this group of texts ascribes to an angelic figure the kind of eschatological functions attributed to the Davidic king in, e.g., the *Psalms of Solomon* (below C.5). In spite of all the Qumranic references to the anointed one(s) of Aaron and Israel, none of the texts that feature Michael and *Melkî-ṣedeq* (except 1QS, where the Prince of Light has primarily ethical functions) makes reference to an eschatological Davidic king or anointed priest.

(3) The New Jerusalem. Although the Qumranites indicate considerable disenchantment with Jerusalem and its priesthood, the scrolls contain no major references to the future transformation of the holy city in the tradition of texts like Sirach 36 and Tobit 14. Nevertheless, a few hints of such an idea appear. The commentary on Ps 37:21–22 anticipates the time when "the congregation of the Poor … will possess the high mountain of Israel … and will enjoy [everlasting] delights in his sanctuary" (4Q171 3:11). The reference is noteworthy because the psalm itself does not mention Jerusalem. The idea of a purified Jerusalem also appears in one of the noncanonical psalms in 11QPs^{a} 22. A detailed visionary description of the new Jerusalem in the tradition of Ezekiel 40–48 has also been found (5Q15). These texts notwithstanding, the eschatologically oriented passages in the scrolls are noteworthy, by and large, for their silence about the restoration of Jerusalem. On the other hand, in the spirit of 1QS 8, a commentary on Isa 54:11 interprets language about Jerusalem and its walls to refer to the community and its leaders (4Q164). Perhaps the hope for a restoration was satisfactorily met in such texts as *1 Enoch* and Tobit, which are preserved among the scrolls.

4. 1 and 2 Maccabees. The two historical texts that describe the events of the mid-2d century B.C.E. employ traditional future-oriented material in special ways that reflect the authors' situations and purposes. For both, but in radically different ways, prophecy has been fulfilled and God's future activity is anticipated.

According to 1 Macc 1:64; 2:49 the persecution by Antiochus Epiphanes is an expression of God's wrath over the apostasy of the hellenizers who have forsaken covenant and Torah (1:11–61). This wrath is turned aside when Mattathias and his family obey the commandments, when the zealous Mattathias follows the example of Phinehas and exacts punishment on an idolatrous Israelite (2:19–26; Num 25:1–13), and when Judas takes up his father's command to repay the gentiles (2:68; 3:8). Thus the Hasmonean house has shown itself to be "the family of those men through whom deliverance was given to Israel" (5:62) as well as rightful high priestly dynasty in the succession of Phinehas. For this advocate of the Hasmoneans, God's turn from wrath to mercy is effected by militant human action; and as in Numbers 25 and Exod 32:25–29, this equips one for priestly service. Writing early in the 1st century B.C.E., the author believes that he lives in the time of blessing that follows repentance from apostasy. Thus the hymn in praise of Simon (14:4–15), which is a veritable pastiche of prophetic clichés, strongly suggests that the

time of fulfillment of the prophecies of Israel's glory had begun in the years of Simon's rule. The covenantal blessings now rest on Israel, and the high priesthood and the title of "king" are legitimately the possession of the Hasmoneans. In such a context it is deemed unnecessary and inappropriate to mention the future consummation of a new covenant, the restoration of the Davidic dynasty, and the rise of a new and righteous high priest. Of course, 4:46 and 14:41 refer to "a (trustworthy) prophet" who may change things in the future. However, since the Hasmoneans would have a say in judging the trustworthiness of such a prophet, there is a certain safety in their openness to future change in the high priestly dynasty.

The author of 2 Maccabees orders the events of ca. 200–165 B.C.E. according to the pattern of Deuteronomy 28–32 (2 Maccabees 3–15). The action focuses on the sanctuary: God protects it during the righteous reign of Onias (chap. 3); the sins committed in it lead to its desolation and the punishment of the people (5:15–20); the repentant actions of the martyrs facilitate the turning of God's wrath to mercy (7:1–8:5) and the restoration of the cult (10:1–8); in this new situation the temple is again under divine protection (chaps. 14–15). In their use of the Deuteronomic cycle, 2 Maccabees and the *Testament of Moses* are noteworthy for their similarities and their differences. Both authors explicitly impose the cycle on the same set of events, and for both, Moses' promise of deliverance from the curse is effected by the act of repentant obedience which occurs in the martyrs' passive acceptance of unjust death. However, different from the *Testament*, which anticipates future salvation through cosmic upheaval and divine epiphany, 2 Maccabees finds the fulfillment of the last stage of the cycle in the past historical events connected with the victories of Judas Maccabeus. In contrast with the propagandistic author of 1 Maccabees, this writer makes pejorative comments in connection with Simon's activity (10:20; 14:15–17) and gives no indication of accepting the perpetual legitimacy of the Hasmonean dynasty.

References to the future appear in two places. In the second letter preceding the historical account, the author cites a pseudo-Jeremianic account about the burial of the temple furnishings until a new time of God's mercy, when the people are gathered and glory returns to the sanctuary as at the time of Moses (and Solomon) (2:4–8). Thus a pseudonymous tradition is accepted as a genuine prophecy that awaits fulfillment. The second set of allusions to the future occurs in chap. 7 with reference to the resurrection of the seven brothers and their mother. Although God's mercy returns to Israel in the events that follow their deaths, they themselves must be vindicated for their faithfulness to the Torah. This notion is expressed through the use of three motifs from Second Isaiah: creation and redemption, the vindication of the Suffering Servant of the Lord, and the return of the children of Mother Zion. Through the use of this last motif, the author denotes a metaphoric fulfillment of Isaiah's prophecy, alongside the literal fulfillment indicated in chap. 2. Although this work shows no love for the priestly and royal pretensions of the Hasmoneans, its scenario for the future time reflects no expectation for a revival of the Davidic dynasty. This is consonant with other texts in the tradition of Second and Third Isaiah.

5. Messianism and Resurrection (*Psalms of Solomon*). Written in the mid-1st century B.C.E., Psalms 2 and 8 of this collection agree with the Qumranic *Damascus Document* (CD) and Habakkuk Commentary that the Hasmonean high priests have polluted the sanctuary (*Pss. Sol.* 2:3; 8:11–13). *Psalms of Solomon* 17:5–6 goes beyond the scrolls in criticizing the Hasmoneans' usurpation of the Davidic throne, and it interprets their expulsion by Pompey as divine punishment for this arrogance (17:4–10). Like the authors of 4QPBless and the Florilegium, this writer cites the eternal covenant with David, here interpreted as an oath (cf. Ps 89:3–4), as the basis for his criticism of the Hasmoneans and his hope for a restoration (17:4, 21). The major part of the psalm (vv 21–43) is a description of the activities of the future "son of David" (v 21), "the anointed one [of] the Lord" (v 32; cf. 18:5, 7). The description is expressed in terminology drawn from Ps 2:9 (17:23–24; cf. 18:7); Isaiah 11 (17:24–25, 35–37; cf. 18:7–8); and Ezekiel 34 (17:40), which are read together as a prophetic scenario to be played out in the future. To the normal military, ruling, and judicial functions appropriate to the future king are added others that may indicate priestly functions: the cleansing of Jerusalem (vv 30, 45) and, perhaps, teaching (v 43; cf. Ps 19:7–10). In addition, the time of the king is associated with the return of the dispersion and reordering of the tribes, who are described in language reminiscent of Isaiah 60 and Ezekiel 40–48 (vv 31, 28). This use of Trito-Isaiah is unusual in a Davidic passage, but it occurs also in *Pss. Sol.* 11. Different from Qumran and the

apocalypticists, the authors of these psalms do not claim to know the time of the restoration, which has been fixed by God (17:21).

The resurrection of the righteous to eternal life and the eternal destruction of the wicked (*Pss. Sol.* 3, 13, 14, 15) are an aspect of the eschatology of the *Pss. Sol.* that is never directly associated with their messianism, possibly because they are not functions of the retributive judgment against the enemies which is associated with the coming Davidic king (Nickelsburg 1972: 131–34). Chronologically, the resurrection is placed at the time of God's judgment, when God visits the earth, the day of mercy for the righteous (15:12–13; 14:9). How this is associated with the day of God's mercy at the time of the future king (17:45; 18:9) is unclear (for a similar duplication of terminology in 2 Maccabees, see above).

6. Immortality in Heavily Hellenistic Texts. A group of thoroughly Hellenistic Jewish texts, possibly all from the 1st century C.E., express a view of immortality that is largely disconnected from the explicit future orientation of most Jewish speculation about a resurrection of the dead. For more details, see RESURRECTION. These texts reflect the typical eschatological concern that God bring to an end death, mortality, and other related human conditions, but that end is usually not associated with a particular future point in history.

a. The Wisdom of Solomon 1–6. The primary example in this treatise on the certainty of divine justice is the case of the persecuted righteous one, who is vindicated when he is exalted in heaven over against his rich and powerful enemies. The precise moment of this post-mortem scene is uncertain because such chronological matters are irrelevant to the author (Nickelsburg 1972: 88–89). Immortality is the *present* possession of the righteous, although it will reach its fruition in God's presence after "they seem to have died" (3:2). Conversely, what the author calls "death" *already* characterizes the wicked and foreshadows their future annihilation. This radicalization of eschatology, while it may be compatible with a Greek notion of immortality, closely parallels the viewpoint of certain of the Qumran hymns.

A temporal historical dimension is not totally absent in Wisdom. The wicked can be punished during their lifetimes (3:10–13, 16–19), and God exacts judgment in historical time and through the forces of the creation. Rulers may be toppled from their thrones or receive divine support, depending on the justice or injustice of their rule (5:17–6:21). One eschatological motif is notably, but not surprisingly, absent in this pseudo-Solomonic text allegedly addressed to kings and rulers. The use of Psalm 2 notwithstanding, the central figure in the text—although he is associated with eschatological functions—is not a future Davidic king, but a righteous spokesman of God patterned after Second Isaiah's servant of Yahweh. See SON OF MAN.

b. *The Testament of Job.* Because Job, here the king of Egypt, has obeyed God's voice and destroyed an idolatrous temple, he becomes the victim of Satan. In this patently unjust situation, the significant soteriological axis is vertical—between earth, where Job is reproached because he has been toppled from his throne into a living death, and heaven, the realm of immortality, where Job's eternal throne is already established as the vindication of his righteousness (chaps. 32–33). Aspects of the narrative recall Wisdom's description of the righteous one (Nickelsburg 1981: 269, n. 35). The vertical dimension is emphasized also when Job distributes to his daughters the magical apparatus that enables them to transcend the things of this world and sing the angelic hymns (chaps. 46–52). In the context of this vertically oriented eschatology, where one participates on earth in the immortal blessings of heaven, there is no place for the horizontal axis of a historically oriented eschatology. Even the bodily resurrection of Job's first children (whatever the literary history of chaps. 39–40) is an accomplished fact rather than a future event of the eschaton.

c. *Joseph and Aseneth.* Different from Wisdom and the *Testament of Job*, life and death are not treated here in a discussion of theodicy (although 4:12–6:7 recalls Wisdom 2 and 5). Rather, through her conversion from idolatry, Aseneth is brought from the realm of death to life, immortality, and incorruptibility. Her physical transformation attests that she is now qualified to marry Joseph, the son of God. Different from the Qumran hymns, where the ordinary Israelite's entrance into the sect brings one from the realm of death to the sphere of salvation and eternal life, here the conversion that confers

immortality brings a gentile idolatress into the family of the God of Israel; and the wife of the son of God is seen as the mother of future converts to Judaism.

d. *4 Maccabees.* This hellenized reworking of 2 Maccabees 7 is noteworthy for its concept of immortality. This state, if it is not already present in the earthly life of the righteous, is conferred at the moment of death, which is the eschaton for individuals. There is no need for a future consummation.

7. Writings Associated with the Destruction of Jerusalem. Four major works survive from the time of the Roman destruction of Jerusalem in 70 C.E.: *2 Baruch*, *2 Ezra*, the *Apocalypse of Abraham*, and the *Book of Biblical Antiquities* (Pseudo-Philo). For all of them, contemporary events constitute a crisis of theodicy, and each addresses the problem, using its own nuances to reshape earlier Jewish eschatological traditions. Here we discuss three of these works.

a. *2 Baruch.* Like its sister apocalypse, *4 Ezra*, this work employs a fictional setting at the time of Nebuchadnezzar's destruction of Jerusalem as a paradigm for the Jews' situation after 70 C.E. The problems of theodicy are worked out through a series of conversations or debates between the seer and God, which make the following points. The present situation indicates that the Jews are being justly punished for their sins. Nonetheless, their gentile conquerors are guilty of greater sins; and their victory over the covenant people is a paradoxical contrast to the divine punishment that they themselves deserve. Moreover, if Israel's plight continues, the people will be denied the privileges of their covenantal status. Thus the present situation massively contradicts the axiom of divine justice and offers a classic opportunity for the solution offered by the varieties of Jewish thought about the future.

The author's answers are difficult to schematize and harmonize, because he has assembled traditions whose views of the future stand in tension and even contradiction with one another if they are taken literally. Nevertheless, some general lines are clear. The solution to the present lies in the future, often designated as "the latter (or last) times," or "in the consummation of the times." God's "chastisement" in the present will be alleviated through God's salvation in the future (1:5; 13:10; cf. Tobit). Chapters 49–52 and 53–74 contrast present and future according to two traditional paradigms. The discussion of the resurrection (chaps. 49–52) employs a vertical axis, contrasting this world and its bodies bound to corruption with the heavenly world of incorruption reserved for the transformed bodies of the resurrected righteous. Chapters 53–74 are an extensive historical apocalypse, with a horizontal eschatological axis. Adam's sin brought untimely death, grief, anguish, pain, and related evils into the world (56:5–6). At the time of the judgment, paradisiacal peace will return, and the consummation of the corruptible will lead to the beginning of the incorruptible (chaps. 72–74).

Three passages associate the events of the end time with the appearance of the anointed one. In chaps. 25–30 his time is placed at the end of twelve periods of evil; he will initiate a time of great blessing and fertility on earth, which will be followed by the consummation and the resurrection. Chapters 36–40 locate the coming of the Messiah during the reign of a particularly wicked king who rules over the last of four kingdoms (cf. Daniel 7). He will judge and condemn that king and reign over Israel until the end of the corruptible world. In the long periodized apocalypse in chaps. 53–74, the Messiah also appears as judge of Israel's enemies who will preside over a world returned to primordial peace. The precise relationship between this messianic reign and the world of incorruption is not clear. Common to all of these texts is their complete silence about the humanity and Davidic lineage of the Messiah. Similarities to Daniel 7 and the Parables of Enoch suggest that the author envisions a transcendental deliverer.

More than the authors of any of the previous texts, this author explicates scenarios for a future that is the end of the old and the beginning of a new time that will replicate the first beginning. The reference to a deliverer defined only as "the (or my) anointed one" (29:4; 30:1; [39:7; 40:1; 72:2]) suggests a fusing of separate eschatologies. The use of historical periodization indicates that God has determined the future, although it is unclear whether the author claims to know its precise time. The admonitions to observe the Torah during the time of the teachers who will succeed "Baruch" suggests that, different from many earlier apocalypses, here the time is not thought to be imminent.

b. *4 Ezra.* The author of this apocalypse also reacts to what he considers to be the patent injustices evident in the gentile conquest of Jerusalem. Perhaps the major difference from *2 Baruch* is the

persistence and penetration with which the questions are pressed in lengthy dialogues that are reminiscent of, and perhaps as unsatisfactory as, the book of Job. These nagging doubts and this ongoing questioning color the book's discussions of the end time. The seer wishes to know: How long? Do we live closer to the end than to the beginning? Is this sorrowful age near its end? Are our sins delaying the consummation? What are the signs of the end? Could God not have made the judgment happen sooner? The responses to these questions indicate, first of all, that the times are fixed, as is the number of the souls of the righteous. Like the period of human gestation, the moment for the birth pangs of the new age can be neither delayed nor accelerated. That time, however, is near; this world is in its old age. A particular time frame for the end is indicated in chap. 12, which expects the Messiah during the reign of a contemporary Roman emperor.

4 Ezra's messianism is noteworthy for its eclecticism. Chapters 11–13 expand on and elaborate the vision in Daniel 7, dividing it into two separate visions. Chapter 13 retains the notion of a heavenly figure who—different from Daniel, but like the Parables of Enoch—will function as the judge and annihilator of the nations. This idea of a transcendent messiah parallels *2 Baruch.* In chaps. 11–12, however, the Messiah, whose functions parallel those in chap. 13, is identified as a descendant of David. See SON OF MAN. The Messiah's humanity is evident in a different way in chap. 7. He will reign for 400 years, and then he will die when the earth returns to primeval silence before the resurrection and judgment over which God will preside.

The last mentioned passage posits a real end that precedes a new beginning which harks back to creation. Ezra's anthropology requires a radical new beginning, so that humanity may be rid of the evil seed which was sown in Adam's heart and produces ungodliness until the time of threshing (4:28–32). "But the day of judgment will be the end of this age and the beginning of the immortal age to come, in which corruption has passed away" (7:112–14). The formulation parallels *2 Baruch*'s.

c. *The Book of Biblical Antiquities* (Pseudo-Philo = L.A.B.). This work is a retelling of the narratives from Genesis to 1 Samuel rather than an apocalypse that explicitly addresses questions about the end. Nonetheless, it addresses some of the same issues as *4 Ezra* and *2 Baruch*, sometimes employing the same traditions. The crisis of the year 70 is addressed in terms of present and future, but with a special nuance. Do Israel's sin and the plight that has resulted from it mean the end of the nation's covenantal status and the failure of God's promises to the patriarchs? An answer does, in fact, lie in the future, even if one is hard-pressed to find references to that future as the time of an end and a new beginning. However, the Enochic typology of Flood and final judgment appears to underlie *L.A.B.* 3:10, where the resurrection, which marks the end of the world and death, is associated with "another heaven and another earth."

Like the apocalypticists, this author presumes a preordained schedule of divine actions (3:9–10; 56:2; 59:1; 61:3; 62:2–9). Whether the author expected a restoration of the Davidic dynasty is disputed. The book's sudden ending before the reign of David may contradict such an idea, or it may leave the story open-ended, precisely in order to suggest the coming of the Davidic heir.

D. Summary

1. The Future as a Necessary Change. Israelite attitudes about the future are bound up with a negative appraisal of the present, in two ways. The expectation that things will change in the future may stem from the belief that God's justice is absent in the present. Thus one awaits an act of divine judgment that will reverse present unjust conditions. Alternatively, one may believe that present calamities are the deserved punishment for the sins of the people or some group of them. In such a case one appeals for the repentance that will restore blessing from the just God of the covenant.

The description of the present that needs to be changed varies from text to text and is always colored by the author's experience and appraisal of the current situation. Early texts cite the destruction or effective dismantling of significant social, political, and religious institutions (the monarchy and the temple, cult, and priesthood) and, preeminently, exile from the land. Some later texts continue to dwell variously on the absence of a Davidic king, the failed glory of Zion, the perceived ineffectiveness of the cult, and the continuation of the Diaspora. Other specific situations that call for adjudication or the repentance that leads to blessing include: religious persecution and social and economic oppression by one's compatriots;

political domination by sinful foreigners; undeserved natural disasters; defilement of the temple; egregious disobedience of the Torah and, worse, the teaching of false interpretations of the Torah which leads others astray.

In the context of these (perceived) conditions, Israelite authors await the inevitable intervention of the righteous God, who will adjudicate these wrongs. The arrogant and disobedient will be punished, the righteous will be rewarded, and those who suffer unjustly will be vindicated. A new day will dawn, in which righteousness and abundant blessing will flourish.

2. Various Eschatological Topics. The 6th-century prophets addressed the disruption and chaos of their times by creating scenarios of the future that were basically restorationist: return from Exile and Diaspora; restoration of the Davidic monarchy over one nation; the glorious rebuilding of Jerusalem and the temple; the revival of the cult. When judgment had been effected, sin had been paid for, and the people had repented, these were the ways in which God would restore the promised blessings to Israel.

Thus the prophetic texts provided a range of topics that reappeared in a wide variety of mixtures and with creative transformations and nuances in scenarios of the future that were, in turn, created by writers of the late Persian and Greco-Roman periods. This variety has tended to be obscured by synthetic and topically oriented handbooks—as valuable as these are for their collections of data. The scholarly investigation of Jewish eschatology needs to focus on individual texts and the specific ways in which their authors interpreted their circumstances and posited solutions to what they perceived to be the major problems that characterized their times.

a. Messianism. The issue of Jewish messianism is particularly knotty, and references to a future Davidic king are far less frequent than one might suppose. The texts posit a variety of figures and combinations of figures with a range of judicial and salvific functions: angels and human beings, a king, a priest, a prophet, an interpreter of the Torah. The term *messiah* should perhaps be reserved for figures whose "anointing," whether literal or figurative, places them in continuity with the anointed kings, priests, and prophets of old. Attention to such detail allows one to detect significant discontinuities and distinctions, e.g., between an anticipated Davidide (*Pss. Sol.* 17–18) and a transcendent savior who fills the role that others ascribed to such a royal figure. Similarly, one can track such tendencies as the absence of a Davidic king in texts that are strongly beholden to the traditions of Second Isaiah and Third Isaiah.

b. The Kingdom of God. The notion that God is king and exercises kingly rule even over the nations is a natural concomitant of royal messianism, as the biblical texts, and the psalms in particular, indicate. It is noteworthy therefore how seldom the term and the idea of the kingdom of God appear in texts of the Greco-Roman period. Significantly, however, this term does occur in contexts where no Davidide is evident but where the problem is a (potential) threat by gentile kings (Daniel 2; 7; *T. Moses* 10:1; Wis 6:4). These and other occurrences need to be studied with an eye toward understanding why the term does not appear in other contexts.

c. Resurrection and Eternal Life. While many of the texts of the Greco-Roman period posit God's transcendence over death, their formulations differ widely. Other texts get along handily without any such idea, and texts like Baruch and 2 Maccabees 7 can employ the same Deutero-Isaianic traditions to describe a literal return from dispersion and a resurrection of the dead. Careful study of historical situation, social context, and literary form helps to explain these differences.

3. Development toward Eschatology. The term *eschatology* is problematic. The Hebrew and Aramaic roots *ʾaḥryt* and *ʾaḥrwn* ('after,' 'latter') need not, in themselves, denote a finality that involves a decisive break with the present. The emergence of the notion that the *latter* times will be the *last* times is difficult to track and is hardly the result of simple evolution. Linguistically it is perhaps most evident in texts—whether original or translations—where *eschatos* ('last') appears as the equivalent of the Semitic terms. More important indicators appear in the content and in the rhetoric or literary form of both Semitic and Greek texts.

a. Replication in a New Beginning. The writings of the 6th-century prophets emphasize with some consistency that the future will be characterized by the replication of a significant past event or situation. A new beginning will correspond to an earlier beginning. One envisions a new exodus, or a new covenant,

or, more radically in Second Isaiah and Third Isaiah, a new creation. The repetition of the primordial sequence of judgment and new creation is central to *1 Enoch* and is suggested in Isaiah 24–27. To the extent that such new beginnings imply an *end* to the present order, one may appropriately use the term *eschatology.*

b. Qualitative Distinction Between the Present and the First Beginnings. Increasingly with time, scenarios of the future posit a sharp and qualitative distinction from the present, a caesura that brings closure to the evils that characterize the present time. The new age will be marked by the universal, permanent eradication of evil and the cosmic, eternal sovereignty of God. In its universality and permanency the new order qualitatively exceeds and transcends the first beginnings that have been replicated. Different from the Flood (Gen 9:11 notwithstanding), this judgment will be final because the world that follows it will live up to the Creator's intentions, completely and forever. The distinction between the future and both the present and the first beginnings justifies the term *dualistic* or *mythic eschatology.* An increasing tendency toward such an eschatology is evident in *some* texts from Second and Third Isaiah onward.

Dualistic eschatologies are a function of their historical contexts and express a pessimistic appraisal of the present situation and severe skepticism about the possibility of redeeming the present order. Differences in the manner and locus of eschatological salvation are, functionally, not all that significant. One may live an eternal life in a transformed and immortal body on a newly created earth. One's soul or spirit may permanently ascend from earth to heaven, the realm of immortality and incorruption, which may eventually be separated from earth, which becomes the place of damnation.

Alongside texts that reflect such dualistic eschatologies, others appear that express views of the future that do not differ significantly from their counterparts in the 6th-century prophets. It remains a task for scholarship to identify and seek to explain these differences.

c. Teleology. If one is justified in using "eschatological" to describe dualistic views of the future with their notions of end and new beginning, there is also another sense in which one may see an "end" in the future. When prophecy fails to reach its complete literal fulfillment, one may look for the *telos,* the moment when God's infallible word finds its "goal" and reaches its fulfillment and culmination. This idea of end is clear in the Qumran commentaries on Scripture and, e.g., in Tobit and Sirach. It may be implicit when prophetic language is used to color new scenarios that describe the future (Baruch, as well as *1 Enoch*). It is evident in a different way when the Deuteronomic scheme is imposed on present and imminent events.

4. Time Frames and Their Implications. Jeremiah and Ezekiel are the earliest among the extant prophetic writings to indicate the specific time when a prophecy was to be fulfilled. Second Isaiah follows by identifying the time of salvation (also the end of the Exile) with a historical event that was in the process of happening. Third Isaiah, Haggai, and Zechariah saw God's intervention as imminent. Although prophecy continues to fall short of its complete fulfillment, writers of the Greco-Roman period continue to announce God's decisive intervention in the imminent future. In the case of the apocalypticists, this notion is expressed in sometimes lengthy reviews of history, attributed to figures of the past, which place the eschaton very close to the real authors' own times. Precisely how these authors concluded that they were living in the end times is not clear. A comparison of these texts with non-apocalyptic writings may shed some light on the matter. Daniel 9 indicates a reinterpretation of Jeremiah; the *Damascus Document* (CD) cites Ezekiel's prophecy, perhaps in revised form, and the Qumran commentaries explicitly point to the fulfillment of specific prophecies; the *Testament of Moses* is cast in the form of a paraphrase of Deuteronomy. However, the methods and mechanics of timing the fulfillment of prophecy and the arrival of the end remain obscure.

Two notions about the time of the end stand in tension with one another, although they sometimes appear in the same texts. The first is the relatively common idea that God foresees all of the future and, indeed, that God determined the structure of the ages before creation. This view is implied in historical apocalypses that "predict" events that cover centuries and even millennia; it is evident in Enoch's claim to have seen the heavenly tablets; and it is explicit in a number of Qumranic texts. It may also be suggested

in Tobit. Over against these kinds of determinism, one finds references to a variety of eschatological catalysts and deterrents. The end can be brought on by the prayers of the righteous, by conversion to a right understanding and observance of the Torah, and by the resolute deaths of the martyrs. Sin and its judgment can deter the coming of salvation and blessing; or for want of a better explanation, one may speak of the times being extended through the mysteries of God (1QpHab 7:7–11).

As the last cited passage indicates, claims that the end is imminent (and in some cases, to be dated) bring with them the problem that one must with time explain the evident fact that the end has not come. The more precise the prediction, the greater the subsequent necessity to explain. Such explanations in the form of revised calculations appear in Daniel 9 and Dan 12:12–13. In *T. Moses* 6 and *1 Enoch* 90 new material is interpolated to indicate a different time frame for an extant context.

In some cases eschatological awareness is so high that one can rightly speak about a "realized eschatology." The events of the end have already begun to happen. Methodological rigor requires, however, that we employ the term with great caution, making appropriate distinctions between Second Isaiah, the Qumran hymns, and the Epistle of Enoch.

5. Eschatology and Genre. Certain literary genres seem more likely than others to express eschatological ideas. Two implications follow from this. The absence of detailed and significant references to the future may be a function of the purposes and limitations of the genre and need not indicate that the author placed no stock in a change in the future. Ben Sira's wisdom genres tend to obscure his eschatology. On the other hand, one should be careful not to posit belief in a certain eschatological topic in spite of its absence.

Eschatology is often linked with apocalyptic thought. Recent studies of apocalypticism have demonstrated, however, that apocalypses reveal the secrets of the cosmos, as well as the hidden events of the future—although the two may be related. The salutary distinction between the literary genre of apocalypse and the kind of eschatology that typifies some apocalypses needs to be maintained and investigated with greater precision. One blurs careful definition when one speaks of "apocalyptic eschatology" in texts that chronologically precede the documented rise of apocalyptic genres (e.g., Isaiah 24–27; 56–66; and Joel). Similar caution is necessary in the study of later texts that are contemporary with the writing of apocalypses. Do these authors (perhaps in their claims about the nearness of the end) presuppose notions of revelation present in apocalypses? Finally, why did apocalypticists employ new, revelatory genres to embody the mythic and dualistic eschatologies that the prophetic texts had expressed in other literary forms?

6. Social Matrices of Eschatological Thought. Relatively little attention has been given to the social contexts that gave rise to early Jewish eschatological speculation. Qumran is an exception, because the archaeological evidence and the genre of some of the texts provide information that is not available in other texts. These latter texts, however, should be pressed for the evidence they may provide. For example, *1 Enoch* suggests the notion of an eschatological community constituted by a belief that they are the possessors of eschatological revealed knowledge. Although we can know almost nothing about whatever communal structure may have existed, it is important to see in these texts and others like them how an eschatological belief may have created or influenced certain behaviors, ideologies, and social arrangements, or may have resulted from them.

A. Introduction

The term *eschatology,* formed from the Gk adjective *eschatos* (meaning "last," "final") was coined in the early 19th century by theologians to refer to that part of systematic theology which deals with Christian beliefs concerning death, the afterlife, judgment, and the resurrection, i.e., *individual* eschatology. The term is now used more broadly to refer to the whole constellation of beliefs and conceptions about the end of history and the transformation of the world which particularly characterized early Judaism, and early Christianity, and Islam, i.e., *cosmic* eschatology. The central foci of these beliefs are the judgment of sinners and the salvation of the righteous. In early Judaism and early Christianity eschatological beliefs were often linked with a sense of urgency in view of the imminent expectation of the end of the age, although the degree of urgency or imminence varies in accordance with the particular social situation in which such beliefs are thought meaningful (e.g., persecution, feelings of alienation, etc.). The future is more important than the present since the existing world order will soon be overthrown.

B. The Morphology of Eschatology

All religions are centrally concerned with *salvation,* though the fundamental problems of human existence perceived by particular communities and the solutions formulated by their religious systems exhibit great diversity. Eschatology is a mythical mode of understanding the complete realization of salvation as a *future* event or series of events which are, nevertheless, somehow linked to the *present.* For this reason, in the belief and myth systems of early Judaism and early Christianity there is always *tension* between the present and future, because the present can always serve as the stage for the inauguration of the eschatological drama and the future can always be drawn into the present through ritual anticipation. Since the emphasis on the imminent expectation of the end is often *increased* in settings of adverse social, economic, and political experience and *decreased* during periods of relative peace and prosperity, it is clear that eschatology had an important social and religious function in ancient Judaism and Christianity. Though the importance and salvation of the individual are not without significance, the eschatology of early Judaism and early Christianity tended to focus primarily on the *social* and *ecological* dimensions of salvation. Eschatology therefore has several important constituent features which require separate discussion.

1. Protology and Eschatology. Many ancient religious traditions produced and preserved mythical accounts of the origins of the gods (theogony) and the world and humanity (cosmogony). They also consciously understood religious rituals as reenactments of archetypal or paradigmatic events, activities, and gestures from a pristine era (Eliade 1959: 21–27; 1963: 392–97), thus providing the basis for possible links between myth and ritual (Fontenrose 1966: 50–60). Comparatively few religious systems share the early Jewish and early Christian view that since the world had a beginning, it must also have an end. For both early Judaism and early Christianity, the idyllic conditions of earlier periods (e.g., the situation of Adam and Eve in the Garden of Eden before the fall, the relationship between Yahweh and Israel in the wilderness of Sinai, the golden age of David and Solomon) became important sources of language and imagery for describing the ideal conditions of the future. This is the *Urzeit-Endzeit* ("primeval epoch-final epoch") schema, in which the future is expected to parallel idyllic eras of the past. Isaiah's vision of a world free from strife and of Jerusalem as an international center (Isa 2:1–4) is based on this pervasive pattern of thought. Similarly, the imagery of Isaiah's prophecy that "the wolf shall dwell with the lamb, and the leopard shall lie down with the kid" (Isa 11:6), is a vision which conceptualizes the idyllic future in imagery drawn from the myth of Eden. Thus the conditions of eschatological salvation are usually conceptualized as a *restoration* of primal conditions rather than an entirely new or utopian mode of existence with no links to the past. On the other hand, the apocalyptic conviction that a period of great stress and upheaval will precede the inauguration of the end is also conceptualized using language and imagery from the past. The mythical primordial story of the fall of Helel ben Shachar (RSV: Day Star, Son of Dawn) first appears in Isa 14:12–15. There it is used in a song of taunt to celebrate the fall of the king of Babylon. Understood as a description of the primordial fall of Satan, it is alluded to in Jesus' vision of Satan's eschatological fall (Luke 10:18) and is applied in Rev 12:7–9 to Satan's protological fall. Similarly, the plagues unleashed by the seven trumpets and seven bowls of Rev 8:1–11:14 and 15:1–16:21 are modeled after the ten plagues inflicted on the Egyptians in Exodus 7–12 (an earlier tradition of *seven* Egyptian plagues is preserved in several OT texts: Pss 78:43–51; 105:27–36; Amos 4:1–12; cf. Wis 11:1–19:9).

2. Eschatology and History. Since the focus of eschatological salvation is upon a transformed society living in an ideal environment, the earliest and most persistent forms of Jewish eschatology have a marked temporal and materialistic focus. The Israelite conception of "salvation" centered in the notion of *bĕrākâ* ("blessing,"), which consisted exclusively in temporal benefits: abundance of crops, long life, good health, many children, peace with one's adversaries, and (even better) victory in war (*PI* 1: 182–212; Westermann 1978: 15–23). In addition, a strong emphasis on the secure and permanent possession of the land, with its center in Jerusalem, pervades the Hebrew Bible and has remained a focus of Judaism until modern times (Brueggemann 1977).

Though there was a tendency in early Christianity to reject the temple (Acts 7) and to spiritualize the conceptions of the land, the holy city, and the temple (Davies 1970: 366–76), it is, nevertheless, true that for some strands of early Christianity strongly influenced by Judaism emphasis was placed upon the eschatological renewal of the earth and the exaltation of Jerusalem within the context of the land (cf. Rev 14:1–5; 20:1–5; 21:1–22:5), a view particularly at home in Jewish Christianity (Danielou 1964: 377–404). The late 1st- and early 2d-century C.E. emphasis on millenarianism (a term ultimately derived from Rev 20:1–5), at home in Jewish Christian circles, was particularly popular in Christian groups living in the Roman province of Asia. Millenarianism included an idyllic portrait of life on a renewed earth as emphasized by Papias (Iren. *Haer.* 5.33.3–4) and accepted by Justin, Irenaeus, and Hippolytus. This materialistic conception of eschatological salvation, however, antithetical to the Hellenic emphasis on the priority of spirit over matter, was ridiculed by educated Christians (cf. Eus. *Hist. Eccl.* 3.39.11–13) and, with the demise of Jewish Christianity, was eventually given up.

Frequently Jewish and Christian perspectives on history have been characterized as *linear,* i.e., as portraying history as a line that began with creation and God's first covenants with people and progresses straight to the future eschatological consummation. This is contrasted with the *cyclical* perspective of Greco-Roman culture, which knows no final and nonrepeatable events. This contrast appears to be a vast oversimplification, however; for the historical thought of ancient Israel and early Judaism as well as early Christianity was not fundamentally different from that of ANE nations and Greece. The Stoic view of time in particular shows close similarities with ancient Israelite conceptions of time.

3. Eschatology and Apocalypticism. Both *eschatology* and *apocalypticism* are modern terms used by scholars to describe an important religious perspective characteristic of some but not all strands of early Judaism and early Christianity. When applied to early Christianity, the terms *eschatology* and *apocalypticism* are essentially synonymous, since there is no aspect of cosmic eschatology that cannot also be considered an aspect of apocalypticism, *apart from the element of the imminent expectation of the end.* Yet until very recently eschatology and apocalypticism have frequently been distinguished, with the former regarded positively and the later negatively (e.g., Perrin 1963: 176–78). According to this assessment the most striking difference between prophecy and apocalypticism lies in their respective views of history. While prophecy regards history as the arena of God's saving activity, apocalypticism understands history in mythical terms so that individual events have ceased to be important and the emphasis is on a climactic series of events by which God will bring salvation to his people by bringing history to a cataclysmic conclusion (Perrin 1963: 176–78). Jesus is understood as rejecting the apocalyptic understanding of history and reverting to a prophetic understanding (Kümmel 1961: 88–104; Perrin 1963: 178; Crossan 1973: 26–27).

Old Testament scholars usually make a distinction between the "prophetic eschatology" of the classical Hebrew prophets and the "apocalyptic eschatology" characteristic of early Jewish apocalyptic literature. Until very recently there was a tendency to deny any direct continuities between prophecy and apocalypticism, a denial motivated at least in part by a generally negative attitude toward apocalypticism on the part of biblical scholars. Apocalypticism was consequently regarded, not as an *internal* development within the postexilic Jewish community, but as the result of the pernicious influence of *external* cultural forces (variously assessed as Canaanite, Babylonian, or Persian). "Prophetic eschatology," it was claimed, was essentially an optimistic world view espoused by the classical Israelite prophets, who expected that God would ultimately transform the world by reinstating the lost Edenic conditions. This prophetic optimism was supposedly shattered by the capture of Jerusalem and the destruction of the Solomonic temple in 587 B.C.E. This event, which entailed the exile of many inhabitants of Judea (Jer 52:28–30 reports three deportations totaling 4600 people; a larger, probably exaggerated, figure is reported in 2 Kgs 24:14), began centuries of national subjugation to a succession of Near Eastern empires. Preexilic optimism was replaced with despair and pessimism which found expression in "apocalyptic eschatology." According to this perspective the world appeared to have become so irredeemably evil that only through a cataclysmic intervention and the destruction of the old world could a new and ideal society and environment be created.

One persistent problem is the propriety of using the term *eschatology* of the message of the preexilic prophets (beginning with Amos and Hosea). In ancient Israelite thought the terms *ʾahărît* ("end,") *ʾahărît yāmîm* ("end of days,") and *yôm YHWH* ("day of the Lord") do not refer to the eschatological consummation or the end of the world but rather to the more or less distant future (Lindblom 1952: 79–114). While the OT speaks of the "day of the Lord," such phrases do not refer to the end of history but rather to a future time (sometimes considered near and at other times more remote), when God is expected to act in human history to accomplish his purpose. Though the precise origins of Jewish eschatology are obscure and a matter of some speculation, it is, nevertheless, clear that earlier *noneschatological* terms and conceptions were later given an *eschatological* significance.

The critical issue for some scholars is whether or not prophets such as Amos and Hosea were prophets of *doom* (McKane 1979: 176 f.). Prophetic eschatology may be defined as "the study of ideas and beliefs concerning the end of the present world order, and the introduction of a new order" (Clements 1965: 105). If the term *eschatology* is restricted to the anticipation of events which follow the consummation of history, then it is an inappropriate designation for describing the element of hope and restoration in Israelite prophecy subsequent to Amos and Hosea. The term *eschatology* can be meaningfully applied to the perspective of the 8th- and 7th-century Israelite writing prophets when the term is broadly defined as the expectation of imminent events brought about by the action of God in history accompanied by the dissolution of the old salvation history. Prophetic eschatology involves the implication that the saving events of the past (e.g., the Exodus; the conquest of the land; the Davidic covenant) are no longer considered adequate or valid (*ROTT* 2: 112–19). It is problematic to label the prophetic anticipations of hope, restoration, and reconstruction (cf. Isa 9:2–7; 11:1–9; 32:1–8; Amos 9:11–12; Hos 2:5) as *eschatological,* since a full and complete *end* is not anticipated. However, the language of prophetic expectation for the future of Israel became increasingly extravagant (cf. Isa 60:1–2; 61:1–7; 66:12–16) and in ignoring historical realities increasingly took on the characteristics of later apocalypticism. Apocalyptic eschatology, then, must be considered primarily as a theological development which took place *within* postexilic Jewish religious thought.

4. Eschatology and Cult. Religious ritual is usually regarded by its practitioners as the conscious repetition and representation of paradigmatic events and activities of the past, serving to restore and invigorate the present (Eliade 1959: 5–6; Zuesse *EncRel* 12: 406–8). In Babylon the annual New Year *Akitu* Festival (preserved in documents from the Hellenistic period, cf. Smith 1978: 72–74) involved a sacred marriage ceremony and a ritual presentation of the primeval battle between the Babylonian god Marduk and the chaos monster Tiamat. The victory of order over chaos assured another year of blessing and prosperity. In ancient Israel and in Judaism, the *šôfār* ("ram's horn") was used in cultic contexts (2 Sam 6:15; Isa 27:13; Joel 2:15; Ps 81:3), where it recalls the Sinai theophany (Exod 19:16; 20:18), and was also used as part of ancient Israelite theophanic imagery (Isa 18:3; Joel 2:1; Zech 9:14; Ps 47:5), a cultic metaphor found also in Rev 1:10.

In early Christianity eschatology was not simply one aspect of a cognitive theological system, but rather was intimately connected with religious experience within the corporate setting of worship. Even though early Christianity (as early Judaism) conceptualized the future in terms of the meaningful paradigmatic or archetypal events and conditions of the significant past, nevertheless, during the first century C.E. the focus was placed on the eschatological consummation in which salvation would be fully and completely realized. Early Christian worship functioned primarily as a vehicle for celebrating the realization of salvation in and through Jesus Christ. The goal of salvation, the complete attainment of the presence of God, was considered the object of eschatological hope, whether in a renewed earthly environment or in the heavenly world (1 Thess 4:16–17; 1 Cor 15:20–28; Heb 12:18–24; Rev 21:22–22:5; *Odes Sol.* 11:16–17; 36:1–2; *Ign. Magn.* 14:1). In Christian worship the anticipated goal of final, eschatological deliverance was drawn into the sphere of present experience and celebrated *as if* it had been fully and finally achieved. In the phenomenology of this worship, past and future collapse into an eternal present; and the spatial distinction between heaven and earth is momentarily obliterated. In the light of this kind of

cultic experience, there can be no hard and fast dichotomy between the presence of Jesus in the midst of the worshipping community and the "distant" presence of Jesus at the right hand of God.

At least two major constellations of imagery were used by early Christians to conceptualize the final heavenly gathering of the redeemed (Aune 1976: 455–58). In early Judaism this final gathering before God or his accredited representative was sometimes conceptualized using banquet imagery (1QSa; *1 En.* 62:14; *2 En.* 42:5; *2 Bar.* 29:8; cf. Isa 25:6; 65:13). The cult meal of the Essenes anticipated the coming of the messiah(s) of Aaron and Israel (1QSa 2:17–22; 1QS 6:1–6; cf. *JW* 2.128–33), and is phenomenologically similar to the function of the early Christian celebration of the Last Supper (Kuhn 1957: 65–93). Through the utilization of this messianic banquet metaphor (which early Christians used only rarely), the celebration of the Eucharist could be understood as an anticipation of the eschatological heavenly banquet (cf. Matt 8:11; 26:69; Mark 14:25; Luke 22:16; 18:30; *Didache* 9:4). Yet the primary way of conceptualizing the complete experience of eschatological salvation was not the messianic banquet metaphor, but rather the conception of the final festal gathering of both angelic beings and redeemed people before the heavenly presence of God. Using this imagery, the gathering of a local community for worship could be viewed from a cosmic perspective as *the* final gathering of *the* Christian church before the eternal presence of God. This phenomenon explains some unusual features of Christian worship, such as the belief that angels were present in the midst of the worshipping community (1 Cor 11:10; Heb 12:22; 13:2; Col 2:18; *Herm. Sim.* 9.27.2; cf. Peterson 1964). The eschatological focus was celebrated in various ways in early Christian worship. Even the celebration of the Eucharist, which is often understood more exclusively in terms of the repetition of the Lord's Supper in light of the events of the death and resurrection of Jesus, nevertheless, has a significant eschatological emphasis in the fragments of the early liturgies which have been preserved (1 Cor 11:26; Mark 11:25 = Matt 26:29 = Luke 22:18; *Didache* 9:4). Some early Christian hymns, such as Phil 2:5–11, have an eschatological perspective in which events which clearly belong to the future are described as if they are already part of present experience. This phenomenon of the blending of the future with the present in the experience of worship suggests that the language of "realized" eschatology (i.e., events and conditions which belong to the eschatological consummation are described as if they already belonged to present experience) may have its origin and primary setting in worship (Aune 1972: 8–23).

5. Eschatology as Folklore. While accounts of the beginning of the gods (theogony) and of the world (cosmogony) are generally recognized as that type of folk literature usually labeled "myth," it is not often recognized that eschatology also belongs to the realm of myth and therefore itself belongs to the category of folk literature. *Eschatology* in the sense that the term is generally used of early Jewish and early Christian conceptions of the end, consists of *narratives* rather than doctrines. Furthermore, since such narratives focus on some time in the future at which the present order will be radically transformed, they are necessarily couched in metaphoric and symbolic terms and include large doses of communal fantasy. Jewish eschatology and Christian eschatology consist primarily in the imaginative projection of folkloristic themes and motifs into the future as constitutive parts of a final salvation presented in narrative form. In an important study the implications of which have yet to be realized L. Hartman (1966) isolated a sequence of five motifs which occur in order in 65 pericopes on the last things found in early Jewish apocalyptic literature (listed in Hartman 1966: 53, n. 13): (1) the preliminary time of evil, (2) divine intervention, (3) the judgment, (4) the fate of the sinners, and (5) the joy of the elect. This structure has two main forms, one in which God intervenes and no messiah is mentioned and the other in which the Messiah has a place in the pattern. Two other frequently occurring motifs are the earthquake motif and the tumult and assault of the heathen. The structural *unity* of the various scenarios consists in the relatively consistent use of this structural pattern and in the extensive use of ancient myths and symbols rather than in any theological or ideological consistency. It is important to emphasize the fact that neither Jewish nor Christian eschatology can in any way be considered a *unified* or consistent system of beliefs and symbols about the saving events of the future.

There are several texts in early Christian literature which narrate a sequence of events associated with the end of the world. Several of these "eschatological scenarios" are found in the Synoptic Gospels: Mark 13; Matt 24–25; Luke 21; 17:20–37.

C. The Jewish Roots of Christian Eschatology

1. Introduction. Eschatology appears to have constituted not only the matrix within which early Christianity developed, but also an inseparable feature of early Christianity itself. One persistent methodological problem in reconstructing the Jewish eschatological setting of Jesus and early Christianity, however, has been the tendency to use the NT itself as a primary source for reconstructing Jewish eschatology for the 1st century C.E. This approach is made even more problematic once it is recognized that early Judaism had no single consistent "eschatology," but rather exhibited a variety of eschatologies. This problematic approach was particularly prevalent in the decades before the discovery and publication of the Dead Sea Scrolls, which provided a datable body of texts (and texts not subject to revision after ca. 68 C.E.), which attested to several forms of Jewish eschatology which existed in Palestine from the 2d century B.C.E. to the 1st century C.E. In most modern discussions of early Christian eschatology, the emphasis is usually placed on parallels with Jewish eschatology without a suitable emphasis on the distinctive features which Christian eschatologies share. The process whereby Jewish eschatology was transformed began with Jesus of Nazareth. Though Jesus certainly stands within the framework of early Jewish eschatological thought, his distinctive combination of eschatological motifs and themes and the way he related them to his own mission and message produced a new perspective which was inherited and broadened by his followers after his death and resurrection.

2. The Messiah. Until the middle of the 1st century C.E. in Judaism, the term *māšîaḥ* ("anointed one") did not unambiguously refer to the eschatological Davidic messiah, a fact which suggests the relative unimportance of the term for Jewish eschatological expectation (de Jonge 1966: 133 f.). That usage begins to appear toward the end of the 1st century C.E. and becomes dominant in later rabbinic Judaism. In CD 14:11, an ambiguous text, there *may* be a reference to the coming of a single messiah representing both priesthood and people or the text may be understood to expect *two* figures, a priestly messiah and a lay messiah. Nothing in these texts suggests a Davidic messiah. In 1QS 9:11–12 there is a clear reference to *two* messianic figures, a priestly messiah and a lay messiah (i.e., the messiah of Israel is nowhere said to be Davidic): "the coming of a prophet and the messiahs of Aaron and Israel." In 1QSa 2:12–21, a single messiah, the messiah of Israel is mentioned alongside the priest. The *War Scroll* (1QM) contains no mention of any messiah, with the exception that the phrase "anointed ones" (11:1–3) clearly refers to prophets. Similarly the *Hodayot* (1QH) makes no clear mention of a messiah. Elsewhere the notion of a Davidic messiah is found in 4QFlor and 4Q161 and 162. Despite the many fragments and documents which made up the library at Qumran, it is remarkable that references to a messiah or messiahs occur only sporadically and inconsistently. It is useful to understand Jewish messianism in terms of Gershom Sholem's typology, which distinguishes between *restorative* and *utopian messianism. Restorative messianism* anticipates the restoration of the Davidic kingdom, while *utopian messianism* expects the creation of a new and perfect world after the destruction of the present evil world.

3. The Combat Myth. The legendary narrative pattern of a combat between a hero and his adversary or the mythical narrative of a primordial cosmic struggle between two divine beings and their allies for sovereignty over the cosmos was widespread throughout the ancient world. The names of the combatants (as well as their roles) change from culture to culture: in Babylon it was Marduk and Tiamat, or Gilgamesh and Humbaba; in Canaan the combatants were Baal and Yamm. There were many variants of the combat myth in Greece; and some of the combatants included Ouranos and Kronos, Zeus and the Titans, Zeus and Typhoeus, and Helios and Phaethon. Many of the mythical motifs of the combat myth remain constant or are subject to a limited range of variation.

Various versions of the combat myth were adapted first by Israel and later on by Judaism from the various cultures with which they had close contact throughout their historical experience. Jewish apocalyptic literature reflects a renaissance of ancient mythical narratives, of which one of the more important was the combat myth. This myth functioned to ascribe the experience of suffering and evil in

the world to an independent cosmic adversary, Satan. Satan is the primary adversary (variously conceived as a rebel, tempter, or tyrant) in early Judaism and early Christianity; his name suggests that his primary role is that of *opposition* (the Gk term *diabolos* means "slander," and the Heb term *śaṭan* means "adversary"). He is of course known by many other names as well, including Beliar, Beelzebul, Abaddon, Apollyon, Lucifer, Sammael, Semihazeh, Asael, and the Devil. In Rev 12:9 he has a long list of aliases, including the Great Dragon, the Ancient Serpent, Devil, Satan, and the Deceiver of the Whole World. In the specifically Christian version of the combat myth, an exalted angelic being challenged the power of Yahweh and now has control of the earth. Christ functions as the divine warrior. Though Satan attempts to defeat him (cf. Luke 22:3: "Then Satan entered into Judas"), Christ has freed humanity through his crucifixion from the tyranny of Satan, though Satan's final banishment has yet to take place. This protological imagery was thus transformed into eschatology in early Christianity.

4. The Paradise Motif. In early Judaism the protological conditions described in Gen 2–3 became the source of imagery for the widespread belief that the ideal conditions which existed before the fall would be restored in the eschaton. In an ideal earthly environment, called the Garden of Eden, but later frequently referred to as Paradise, Adam and Eve possessed perpetual life and were free from disease, pain, sorrow, and the necessity of labor. The process of mythologization further developed each of these ideal features. Paradise was considered a heavenly region (2 Cor 12:2f.; *2 En.* 8:1), so that the expulsion of Adam and Eve was from heaven to earth. Adam was conceptualized as an angelic heavenly being who lost immortality when he was expelled from heaven. Further, the tree of life, first mentioned in Gen 2:9 and 3:23–24, became a recurring symbol for access to eternal life in Judaism (Sir 19:19; *4 Ezra* 7:123; *4 Macc.* 18:16; *T. Levi* 18:11; *Apoc. El.* 5) and in early Christianity (Rev 2:7; 22:2, 14, 19). Whenever the attainment of eternal life was the subject of Jewish eschatological hopes, that life was conceptualized in terms of the restoration of Edenic conditions. In Rev 22:1–5, for example, the New Jerusalem (the dwelling place for the righteous on a re-created earth) is described with imagery drawn from Gen 2–3.

5. The Denationalization of Jewish Eschatology. While Christianity began as a movement within Judaism, by the late 1st century C.E. a polarization had taken place which eventually resulted in the complete separation of Christianity as a distinct entity from Judaism. Christianity then became a distinctive religious phenomenon in the ancient world, a religious cult without a national homeland. Paul had already placed all people into three distinct groups, Jews, Greeks, and members of the church of God (1 Cor 10:32). This tendency culminated in the designation of Christians as the *tertium genus,* "third race" (*Diog.* 5–6; Tert. *Ad Nat.* 1.8).

Since the mythical imagery and motifs of Jewish apocalyptic eschatology were drawn from the ancient *national* mythical traditions of creation and kingship, the separation of Christianity from Judaism also entailed separation from the mythical traditions which defined the Jewish national identity. It is not accidental that Revelation was apparently the *only* apocalypse with close generic ties to early Jewish apocalypses nevertheless produced by an early Christian author (theories proposing that Revelation is basically a Jewish apocalypse with a light Christian redaction have proven unconvincing). While the *Shepherd of Hermas* (particularly *Vis.* 1–4) is an apocalypse, there is little similarity in content with either Revelation or early Jewish apocalypses. Christian "apocalypses" produced in the 2d and 3d centuries C.E. such as the *Apocalypse of Peter,* tend (like Greco-Roman apocalypses; cf. Betz 1983: 594 f.) to focus on tours of heaven and hell in which the eternal states of the righteous and sinners are emphasized as sanctions for present behavior. In several respects the acts of Christian martyrs, with their focus on individual eschatology, replaced the apocalypse as the idiom of an oppressed minority.

D. Eschatology in the Greco-Roman World

Several themes which play an important role in Jewish and Christian eschatology were also the subject of speculation in the Greco-Roman world. Three such themes include (1) the end of the world, (2) the schematization of history into periods, and (3) the anticipation of an idyllic period following a time of decline or repression.

In early Greek thought the expectation of the end of the world was a concern of natural philosophy, not of religious or mythological speculation (Burkert 1983: 240). Stoicism taught a periodic conflagration

(ekpyrosis) and reconstitution *(palingenesia)* of the cosmos (cf. von Arnim 1964: 2.596–632; Long and Sedley 1987 §46A–P). The conflagration of the world was a view attributed to Heraclitus (Diog. Laert. 9.8). According to the Stoics the world, though imperishable, was subject to an eternal series of world cycles in which all matter was reduced to pure fire *(ekpyrosis).* Chrysippus emphasized the periodic return of the *same* world and the *same* people. Virgil, writing in this tradition, predicts that in the golden age a second voyage of the Argo (from the story of Jason and the Argonauts) will take place, and a second Trojan War will be fought, and a second Achilles will go to Troy (*Ecl.* 4.34–36). The Stoics even spoke of these cosmic cycles in terms of the beginning *(arche)* and end *(telos)* and of significant events which changed the character of the world. Though both Plato and Aristotle held to a conception of the eternity of the cosmos, they both thought that civilization was periodically destroyed by natural disasters and thereafter reborn (a view also reflected in Polyb. 6.5.4–9).

The periodization of past epochs was also important for such Greek authors as Hesiod (*Op.* 106–201) and Plato (*Plt.* 273E; *Ti.* 29A). This historical scheme appears in Daniel 7–12 and later Jewish apocalypses and seems to have been borrowed by the Jews from the Greeks and thereafter transformed into an apocalyptic conception (Burkert 1983: 244–51; Momigliano 1984: 77–103). For Plato the present age is perfect and eternal, the third of three successive stages. The first was the period before the great reversal (*Polit.* 269C; 270A; 272E); the second was the great reversal, the Age of Kronos and the Earthborn (*Polit.* 269D–E; 270D ff.; 273A). However, the ideal past periods of human history (followed by periods of decline) were irretrievable. The Great Year, the cycle of time in which all things began again, was a widespread Greek belief. The legendary Musaeus reportedly claimed that "everything proceeds from unity and everything is eventually resolved into unity" (Diog. Laert. 1.3). The Pythagoreans held that everything repeated itself in exact detail.

During the early Roman Empire there was some speculation that the idyllic "Saturnian" era of the past would again be realized in the near future. The poetry from the early Roman imperial period has just three passages concerning the imminent reemergence of the Saturnian age: Virgil *Ecl.* 4.5; Calp. *Ecl.* 1.42–45; anonymous poet in *Anth. Lat.* no. 726, 22–24. In Augustan propaganda, the return of the *aureum saeculum* ("golden age") was associated with Augustus (Virgil *Aen.* 6.791–94):

> Here is the man you've heard so often promised:
> a golden age in Latium, land where once
> Saturn was king.

The Romans adapted the god Aion (a deity who was important in Hellenistic Alexandria), the ruler of the universe and god of limitless time who was expected to bring about the return of the golden age.

In the Hellenistic world the notion of immortality, originally understood in the Greek world as the exclusive possession of the gods and one which they jealously guarded, came to be understood as a permanent or ontological property of the human soul. Early Judaism was inevitably influenced by this conception (Wis 3:4; 6:18 f.; *4 Macc.* 9:22; 14:5; 15:3; 16:13; 17:12; Philo *Quaest Gen* 3.11; *Probus* 7.46; *Congr* 18.97). Yet Judaism continued to associate immortality with resurrection at the end of days, and few conceptions were as foreign to Greek and Roman thought as that of physical resurrection.

E. The Eschatology of Jesus

Even though there is wide disagreement regarding what can be known about the historical Jesus and his teachings, two important features of his eschatological orientation have attracted the attention and the speculation of scholars: Jesus' views of the future (i.e., his eschatological perspective) and Jesus' understanding of his own role within the framework of that eschatological perspective. Whether or not Jesus considered himself an eschatological figure, his followers quickly placed him in that category within a relatively few years following his crucifixion in 29 C.E.

1. Models for Understanding the Message of Jesus. The four canonical Gospels are the end result of complex oral and literary processes which have preserved a great variety of traditions about Jesus of Nazareth. While much of this material may be rooted in the teachings and activities of the historical Jesus, most of it has been subject to various degrees of modification by early Christians who transmitted the Jesus traditions. This complexity has made it very difficult to reconstruct the teachings of the historical

Jesus with any confidence. It was not until the early 20th century, through the work of such NT scholars as Johannes Weiss and Albert Schweitzer, that the eschatological or apocalyptic character of early Christianity began to be more fully recognized and thereafter to be taken more seriously. This modern rediscovery of the significance of eschatology for early Christianity has been assessed in four very distinctive and influential ways (Chilton 1984: 1–26 contains a succinct survey).

a. The Consistent Eschatology Model. This view, which developed toward the end of the 19th and the beginning of the 20th century, was formulated by Johannes Weiss (1971; originally published in 1892; 2d ed. 1900) and Albert Schweitzer (1964; originally published in 1901; 2d ed. 1913), and accepted by a number of prominent NT scholars including F. C. Burkitt, B. F. Easton, M. Dibelius, and R. Bultmann (survey in Perrin 1963: 13–36) and more recently by R. H. Hiers (1970, 1973). Schweitzer eloquently exposed the tendency of liberal scholars to create Jesus in their own image by turning him into a moral teacher who propounded timeless truths. Like Weiss before him, Schweitzer insisted that the eschatological views of Jesus be taken seriously and understood against the background of early Jewish apocalyptic literature (Schweitzer 1964: 367 f.). Ethics and eschatology in the teachings of Jesus and early Christianity, it was argued, are not superficially related to one another as kernel to husk. Both are essential. Jesus was an apocalyptist with an eschatological timetable. The mission discourse which Jesus gave when he sent out the Twelve (Matt 10:5–42) contained an explicit prediction of the imminent coming of the Son of Man (Matt 10:23), identical with the dawn of the kingdom of God, and the sufferings which the disciples would experience (10:34–39); both predictions failed to be fulfilled (Schweitzer 1961: 358–64). Since the tribulations heralding the end which Jesus had anticipated failed to materialize, he resolved to suffer himself in an attempt to force the arrival of the kingdom (Schweitzer 1961: 387–97). Since the end did not arrive, Jesus is an example of a failed prophet. The whole subsequent history of Christianity is in fact based on the nonoccurrence of the Parousia and the consequent abandonment of eschatology (Schweitzer 1961: 360; Werner 1957). While few scholars accepted Schweitzer's thesis in all its details, his emphasis on Jesus as an eschatological prophet has continued to dominate modern conceptions of the historical Jesus.

b. The Realized Eschatology Model. C. H. Dodd proposed that Jesus taught the essential *presence* of the kingdom of God (survey in Perrin 1963: 58–78). Formulated in opposition to consistent eschatology with its view of Jesus as a failed prophet, Dodd's view of the continuing truth and relevance of the message of Jesus was based on a careful exegesis of the sayings of Jesus in the Gospels, particularly the parables. Though recognizing that Jesus referred to the kingdom of God in some sayings as future and in other sayings as present, Dodd thought that Jesus' emphasis on the *presence* of the kingdom was the most characteristic and distinctive feature of his teaching (Dodd 1961: 34). Dodd therefore objected to understanding the kingdom of God as an apocalyptic concept. The "kingdom of God" is rather "the manifest and effective assertion of divine sovereignty against all the evil of the world" (Dodd 1961: 35), i.e., "history had become the vehicle of the eternal" (Dodd 1961: 159). The real problem for Dodd was not the delay of the Parousia or the de-eschatologization of early Christianity, but rather how such doctrines as the imminent Parousia became such an integral feature of post-Easter Christianity *at all.* While the Synoptic Gospels, Acts, Paul, and the Revelation of John represent the entry of eschatology into Christian belief systems, according to this view the Fourth Gospel and Hebrews retain the original emphasis on realized eschatology as taught by Jesus.

c. The Proleptic Eschatology Model. A number of scholars (J. Jeremias, O. Cullmann, W. G. Kümmel), reacting to the antithetical alternatives posed by Schweitzer and Dodd, proposed that Jesus held a paradoxical juxtaposition of the kingdom of God as *both* a present reality and a future expectation (survey in Perrin 1963: 79–89). Though few scholars explain the relationship between present and future in the teaching of Jesus in precisely the same way, the label "proleptic eschatology" is useful for indicating that there is a tension between present and future in Jesus' understanding of the kingdom of God, in which the present is a critical stage in the full future realization of the kingdom of God. The positions of consistent eschatology and realized eschatology can only be maintained by ignoring or minimizing present or future elements in the eschatological teaching of Jesus. W. G. Kümmel (1961)

sought to demonstrate three theses: (a) there is incontrovertible evidence that in the teaching of Jesus the kingdom of God is a future reality which will appear imminently (Kümmel 1961: 19–87); (b) there is also incontrovertible evidence that the kingdom of God is a present reality in and through the words and deeds of Jesus (Kümmel 1961: 105–40); (c) the eschatological message of Jesus must be contrasted with the apocalyptic eschatology characteristic of early Judaism, for Jesus' juxtaposition of present and future means that the redemptive function of the eschatological consummation has already become a present reality in the mission and message of Jesus (Kümmel 1961: 141–55). This view of the paradoxical juxtaposition of both the present and future aspects of the kingdom of God in the teachings of Jesus became dominant in the early 1960s as evident in the almost simultaneous publication of three books in 1963–64, the first two of which are primarily surveys of research (Perrin 1963; Lundström 1963; Ladd 1964).

d. Models De-emphasizing Eschatology. At the present time the proleptic eschatology model (a synthesis of the antithetical consistent and realized eschatology models) dominates the modern understanding of Jesus' eschatological perspective. Yet some scholars have recently criticized the assumption that the outlook of Jesus was primarily determined by eschatology, i.e., he understood his mission and message within the framework of the actual end of the world in his generation (Glasson 1980, 1984; Borg 1986; Mack 1987). This critique is based on several arguments (cf. Borg 1986: 81–102). (1) In recent critical discussions of the coming Son of Man sayings in the Gospels, many scholars have concluded that such sayings are not authentic and that there was in fact no eschatological Son of Man conception in early Judaism to which Jesus could have referred. (2) The conception of an eschatological kingdom of God, which occurs so frequently in the Synoptic teachings of Jesus, is a notion conspicuous by its general absence from early Jewish apocalyptic literature (Chilton 1987: 51–75). Perrin (1963: 168–70) finds just five occurrences: *Pss. Sol.* 17.3; *Sib. Or.* 3.46 f.; *Assum. Mos.* 10.1; 1QM 6.6; 12.7 (though a more thorough investigation is found in Lattke 1984: 72–91). The conception of the royal rule of God is completely absent from a surprising number of early Jewish apocalypses (*Martyrdom of Isaiah; 2 Baruch; 3 Baruch; 2 Enoch; 4 Ezra;* cf. Lattke 1984: 78). (3) The notion that Jesus' proclamation of the arrival of the kingdom of God involved the end of the world is a conception which has no basis in the kingdom sayings themselves. (4) The eschatological understanding of Jesus has not been able to account adequately for the strong component of *proverbial wisdom* present in the teachings of Jesus (particularly in Q, the Sayings Source). On the basis of arguments such as these, some scholars have rejected the widespread understanding of Jesus as an eschatological prophet, based on the apocalyptic context of his mission and message, and replaced it with the model of Jesus as a Cynic sage, a model which attempts to deal more seriously with the substantial element of proverbial wisdom preserved in the Synoptic Jesus tradition (Mack 1987:11–22). This construction has many similarities to the earlier liberal view of Jesus to which Weiss and Schweitzer reacted so strongly, as well as to the emphasis on realized eschatology begun by Dodd. A. Harnack, one of the more prominent Protestant liberal scholars, rejected the proposal that Jesus must be understood within the context of Jewish apocalypticism and emphasized instead the religious and ethical elements of the teaching of Jesus which were so prominent in Q (Harnack 1908),

2. Jesus and the Kingdom of God. The kingdom of God, which is the focus of the teaching of Jesus in the Synoptic Gospels, was also central in the proclamation of the historical Jesus. Jesus proclaimed the kingdom, explained it through parables, enlisted disciples to help in its proclamation, was involved in disputes with Jewish religious leaders about its meaning, and very probably died as a consequence of the controversy which the proclamation of the kingdom of God generated. Despite this emphasis on the kingdom, the Gospels preserve no sayings in which Jesus explains precisely what he meant by it. Since the term *kingdom* in Judaism referred to the *rule* or *sovereignty* of God rather than to the territory or sphere ruled over by God, a more appropriate translation of the Gk phrase *basileia tou theou* (reflecting the Heb phrase *malkût šāmayim*) would be "*reign* of God." Despite the fact that the specific phrase "kingdom of God" or its equivalent occurs rarely in early Jewish apocalyptic literature (Perrin 1963: 168–70; Lattke 1984: 72–91), it is sufficiently clear that in the Judaism of the time of Jesus there was a

widespread expectation that God would soon act in a decisive way to visit and redeem his people. The many parables in the Synoptic tradition which illuminate various aspects of the kingdom of God suggest that Jesus' own perspective was not one commonly held but required definition and explanation (Matt 13:24–50; 18:23–25; 20:1–16; 22:1–14; 25:1–13; Mark 4:26–34; Luke 13:18–20). The phrase "kingdom of God" occurs just twice in John (3:3, 5) and usually in the form "kingdom of heaven," in Matthew.

Jesus is presented as announcing the *presence* of the kingdom of God in many sayings preserved in the Synoptic Gospels (Matt 12:28 and par.; Matt 11:5–6; Luke 7:22–23; Matt 13:16–17 and par.; Luke 4:16–30; 17:20–21; cf. Beasley-Murray 1946: 75–107). A similar emphasis on the presence of the kingdom appears in many parables (Mark 3:27 and par.; Matt 13:44–46; 18:23–25; 20:1–6; 22:1–14 and par.; Mark 4:26–29; cf. Beasley-Murray 1946: 108–46). It is also evident that in many other sayings and parables the *future* arrival of the kingdom of God is emphasized (Matt 6:9–13 and par.; Matt 5:3–12 and par.; Matt 8:11–12 = Luke 13:28–29; Mark 9:1 = Matt 16:28 = Luke 9:27). Many of the parables attributed to Jesus convey a situation of imminent crisis (Mark 4:30–32 and par.; Matt 13:33 = Luke 13:20–21; Mark 4:26–29; Mark 4:1–9 = Matt 13:1–9; Luke 8:4–8; Matt 13:24–30). The many sayings which deal with *entering* the kingdom of God must also be understood in terms of the futurity of the kingdom (Mark 9:43–48 and par.; Mark 10:23 and par.; Mark 10:15 and par.; Matt 5:20; 7:21). Though the problem of the authenticity of many of these sayings will continue to be debated, the sheer volume of such Jesus traditions emphasizing the present or future dimensions of the kingdom of God strongly suggests that Jesus himself understood the kingdom as provisionally present in his own person and message but that complete arrival of the kingdom of God was the object of imminent expectation.

This eschatological conception of Jesus, however, was not as unique in early Judaism as many scholars have thought. In the *Hymn Scroll* from Qumran, there is evidence that the Qumran sectarians held that eschatological salvation had already entered the present age in the history and experience of their community (1QH 3:19–36; 11:3–14; 11:15 ff.; 15; Kuhn 1966: 44–112; Aune 1972: 31–37).

3. Jesus as the Messiah. The central category to which the earliest Christians assigned Jesus was that of *messiah.* Yet precisely *how* this title became a central way of characterizing the religious significance of Jesus is problematic since his career did not cohere well with early Jewish messianic expectations. It is, nevertheless, true that within 20 years after the crucifixion of Jesus, as demonstrated by Paul's letters, *Christos* (the Greek equivalent of the Hebrew term *messiah*) occurs 266 times, usually as a proper name for Jesus, as in the phrase "Jesus Christ," in the quasi-titular usage "Christ Jesus," or as the name for a specific messiah, i.e., Jesus (Rom 9:5). This suggests that Paul had no particular concerns about the messianic status of Jesus. In the Gospels and Acts, on the other hand, the specifically messianic status of Jesus is a central issue. *Christos* occurs 80 times, 16 times as a proper name for Jesus (e.g., Mark 1:1; John 17:3), but also as a title predicated of Jesus (e.g., Mark 8:29 and par.; 14:61 and par.), and a designation for the eschatological Davidic king (e.g., Mark 12:35 and par.; Acts 2:31). The *meaning* of the designation "messiah" when applied to Jesus by Christians was determined primarily by Christian conceptions of Jesus rather than by conventional Jewish ways of understanding that title.

4. Jesus and the Son of Man. The Son of Man designation, found 69 times in the Synoptic Gospels and 13 times in John, is a distinctive designation which Jesus alone used of himself in the Gospels. In just two passages, John 12:34 and Acts 7:56, is the designation used by anyone other than Jesus himself. Further, Jesus is never referred to as Son of Man in the rest of the NT, apart from two allusions to Dan 7:13 in Rev 1:13 and 14:14. The designation is not used in an exclusively eschatological way but is used of the *present* Son of Man (e.g., Mark 2:10, 28 and par.), the *suffering* Son of Man (Mark 8:31 and par.; 9:31 and par.; 10:33–34 and par.), and the future or *eschatological* Son of Man (see below).

The origin and significance of the Son of Man designation has become one of the most hotly debated issues in modern NT scholarship. Up until quite recently most scholars assumed that "Son of Man" was a term for a heavenly eschatological figure expected by apocalyptic groups within Judaism. Since the 1960s it has become increasingly clear that such a concept was quite unknown in early Judaism (Perrin 1963: 164–99; Leivestad 1987: 153–64). References to the Son of Man in *1 En.* 37–71 (the dating of which is uncertain) appear to be based on an exegesis of Dan 7:13 rather than on a current eschatological

conception. The Gospels contain a number of eschatological Son of Man sayings, i.e., those which center on his Parousia (cf. Mark 8:38 and par.; Matt 19:33 = Luke 12:8–9; Matt 19:28; 24:27, 37 = Luke 17:24, 26), some of which clearly allude to Dan 7:13 (Mark 13:26 and par.; 14:62 and par.). These latter are often judged to be inauthentic. The fact that the Son of Man and the kingdom of God are motifs which do not occur together in authentic sayings of Jesus has suggested to some that the Son of Man sayings are all secondary, since many kingdom sayings have a strong claim to authenticity (Vielhauer 1965: 55–91). While some scholars argue that *none* of the Son of Man sayings in the Gospels is authentic, others argue that only the eschatological sayings are authentic but contend that Jesus is not speaking of himself but of another, since the sayings are couched in the third person. While Jesus could well have referred to himself as "son of man" in a polite Aramaic idiom for "I" or "me," it appears improbable that he consciously referred to himself as the heavenly redeemer figure of Dan 7:13. Evidence from the Gospels, however, makes it quite clear that this is precisely the category into which Jesus was placed in the sayings tradition.

5. Eschatology and Ethics. The traditional understanding of the message of Jesus links his proclamation of the imminent but *future* arrival of the kingdom of God with repentance evidenced by changed behavior in the *present* (Mark 1:15; Matt 4:17). However, many of the ethical teachings of Jesus appear to have no logical relationship to his proclamation of the kingdom, such as the sayings on divorce (Mark 10:11–12 and par.; Matt 5:31–32). The reconciliation of the eschatology of Jesus with his ethical teachings occurs in the demand of Jesus that people make a present decision which will affect their future standing with God.

F. Pauline Eschatology

1. Sources and Problems. Seven of the corpus of 13 Pauline letters are widely regarded as authentic (Rom, 1–2 Cor, Gal, Phil, 1 Thess, Phlm). The other six letters, however, including the Pastoral Epistles (1–2 Tim; Titus), as well as Eph, Col, and 2 Thess (all written during the last quarter of the 1st century C.E. or later), are in all probability pseudonymous and reflect the later thought of various individuals and groups of Christians sympathetic to Paul. Though these six letters are valuable sources for the transmission and development of Pauline traditions, they cannot serve as primary sources for Paul's own thought. Acts, though emphasizing the travels, teaching, and preaching of Paul, is of uneven and uncertain historical reliability and can be used as evidence for Pauline thought only when supported by the authentic letters.

There are several problems involved in evaluating the role which eschatology plays in the Pauline letters. First, since it is difficult to place the seven authentic Pauline letters in relative chronological order, the varying eschatological emphasis in them (e.g., the Parousia is not mentioned in Galatians) has led to various hypotheses of the development of Pauline eschatology (Hurd 1967; Longenecker 1985). Second, there is the problem of deciding on the center of Paul's thought and of determining whether apocalypticism is that center (Beker 1980: 15–18; 1982: 10), or what the relationship is between apocalypticism and that center.

2. Transformations of Apocalypticism. Whether or not apocalypticism is the *center* of Pauline thought, the apocalyptic world view certainly provides a framework for his thought (Käsemann 1967a: 82–107; Beker 1980: 143–52); and it is from this perspective that the *gospel*, the central theological emphasis in his letters, must be understood. The eschatological framework of Paul's gospel is clearly reflected in 1 Thess 1:9f., where he relates how the Thessalonians "turned to God from idols, to serve a living and true God, and to wait for his Son from heaven, whom he raised from the dead, Jesus who delivers us from the wrath to come." Here the themes of Parousia, resurrection, and judgment are interwoven. This apocalyptic orientation has several significant features: (1) eschatological dualism, i.e., a distinction between "this age" and "the coming age"; (2) cosmic eschatology, i.e., the anticipated victory of God over the created world; and (3) a belief in the imminence of the end (Beker 1980: 135–38).

a. The Two Ages. In continuity with the two ages characteristic of Jewish apocalyptic thought (Bousset and Gressman 1966: 243–49), Paul maintains a dualistic contrast between the present and future age or aeon (Gal 1:4; Rom 8:18; 1 Cor 7:26; cf. Eph 5:16). Paul frequently uses the expression "this age" (Rom 12:2; 1 Cor 1:20; 2:6, 8; 3:18f.; 2 Cor 4:4; cf. Eph 2:2) and speaks of the evil supernatural powers which

dominate it (1 Cor 2:6; 2 Cor 4:4). This temporal dualism (the age to come as *future*) coincides with a spatial dualism (the age to come as a heavenly reality); i.e., in Judaism the age to come had two aspects, it was an unseen, heavenly reality, but one which would succeed this age in the future (cf. Davies 1970: 308–20). Paul can also say that "the things that are seen are transient, but the things that are not seen are eternal" (2 Cor 4:18; cf. Phil 3:20; 2 Cor 5:1–5). Paul expected the age to come, which would be introduced by the Parousia of Jesus, to arrive in the near future (Phil 4:4f.; 1 Cor 7:29), though he considered the possibility that he might die before its arrival (Phil 1:23).

However, Paul's conviction that Jesus was the Lord who had already died and risen again meant that he could not simply retain the Jewish apocalyptic conception of the two ages unchanged. The resurrection of Jesus convinced Paul that the age to come had already begun. He did not view the resurrection of Jesus as an isolated event, however, but rather as the first stage in the future resurrection of all the righteous dead (1 Cor 15:20–23). The sharp distinction between the present and future characteristic of much of Jewish apocalypticism has therefore been softened or blurred in his thought, since Christians can experience the future age in the present time (1 Cor 2:6; 7:29–31; 10:11). He regarded the period between Christ's resurrection and the Parousia as an interim period in which the powers of the age to come were present in a hidden way for the community of Christian believers (Beker 1980: 135–81; 1982: 40). Deliverance from "the present evil age" has been made possible by the sacrifice of Christ (Gal 1:4). Thus Christian existence can be called a "new creation" (2 Cor 5:17; Gal 6:15); for the Christian participates in salvation by being "in Christ," by "putting on Christ" in baptism whereby he dies to sin and shares the promise of resurrection (Rom 6:1–11; Gal 2:20). Even though Christians are in process of transformation (2 Cor 3:18; 4:16), the full transformation will not occur until the Parousia of Jesus (1 Thess 4; 1 Cor 15:51–56; Phil 3:20f.). When Paul speaks of the believer's rising with Christ, he uses what E. Käsemann prefers to call Paul's "eschatological reservation" (Käsemann 1967b: 132–37), in that Paul does not speak of participation in Christ's resurrection as a *past* experience (a view expressed in Deutero-Pauline letters, cf. Col 3:1–3; Eph 2:1–10) but as one which lies in the *future* (cf. Rom 6:4–5).

b. Judgment and the Parousia. The prophetic conception of the Day of the Lord (Amos 5:18–20; Zeph 1:14–16; Joel 2:2; cf. Rowley 1956: 177–201) became the basis for Paul's conception of the impending eschatological judgment of the world (1 Thess 5:2; Rom 2:16). Phrases such as "the Day of Jesus Christ" (1 Cor 1:8; Phil 1:6), however, indicate that for Paul the center of eschatological hope had shifted from God to Christ (Kreitzer 1987: 99–102). Yet the very fact that Paul can refer to the judgment seat of Christ in one place (2 Cor 5:10) and the judgment seat of God in another (Rom 14:10) suggests fluidity and ambiguity in his thought (Kreitzer 1987: 107–12), a phenomenon explicable in part by the application of the term "Lord" to Christ. The expectation of the Parousia, which focuses on the return of Christ as savior and judge rather than on the visitation of God, is a major way of understanding the Day of the Lord. Paul refers to the Parousia frequently in his letters (1 Cor 15:23; 1 Thess 2:19; 3:13; 4:15; 5:23; cf. 2 Thess 2:1, 8). In passages such as 2 Cor 4:4 it is clear that Paul understood that the resurrection of Christ implied the resurrection of believers. In 1 Thess 4:13–18 he depicts the Parousia primarily as a *saving* event signaled by the Lord's cry of command, the archangel's call, and the sounding of God's trumpet (apocalyptic visitation and judgment imagery), at which deceased Christians will rise from the dead and, together with living Christians, will be taken up to the Lord in the clouds. This passage should be understood in light of early Jewish apocalyptic imagery of accounts of translations or assumptions of living people into heaven (for other Christianized accounts, cf. Luke 17:34–35 = Matt 24:40–41; Luke 24; Acts 1; Rev 11:3–13; 12:5); assumption of living people means that they do not have to taste death, while those who are really dead cannot be assumed (Plevnik 1984: 280). If Paul had taught the Thessalonians that at Christ's Parousia they would all experience assumption to the risen Lord, they would have believed that only the *living* could be assumed. Paul's insistence that the dead in Christ will rise first (probably in a transformed state rather than a restoration of earthly life) means that all will qualify for assumption (Plevnik 1984: 280–83). In 1 Cor 15:51–57 the same event is dealt with in a different way (the Parousia itself is not mentioned), though the focus is on eschatological salvation. At the sound of the eschatological trumpet, the dead will be raised and will, with the living, experience a transformed state of existence.

3. Did Paul Expect a Temporary Messianic Kingdom? The conception of an intermediate messianic kingdom which serves as a transition between a temporary age and an eternal age is found in three Jewish apocalypses: (1) Apocalypse of Weeks (*1 En.* 91:1–10; 93:12–17; between 175 and 167 B.C.E.), (2) *4 Ezra* 7:26–44; 12:31–34 (ca. 90 C.E.), and (3) *2 Bar.* 29:3–30:1; 40:1–4; 72:2–74:3 (ca. 110 C.E.). Schweitzer proposed that Paul (particularly in 1 Cor 15:20–28), like John the Seer in Rev 20:1–15, anticipated a temporary messianic kingdom which would be introduced by one resurrection and concluded by a second resurrection (Schweitzer 1931: 65–68, 90–100; cf. Schoeps 1961: 97–110). Schweitzer proposed that Paul anticipated the following sequence of eschatological events: (1) the sudden and unexpected Parousia (1 Thess 5:1–4); (2) the resurrection of deceased believers and the transformation of living believers (1 Thess 4:16f.); (3) the messianic judgment presided over by Christ (2 Cor 5:10), or God (Rom 14:10); (4) the dawn of the messianic kingdom (not described but presupposed by Paul); (5) transformation of all nature (Rom 8:19f.) and a struggle with angelic powers (Rom 16:20) until death itself is conquered; (6) the messianic kingdom ends (Paul does not mention its length); (7) a general resurrection (1 Cor 6:3), followed by judgment upon all people and defeated angels. Schweitzer's reconstruction has been widely criticized (Wilke 1967; Davies 1970: 285–98). First, there is no evidence that Paul expected an intermediate messianic kingdom, and second, there is no evidence that Paul expected a general resurrection. In Pauline thought there is an unforeseen interval only between the resurrection and Parousia of Christ.

4. Eschatology and Ethics. Paul often uses eschatological language as a means of sanctioning certain types of behavior (Gager 1970: 327–37; Meeks 1983b: 687–703). In Rom 8:18–25 Paul argues that the experience of suffering and tribulation is an indispensable condition for glorification (cf. 2 Cor 4:7–12; Rom 5:3–5; 6:5–11). Thus his eschatological perspective provides meaning for negative aspects of present experience. In Gal 5:21, at the conclusion of a list of vices, he claims that "those who do such things shall not inherit the kingdom of God" (cf. 1 Cor 6:9–10, where the warning precedes a list of types of sinners). Here eschatology provides a direct sanction for discouraging certain unacceptable types of behavior. The relationship between eschatological language and moral exhortation is often more subtle. The social function of such language has been explored in several recent studies (Meeks 1983a: 171–80; 1983b; Jewett 1986). In 1 Thessalonians, for example, apocalyptic language tends to reinforce notions of community uniqueness and solidarity, disposing Christians to act in a manner beneficial to the entire Christian community (Meeks 1983b: 694).

G. Eschatology in the Synoptic Gospels and Acts

The Synoptic Gospels are complex compositions which narrate the life and ministry of Jesus as refracted through decades of Christian tradition and interpretation culminating in the literary activity of each of the Evangelists. The various strata of each gospel exhibit varying emphases on eschatology overlaid on their presentation of the words and deeds of Jesus.

1. The Gospel of Mark. The term "kingdom of God," introduced in Mark 1:15, occurs 14 times in Mark (1:15; 4:11, 26, 30; 9:1, 47; 10:14, 15, 23, 24, 25; 12:34; 14:25; 15:43), while the kingdom of David is mentioned just once (11:10). Despite C. H. Dodd's attempt to interpret Mark 1:15 to mean "the kingdom of God has come" (Dodd 1961: 29f.), subsequent exegesis agrees that though the problematic verb *eggizein* is somewhat ambiguous (Berkey 1963; Perrin 1963: 64–66), it normally has a future reference (Fuller 1954: 21–25). The phrase in Mark 1:15 should be translated "the kingdom of God has come near" or "the kingdom of God is at hand" (Kümmel 1961: 19–25), i.e., it is not present, but imminent. According to Mark 9:1 the disciples will not die before they see the kingdom of God. Similarly, Mark's emphasis on "entering the kingdom of God" (10:23, 24, 25) and on Joseph of Arimathea's expectation of the kingdom of God (15:43) also suggests that it is a future entity. With the possible exceptions of the parables of the Sower (Mark 4:3–9), of the Seed Growing Secretly (4:26–29), and of the Mustard Seed (4:30–32), there is no suggestion in Mark that the kingdom of God is in any sense a present reality. While these parables have been understood to refer to the *presence* of the kingdom in the ministry of Jesus (Dodd 1961: 140–47), that meaning is not evident in the present text of Mark; and if their original meaning is recoverable at all (Linnemann 1966: 117–19), it was oriented toward the *future*

(Jeremias 1963: 149–53). The debate is far from over, however, for in a recent study Mack (1987: 29–44) argues that *none* of the kingdom sayings attributed to Jesus in Mark is authentic in the sense that they derive from the historical Jesus. The apocalyptic element, he argues, has been superimposed on an essentially non-eschatological Jesus by Mark and the community he represents.

Mark 13 consists of an eschatological scenario which indicates the apocalyptic orientation of the author. Following Jesus' prediction of the destruction of the temple (13:2), Jesus predicts a series of eschatological events including the appearance of false messiahs, wars, earthquakes, and famines, a period of great tribution (13:5–8). The arrest and prosecution of Jesus' followers is predicted, along with persecution even by family members (13:9–13). When the "desolating sacrilege" is set up (an enigmatic reference to the desecration of the temple based on an earlier event recorded in Dan 9:27; 11:31; 12:11), citizens of Judea are advised to flee; for a terrible time of tribulation will ensue, including the appearance of false messiahs and false prophets (13:14–23). Finally, after a cosmic upheaval (13:24–25), the Son of Man will come in the clouds and gather his elect from all parts of the world (13:26–27). Since there is no clear allusion to the fall of the temple in 70 C.E., it may be that Mark was written before that event occurred, i.e., from 65–70 C.E.

2. Q: The Synoptic Sayings Source. The abbreviation "Q," (usually linked to the German word *Quelle*, meaning "source") can be defined very simply as the non-Markan parallels between Matthew and Luke. This double tradition is quite extensive, consisting of about 250 vv found grouped in nearly 50 pericopes. Often referred to as the Synoptic Sayings Source, Q was in all probability a *written* (rather than an oral) source used by Matthew and Luke; it exhibits *literary unity* (Jacobson 1982); it was probably composed in Greek, ca. 50 C.E., very likely in Palestine (Kloppenborg 1987a: 42–64). Since Q probably arose within Palestinian Christianity, scholars often refer to the "Q Community," that is, to the hypothetical Christian community whose theology found expression in this document. Unlike the Gospels, Q consisted primarily of *sayings* of Jesus (and John the Baptist) and lacked the narrative unity provided by a plot. It contains just two miracle stories (Luke 7:1–10 = Matt 8:5–13; Luke 11:14 = Matt 12:22–23). It did not include an account of the last days of Jesus, nor does Q appear to have mentioned the resurrection.

There is a strong and pervasive emphasis on *eschatology* throughout Q (Kee 1977: 87–117), yet there is also a significant focus on *wisdom* (Carlston 1982: 101–19; Edwards 1976: 58–79), as well as *prophecy* (Edwards 1976: 44–57). The relationship between these three emphases remains problematic. The emphasis on eschatology and prophecy has suggested to some that the hypothetical community which produced Q was an apocalyptic sect which lived in imminent expectation of the end (Schulz 1972: 168) and which had undertaken a prophetic mission to Israel.

In the preaching of John the Baptist preserved in Q, imminent expectation consists of three connected motifs: (1) the threat of *judgment*, (2) the fact that this judgment is *imminent*, and (3) the focus on the *coming judge* (Luke 3:7–9 = Matt 3:7–10; Luke 3:16–17 = Matt 3:11–12). One of the more important of these motifs is that of the *imminent expectation of the end* (Hoffmann 1972: 34–49). There are nine Son of Man sayings in Q, six of which focus on the *future coming* of the Son of Man (Luke 11:30 = Matt 12:40; Luke 12:40 = Matt 24:44; Luke 12:8–9 = Matt 10:32–33; Luke 17:24 = Matt 24:27; Luke 17:26 = Matt 24:37–39; Luke 17:28 = Matt 24:37–39). Three describe the *present activity* of the Son of Man (Luke 7:34 = Matt 11:19; Luke 12:10 = Matt 12:32; Luke 9:58 = Matt 8:20), while Q contains no sayings relating to the suffering Son of Man. The Q Community appears to have experienced persecution (Luke 6:22–23 = Matt 5:11–12; Luke 11:49–51 = Matt 18:34–35; Luke 13:34–35 = Matt 23:37–39). A continuing problem which dogs the analysis of Q, and the primary reason for the varied assessments of that source, is the difficulty of determining the extent to which it reflects the self-understanding of the Q Community.

3. The Gospel of Matthew. The Christian community in which Matthew arose was apparently a Jewish-Christian group in conflict with a Judaism in process of reconstruction after the First Jewish Revolt of 66–73 C.E. (Matt 23:1–36). Probably allusions to the fall of Jerusalem in 70 C.E. are reflected in the parable of the wedding feast (Matt 22:1–14). For Matthew the Church is the true Israel and the eschatological promises made by God in the OT have been fulfilled in the life and ministry of Jesus (cf.

the ten fulfillment quotations in Matt 1:22 f.; 2:15, 17 f.; etc.) The term *kingdom of heaven* ("heaven" is used as a pious circumlocution for "God") is mentioned 32 times, *kingdom of God* 4 times (12:28; 19:24; 21:31, 43); and the term *kingdom* with other modifiers occurs 14 times in Matthew. Though there are several passages which suggest the imminence of the end (10:23; 16:28; 24:34), they have been taken over with little change from sources (Strecker 1971: 41–43). Thus Matthew's expectation of the end is not as imminent as that of Mark. Further, there is little evidence that Matthew understood the kingdom of heaven as present in Jesus. The announcement that "the kingdom of heaven has come near" is made by John the Baptist (3:2), Jesus (4:17), and the disciples (10:7). The phrase "the gospel of the kingdom" (4:23; 9:35; 24:14; 26:13) is Matthew's designation for the message which Jesus and his disciples proclaimed to Israel, though in actuality this phrase refers both to the proclamation of the historical Jesus and that of the post-Easter Church (Kingsbury 1975: 129 f.). A distinctive emphasis of Matthew is that the coming judgment applies even to disciples (13:24–30, 36–43; Bornkamm 1963: 18). The Olivet discourse in Matt 24 (based on Mark 13), is directed to the disciples generally, not to a restricted group of four as in Mark; and it is more sharply focused on "when this will be and what will be the sign of your coming and of the close of the age" (24:3). Matthew emphasizes the theme of eschatological judgment by appending several parables which focus on this theme in his rewriting of Mark 13 (the ten maidens, 25:1–13; the talents, 25:14–30 [= Luke 19:12–27]; the last judgment, 25:31–46). To the five parables of Mark 4, Matthew 13 adds the parable of the weeds (13:24–30) and its interpretation (13:36–46), along with four additional kingdom parables (13:44–52). The author frequently uses the Son of Man designation in its apocalyptic sense for Jesus (10:23; 13:37–41; 16:28; 19:28). Matthew is the first author to use the Gk term *Parousia* in the technical sense of the second coming of Christ (24:3; 24:27, 37, 39). Matthew closely links the coming of the Son of Man with the kingdom (compare Matt 16:28 with Mark 9:1 and Luke 9:27). The imagery of "weeping, wailing, and gnashing of teeth" as a means of expressing the terrors of eschatological judgment occurs five times in Matt (8:12; 13:42; 22:13; 24:51; 25:30), though elsewhere in the NT it occurs only in Luke 13:28).

4. Luke-Acts. While eschatology is clearly a central issue in Luke and Acts, it is also one of the most complex and debated aspects of Lukan theology. The central issue is not whether Luke anticipated an eschatological consummation, but whether he conceives of that consummation as belonging to the *near* or *distant* future. Wilson (1969–70) has proposed that Luke inconsistently emphasized *both* the imminence of the end and the delay of the end. This inconsistency results from the fact that his central concern is pastoral and these two emphases deal with different problems caused by the delay of the Parousia. According to Conzelmann (1960) Luke was aware of the problem involved in the delay of the Parousia and rewrote and edited his sources to eliminate or suppress the earlier expectation of an imminent eschatological consummation in favor of a consummation located in the indefinite future.

There are some clear instances in which Luke has omitted or toned down the imminent expectation of the end found in Mark (Mark 1:15; cf. Luke 4:15; Mark 9:1; cf. Luke 9:27). In a saying attributed to Jesus in Luke 17:20–21, the kingdom of God will not come with outward signs, but is "in your midst." Jesus tells the parable of the pounds in Luke 19:11–27 because people thought that "the kingdom of God was to appear immediately" (v 11).

Yet Luke has also included several sayings (admittedly few) which emphasize the imminence of the eschaton. John the Baptist threatens his hearers with the imminence of eschatological judgment (3:7–9, 16–17). Jesus announces the imminent arrival of the kingdom of God (10:9, 11; 21:31) as well as the coming of the Son of Man (17:22–37).

One aspect of Luke's response to the problem of the delay of the Parousia, according to some scholars, is the transformation of macrocosmic eschatology (the end of the world) into microcosmic eschatology (the end of the individual), i.e., the judgment and entry of individuals into heaven or hell (Dupont 1973; Schneider 1975). However, the few passages used to support this view (Luke 12:20; 16:19–31; 23:43–46; Acts 7:55–60; 14:22) provide slim support for such a proposal. The parable of the rich man and Lazarus (Luke 16:19–31), for example, deals with punishment and reward in the afterlife; but the extent to which Luke's cosmology agrees with that of this traditional story cannot be known. Eschatological language is

used in Stephen's dying vision of the Son of Man standing at the right hand of God (Acts 7:55–56). Some have interpreted this passage as involving a private and personal Parousia for Stephen. Yet the literary function of this passage (coming at the end of Stephen's long sermon) is to emphasize the divine judgment which will fall on those who do not heed Stephen's message, rather than simply to depict the Son of Man as standing to receive the soul of the dying martyr. Jesus' words to the dying thief, "today you will be with me in paradise" (Luke 23:43), and his final words, "Father, into thy hands I commit my spirit" (Luke 23:46; cf. Acts 7:59b), suggest that God receives the spirit of the righteous person upon death. Though individual eschatology is involved in these last passages, it is not without parallel elsewhere in the NT (Phil 1:23). Following Conzelmann, some scholars have argued that all traces of a belief in an imminent end have been eliminated by Luke (Kaestli 1969). Yet Luke has not completely shifted eschatological expectation from a near to a distant future, and there is a strong emphasis in Luke-Acts that promised eschatological events have been partially fulfilled.

Some passages in Luke which have played an important role in the theory of the delay of the Parousia are Luke 13:22–30; 14:15–24 (the parable of the Great Feast); 19:11–27. Other important passages are Acts 1:6–8; Luke 22:69; Luke 9:27; Luke 21:32. Luke 21:32 is a saying which does not fit well with the notion of an indefinitely delayed Parousia: "Truly, I say to you, this generation will not pass away till all has taken place." Yet this is the *only* passage in Luke-Acts suggesting imminence, and it is not part of Luke's editorial work but a traditional saying which he has retained relatively unchanged from Mark.

In Luke-Acts the expectation of an Israelite messianic kingdom with Jesus as the Davidic messiah is part of the plan of God (Luke 1:32–33, 68–71; Acts 2:30–36; 3:20–21; 13:22–23, 32–34). Jesus' predictions that he must suffer and be rejected are not understood by the disciples (9:22, 44–45; 17:25; 18:31–34; 22:22). This misunderstanding kindles false eschatological expectations. The disciples mistakenly expect the imminent arrival of the kingdom of God when Jesus triumphantly enters Jerusalem as messianic king (Luke 19:11; 24:21). Their disappointed expectation of the inauguration of the Davidic eschatological kingdom is momentarily rekindled after Jesus' resurrection (Acts 1:6). When he arrives in Jerusalem, Jesus is recognized as king (19:37–38). As the immediate result of the rejection of Jesus, the "restoration" of the messianic kingdom is delayed (Luke 19:41–44; Acts 1:6–7). In Acts the necessity of repentance becomes a condition for the arrival of the messianic kingdom (Acts 3:19–21), though this emphasis is found only here in Acts. Those who predict the coming of the Son of Man (Luke 17:23) or who announce that "the time is near" (Luke 21:8) are false teachers.

In Mark and Matthew the fall of Jerusalem (alluded to by reference to the "abomination of desolation," which refers to Dan 9:27 and 12:11) is an apocalyptic event which is part of the eschatological program culminating in the Parousia of Jesus (Mark 13:14; Matt 24:15). For Luke, on the other hand, the destruction of Jerusalem is a historical event separate from the events of the eschatological consummation. Whereas Mark was probably written shortly before the destruction of Jerusalem in 70 C.E., Luke-Acts was probably written much later, ca. 90 C.E. For Luke the fall of Jerusalem was the fulfillment of a prophetic oracle (Luke 21:20; cf. 13:34–35; 19:41–44; 23:27–32). Yet Luke has portrayed the capture of Jerusalem in 19:42–44 and 21:20–24 in biblical language and imagery describing the conquest of Jerusalem by the Babylonians in 586 B.C.E. (Dodd 1968; Reicke 1972).

Eschatology is little emphasized in Acts. Aside from several general references to the resurrection (Acts 23:6; 24:15, 21; 26:6–8) and vague references to the hope of Israel (Acts 1:6; 28:20), the author refers to the eventual return of of Jesus from heaven in a manner analogous to his ascension (1:11). According to 3:19–21 repentance will hasten the arrival of the messianic kingdom; and according to 10:42 and 17:30–31, Jesus, acting as God's agent, will one day judge the living and the dead.

H. Johannine Literature

The eschatology of John is dominated by the presence of Jesus, who demands decision and belief on the part of characters in the narrative as well as on the part of the readers (John 20:30–31). A positive response to this invitation results in the present appropriation and enjoyment of the eschatological gift of eternal life.

Just as in the Synoptic Gospels, the title messiah is of central significance for the christology of the Fourth Gospel (20:30 f.), since for the Fourth Evangelist the coming of the Messiah is an essential aspect of Jewish eschatological expectation (1:20, 25, 41; 3:28; 4:25, 29; 7:26 f., 31, 41 f.; 9:22; 10:24). These references, however, tell us more about the *Christian* conception of the messianic role of Jesus than they do about early 1st-century *Jewish* messianic expectation. Since the author clearly identified Jesus with the Christian conception of the Messiah of Jewish expectation (20:31), the title functions as a key to understanding the realized eschatology of John. Though "Christ" is twice used as a name for Jesus (1:17; 17:3), a usage characteristic of Paul, the term *messiah* is also used in a creedal or confessional way (9:22; 11:27; 20:31). Many aspects of traditional future eschatology are found in John. Several times reference is made to "I will raise him up on the last day" (6:39, 40, 44, 54). Two aspects of the Parousia of Jesus are described in 14:23. The future resurrection is referred to in 5:28–29. The second coming is mentioned in 14:3 and 21:21–23. Judgment is referred to in 12:48, the Parousia in 14:18. The element of futurity is possibly retained in John 4:14, 36; 5:29, 39; 6:27; 12:25; 1 John 2:25.

While the Gk text of the gospel of John contains eschatological statements which refer *both* to the present and to the future, the phenomenon of "realized eschatology" is clearly dominant. Since realized eschatology refers to the realization in present experience of blessings normally regarded as belonging to the eschatological future, the author and the community he represents have transformed traditional Christian eschatology. The benefits of future eschatological salvation were experienced as present realities by the Johannine community in four primary ways. (1) Since the spirit of God is understood as an eschatological gift, the *presence* of the Spirit-Paraclete means that an aspect of the eschaton is present. (2) Since " (eternal) life" is understood as a *future* blessing of eschatological salvation both in early Judaism and in pre-Johannine Christianity (Mark 10:17, 30, and par.; Matt 19:16, 29; Luke 18:18, 30; Matt 25:46; Luke 10:25; cf. Mark 9:43 and par.; Matt 18:8; Mark 9:45), the emphasis in John of the *present* possession of that life represents a radical modification of traditional Christian eschatology. The key phrase in John is "to have/possess (eternal) life" (John 3:15, 36; 5:24, 40; 6:40, 47, 53, 68; 10:10; 1 John 3:13, 15; 5:12, 13, 16). (3) Since judgment is an event normally associated with the eschatological consummation, the belief that divine judgment occurs in the present suggests that another important eschatological feature is regarded as part of present experience (3:36). (4) Since the Parousia or "coming" of Jesus as Son of Man to save and to judge is one of the central features of the eschatological consummation for traditional Christianity, references to the present "coming" of Jesus must be understood as realized eschatology.

There are several ways of assessing the significance of realized eschatology in John. (1) Since realized eschatology is characteristic of Johannine theology, any references to apocalyptic eschatology can be regarded as foreign intrusions inserted in the text by later interpolators or redactors (Bultmann). (2) The presence of some features of apocalyptic eschatology in the present text of John and its supposed connection with Revelation have led a few scholars to accentuate the role of futuristic eschatology (van Hartingsveld 1962). (3) Most scholars, recognizing the presence of both present and future eschatology in John, accept the existence of a tension between these two aspects of Johannine thought (Corell 1958; Cullmann 1967: 268–91).

I. The Revelation of John

Revelation is the only Christian apocalypse in the NT (the name of the genre "apocalypse" was derived from Rev 1:1). The main portion of the book (4:1–22:5) is a complex vision report stitched together from earlier Jewish and Christian eschatological traditions of various lengths and complexity. The overall plan of Revelation is a sequential narrative of future events of the type which characterizes the eschatological scenarios in revelation discourses (Mark 13 and par.; 1 Thess 4:13–18; 2 Thess 2:1–12; *Didache* 16). As in such revelatory discourses, the primary emphasis is on the eschatological punishments which will afflict the enemies of God's people (Rev 6:1–16:21). The anticipated destruction of Babylon-Rome is savored with particular glee (Revelation 17–18). The Parousia is presented as a final battle between Christ, depicted as a field marshall leading the heavenly armies, and his opponents, both earthly and supernatural (Revelation 19). Satan's defeat ushers in a millennial kingdom (20:1–6), which is concluded

by the final defeat and punishment of Satan and his allies (20:7–10), followed by a great judgment scene (20:11–15). Following the destruction of the first heaven and earth, a new heaven and earth are created, and the heavenly Jerusalem descends from heaven to earth (Revelation 21), providing a restored Eden where Christians can enjoy eschatological salvation in the eternal presence of God and the Lamb (22:1–5).

Revelation is permeated by a sense of urgency. The eschatological events described in the book will occur shortly (1:1, 3; 22:10). Christ reiterates the claim that he will come soon (2:16; 3:3; 16:15; 22:7, 12, 20). Moral exhortation, concentrated in Revelation 2–3, in the proclamations to the seven churches, is sanctioned by the rewards and punishments which will be meted out at the final judgment (21:5–8). While Jesus is sometimes referred to as the Messiah (11:15; 12:10; 20:4, 6), he is more frequently referred to as the Lamb (28 times), obviously with the intention of including the suffering and sacrifice of Christ (5:6, 9, 12; 7:14; 12:11). Yet the Lamb is also associated with messianic imagery; he shares God's throne (22:1, 3), he shepherds the people of God (7:17; 14:1–5), and he is a mighty warrior (17:14).

J. The Problem of the Delay of the Parousia

In the view of many scholars, the *delay of the Parousia* was the single most important factor for the transformation of early Christian eschatology from an emphasis on the *imminent* expectation of the end to a vague expectation set in the more distant future (Schweitzer; Werner 1957: 3–27. The Gk word *parousia* means "coming," "arrival," and was frequently used of the ceremonial arrival of a king, emperor, or highly placed government official. In the NT the term is applied to the eschatological return of Christ, a term widely used in early Christianity (1 Thess 4:15; 2 Thess 2:8; 1 Cor 15:23; Matt 24:3; Jas 5:7; 1 John 2:28; 2 Pet 3:4). According to this view early Palestinian Christianity lived in the imminent expectation of the return of Jesus as Son of Man to bestow salvation and execute judgment. With the passage of time, the process of institutionalization, and the expansion of Christianity into the world of Roman Hellenism, the fervency and imminence of eschatological expectation began to diminish so that the significance which eschatology once had in Christian belief became increasingly less important. The widespread realization of the problem of the delay of the Parousia necessitated a theological adjustment. Thus the delay of the Parousia has been regarded as the single most important factor in the transformation of early Christianity. Since the imminent arrival of the end which was announced by Jesus in the Gospels (Mark 1:15; 9:1) and an early consummation expected by Paul (Rom 13:11; 1 Cor 7:29; 1 Thess 4:15) did not occur, awareness of the problems involved in this delay necessitated a readjustment in expectation. (See also Fitzmyer *Luke 1–9* AB, 28.)

D. E. AUNE

ESDAR, TEL (M.R. 147064). A small site on a low hill 2.5 km N of Tel ʿAroʿer in the Negeb. It was excavated in 1963–64 by M. Kochavi, who discovered five periods of occupation.

Stratum IVb consisted of silos and ash pits. These contained pottery and other finds from the Chalcolithic period typical of the Beer-sheba culture.

Stratum IVa dates from the EB II period and yielded occupational evidence of pebble floors. A hoard of very large incised tabular flint scrapers was found on a floor.

Stratum III dated to the end of the 11th century B.C. and was the most important stratum at the site. Remains of ten houses, built in a circle on the summit of the hill, were observed. At least six more are well attested. Eight houses were excavated, revealing the same architectural traits—long rectangular buildings divided by stone pillars into two or three living spaces. All entrances faced the center of the circle, and the houses were built adjoining one another, with their outer walls forming a kind of defensive wall. The area surrounded by the circular line of houses was left undeveloped and open and could have served as a corral. The settlement was probably destroyed in a sudden attack since all the contents of its dwellings were found smashed on the floors and were fully restorable—a phenomenon explained only by a sudden catastrophe such as an earthquake or a surprise assault.

Stratum II consisted of two buildings on the slope of the hill outside the circular line of stratum III. Its architectural traits and pottery assemblage differed from those of Stratum III. This was a 10th-century B.C. farmhouse with a subsidiary building beside it.

Stratum I was field terraces and scattered pottery sherds of the Byzantine period.

The two earliest periods of occupation at Tel Esdar (stratum IVa–b) do not differ from other sites of the Chalcolithic and the EB in the Negeb. Farmsteads of the 10th century B.C. (stratum II) as well as Byzantine field terraces (stratum I) are also common in the area. The early Iron Age settlement of stratum III, however, was the first to be excavated in the Negeb and is still the best example of an early Israelite settlement there. Its initiation, like that of Arad XII and that Beer-sheba VIII–VII, coincides with the collapse of the large non-Israelite (probably "Amalekite") center at Tel Masos. Early Israelite settlers could settle in the Beer-sheba/Arad plain only after the alien inhabitants of Tel Masos suffered severe blows, probably from Saul and David. After a short period of time, the settlement was totally destroyed. Its destruction could be attributed to the wars of Saul and David against the Amalekites (1 Sam 15:3; 2 Sam 8:12; etc.).

Since no early Iron Age pottery was found at nearby Tel ʿAroʿer, usually identified with biblical AROER, it has been suggested (Biran 1983) that Aroer of the time of King Saul, mentioned in 1 Sam 30:28, should be identified with Tel Esdar.

MOSHE KOCHAVI

ESDRAELON (PLACE) [Gk *Esdrēlōn* (Ἐσδρηλων)]. Western section of the valleys and plains that separate Galilee from Samaria (Jdt 1:8; 3:9; 4:6; 7:3). The name does not occur in the OT, where the name given to this area is Jezreel. Esdraelon includes the plain of Megiddo, which extends from the N slopes of Mt. Carmel to the plain of Acco, to En-gammin (modern Jenin) as far as Mt. Gilboa on the S and NE to the slopes of Mt. Tabor. The river Kishon runs through the N of the valley. The plain served as a part of a trade route from the earliest times. As part of the Way of the Sea (Isa 9:1), it connected Egypt with the N. As Jezreel in the OT, it was the scene of many battles because of its strategic location. In the Apocrypha the name occurs in the book of Judith as the place where Holofernes camps with his army (Jdt 3:9). It is one of the few place names in the book of Judith that can be identified with certainty.

SIDNIE ANN WHITE

ESDRAS, FIRST BOOK OF. A book of the Apocrypha which appears in the standard texts of the LXX as Esdras A or 1 Esdras. In OL and Syriac versions it is also called 1 Esdras. In English Bibles since the Geneva edition of 1560 it is named "Ezra," the same name as that of the canonical book. In 1883 P. Lagarde's *Librorum Veteris Testamenti Canonicorum pars prior Graece* refers to the book as Esdras B or 2 Esdras and states that it represents the Lucianic recension of the LXX in which 1 Esdras is Ezra-Nehemiah. Jerome condemned the text but, nevertheless, retained it and placed it after the NT. In Latin Bibles since his time it is designated 3 Esdras. In the "Great Bible" of 1539, it appears as 3 Esdras while 1 and 2 Esdras refer to Ezra and Nehemiah respectively. For clarity and convenience the book has also been called the "Greek Ezra" to differentiate it from the other Ezra books. This brief summary of the names for this text indicates the complexity attached to the history of the text and the confusion which has characterized its study.

A. Textual Traditions

Various Gk texts of 1 Esdr 3:1–5:6 are to be found in many of the important mss and versions of the LXX. Among the Gk texts which provide a reliable text of 1 Esdras, Codex Alexandrinus (A) is the best. Contrary to a long-standing practice of using Codex Vaticanus (B) as the oldest and best extant copy of the LXX upon which to base a translation of 1 Esdras, Codex A provides the superior text, having suffered less extensive revision than B. Of additional value in studying 1 Esdras are Josephus, the OL, and the Syriac versions. R. Hanhart's critical edition of 1 Esdras in the Göttingen LXX is indispensable for its thorough ms citations on restoring the text.

Of the numerous printed editions of the Gk text, S. Tedesche's critical edition (1928) is noted for its recognition and use of Codex Alexandrinus as the text superior to Josephus', the OL, and Syriac versions. Armenian and Arabic versions also exist, but little work has been done on them. Jellicoe (1968) and Myers (*1–2 Esdras* AB) offer extended discussions of the value of the several ms traditions of 1 Esdras.

B. Contents and Relationships

With the exception of 3:1–5:6, 1 Esdras is a rather free Gk version of the biblical history from the time of Josiah's Passover to Ezra's reforms. In any discussion of the book's origin, literary type, original language, purpose, value, date, and place, it is necessary to note the parallels with the biblical material and to take account of deviations in order and content. Using the RSV versification, the relationship of 1 Esdras and the canonical books of 2 Chronicles, Ezra, and Nehemiah is shown in the following table:

1 Esdr 1:1–55 = 2 Chr 35:1–36:12
1 Esdr 2:1–15 = Ezra 1:1–11
1 Esdr 2:16–30 = Ezra 4:7–24
1 Esdr 3:1–5:6 is without a parallel
1 Esdr 5:7–46 = Ezra 2:1–70
1 Esdr 5:47–73 = Ezra 3:1–4:5
1 Esdr 6:1–7:15 = Ezra 4:24–6:22
1 Esdr 8:1–9:55 = Ezra 7:1–10:44 and Neh 7:73–8:12

As the table shows, 1 Esdras and portions of the Chronicler's work constitute duplicate versions, with the exception of the long passage 1 Esdr 3:1–5:6, which is unique to 1 Esdras.

While the content of 1 Esdras parallels material from the canonical 1–2 Chronicles, Ezra, and Nehemiah, it is not in its present form an exact parallel, since 1 Esdras is a truncated version of the Chronicler's work. Some scholars view it as a fragment of the entire Chronicler's work with a rearrangement of some of the material in order to emphasize the role of Zerubbabel and Ezra in the return and rebuilding of the temple and revival of religious reform. The abrupt beginning and ending of the narrative suggest this rearrangement. The superior Gk style of 1 Esdras compared to the LXX version of the canonical Ezra-Nehemiah suggests to some that 1 Esdras and the canonical works stem from a common prototype (Pfeiffer 1949: 245).

1 Esdras has traditionally been of interest mainly for its textual affinity with the canonical books of the Chronicler, and the work itself is canonical for the Eastern Orthodox Church but not for Protestants or Roman Catholics. Most commentators agree it has been preserved in 1 Esdras because it contains the Story of the Three Youths, an element without canonical parallel.

C. Date

While the historical period covered in 1 Esdras is from the reform of Josiah (621 B.C.E.) to the restoration of the Jews from Babylon to their homeland (444 B.C.E.), the book was probably written much later. Linguistic and stylistic affinities to Daniel and Esther make it probable that 1 Esdras was composed after 165 B.C.E. Since Josephus used 1 Esdras for his account of the postexilic period, the book can have been composed no later than the middle of the 1st century C.E.

D. Story of Three Youths

1 Esdr 3:1–5:3 constitutes a third person narrative of a contest of wits at the court of the Persian king Darius. Following a great feast, after which the guests and the king retire to bed, three young men, identified as bodyguards of the king, propose a riddle contest on the subject of the strongest thing in the world. After each youth names what he thinks is the strongest, the answers are put under the pillow of the king who, they believe, will reward the wisest youth with great gifts and honors. The king, upon waking, summons an audience and requests each youth to give a public defense of his answer to the riddle. The third youth, identified as Zerubbabel, delivers the winning speech on the strength of women and truth and accordingly is allowed to make a request of the king as his prize. He requests that the exiled Jews be permitted to return home to Jerusalem, that the city and the temple be rebuilt, and that the temple vessels be returned to the temple. The king grants his request and issues the proper decrees. Zerubbabel then offers thanksgiving to God for his gift of wisdom and prepares to lead the exiles to Palestine. Darius provides an escort. The narrative ends with a list of those returning under Zerubbabel.

Basic to this story is the recognition that the passage is composite, the result of a growth of its various parts. These chapters, which purport to be history by virtue of their location in the middle of the "historical" work of the Chronicler, are in fact a devotional or edifying legend about an important leader of the Jews during the Babylonian Exile. This legend probably circulated independently before it was adopted and identified with Zerubbabel, a historical leader of a return from captivity during the early Achaemenid period. It is impossible to tell whether Zerubbabel's name was attached to this legend while it was circulating independently, or whether it was identified with the builder of the Second Temple when it was interpolated into the Chronicler's history.

The devotional legend of 3:1–5:3 grew out of a court tale, still discernible in 3:1–4:42. An original tale about a riddle contest at the court of a nameless king was adapted and given a Persian court setting, the king having been identified with an unspecified Darius. Other details of the narrative framework indicate that the unspecified Darius is probably meant to be Darius I (the Great), the organizer of the Persian Empire. The passage on truth was not a part of the original court tale but was adapted to form a legend about the success of a Jew at a foreign court. The three answers of the youths—wine, the king, and women—were probably a part of the original court tale.

The court tale of 3:1–4:42 constitutes Wisdom Literature with common elements of Oriental court tales abounding in the passage—two of these being the great feast (cf. Esth 1:3 and Dan 5:1) and the

restlessness or sleeplessness of the king, giving the opportunity for some "wise" individual to provide a remedy. In other Oriental literature Ahikar, Judith, Zerubbabel, Esther, Daniel, and ʿOnchschshonqy seize similar opportunities to exhibit their powers of wit and wisdom.

The basis of the tale is the riddle, "What is the strongest thing in the world?" This riddle constitutes the smallest unit with an independent existence within the entire section and no doubt was widely circulated throughout the ANE. Impersonal in style, the riddle form, along with aphorisms and parables, is characteristic of the wisdom genre. Interrogative form, either explicit or implicit, is basic to riddle speech; and embedding the riddle in a narrative framework is a characteristic means of transmitting riddles in both Hebrew and non-Hebrew literatures. The passage also shows that the original riddle has grown from its early oral stage and moved to the court tale, finally being fixed in a devotional legend. Future research should focus on textual studies and analyses of the "wise sayings" in the speeches of the three youths.

The most enigmatic unit of the Story of the Three Youths is the second speech of the third youth on the power of truth. In this passage the answer has been interpolated into the original, thus making "truth" and not "women" the winning answer. The abstract concept "truth" in the third youth's answer seems to have a cosmic sense as well as an ethical content, a fact which makes a determination of its origin difficult. Asha in Zoroastrian circles, Maat from an Egyptian background, Hokmah of the Hebrews, and Sophia of the Greeks are all candidates as the original subject of the speech in praise of the power of truth in 1 Esdras. The interpolation of truth into the original tale of the riddle contest thus moralizes the tale, removing what appears to have been a purely secular story from the sphere of the profane to serious or even sacred use.

E. Purpose

Temple oriented, 1 Esdras is largely a Gk translation of portions of the work of the Chronicler, except for 3:1–5:6, which is without canonical parallel. This unit is an independent literary unit apart from the rest of the book. Historical material precedes and follows it, with the RSV beginning at 3:1 with "Now King Darius …," thus indicating the beginning of a separate story or episode. The narrator does not seem to be concerned with historical accuracy (a characteristic of the entire book) and does not precisely identify King Darius.

The origin of the material in the elaborated speeches or riddle answers has not been thoroughly studied and provides a subject for further research into parallels with other ANE wisdom material.

Taken as a whole, 1 Esdras preserves some remarkable Wisdom Literature from the ANE in a devotional legend in which Zerubbabel, Sheshbazar, and Ezra, historical figures in the Chronicler's narrative, are presented as "heroes" of the faith. The return from Babylonian Exile, the rebuilding of the temple, the reforms under Ezra, and the beneficent patronage of the Persian monarchs confirm the greatness of "truth," which prevails.

WILLIAM R. GOODMAN

ESDRAS, SECOND BOOK OF. Also known as "the Apocalypse of Ezra" or *4 Ezra,* this work is a Jewish apocalypse written in the last decade of the 1st century C.E. It has not survived in its Semitic original (probably Hebrew; see Stone 1967: 109–11; Klijn 1983: 9–10), or in the Greek version made from that Hebrew. It was not preserved in rabbinic tradition and is known thanks to its popularity in the Christian churches.

A. Versions

Full-length versions made from the Gk translation survive in Latin, Syriac, Ethiopic; two in Arabic, Georgian, and Armenian. Fragments of a Coptic version have also been uncovered. In addition, the influence of *4 Ezra* is witnessed by a number of tertiary translations. From Latin, translations were made into Arabic (a single fragment), New Greek (chaps. 11–12), Armenian (the second version), Georgian (the second version), and Slavonic. A Romanian version, apparently made from the Slavonic, exists. A third full Arabic version was translated from Syriac.

Ever since the analysis by Robert Blake (1926: 308–14), it has been accepted that the textual tradition divides into two chief families: Latin and Syriac on the one part, and Ethiopic, Georgian, and Coptic on the other. The other translations from Greek are of a less literal character and generally have only secondary importance as textual witnesses. Readings attested by either of the two chief families have a strong claim to have existed in Greek. This is significant, since scholars have tended to attribute disproportionate weight to the Latin version.

B. Use in Jewish and Christian Literature

This wealth of translations reflects the extraordinary impact of *4 Ezra.* This is corroborated by the number of later writings that depend on it, including the *Greek Apocalypse of Ezra, Apocalypse of Sedrach, Vision of Ezra, Revelation of Ezra, Questions of Ezra,* and further compositions in Ethiopic, Syriac, and other languages.

The most widely known of the versions of *4 Ezra* is the Latin. It was often contained in the Vulgate in the Middle Ages and is usually printed in an Appendix to the Latin Bible, following the NT. *4 Ezra* is included in the Apocrypha of the Church of England and of Protestant churches. The Latin version includes four chapters, more than any other; two of these usually precede the book and two follow it. They are conventionally included in the chapter numbering, though recognized as different works. The title "2 Esdras" is drawn from the English Apocrypha; most usually the Jewish Ezra Apocalypse, i.e., chaps. 3–14 of the Latin, is called *4 Ezra,* while chaps. 1–2 are called *5 Ezra,* and chaps. 15–16 are *6 Ezra.* These latter two writings are not integral parts of *4 Ezra;* and while some scholars raise the possibility that *5 Ezra* is Jewish or Jewish-Christian in origin, more generally both works are considered Christian.

4 Ezra was apparently lost in Greek quite early. It is definitely cited by 2d-century authorities (e.g., *Apostolic Constitutions* 2.14.9 = *4 Ezra* 7:103; 8.7.6 = *4 Ezra* 8:23; Clement of Alexandria *Strom.* 1:22 = *4 Ezra 5:35*). Later, definite Gk citations are not known; and, although other quotations from the Gk text have been claimed to exist, they are far from certain. The reasons for the loss of the Gk text remain mysterious. The surviving versions were cited to a greater or lesser extent depending on particular circumstances in the diverse ecclesiastical traditions.

C. General Character

4 Ezra is an apocalypse. Written a generation after the destruction of the temple, it is dominated by this catastrophe. The book is structured in seven parts, conventionally called visions: Vision 1 = 3:1–5:20; Vision 2 = 5:21–6:34; Vision 3 = 6:35–9:25; Vision 4 = 9:26–10:59; Vision 5 = chap. 11–12; Vision 6 = chap. 13; Vision 7 = chap. 14. The first three visions are predominantly dialogues between the seer, identified as Ezra the Scribe, and an angel. In the fourth vision the seer meets a mourning woman, comforts her, and experiences her transformation into the heavenly Jerusalem. The fifth and sixth visions are political and messianic in character, foretelling in detail the downfall of the Roman Empire and of the wicked nations together with the coming of a redeemer. The last vision relates the revelation to Ezra of the sacred Scriptures as well as of 70 secret books, and it concludes with Ezra's assumption to heaven.

D. Chief Critical Issues

The chief critical issues raised in the study of the book over the past century and a half have been those of date, literary unity, and, in recent years, its overall character and purpose.

The *date* cannot be more precisely established on external grounds than to say that *4 Ezra* precedes the oldest definite citations from it, those by Clement of Alexandria and in the *Apostolic Constitutions.* The internal evidence that has been adduced to establish the time of composition has proved debatable in

many instances. For example, 3:1 dates the book pseudepigraphically to the 30th year after the Babylonian destruction of the First Temple. Taken typologically, this date might be thought to indicate a date 30 years after the Roman destruction of the Second Temple, i.e., in 100 C.E. But such typological use of pseudepigraphical dates is unknown elsewhere, and *4 Ezra* 3:1 may instead have drawn this date from Ezek 1:1. Other indications have been sought in certain prophecies of messianic woes (e.g., von Gutschmidt 1960: 78; de Faye 1892: 44–45; Wellhausen 1899: 247), but these woes can be shown to be traditional in character.

More convincing are two considerations. The first is that, from its very character and central concerns, the book must have been written not very long after the destruction of Jerusalem and the temple by the Romans in 70 C.E. The other has to do with Vision 5. This is a political vision, like a number of other apocalyptic visions (e.g., *1 Enoch* 89–90; Daniel 7; and others). Such visions tell past history and predict future history up to the eschaton, disguising events behind complex symbolic structures. If it is possible to isolate the point at which the narrative of past events is abandoned for the prediction of future happenings, that point may be regarded as the time of composition. Vision 5 of *4 Ezra* is the seer's dream of a monstrous eagle with 12 wings, 8 little wings, and 3 heads. Each of these is said to represent a Roman ruler, and the peak of Roman wickedness was achieved during the rule of the three heads and particularly of the middle head. The heads are discussed in considerable detail, and can be most admirably identified as the Flavian emperors, and the middle head as Domitian (81–96 C.E.). The vision does not know of Domitian's death, which is taken to indicate that *4 Ezra* was written before 96 C.E. The major arguments in this matter were already assembled by Schürer (*GJV* 3: 241–42), and no argument of substance has been added since then.

The question of *literary unity* is deeply connected with the conception of the purpose of the book and has been a central issue since Richard Kabisch published his source analysis of *4 Ezra* in 1889. The most influential English language scholar to follow this view was G.H. Box (1912), who concluded that *4 Ezra* was composed of five sources combined by a redactor who was also responsible for part of the text. These sources were: (1) *S: A Salathiel Apocalypse* (3:1–31; 4:1–51; 5:13b–6:10; 6:30–7:25; 7:45–8:62; and 9:15–10:57); (2) *E: An Ezra Apocalypse* (4:52–5:13a; 6:13–29; 7:26–44; and 8:63–9:12); (3) *A: The Eagle Vision* (chaps. 11–12 with revisions by redactor); (4) *M: The Son of Man Vision* (chap. 13, with much revision by redactor); and (5) *E2: Second Ezra Piece* (14:1–17a; 14:18–27; and 14:36–47). The redactor composed a number of passages and was responsible for numerous adjustments within the sources.

The criteria applied for drawing these distinctions within the book were both literary and conceptual. On the one hand, literary unevennesses were highlighted and taken as indications of the inept combination of existing sources. On the other, supposed differences in the eschatological conceptions of the different parts of the book were also taken to demonstrate its composite authorship.

The attack on this view proceeded along various lines. First, the literary difficulties, when examined, proved in no way as serious as Kabisch and Box had claimed (Sanday in Box 1912: vi–vii). Second, the assumptions about the requirements of consistency were questioned on the grounds that (1) they implied a systematic approach unjustified for a work of this genre, and that (2) in any case, very often the supposed contradictions were the result of exegesis designed to highlight differences (Keulers 1922: 46–54; Stone 1965: 12–21; Hayman 1975: 48; Stone 1983, etc.).

Gunkel (1900), while recognizing the differences between the various parts of the book, regarded them not so much as stemming from the combination of different sources, as reflecting the psychological stresses within the personality of the author. This view deeply influenced succeeding scholarship (e.g., Breech 1973). Today, on the whole, this source analysis is no longer accepted, while Gunkel's approach has been both criticized and modified.

It is now almost universally accepted that *4 Ezra* is the work of a single author who probably used some literary sources and some crystallized traditions, incorporating them skillfully into his book. Chief passages reflecting preexisting materials probably include 13:1–13 (Stone 1968); 9:43–10:3 (Gunkel 1900: 334); 4:35–37; 6:49–52; 13:40–47; and perhaps 7:78–99. Such materials have further been detected

in 5:1–13 and 6:18–27. This use of preexistent materials is, however, a quite normal and natural phenomenon in the literature of the age. The book is, nonetheless, a very deliberate and considered composition as has most recently been stressed by Brandenburger (1981) and Stone (*4 Ezra* Hermeneia).

E. The Teaching of *4 Ezra*

It is quite evident that *4 Ezra* is wrestling with the problems arising out of the destruction of the temple. Visions 1–3 are dialogues between the seer and an angel in which the seer repeatedly attacks the divine governance of the world as it is evident both in the fate of Israel (e.g., chap. 3) and that of human beings (e.g., Vision 3). In the fourth vision the seer changes and accepts the point of view presented by the angel (see particularly 10:5–17). The vision of heavenly Jerusalem ensues, and this is followed in Visions 5 and 6 by prophecies of the destruction of the wicked kingdom. Finally, Vision 7 contains the story of the revelation of the sacred Scriptures, both exoteric and esoteric (14:37–48) and Ezra's last words to the people *(Abschiedsrede)* in 14:28–36. Although this seems clear enough, the question of the overall purpose and meaning of the book has been much discussed and, in the past a number of rather different interpretations have been offered.

One interpretation is associated with the names of Brandenburger and Harnisch (1969), most recently expanded and refined by Brandenburger (1981). Brandenburger would claim that the book is a carefully developed treatise designed to forward the views set in the mouth of the angel (= God). Ezra, throughout the dialogues, represents an opposition point of view, characterized by him as "skeptical" or "gnosticizing." Ezra remains unmoved throughout the first three visions, and the change in Ezra in Vision 4 is a mysterious act of divine grace in which the opponent is turned to accept the wisdom of God's governance of the world. This change is sustained throughout the following revelations and into the *Abschiedsrede,* where Ezra adopts the views previously set in the mouth of the angel.

This significant theory has been attacked by a number of scholars (e.g., Breech 1973; Hayman 1975; and Thompson 1977). It seems to be unacceptable to regard the figure of Ezra as a literary fiction, used more or less "cold-bloodedly" by the author to forward his theological views, which are set in the angel's mouth. This runs against the clear literary intent of the work of which Ezra is the obvious hero. Moreover, although, on the one hand, it is clear that the author cannot ascribe to God or his angel views which, in the final analysis, he rejects; yet on the other hand, Brandenburger and Harnisch offer no explanation for the ascription of these heretical and skeptical views to Ezra the Scribe (Hayman 1975: 51).

It seems most persuasive to regard the book as the "Odyssey of Ezra's Soul." The first three dialogues do not present merely a static conflict, but a dynamic of dialogue and dispute in the course of which Ezra partially accepts certain of the ideas propagated by the angel (Stone 1988). There is development in Ezra's views, though even at the end of the third vision he is far from full acceptance of the angel's position. The fourth vision, rightly viewed by Brandenburger and others as a turning point, describes a major psychological experience of the seer in which he internalizes the teachings he has previously partially accepted. The result of this is precisely the epiphany of heavenly Jerusalem and the command to enter in and see whatever mortal eyes can see (10:55–56).

The dream visions follow, revelations which resolve the basic issues that have motivated the seer from the first part of the book (chaps. 11–13). The main remaining difficulty touches on the final vision. What is its relation to and function in the rest of the book? Brandenburger puts almost exclusive emphasis on the *Abschiedsrede,* Ezra's address to the people. But this is a small part of this vision, which is clearly about the revelation of exoteric and esoteric lore. In the preceding visions the revelation to Ezra has been of esoteric teaching (see 12:36). In the seventh vision at first he is promised esoteric teaching (14:7–8); but only after his special prayer (14:19–22) does God also grant him the revelation of exoteric teaching, the 24 books of the Bible. Only with this does he become equal to Moses. The number of days of the first six visions totals 40, corresponding to the 40 days of the seventh vision (and of course to Moses' time on Mt. Sinai). The seventh vision tells of a revelation that parallels and complements the revelation of the first six visions. Ezra has moved from his doubts to a full prophetic position, indeed to the role of Moses. The transcending of doubts is the transcending of the problems raised by the destruction and the acceptance of divine governance of the world and divine determination of its history.

F. *4 Ezra* in Judaism of its Time

The problems addressed by the book—of divine justice and the fate of Israel—were clearly very much on people's minds after the destruction of the temple in 70 C.E. As with all the apocalypses, we are quite ignorant of their social context or function (Stone 1984: 433–35). *4 Ezra* does refer to a tradition of esoteric learning, of which the author partakes and which he traces back to Abraham and Moses. Moreover, the Eagle Vision is presented as contemplation on Daniel 7 (12:10); Ezra is commanded to teach it to "the wise among your people" (12:37), and he is told in Vision 7 that the esoteric books are to be taught "in secret to the wise" (14:26; cf. 14:47). Exactly what is reflected by these hints, in terms of social context and function, is beyond our ken. Some sort of social group must have existed, however, which bore and cultivated this tradition. This is corroborated by the fact *4 Ezra* is particularly close to *2 Apocalypse of Baruch,* with which it shares the seven-vision structure and many elements of terminology and language. To a lesser extent it also shows clear affinities to *Liber Antiquitatum Biblicarum*.

MICHAEL E. STONE

ESDRIS (PERSON) [Gk *Esdris* (Ἐσδρις)]. A Jewish commander in 2 Macc 12:36. Esdris is a shortened form of the Heb Azariah. Abel noted that the Eleazar (Gk *Eleazaros*) of 2 Macc 8:23 is also a form of the Heb Azariah as is the variant reading Ezra (ArmLa^{BMP}Vg), which he prefers. Abel thinks this Esdris or Ezra/Eleazar to be Eleazar, brother of Judas Maccabeus, mentioned in 1 Macc 2:5 (1961: 271). Goldstein points out that 1 Macc 5:56 refers to Azariah as a commander (*2 Maccabees* AB, 447). Judas, Simon, Jonathan, and Joseph are mentioned along with Azariah as military commanders in 1 Macc 5:55–56 as they are with Eleazar in 2 Macc 8:22–23. The confusion regarding the names may suggest that the author of the source common to both 1 and 2 Maccabees did not recognize that they were the same person. This confusion was passed on to Jason of Cyrene, whose history was epitomized in 2 Maccabees.

MICHAEL E. HARDWICK

ESEK (PLACE) [Heb *ʿēśeq* (עֵשֶׂק)]. The name given to a well dug by the servants of Isaac (Gen 26:20). The name means "contention," "strife," "hostility" and is based on the tradition of conflicts between Isaac's herdsmen and those of Gerar over rights to its water (Matthews 1986). The exact location of the well is, of course, unknown; but the context suggests that it was located between Gerar and Beer-sheba, perhaps somewhere in the Wâdī esh-Sheriah (Naḥal Gerar) E of Tell Abu Hureira (M.R. 112087).

GARY A. HERION

ESH-SHUNA, TELL (NORTH). See SHUNA (NORTH), TELL ESH-.

ESHAN (PLACE) [Heb *ʾešʿān* (אֶשְׁעָן)]. Town situated in the central hill country of Judah (Josh 15:52), within the same district as Hebron. The only reference to this settlement, the name of which perhaps means "resting place" (from *šʿn,* "to lean," "support oneself"), occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). Based on the alternative reading *sōma* in LXXB, it has been suggested (Boling and Wright *Joshua* AB, 389) that the ancient town might be associated with Khirbet hallat Sama, located approximately 17 km SW of Hebron. Considering the difficulty in understanding the differences between the two readings and the lack of archaeological verification, the identity of the ancient town must remain enigmatic.
WADE R. KOTTER

ESHBAAL (PERSON) [Heb *ʾešbaʿal* (אֶשְׁבַּעַל)]. The youngest son of Saul ben Kish and Ahinoam bat Ahimaaz, who succeeded his father to the throne of Israel. The name Eshbaal occurs in the Saulide genealogy in 1 Chr 8:33; 9:39. In 2 Samuel the same individual is consistently named ISH-BOSHETH. The alternate English form Ishbaal never appears in the Bible; it is a hypothetical reconstruction of the original name. The etymology of the name Eshbaal is disputed, with three possibilities proposed for understanding the initial element *ʾeš-*. The first suggests that it is a form of the Heb verb *ʾwš,* "to give"; the second, that it represents the noun *ʾîš,* "man"; and the third, that it derives from a verbal element corresponding to the more common *yēš,* " (he) exists" (Schoors 1972: 8; McCarter *2 Samuel* 86). It is commonly assumed that the second element, *baʿal,* "lord," is an epithet for Yahweh, rather than a reference to the Canaanite deity Baal.

The battle of Gilboa, in which Saul unsuccessfully attempted to capture the city-state of Beth-Shean, ended with most of the Saulide royal house decimated. Saul and his three eldest sons, Jonathan, Abinadab, and Malchishua, were killed. Only the youngest son of Ahinoam, Eshbaal, and two sons born

to Saul by his concubine Rizpah, Armoni and Mephibaal, remained alive as male offspring of the former king; they could be considered as immediate dynastic candidates to succeed Saul to the throne. In addition, an infant grandson born to Jonathan and five grandsons borne by Merab, Saul's eldest daughter, were available as possible candidates for the throne.

Abner, the general of the Saulide army and Saul's cousin, managed to survive the battle and sent the surviving troops to Mahanaim (modern Telul edh-Dhahab el-Garbi) in Transjordan. He then escorted Eshbaal from an undisclosed location in Cisjordan, probably the Saulide capital, across the Jordan to Mahanaim, where he was acclaimed king by the troops (2 Sam 2:8). The army was used on other occasions to represent a quorum of the Israelite citizenry for purposes of coronation (1 Kgs 16:16; 2 Kgs 11:4–12).

According to the accession formula in 2 Sam 2:10, Eshbaal was 40 years old when he began to reign; and he ruled for two years. It is likely that the reported age at accession is a round figure meant to imply maturity rather than a precise age. Even so, the figure is almost certainly inaccurate. Eshbaal's absence from the battle of Gilboa, requiring Abner to detour probably to the capital to retrieve him so that he could be crowned king by the surviving troops who were in Mahanaim, strongly implies that Eshbaal was under 20—the legal age for military service (Num 26:2, 4)—at his accession. His youth tends to be confirmed by other considerations. Jonathan, the eldest of Saul's sons and heir-elect, appears to have only been in his twenties when he died, as indicated by his having a single infant child at the time of his death. As the youngest son of Ahinoam, Eshbaal could not have been 40 when crowned. In addition, Eshbaal's failure to produce an heir during his two-year reign, before his premature death, also suggests a youthful age at the time of his accession.

It is commonly assumed that Mahanaim served as the capital of Israel throughout Eshbaal's reign and that the Philistines' victory at Gilboa led to their regaining political hegemony over Saul's Cisjordanian holdings (e.g., Ewald 1853: 144; Soggin 1975: 36–37; Miller and Hayes *HAIJ*, 146–47). However, neither of these ideas is explicitly supported by textual evidence. Abner's dispatching of the remaining troops to Mahanaim immediately after the defeat at Gilboa may have been determined more by his desire to secure this strategic site than by the Philistines' presumed overrunning of Cisjordan in the aftermath of Saul's defeat. Mahanaim controlled access to the iron-rich Ajlun region (*HGB*, 273), and Abner may have been primarily concerned with maintaining Saulide control over this vital resource. In view of the probable loss of a large portion of the Israelite army in the Jezreel valley, Mahanaim would have become a prime target for both the Ammonites and the Philistines.

The list of Eshbaal's districts in 2 Sam 2:9 tends to refute the assumed large-scale Philistine seizure of Saulide land in Cisjordan. During his brief two years on the throne, Eshbaal was able to control Benjamin, Ephraim, Jezreel, and the Asherites in Cisjordan, in addition to Saulide territory in Gilead. It seems unlikely that he would have been able to recapture such extensive territories from the Philistines in such a brief period, especially since a sizable portion of his career is reported to have been preoccupied with war against David (2 Sam 3:1). The historicity of the claim that the Philistines seized Israelite settlements "on the other side of the valley," i.e., the N side of the Jezreel or Beth-Shean valley immediately after Saul's death at Gilboa (1 Sam 31:7; 1 Chr 10:7) is now open to question in light of the recent archaeological survey work in SW Galilee. No settlements were found that could be dated to the period of Saul (Gal 1982: 80). It seems that this comment is literary embellishment intended to emphasize Saul's crushing defeat. The presumed widespread Philistine occupation of Israelite land in the wake of Saul's death does not appear to have historical foundation.

The suggestion that there was a 5.5-year interregnum prior to Eshbaal's coronation, during which Abner was engaged in regaining lost Israelite territory from the Philistines and rebuilding the Israelite army, can also be dismissed as unlikely (Ewald 1853: 144–45; Soggin 1975: 37). The idea is derived from 2 Sam 2:11, where it is reported that David's reign over the house of Judah from Hebron lasted 7.5 years, while Eshbaal's reign was only 2 years. It presupposes that David only became king in Hebron at Saul's death, which is consistent with the larger narrative portrayal of Saul as king over all the territory associated with the twelve tribes constituting premonarchic Israel but which may derive from the ideology of the biblical

writer rather than reflect the historical situation. The narrative evidence for Saul's firm control over most of the territory of Judah is ambiguous. There is no unequivocal basis for rejecting David's establishment of Judah as a rival state to Israel during the last 5.5 years of Saul's reign.

The site of Eshbaal's capital is not specified in tradition, but it is not necessary to assume that he remained at Mahanaim after his coronation. Having secured continued control over the iron ore near Mahanaim, it is likely that Eshbaal would have returned to the established Cisjordanian capital so that he could regulate affairs of state in the heart of his state. The account of the representative battle that took place at Gibeon immediately after Eshbaal's coronation (2 Sam 2:12–32) may hint that the latter site was the capital and that Eshbaal returned in the wake of David's unsuccessful attempt to take control over it. No reason is given for David's sending his general Joab with troops to Gibeon. The action would be understandable, however, had Gibeon been the Saulide capital.

Eshbaal's removal to Mahanaim to be crowned by the remaining troops would have left the capital temporarily vulnerable to outside attack, and David appears to have attempted to take advantage of this situation. Abner apparently realized the danger and quickly sent a contingent to guard Gibeon after the coronation, only to find David's men already there, ready for a challenge. The issue under dispute would have been who was to control the newly forged state of Israel by controlling its capital: David or Eshbaal. The use of representative combat (2 Sam 2:12–16) (Sukenik 1948; Eissfeldt 1951) indicates that neither side wanted to destroy the city; each wanted to use it as the continuing seat of power. Although the battle was a draw, with all 24 representatives left dead and even though Eshbaal is said to have lost more men in the fighting that ensued than David (2 Sam 2:30–31), the ultimate result was victory for Eshbaal, who maintained Saulide control over the city, thwarting David's challenge. It seems warranted to conclude that Eshbaal would have returned to Gibeon in the aftermath of the withdrawal of David's troops to claim his rightful place on the throne of Israel's capital.

Eshbaal's youth and inexperience would have led him to rely heavily on his uncle Abner's judgment and leadership as general of the Israelite army; and Abner seems to have decided to attempt to take direct control of the throne for himself, perhaps in collusion with David (see ABNER). As Saul's cousin and a proven military leader within Israel, Abner would have been able to garner support for his ambitions from portions of the Israelite populace and particularly from the army. His overt move to depose Eshbaal is reported to have been made by his taking over control of Saul's former harem (2 Sam 3:7). Possession of the royal harem was a symbol of kingship in the ANE. Eshbaal, clearly aware of the political overtones of Abner's move, is said merely to have rebuked his uncle (2 Sam 3:8) but apparently was able to quash the attempted takeover. It was in the wake of his failure to gain the throne that Abner met an untimely death at the hands of Joab, the commander of David's army, during a visit to David at Hebron (2 Sam 3:22–30).

David's request that Eshbaal return Michal, his elder sister who is reported to have been married to David briefly during Saul's reign (2 Sam 3:18), would have taken place after Abner's death. David is reported to have requested Michal's return in his earlier private negotiations with Abner (2 Sam 3:13). His renewed interest in Michal seems to have been sparked by the possibility that he could claim as Saul's son-in-law to be a legitimate dynastic candidate for the throne of Israel through the practice of optative affiliation (Morgenstern 1929: 97). David's public demand that Eshbaal return Michal would appear to have been a declaration of his intentions to challenge Eshbaal's possession of the Saulide throne. Perhaps he was aware of growing discontent with the inexperienced king among the Israelite citizenry; and with Abner conveniently out of the way, David, the former Israelite army commander and son-in-law to the king, became an attractive alternative.

Soon after Abner's death, Eshbaal was assassinated by two of his own raiding captains, Baanah and Rechab, from Beeroth. The men slipped into the palace, slew and beheaded Eshbaal while he was napping, and then took his head to David at Hebron (2 Sam 4:5–7). The parenthetical comment in vv 2–3 tends to imply that the two captains were working on their own out of revenge for Saul's attempt to remove the Gibeonites from within the boundaries of Israel (2 Sam 21:1–2). One wonders, however, if this is not a deliberate attempt to disassociate the assassins from David, who may have plotted the murder to eliminate Eshbaal permanently from the throne after his unexpected success in thwarting Abner's

initial, bloodless attempt to gain the throne. The men's immediate delivery of Eshbaal's head to David might imply his collusion in the murder (2 Sam 4:8); and David could have purposely recruited the two men because of their background, to be able to have blood revenge appear to be the primary motive for the murder (VanderKam 1980). With both Eshbaal and Abner dead, David had a clear path to gaining the throne of Israel himself two years after his unsuccessful bid in the event at Gibeon.

DIANA V. EDELMAN

ESHBAN (PERSON) [Heb *ʾešbān* (אֶשְׁבָּן)]. A clan name in the genealogical clan list of Seir the Horite. This person appears in Gen 36:26 as well as the matching genealogy in 1 Chr 1:41 as second of four sons of the clan chief DISHON and is thus considered the grandson of Seir. These elaborate genealogies may reflect tribal alliances or territories within the Edom region rather than actual blood kinship. For discussion of the Horite clans, see JAAKAN.

VICTOR H. MATTHEWS

ESHCOL (PERSON) [Heb *ʾeškōl* (אֶשְׁכֹּל)]. A brother of Aner and Mamre, who were allies of Abram (Gen 14:13, 24; see ANER). Eshcol is a personification of the place name *naḥal ʾeškōl,* "valley of grapes" (Num 13:23, 24; 32:9; Deut 1:24) near Hebron in the same way as the name of Mamre, another locality near Hebron, was used as a man's name in the same vv of Genesis 14. See also MAMRE.

MICHAEL C. ASTOUR

ESHCOL (PLACE) [Heb *ʾeškōl* (אֶשְׁכֹּל)]. Name of a valley in the vicinity of Hebron from which the Israelite spies brought back a cluster of grapes so large that two men were required to carry it between them on a pole (Num 13:22–24). The text claims that the valley received its name Eshcol ("cluster") from this remarkable cluster. The area around Hebron, especially to the N, is well suited to viticulture, and its importance to the economy of that region continues even into modern times. Two other texts also refer to the valley of Eshcol in connection with this espionage mission (Num 32:9 and Deut 1:24). Eshcol, together with Aner and Mamre, also occurs as a personal name in Gen 14:13, 24; but since Eshcol and Mamre, at least, were place names from the immediate vicinity of Hebron, one should probably understand their significance here as personifications of the place names.

WESLEY I. TOEWS

ESHEK (PERSON) [Heb *ʿēšeq* (עֵשֶׁק)]. A Benjaminite, a descendant of King Saul according to the genealogy in 1 Chr 8:39. The name Eshek is unique to this person and its etymology is unclear. (Rudolph [*Chronicles* HAT, 80]; Noth [*IPN*, 254] find the translations "oppression," "a forced groan" unacceptable.) This might explain why different names are found in the LXX (Codex Vaticanus, *asēl;* Codex Alexandrinus, *eselek;* Gk minuscules *esēl*). Eshek appears in the very last section of the genealogy of Benjamin in chap. 8; he is lacking in the Benjaminite genealogy in chap. 9, which is generally parallel to 1 Chr 8 (see AHAZ #1). 1 Chr 8:39–40 are concerned with the military prowess and the numerous progeny of the clan of the Benjaminites; this is related to the tradition of Benjaminite warriors in 1 Chr 12:1–7 and broadly parallels the list of David's warriors in 1 Chr 11:10–47 (Ackroyd, *Chronicles, Ezra, Nehemiah* TBC, 43). However, the traditions in 1 Chr 8:39–40 are largely independent of 1 Chr 12:1–8

(except for Eliphelet in 8:39, who might possibly be identified with Pelet in 12:3); and it is best to see 1 Chr 8:39–40 as an independent genealogy of a subbranch of the Benjaminites which was tacked on as an appendix or conclusion to the Benjaminite genealogy.
MARC Z. BRETTLER

ESHTAOL (PLACE) [Heb *ʾeštāʾôl* (אֶשְׁתָּאוֹל)]. ESHTAOLITE. A town in the E part of the territory of Dan (Josh 19:41). Along with Zorah, Eshtaol comprised the core area of Danite settlement in the Judean foothills. It is this area which forms the backdrop for the activities of Samson (Judg 13:25), and it is from this area that the Danites sallied forth to conquer Laish (Judges 18). Subsequently, Eshtaol was considered Judahite territory (Josh 15:33; 1 Chr 2:53 [Heb *ʾeštāʾulî*]), settled by Eshtaolites of the Calebite clan of Kiriath-jearim. It has been identified with Khirbet Deir Shubeib (M.R. 148134), near the village of Ishwa (M.R. 151132), which retains elements of the ancient name (Kallai *HGB,* 368).

RAPHAEL GREENBERG

ESHTEMOA (PERSON) [Heb *ʾeštĕmoʿa* (אֶשְׁתְּמֹעַ)].

1. The son of Ishbah listed in the genealogy of Caleb (1 Chr 4:17). This figure is otherwise unknown.

2. A Maacathite, the grandson of Hodiah listed in the genealogy of Caleb (1 Chr 4:19). This figure is otherwise unknown. See also ESHTEMOA (PLACE).
JEFFRIES M. HAMILTON

ESHTEMOA (PLACE) [Heb *ʾeštĕmōaʿ* (אֶשְׁתְּמֹעַ)]. Fourth Levitical city in the Judah/Simeon list (Josh 21:14; 1 Chr 6:42—Eng6:57). Outside the Levitical city references Eshtemoa is mentioned in two other texts in the OT. The first is in Josh 15:50, where Eshtemoa is one of the cities in the hill country allotted to Judah. The second occurrence is in 1 Sam 30:28, when Eshtemoa, like Jattir, received some of the booty from David after his defeat of the Amalekites and return to Ziklag. There are no references to Eshtemoa outside the Bible.

This biblical city has been identified with es-Samʿ (M.R. 156089), 8 km NE of Khirbet ʿAttir and 14 km SW of Hebron in the hill country of Judah. It is 10 km from the modern town of Zahariyeh. Today the modern village of Eshtemoaʿ covers the ancient occupation. Es-Samʿ lies on top of a hill at the edge of a mountain which rises to the S. To the N and E deep ravines isolate the village from surrounding neighbors. Because of its location in the hill country, es-Samʿ provides the people with an adequate defense. Important to this village are the roads and valleys that make up the communication network in the hill country (Peterson 1977: 500–58). One of the longitudinal roads runs the entire length of the country from Shechem to Hebron. At Hebron this road forks into two branches; the E branch turns from Hebron and passes Juttah and modern Eshtemoaʿ and then descends into the Negeb towards Arad. At es-Samʿ a wadi flows just to the N of the town and there are several cisterns dotting the landscape near modern Eshtemoaʿ.

The first to identify es-Samʿ with biblical Eshtemoa was Robinson (1841: 626–27), and his identification has never been contested. Most of the archaeological interest at es-Samʿ has centered around the 4th-century synagogue, but in 1928 the Inspectors from the Palestine Department of Antiquities started to make frequent visits to es-Samʿ. The pottery identified was predominantly Roman and Byzantine, but Iron Age, Greek, and Cypriot potsherds were also found, and several test-shafts foundation trenches were dug. In 1971 Yeivin carried out further repairs on the synagogue. During his work he found two vessels dated to the 9th–8th century B.C. There can be no doubt that this small village in the hill country of Judah is the biblical city of Eshtemoa.

JOHN L. PETERSON

ESHTON (PERSON) [Heb ›*eštôn* (אֶשְׁתּוֹן)]. A descendant of Judah, the son of Mehir, and father of Bethrapha (1 Chr 4:11, 12). His ancestry is traced to a certain Chelub, which many, on the basis of the LXX, suspect is a variant of Caleb. Nothing concerning Eshton is otherwise known.
H. C. LO

ESLI (PERSON) [Gk *Esli* (Ἐσλι)]. The father of Nahum and son of Naggai, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:25). D omits Esli, substituting a genealogy adapted from Matt 1:6–15 in Luke 3:23–31. Esli appears as Gk *hesli,* occasionally with *-ei* ending, in many mss and versions. The name Esli occurs nowhere else in the biblical documents, including Matthew's genealogy, and falls within a list of 17 otherwise unknown descendants of David's son Nathan (Fitzmyer *Luke 1–9* AB, 500). See also ELIAKIM. Kuhn (1923: 211) also notes a number of possible variant Hebrew and Greek forms of Esli in 2 Kings 22:3; 1 Chr 34:8; Gen 46:24; Num 26:48; 1 Chr 7:13; Num 26:48; 1 Chr 12:4. But as Kuhn admits, there is no exact form of Gk *esli.* With no textual variants for Esli and Eliakim to support confusion of the two, Kuhn's theory has little plausibility.

STANLEY E. PORTER

ESSENE GATE. In his famous description of the walls of Jerusalem, Josephus describes the course of the oldest ("the first") wall to the S of the Hippicus Tower: "Beginning at the same point in the other direction, facing west, it descended past the place called Bethso to the Gate of the Essenes *(Essēnōn pylēn)* and thereafter facing south, extended above the fountain of Siloam" (*JW* 5.145). To mark variations in the course of the "first" wall, the Jewish historian names respectively two or three nearby places (cf. *JW* 5.144–45). For this reason it is possible to locate the Essene Gate quite unequivocally (Riesner fc.): it was located at the point where the "first wall" altered its N-S course to an E-W orientation and near an area called Bethso.

Because of this information early 19th-century investigators usually looked for the Essene Gate on the SW hill of the ancient city of Jerusalem (e.g., Conder 1879), which has been called "Zion" at least since the beginning of the 2d century C.E. (Riesner *ARNW* fc.) and which today lies beyond the Turkish city wall. In 1894 on the property of the Gobat School (today the American Institute for Holyland Studies), F. J. Bliss discovered a gate with several superimposed thresholds, which he originally identified as the Essene Gate (1895: 12). He later attributed the entire gate to the Byzantine period but thought in spite of this that the Essene Gate had stood at this place or nearby (1898: 16–20, 322–24). The excavation was soon filled in, but since then almost all topographers have searched for the Essene Gate on this SW hillside (e.g., Dalman 1930: 86–87; Simons 1952: 278–81; Vincent and Stève 1954: 65). An exception was M. Avi-Yonah (1956: 307), who like E. Robinson (1841: 473–74) identified the Essene Gate with the Dung Gate (Neh 2:13; 3:13–14; 12:31). Consequently, he looked for it near Shiloah, a location which conflicts completely with the description of Josephus.

The dimensions used in the Roman construction caused A. Strobel to doubt the Byzantine dating of the underlying gate threshold (1974: 356–58). In 1977 B. Pixner again exposed the gate discovered by Bliss (1981: 5–7); and in 1979 ongoing, systematic excavations resumed (Pixner, Chen, and Margalit fc.). A few results have by now become certain: (1) the wall in which the gate is located belongs to the Hasmonean period; (2) an even older (preexilic?) wall lies below it; (3) the gate was built into the existing wall for the first time in the early Herodian period as an afterthought; (4) in the time of the late Roman Aelia Capitolina this gate took the shape of a simple gateway; and (5) in the Byzantine period a very weak

wall was erected on top of the Hasmonean wall, and the gate itself was repaired. These five considerations conclusively refute the earlier view of Kenyon (1974: 199–203), already abandoned by her for other reasons, that the SW hill along with the traditional room of "the Last Supper" *(coenaculum)* was not included in the city wall until the reign of Herod Agrippa I, 41–44 C.E. (1967: 155–62). The most recent view of Yadin (1985: 180–82), in contrast to his earlier opinion (1975: 90–91) which sought the Essene Gate in the middle of the Western Wall rather than at its SW corner (1985: 180–82), also has proved to be unnecessary. A gate found by M. Broshi near the SW corner of the present-day city wall (1977: 12) derives presumably from the late Roman period (Pixner, Chen, and Margalit fc.).

During the Herodian phase the Essene Gate, accessible only to pedestrians, was possibly located at an inconvenient place above the steep incline of the Hinnom Valley. Numerous investigators believe (e.g., Vincent and Stève 1954: 65, 69–71; Michel and Bauernfeind 1963: 246) that the Essene Gate bears the name of an Essene settlement in the immediate vicinity. The archaeological data support the assumption that this quarter was erected at the beginning of the reign of Herod the Great (39–34 B.C.E.), who, according to Josephus, had a friendly attitude toward the Essenes (*Ant* 15.371–78). For the duration of his reign the monastic settlement at Qumran remained abandoned, a circumstance that would also support the possibility of an Essene settlement in the holy city (Pixner 1981: 3–5; Riesner 1985: 69–70). The Gk designation *Bethso* in Josephus also points to an Essene quarter located in the immediate neighborhood of the Essene Gate. Only in the *Temple Scroll* from Qumran is there a parallel to this name, specifically in the prescription for the construction of latrines (11QTemple 46:13–16). This evidence confirms the earlier view based on the Aramaic that the original place name was *beth so'a* (Dalman 1930: 86). Also in favor of locating the Jerusalem Essene quarter in this area are the ritual pools both inside and outside the wall (1QM 7:6–7; cf. Deut 23:13–15) as well as the *Copper Scroll*'s treasures caches nos. 1–18 (3Q15 1:1–4, 5). All of this evidence fits the SW hillside (Pixner 1983: 342–47).

The assumption of an Essene quarter at this place is especially interesting, because a trustworthy topographical tradition locates the first assembly center of the early Christian community in Jerusalem and the room of Jesus' Last Supper quite near this area (Riesner 1985: 64–69; *ARNW* fc.). The similarity of certain early Christian rules of conduct (Acts 1–6) to those of Qumran has always attracted attention and might be explained by the conversion of some Essenes (cf. Acts 2:5 ff.; 6:7) to a new messianic belief. Besides other consequences these recent archaeological discoveries could shed light on the chronology of Jesus' last Passover meal (Ruckstuhl 1985) and the shared communal life of the early Christian community (Capper 1986).

ESSENES. A Jewish sect which is known to have flourished from the mid-2d century B.C.E. to the time of the First Jewish Revolt against Rome (66–70 C.E.). They are described by a number of Greek and Latin authors, of whom the most important are the Jewish writers Philo and Josephus and the Roman Pliny (see *HJP* 2:555–74). The site of Qumran is widely believed to have been an Essene settlement, and the Dead Sea Scrolls are thought to have once constituted an Essene library. See also QUMRAN; DEAD SEA SCROLLS.

———

A. Etymology

The name of the sect is variously given as *Essaioi* (Philo) or *Essēnoi* (Josephus, Dio, Hippolytus) in Greek, *Esseni* in Latin (Pliny). Epiphanius mentions both *Essēnoi,* which he identifies as a Samaritan sect, and *Ossaioi* or *Ossēnoi* from the vicinity of the Dead Sea (*Adv. Haer.* 19.1–4). The etymology of the name remains an enigma although several proposals have been put forward. Philo suggested that it was derived from the Gk *hosiotēs,* "holiness" (*Quod Omn* 75). Josephus seems to imply a pun on *semnotēs,* "sanctity" (*JW* 2.8.2 §119). Most scholars have assumed that the name is of Semitic origin, like Pharisee and Sadducee. The more popular suggestions include the following.

(a) The word *Essenes* could be derived from the Aram *ḥsyʾ* (pl. *ḥsyn* or *ḥsyyʾ*), "pious," the equivalent of the Heb *ḥasîd.* This would suggest a connection between the Essenes and the *ḥasîdîm (asidaioi)* mentioned in 1 Macc 2:42; 7:12–13 and 2 Macc 14:6, but this idea is open to the objection that *ḥsyʾ* is never used in this sense in Jewish Aramaic.

(b) The Aramaic *ʾsyyʾ,* "healers" has been proposed especially by Vermes. Philo says that they were "therapeutae of God" (*Quod Omn* 75) and describes another community called Therapeutae *(Vita Cont),*

but he understands the word in the sense of religious service rather than healing. It is not apparent that healing was such a dominant interest of the Essenes that they would derive their name from it.

(c) The Hebrew verb *ʿśh*, "do" yields a participial form *ʿōśin* in rabbinic Hebrew. It has been suggested that this might be an abbreviation for "Doers of the Law" or some such phrase (Goranson 1984). This form suggests the name *Ossēnoi* given by Epiphanius, but the word is too general and is not related to the Essenes by specific evidence.

(d) The word *ḥsh*, "to trust" is likewise only of general relevance. Other suggestions, such as *ḥzzy*ʾ, "seers" or *ḥšyy*ʾ, "silent ones" are likewise inconclusive.

It should be noted, however, that the name Essene is only attested in Greek and Latin, and hence the possibility of a Greek derivation deserves serious consideration. Two possibilities deserve mention.

(a) Josephus (*Ant* 3.7.5 §163–71) uses the word *essēn* for the high priest's breastplate (Heb *ḥošen*) and says that the word signifies *logion*, "oracle." He adds that God foreshadowed victory in battle by means of the shining of the 12 stones, which the high priest wore upon his breast stitched into the *essēn;* hence the signification "oracle." The *essēn* ceased to shine about 200 years before the time of Josephus, i.e., in the late 2d century B.C.E. We will see below that Josephus attributed to some Essenes the ability to foretell future events. He does not, however, say that they used the *essēn,* or that their name was derived from it. A composition dealing with the shining of the *ḥošen* has now been found at Qumran (Strugnell fc.). It was not necessarily composed there, however, and it does not prove that the community attached any more importance to the *ḥošen* than did Josephus. An association of the name Essene with the priestly *essēn* is an intriguing possibility, but no more.

(b) The term *essēnas* is attested as a designation for functionaries in the cult of Artemis at Ephesus, who had to observe an ascetic lifestyle while in office (Paus. 8.13.1; Jones 1985: 97; Kampen 1986: 61–81). We will see that the accounts of the Essenes in Philo and Josephus were written for hellenized readers and were assimilated to Hellenistic models to some degree. Nonetheless, the cult of Artemis at Ephesus seems a rather remote model for the identification of the Jewish sect.

B. The Sources

Philo provides two descriptions of the Essenes, in *Quod Omn* 75–91 and *Hypothetica* 11.1–18. There is considerable overlap between these accounts. Philo does not claim to have firsthand knowledge of the Essenes, and he is evidently dependent on a source or sources. Further, he portrays the Therapeutae in *Vita Cont* as people who bear some similarity to the Essenes but are located in Egypt and lead a less active life.

The most extensive account of the Essenes is preserved by Josephus (*JW* 2.8.2–13 §119–161). A parallel to this account is found in the *Philosophoumena,* which is attributed to Hippolytus (*Haer*. 9.18.2–28.2). Many scholars have held that Hippolytus is dependent on Josephus, but Morton Smith has shown decisively that this is not so. Some of the differences between the two accounts are due to confusion on the part of Hippolytus (he identifies the Essenes with the Zealots) or to editorial censure (he deleted apparent references to sun worship). Hippolytus' account of Essene eschatology, however, may well include authentic information which is omitted by Josephus. Some minor differences between the two accounts can be explained by positing a common source which was originally in Hebrew (Smith 1958: 290–91). Josephus confirms most of the points mentioned by Philo but goes into greater detail. Another, shorter, account is provided by Josephus in *Ant* 18.1.5 §18–22. He also refers to individual Essenes at several points (*JW* 2.20.4 §566–68; 3.2.1 §9–12; *Ant* 15.10.5 §371–79) and once to the "Essene Gate" in Jerusalem (*JW* 5.4.2 §142–45).

Despite Josephus' claim that he personally made trial of the three major sects (*Life* 9–11), he can never have been a member of the Essenes. He claims to have undertaken the three courses at age 16, then spent three years with Bannus in the wilderness, and returned to Jerusalem at age 19. He evidently then did not have time to complete even the initial year of the Essene process of admission. With the possible exception of the testimony to their endurance in the war against Rome (*JW* 2.8.10 §151–52), his knowledge of the Essenes was based on sources. These sources were probably available to him in

hellenized form. Both Josephus and Hippolytus make comparisons with Pythagoras and with the Greek conception of the isles of the blest.

The most important notice by a pagan author is that of Pliny the Elder, in his *Natural History* (5.15.73), which was completed in 77 C.E. Pliny had probably been in Palestine with Vespasian in 68 C.E. He speaks of the Essenes in the present tense, but his information was probably gathered before 70. He mentions them in the context of a topographical survey of Judea and locates them on the W bank of the Dead Sea between Jericho and En-gedi (En-gedi is said to be "below" them; this should be understood as southward, in view of the direction in which the description moves). Pliny's one-sentence description of the Essenes confirms some aspects of the accounts in Josephus and Philo, but he exaggerates their rejection of worldly goods when he says that they live "without money" and also the duration of the sect as through "thousands of centuries."

Except for the enigmatic (probably confused) notice in Epiphanius which we have mentioned in connection with the etymology, the other ancient notices (Synes. *Dio* 3.2; Heges. *Hypomnemata, Apos. Con.* 6.6.1–8; Jerome, *vir. ill.* 11 and *adversus Jovinianum* 2.14) add nothing of significance to the 1st-century sources. (All these and some later witnesses are conveniently collected by Adam and Burchard; note also the Syriac account of Dionysios Bar Salibi discussed by Brock.)

C. Description of the Sect

The classical sources are primarily concerned with the customs of the sect. Josephus also provides some information about its organization and discipline. We are given relatively little account of doctrines and beliefs.

1. Location and Extent. Both Philo and Josephus say that the Essenes were spread throughout the country. Philo says that they lived in villages and avoided the iniquitous cities; Josephus, on the contrary, says that many lived in each city, but they had none of their own. The discrepancy here may be due to an idealizing tendency in Philo. Pliny, as we have noted, located the Essenes by the Dead Sea. Dio, as reported by Synesius, repeats this location but may depend on Pliny. Epiphanius says the Essenes were from Samaria but puts the *Ossaioi* in the vicinity of the Dead Sea. In view of Pliny's notice, we should assume that there was a major settlement by the Dead Sea; but evidently Essenes were not confined to one location. Both Philo and Josephus give their number as "more than four thousand." This figure was presumably derived from a common source which must have been extant in the early 1st century C.E.

2. Organization. Josephus introduces the Essenes as one of three Jewish "philosophies." They are listed among the *haireseis* (whence heresies) of the Jews by Hegesippus and Epiphanius. (Josephus refers to the *hairetistai* of each philosophy—i.e., those who choose to follow it.) The modern term *sect* is influenced by the Christian usage and has the disadvantage of implying a normative orthodoxy, which is anachronistic for Judaism in the era before 70 C.E. Nonetheless, *sect* is accepted as a more appropriate label for the Essenes than for the Pharisees or Sadducees, since it is clear from Josephus that they had a distinct organization with clear procedures for admission and expulsion and also that they were at variance with the Jerusalem temple, which was the focal point of Judaism at the time. We have as yet no better term than *sect* to describe this organization.

The procedures for admission are described by Josephus *JW* 2.8.7 §137–42). For the first year the postulant was required to follow the way of life but remain outside the community. After this there was a further probationary period of two years before final admission. Upon admission "tremendous oaths" were required. These included promises to "forever hate the unjust and fight the battle of the just," to be loyal to those in authority, to conceal nothing from other members, and to guard their secrets, including their books and the names of the angels. There was also provision for expulsion, which had dire consequences, because the expelled person was still prevented by oaths from partaking of common food.

The sectarian way of life was characterized by some form of communal property. According to Josephus (*JW* 2.8.4 §122) "the individual's possessions join the common stock and all, like brothers, enjoy a single patrimony." Philo comments that "they stand almost alone in the whole of mankind in that they have become moneyless and landless by deliberate action" (*Quod Omn* 77). Pliny states that they live "without money." All three 1st-century witnesses also attest the celibacy of the sect. Josephus says that

they shun marriage but do not condemn it in principle (*JW* 2.8.2 §120–21) but also informs us of a second order of Essenes that practiced marriage (2.8.13 §160–61). Philo declares categorically that "no Essene takes a wife" (*Hypothetica* 11.14) and is apparently unaware of exceptions. Pliny says that they live "without any woman" and renounce sex. He marvels that a community in which no one was born could still perpetuate itself through generations. Philo gives as a reason for celibacy that marriage was perceived as a threat to communal life.

Much of the lifestyle of the sect follows from the requirements of communal living. Josephus emphasizes the hospitality extended to sectarians from other communities. Avoidance of wealth and distinction led to rejection of oil (which was also considered defiling) and to extreme frugality in dress (*JW* 2.8.4 §123–27). The cohesion of the community was ensured by strict obedience and deference to elders (*JW* 2.8.9 §146) and by a well-defined hierarchical order (2.8.10 §150). Both Philo and Josephus mention the rejection of slavery (*Quod Omn* 79; *Ant* 18.1.5 §21). Philo suggests that they also avoided weapons or at least refrained from making them (*Quod Omn* 78), but Josephus reports that they carried weapons on their journeys for self-defense (*JW* 2.8.4 §125). A figure called John the Essene appears as an officer in the war against Rome (*JW* 3.2.1 §9–12; 2.20.4 §566–68).

3. Religious Practices. The attitude of the Essenes to animal sacrifice and temple worship has been a matter of much controversy. Philo says that they worshipped God "not by offering sacrifices but by resolving to sanctify their minds" (*Quod Omn* 75). This would seem to imply a rejection of sacrifice in principle, but it may mean only that sacrifice was not central to their piety. The testimony of Josephus is confused by textual variation. The Gk mss say that they "send votive offerings to the temple, but perform their sacrifices employing a different ritual of purification. For this reason they are barred from those precincts of the temple that are frequented by all the people and perform their sacrifices by themselves" (*Ant* 18.1.5 §19). The *Epitome* (an abbreviation of the *Antiquities* which is thought to date from the 10th century) and the Latin translation of Cassiodorus read a negative: "they do *not* perform their sacrifices." (Cassiodorus, however, only says that they did not sacrifice in the temple; see Black 1961: 40.) From this evidence it would seem that the Essenes were excluded from the official temple cult. However, the evidence could be interpreted to mean that they still offered sacrifice, either in a special part of the temple area or elsewhere, on their own.

The preoccupation of the Essenes with purity is evident in many of their practices, including celibacy and avoidance of oil (see above). Josephus mentions their ritual baths in cold water (*JW* 2.8.4 §129), notes that novices were allowed to share a purer kind of holy water after their year of postulancy (2.8.7 §138), and mentions that if a senior member of the community was touched by a junior, he had to take a bath "as after contact with an alien" (2.8.10 §150). He also reports their custom of burying their excrement (so as not to offend the rays of the deity) and of avoiding bowel movements on the Sabbath (2.8.9 §148). Even those expelled from the community were apparently still bound by purity regulations (2.8.8 §143–44).

Perhaps the most distinctive custom noted by Josephus is the custom of praying towards the sun before dawn "as if entreating him to rise" (*JW* 2.8.5 §128). They are said to pray "towards" *(eis)* not "to" *(pros)* the sun and so should probably not be regarded as sun worshippers. Nonetheless, the practice is surprising in a Jewish context and is reminiscent of the custom condemned in Ezek 8:16. The parallel passage in Hippolytus makes no reference to the sun, a fact which is probably due to editorial intervention.

A more conventional aspect of the Essences' piety is their devotion to the law. They are said to hold Moses in reverence second only to God (*JW* 2.8.9 §145) and to display an extraordinary interest in the writings of the ancients (2.8.6 §136). Philo claims that the exposition of the law at the sabbath services was allegorical (*Quod Omn* 82), but his description of the Essene assembly does not differ greatly from his account of the assembly of the Therapeutae in the *Vita Cont* (75–78) or of the Jewish people in *Hypothetica* (7).

Finally, the common meals of the community had religious significance. Josephus comments that, after their ritual bath, "pure now themselves, they repair to the refectory as to some sacred shrine" (*JW* 2.8.5 §129). The meal is ritualized by the prayers of a priest both before and after. Philo mentions the common meals as factors which further the unity of the members (*Quod Omn* 86; *Hypothetica* 11.5); but in his

description of the related group, the Therapeutae, he dwells at length on the meal, which he calls a "sacred symposium" (or banquet) (*Vita Cont* 71).

4. Religious Beliefs. The 1st-century accounts of the Essenes are primarily concerned with the practices of the sect. Philo gives us scarcely any information about their beliefs but he does state that they believed that the godhead is the cause of all good things and nothing bad (*Quod Omn* 84). This belief may imply a dualistic view of the universe. The main account of the beliefs of the sect is found in Josephus (*JW* 2.8.11 §154–58), and there is some additional information in *Ant* 18 and in Hippolytus.

Josephus clearly asserts that the Essenes believed in the immortality of the soul and regarded the body as a prison house (compare *Ant* 18.1.5 §18). He compares their idea of the abode of the virtuous souls to the Greek isles of the blest and the murky dungeon of the wicked to Hades. The parallel account in Hippolytus, however, goes beyond this and says that they also believed in the resurrection of the body. The sojourn of the soul in the "isles of the blest" is "until the judgment," which would be followed by the *ekpyrosis,* or universal conflagration. Some have suspected that the reference to resurrection is intended to bring the Essenes into line with Christian teaching, but it is by no means clear that Hippolytus would have wanted to make a Jewish sect look like an anticipation of Christianity. The account in *Ant* 18.1.5 §18 emphasizes the determinism of the sect: they are wont "to leave everything in the hands of God."

Josephus and Hippolytus say that some of the Essenes professed to foretell the future. Josephus elsewhere relates incidents involving three different Essene prophets (*JW* 1.3.5 §78–80; 2.7.3 §111–13; and *Ant* 15.10.5 §373–79). In each case the prophecy concerns the fortunes of a king: in the first case, Judas the Essene predicted the murder of Antigonus (about 104 B.C.E.); in the second, an Essene named Simon interpreted a dream of Archelaus (about 6 C.E.); and in the third, Menahem foretold the kingship of Herod and earned the despot's respect for the Essenes. In Hippolytus the notice about prophecy follows immediately on the reference to the final judgment and may have apocalyptic overtones. Josephus also notes their interest in medicinal roots and the properties of stones (*JW* 2.8.6 §136).

Hippolytus also ascribes to the Essenes a fanatic aversion to idols, an inclination to kill the uncircumcised, and an unwillingness to recognize any lord except God. Throughout this passage, however, he appears to have confused the Essenes with the Zealots or Sicarii. Despite this militant portrayal Hippolytus says that they swore not to hate anyone—in sharp contrast to the oath in Josephus which promises always to hate the wicked. It is possible that Hippolytus has introduced some elements of Christian morality into the text in this instance.

D. Correlation with the Qumran Scrolls

The identification of the sect of the Dead Sea Scrolls as the Essenes rests on two primary considerations: the location of the Essene settlement according to Pliny and the descriptions of the process of admission both in Josephus and in the Qumran *Rule of the Community* (1QS).

1. Location. Pliny located the Essene settlement between Jericho and En-gedi (assuming that "below" means "to the South of" in accordance with the direction in which the description is moving). The only oasis between Jericho and En-gedi, is the Ain Feshka oasis, at the N end of which stands Qumran (M.R. 193127). The excavations at Qumran have shown that there was a settlement at the site from the mid-2d century B.C.E. to the time of the Roman conquest (except for an interruption immediately before the turn of the era). The period of occupation at Qumran corresponds well to the period within which the Essenes are mentioned in Josephus. Since there is no other known site which would fit the location given by Pliny, it is reasonable to conclude that he was in fact referring to Qumran. See also QUMRAN.

Prior to the discovery of the Dead Sea Scrolls, the ruins at Qumran were thought to be part of a military fort. This theory has recently been revived by Golb (1985), who points out that Qumran was violently destroyed and so had presumably been defended. The standard Essene interpretation, however, can account for the military adaptation of the site, whether by the sect itself or by Jewish revolutionaries, in the face of the Roman threat. On the other hand, the "military fort" theory leaves us with no identification for the site mentioned by Pliny. The assumption that Qumran was an Essene settlement remains the most economical way to account for the evidence.

2. Admission Procedures. The second basic argument rests on the correspondence between 1QS and the description of the Essenes in Josephus. Evidently 1QS is the rule for a distinct community. See COMMUNITY, RULE OF THE (1QS). It is simpler to suppose that this community was located at Qumran, rather than at some other unknown location. The correspondences with the description of the Essenes, then, further confirm the identification of the site. These correspondences are not complete or without problems; but, nonetheless, they are impressive.

The most striking point of analogy between 1QS and the account in Josephus concerns the procedures for admission to the sect. According to 1QS 6:14–23 the candidate is first examined by the overseer, at the head of "the Many" or main body of the community. If he is accepted, he still cannot touch the "Purification of the Many" or mingle his property with that of the community for a year. At the end of this year, his property is handed over to the overseer; but he cannot partake of the drink of the congregation for another year. This account initially seems to posit a two-year, rather than three-year, candidacy. In Josephus' account, however, the first year was spent outside the community. The initial examination by the overseer in 1QS 6 may in fact mark the end of such a postulancy. In Josephus' account the candidate is allowed to share "the purer kind of holy water" after the year as a postulant. If this corresponds to the "Purification of the Many," as seems likely, then there is a discrepancy between the two accounts: either 1QS envisages only a two-year candidacy or it places this stage of admission after the second year of three. The general similarity between the two procedures remains impressive, however, especially since we have no parallels for such a multiyear process of admission elsewhere in ancient Judaism. The discrepancy is most simply attributed to a misunderstanding on the part of Josephus' source, but it is also possible that it reflects a change in practice at some point in the history of the Essenes.

3. Communal Property. Both Philo and Josephus emphasize the sharing of possessions in the Essene community. Some passages in 1QS have a similar theme: "All the volunteers that cling to his truth shall bring all their understanding and powers and possessions into the community of God" (1:11). Again, when a candidate has completed one year in the community, "his property and also his wages shall be handed over to the overseer of the revenues of the Many; but it shall be inscribed to his credit, and shall not be spent to the profit of the Many" (6:18–20). This latter passage does not clarify whether private ownership persists after full admission to the community. The *Rule,* however, presupposes some form of private property, since it requires that a member reimburse the community for damage to the communal property (1QS 7:6).

Some scholars (e.g., Rabin 1957) have seen here a significant discrepancy between the Essenes and the sect of the scroll, since the classical accounts insist that "the individual's possessions join the common stock and all, like brothers, enjoy a single patrimony" (*JW* 2.8.3 §122). Yet the similarity is more striking than the difference. Philo and Hippolytus mention the treasurer (Philo, *Hypothetica,* 11.10) or overseer (Hippolytus, *Haer.* 9.20.2, *proestōta*) who handles the community finances. The common meals, which are attested in the Gk sources and 1QS 6, required common funds. It is easy to see how the existence of a common treasury could have been perceived by a Gk ethnographer to imply a rejection of private property. Even the Gk term *anamemigmenon,* "mingled," which is used by Josephus (*JW* 2.8.3 §122) for the communal pooling of funds, may well be a translation of the Heb *hitʿareb* (1QS 6:17; see Black 1961: 33–36). Rabin argues that *hitʿareb* in 1QS means "to do business," as in 1QS 9:8 it is used of dealings with outsiders. This interpretation does not account for the role of the overseer in 1QS 6.

The role of the common treasury is further restricted in the *Damascus Document* (CD). There "the rule of the Many to provide for all their needs" specifies: "The wage of at least two days a month, this is what they shall pay into the hands of the overseer and the judges. They shall set apart a portion of this sum for orphans, and with the other they shall support the hand of the poor …" (CD 14:12–14). The remainder is presumably retained as private property. This, however, is part of the rule for the "camps," for those who live throughout Israel rather than in a monastic settlement. There is no such specification of the amount of the contribution in 1QS. The Gk account of communal property among the Essenes is more likely to have been derived from the regulations reflected in 1QS than from the rule for the camps in CD.

4. Celibacy. Abstention from marriage and sexual activity was one of the hallmarks of the Essenes according to Philo, Josephus, and even Pliny. While Philo says flatly that "no Essene marries" (*Hypothetica* 11.14), Josephus adds, in an epilogue to his account, that there is a second order of Essenes which differs in this regard (*JW* 2.8.13 §160–61) and says that even the celibates do not condemn marriage in principle (2.8.2 §121). (The notice in the Syriac author Dionysios bar Salibi [cited by Charlesworth 1980: 216] that the Essenes did not approach their wives again after they had become pregnant, is evidently based on a misunderstanding of Josephus.) The scrolls never mention a prohibition of marriage, but 1QS does not mention the subject at all and makes no provision for women in the community. In contrast, the rule for the camps in CD assumes marriage and family life; and the "Rule for the End of Days" (the so-called "Annex to the Community Rule," 1QSa) provides for sexual relations when a man has reached 20 years of age, which is late by rabbinic standards. Here again the variation probably lies between the two orders of Essenes. Thus 1QS is at least compatible with the celibate life described in the Gk sources, while CD and 1QSa can only pertain to the second order of Essenes. The bones of a few women and children have been found on the periphery of the cemetery at Qumran. Their presence may be explained by the hypothesis that Qumran served as a center for Essenes from other locations, and so these women may not have lived there. While the Qumran evidence on this matter gives no positive support to the identification as an Essene settlement, it can be reconciled with this identification. (See further Vermes 1981: 108; de Vaux 1973: 128–29.)

5. Relation to the Temple. We have seen already that the evidence of Josephus is ambiguous, but at least it shows clearly that the Essenes were at variance with the rituals usually practiced in the Jerusalem temple. In 1QS there is silence on this issue (as there is in Josephus' main account in *JW* 2 and in the parallel in Hippolytus). The information in CD is also ambiguous, but can be reconciled with the data in Josephus. In CD 6:11–13 we read that "none of those who have entered the covenant shall enter the sanctuary to kindle his altar in vain." This passage, like *Ant* 18.1.5 §18–19, is open to different interpretations but at least implies dissent from the official temple ritual. The ambiguity lies in the phrase *in vain*: it may be that sacrifice was permitted if the proper (sectarian) regulations were observed, or it may be that all access to the temple was prohibited. The archaeological evidence from Qumran has not clarified this situation. Carefully buried animal bones have been found; some scholars have taken these as evidence for the practice of sacrifice at Qumran (e.g., Cross 1961: 102), but others suppose that they were the remains of religious meals which had been ritually buried (de Vaux 1973: 14). A number of passages in 1QS speak of the life of the community as a substitute for the sacrificial cult (5:6; 8:3; 9:4). While this does not necessarily exclude the practice of sacrifice, it shows how the ritual could have been dispensed with. Josephus' statement that the Essenes sent offerings to the temple would seem to be in accordance with the situation envisaged in CD 11:19: "let there be sent to the altar of holocaust neither offering nor incense nor wood by the hand of a man defiled by any defilement whatsoever, permitting him thus to render the altar unclean …" Presumably offerings could be sent if the bearer was not defiled.

6. Religious Beliefs and Ideas. Josephus' statement that the Essenes are wont to leave everything in the hands of God (*Ant* 18.1.5) accords well with the deterministic theology of the scrolls (e.g., 1QS 3:15: "from the God of Knowledge comes all that is and shall be, and before they were, he established all their design …"). The main doctrinal issue in the Gk sources, however, is the immortality of the soul, which is mentioned in both *JW* 2 and *Ant* 18. There has been considerable debate as to whether this belief is attested in the scrolls, or even whether some more Semitic conception of an afterlife underlies Josephus' hellenized formulation. The problem concerns the rather vague formulation of personal eschatology in the scrolls. In 1QS 3:7–8 the visitation of all who walk in the spirit of life "consists of healing and abundance of bliss, with length of days and fruitfulness and all blessings without end, and eternal joy in perpetual life and the glorious crown and garment of honor in everlasting light." The language of this passage is reminiscent of the Psalms (e.g., Ps 16:11: "thou dost show me the path of life; in thy presence there is fullness of joy") or of Proverbs (e.g., Prov 8:35: "he who finds me finds life and obtains favor from the Lord"), which are not usually thought to imply a belief in an afterlife. In 1QS, however, the lot of the Children of Light is contrasted with that of the Sons of Darkness. The visitation of the latter "consists of

an abundance of blows administered by all the Angels of Destruction in the everlasting Pit by the furious wrath of the God of vengeance, of unending dread and shame without end, and of the disgrace of destruction by the fire of the region of darkness" (1QS 4:12–13). Since this passage clearly implies punishment after death for the wicked, it is hardly conceivable that the "eternal life" of the righteous does not also extend beyond the grave. The "eternal life" of the community certainly involved present participation in the eschatological state, as can be seen from the *Hodayot* (Thanksgiving Hymns), but it also extended beyond death. (Compare also the contrast between the fates of the wicked and the righteous in CD 2:5–6 and 3:20. See further Nickelsburg 1972: 156–67.) This conception could well have been translated into Greek, though not quite accurately, as the immortality of the soul.

Hippolytus further claims that the Essenes believed in bodily resurrection, a final judgment, and universal conflagration (*Haer*. 9.27). A few passages in the *Hodayot* have been interpreted as references to resurrection: 1QH 6:34, "they that lay in the dust have raised up a banner"; 1QH, 11:12 "that this vermin that is man may be raised from the dust to [thy] secret [of truth]." Other scholars, more plausibly, take these passages as references to the present state of the community. Thus 1QS does not clearly speak of resurrection; it simply does not specify whether or not the body will participate in eternal life. Since the scrolls do not make the typical Greek distinction of soul and body, it is likely that they had in mind some conception of a "spiritual body" such as Paul has in 1 Cor 15:44. Here again we can see how an outsider might have construed this, inaccurately, as resurrection of the body. It is also possible that Hippolytus changed his source at this point, under the influence of his own Christian beliefs (see further Nickelsburg 1972: 146–69).

The final conflagration, in contrast, is strikingly illustrated in the description of the torrents of Belial in 1QH 3:29–36. In this case at least, the scrolls seem to support the account preserved in Hippolytus.

7. Further Correlations. There are several other points where the scrolls (esp. 1QS) correspond to the Gk sources (see Beall 1988). These include *ritual bathing* (*JW* 2.8.4 §129; 2.8.7 §138; 1QS 3:4, 9; 5:13); the *common meal* (*JW* 2.8.5 §131–32; *Quod Omn* 86; *Hypothetica* 11:5; 1QS 6:5); *study of the law* (*JW* 2.8.6 §137; 2.8.9 §145; *Quod Omn* 80; 1QS 6:6); the *prohibition of spitting* (*JW* 2.8.9 §147; 1QS 7:13); the requirement of *oaths upon admission* (*JW* 2.8.7 §139; 1QS 5:7–8); the *demand to hate the unjust as well as support the just (JW* 2.8.7 §139; 1QS 1:9–10); and to *conceal nothing from the members of the sect* but *divulge none of their secrets to others* (*JW* 2.8.7 §141; 1QS 9:17–19). In some cases we can speak of "verbal reminiscences in Josephus of theological clichés in the Qumran texts" (Cross 1961: 96): the use of the verb "hate" with reference to the unjust, the term "mingle" *(hitʿareb, anamignusthai)* with reference to the finances of the community, and the description of the dark netherworld, where the wicked are punished.

Some other points which are not noted in the *Rule of the Community* are otherwise supported by discoveries from Qumran. Philo's statement that the Essenes supported themselves by labor on the land and by crafts is supported by the archaeological evidence from Qumran and nearby Ain Feshka (de Vaux 1973: 60–87). The fact that the secrets of the sect include the names of angels (*JW* 2.8.7 §142) accords well with the general prominence of angels in the scrolls. The biblical commentaries or Pesharim may provide some basis for Philo's assertion that they interpret their writings "through symbols" or allegorically, although Philo's understanding of allegory is very different from that at Qumran. The discovery of horoscopes at Qumran (4Q186) may be of relevance to the Essene interest in predicting the future. A very obscure fragment, the so-called *4QTherapeia,* has been adduced as evidence of the Essene interest in superstitious medicine, but that interpretation has been decisively refuted (Naveh 1986).

8. Discrepancies. Apart from the problems noted above relating to the practices of the sect, the most significant discrepancy is that the scrolls provide considerable information about the self-understanding and beliefs of the sect which has no parallel in the Gk sources. Josephus mentions that a priest says grace at meals but otherwise does not hint at the prominence of priests in the community. The theology of the *Rule of the Community* is dominated by the dualistic opposition of Light and Darkness, which will endure until the final judgment. This dualism is never explicit in the Gk sources. It may be implied in Philo's

statement that they held the divinity responsible only for good things (*Quod Omn*, 84), while the Essene reverence for the sun is highly appropriate for self-styled "Children of Light."

Yet there is no doubt that the Greek accounts proceed from an understanding of the sect very different from what we find in the scrolls. In broad terms the contrast is between Hellenistic mysticism on the one hand and priestly apocalypticism on the other. In the light of the scrolls, the asceticism of the sect can be seen to arise from a strict adherence to levitical purity, intensified by the conviction that the end of days was at hand. The reference to a final conflagration in Hippolytus suggests that some apocalyptic motifs may have been dropped by Josephus and Philo. Basically, however, the difference between the two portrayals must be attributed to the fact that the Greek accounts, and their immediate sources, were written for Greek readers and that they adapted their material accordingly. As Morton Smith has observed (1958: 290–91), the common source of Josephus and Hippolytus was already a document of Greek ethnography. Some of the material—references to messiahs or to a final war between the forces of Light and Darkness—may have seemed too hostile for gentile readers, or the Hellenistic writer may simply have failed to appreciate the importance of some sectarian beliefs which could not be assimilated to Greek models. Despite the differences the parallels between Josephus' source and 1QS are far closer than those with any other known document.

The discrepancies between the Greek sources and the scrolls, significant though they are, are outweighed by the similarities. The correspondence of geographic location and the extensive similarity of community structure make overwhelmingly probable the identification of Qumran, and of the *Rule of the Community*, as "Essene."

E. History of the Sect

The Essenes appear in Josephus' account from the mid-2d century B.C.E. to the time of the war against Rome. He gives no explanation of their origin; except that he notes their difference from the ritual of the temple; and we might infer that this had some bearing on their separation from the rest of Judaism. Attempts to fill out the history of the Essenes are based primarily on evidence from the Dead Sea Scrolls and the archaeology of Qumran. Here we are concerned only with those points at which the Greek and Latin evidence has some bearing on historical reconstruction. There are three such points: (a) the early formation of the sect, (b) the interruption in its sojourn at Qumran, and (c) its survival after 70 C.E.

1. Early Formation. It is evident from the *Damascus Document* (CD) that the sect had some history prior to the settlement at Qumran. On the most widely accepted interpretation of CD 1, the sect arose in the early 2d century B.C.E. ("390 years" after the fall of Jerusalem, granted that the number is not exact). (On the alternative interpretation, which pushes the origin of the sect back into the Babylonian Exile, see the discussion of CD in DEAD SEA SCROLLS.) There was then a 20-year period of uncertainty which ended with the arrival of the "Teacher of Righteousness." Subsequently there was a split in the movement, when some people "departed from the way" and "turned back" with the "Man of Lies." The settlement at Qumran is usually thought to have been initiated by the Teacher, but the evidence on this point is not clear.

The Greek evidence is relevant to this early history at two points. The first concerns the designation of pre-Qumranic material as "Essene." The name, as used in the Greek sources, refers to an organized form of communal life. The designation is most fully warranted when we have a full community rule as in 1QS. It is probably warranted with reference to the "new covenant" of CD, which was probably formed before the arrival of the Teacher. It does not, however, seem to be warranted in the case of pre-Qumran pseudepigraphic works such as the early Enochic writings and *Jubilees*. While this material reflects incipient sectarian movements, which may have been forebears in some sense of the Essenes, it lacks reference to the distinct community structures which are a hallmark of the Essenes.

A second point concerns the split in the early Essene movement. We know from Josephus that there were two orders of Essenes. The evidence of CD, which makes special provision for "those who live in camps," is compatible with this information. Neither the Greek nor the Hebrew evidence, however, suggests that the distinction of two orders was the result of a schism. In CD, those who live in camps are clearly regarded as part of the Teacher's movement, while the followers of the "Man of Lies" are not. The

suggestion that "non-Qumran Essenes" were those who refused to follow the Teacher (Murphy-O'Connor 1974: 235–36) and so were in opposition to Qumran, is not supported by the evidence.

2. Interruption of the Qumran Settlement. Two major developments in the history of the Qumran settlement are known from the archaeology of the site. The first was the expansion of the settlement in the time of Alexander Jannaeus (103–76 B.C.E.), presumably to accommodate an influx of new converts. This development has been associated with the persecution of the Pharisees by Alexander Jannaeus reported by Josephus (*JW* 1.4.6 §96–98; *Ant* 13.14.2 §380–83) but is not reflected in the accounts of the Essenes.

The second major development was the destruction of the site and its subsequent abandonment in the reign of Herod. The destruction of the site has been variously attributed to an earthquake (which is known to have happened in 31 B.C.E.) or to the Parthian invasion of 40–39 B.C.E. (see de Vaux 1973: 20–24). We do not know where the community lived while the site was vacant. Since Josephus tells us that Herod held the Essenes in high respect (*Ant* 15.10.5 §378), the question has been raised "should we think of the Essenes as retreating to Jericho and living beside the magnificent Herodian structures that have recently been excavated and restored?" (Charlesworth 1980: 227). In view of the general asceticism of the Essenes, this question should almost certainly be answered in the negative.

3. Survival after 70 C.E. The majority of the Essenes lived at sites other than Qumran. (Philo and Josephus say that there were about 4000 Essenes; the capacity of Qumran was about 200.) It is therefore a priori unlikely that the destruction of Qumran would have brought the sect to an end, but it is possible that the sect dissolved in the general turmoil of the war against Rome. Evidence for the persistence of the Essenes after 70 C.E. is hard to find. The accounts of Josephus and Hippolytus were written in the present tense but they were based on older sources. Pliny's information was probably gathered before 70 C.E. Epiphanius, who preserves some distinctive material, claims to rely on a tradition *(he eis hemas elthousa paradosis)* the origin of which is unknown. Alleged theological and thematic influences on Syriac Christianity (Charlesworth 1980: 231) do not require the continued existence of the sect. The suggestion of Vermes (1975: 28) that a passage in *Midrash Rabbah* 36 be translated to say that Rabbi Meir visited the Essenes and found no copy of Esther among them is intriguing in view of the absence of Esther at Qumran but is very slender evidence for the continued existence of the Essenes. (The usual translation says he visited Asia Minor.) In short, while it is certainly possible that the Essenes continued to exist after the 1st century, we lack firm evidence to confirm that they did.

ESTHER, ADDITIONS TO. The "Additions to Esther" consist of six extended passages (107 verses) in the Greek version/s which have no counterpart in the traditional Hebrew text. Regarded by both Jews and Protestants as apocryphal, i.e., noncanonical, these Additions (= Adds) never appear in Jewish Bibles; and if printed in Protestant Bibles, they usually appear, along with other apocryphal books, between the two Testaments or after them. By contrast, Roman Catholics since the Council of Trent (1546) have regarded these Additions as authoritative and have called them "deuterocanonical"; and following Jerome's practice in the Vulgate (A.D. 405), Catholic Bibles usually print these six Adds immediately after the canonical text, numbering them as chaps. 11–16.

Designated by a variety of numbering systems, the Adds consist of the following: Mordecai's dream (Add A 1–11) and the discovery of a plot against the king (Add A 12–17); the royal edict dictated by Haman, announcing a pogrom against the Jews (Add B 1–7); the prayers of Mordecai (Add C 1–11) and Esther (Add C 12–30); a description of Esther's going before the king unsummoned (Add D 1–16); the royal edict dictated by Mordecai, counteracting the edict written by Haman (Add E 1–24); and the interpretation of Mordecai's dream (Add F 1–10) along with the colophon to the Greek version (F 11). These Adds differ from the canonical Esther—as well as from one another—in purpose (i.e., effect), content, and style.

There is one other "addition" in the Greek text which must be mentioned here: God himself. The word or his name occurs over fifty times, mostly in the deuterocanonical sections but sometimes even in the canonical sections (see below). This is in sharp contrast to the Hebrew text where God is not mentioned at all, a fact that has prompted much debate. (On this problem as well as other matters relating to the Hebrew version of Esther, see ESTHER, BOOK OF.

F. Purpose/s of the Adds
G. Dates of the Adds
H. Provenance and Authorship
I. Critical Editions

A. Summary

1. Add A 1–11 (=Vg 11:2–12). The Greek version of the book of Esther begins *before* the description of Ahasuerus' banquet (the scene that begins the Hebrew version), recounting that, on New Year's Day in the 2d year of the reign of Artaxerxes the Great, Mordecai ben Jair, a prominent Jew serving in the royal court at Susa, had a dream in which he saw the earth full of cries and chaos. Two great dragons were readying themselves for battle while the pagan nations prepared to war against the righteous nation. Surrounded by darkness and filled with fear, the righteous nation cried out to God. And from their crying there arose a mighty river; then light and sun appeared. Finally, the humble were exalted and devoured the eminent. Realizing that this dream was a portent of what God intended to do, Mordecai puzzled over it all day.

2. Add A 12–16 (=Vg 12:1–6). Also placed before the banquet scene and also set on New Year's Day in the 2d year of Artaxerxes, these verses recount how Mordecai, while in the royal court that evening, overheard Gabatha and Thara, the king's bodyguards, plotting against Artaxerxes. Mordecai promptly informed the king; and after the culprits were executed, Mordecai's good deed was duly recorded; he was also ordered to serve in the king's court and received certain other rewards for his service. But Mordecai's "betrayal" of the eunuchs also earned him the enmity of Haman, son of Hammedatha, a Bougaion who was also the king's favorite, who decided to destroy not only Mordecai but his people as well.

3. Add B 1–7 (=Vg 13:1–7). This florid and rhetorical Add, appearing between what would be verses 13 and 14 of chap. 3 of the MT, transcribes the royal edict dictated by Haman. In it, the Persian king in effect says the following: "Having conquered the whole world (but not out of any power-madness but always with gentle restraint), I was resolved to make the lives of my subjects untroubled by civilizing the land, making all travel safe, and restoring the peace. When I asked Haman, my second in command and an adviser of balanced judgment and consistent kindness, how this might be accomplished, he informed us that there is scattered throughout the empire a certain people whose own laws make them hostile to everyone else and who ignore the royal ordinances and frustrate our noble plans. Realizing that this people, alone, are always acting only in their own interests and are frustrating the good that I would do, and threatening the general welfare of the empire, I do hereby authorize their total and complete destruction—including their women and children—on Adar 13 of the present year. With all of them killed in one day, our government will then be secure and our future untroubled."

4. Add C 1–11 (=Vg 13:8–18). Assured that Esther would intercede for her people, Mordecai left the King's Gate (4:17 of the MT). In the Greek verses immediately following, it is recounted that Mordecai prayed to God, in effect saying: "Lord, king and creator of the universe, not out of insolence or vanity did I refuse to bow down to Haman. For Israel's sake I would have kissed the soles of his feet, but I will bow down only to you, my Lord. God of Abraham, spare your people, your heritage whom you ransomed from Egypt. Turn our mourning into feasting. Lord, don't stifle the voices of those who praise you!" Meanwhile all Israel was also crying out in fear of the impending implementation of the edict dictated by Haman (Add B).

5. Add C 12–30 (=Vg 14:1–9). Terrified at the prospect of approaching the king unsummoned, Esther put on mourning clothes, covered her head with ashes and dung, and prayed, in effect saying: "My Lord and only king, help me who am alone as I risk my life. I have always heard that you treated your inheritance Israel just as you had promised. But when we sinned and extolled the gods of our enemies, you handed us over to them. Not satisfied with our enslavement, they now are resolved to nullify your promises to us by destroying both the temple and us. Lord, don't relinquish your scepter! Frustrate their plot and make an example of Haman. Lord, give me courage! Make me persuasive before the 'lion' and make him hate our enemy and his supporters. You know that I detest the pomp of the wicked and the bed of the uncircumcised. As for the royal turban I wear at court, I loathe it like a menstruous rag! I have not dined at Haman's table or partied or drunk the royal libations. God of Abraham, I have always delighted only in you. Save us from the wicked—and, Lord, protect me from my fears!"

6. Add D 1–16 (=Vg 15:4–19). This Add, an expansion of 5:1–2 of the MT, reports that on the third day, when Esther's prayers were finished, she dressed in her finest outfit and, with one maiden preceding her and another carrying her train, she finally stood before the king—radiant, regal, but unsummoned. But when the king turned livid at the sight of her, she turned pale and keeled over on her maid. God instantly changed the king's rage to gentleness so that Artaxerxes leaped from his throne and, gathering her up in his arms, assured her that everything would be all right. "My lord," she said to the king, "I saw you like an angel of God, and I was upset." As she sagged with relief, the king and his court continued to reassure her. The Greek then follows the MT (5:3–8:12), recounting how Esther asked that the king and Haman come to her dinner, how the second dinner culminated with the execution of Haman, and how the king authorized Mordecai to issue a pro-Jewish edict to counterbalance Haman's earlier anti-Jewish edict.

7. Add E 1–24 (=Vg 16:1–24). These verses transcribe in diffuse and florid style the edict that Mordecai dictated. It begins with Artaxerxes greeting his governors and all his subjects throughout the empire. He then goes on to say, in effect: "Some arrogant men, excessively honored by overly generous benefactors, scheme even against their own benefactors. Puffed up by flattery, they hope to escape the evil-hating justice of the omniscient God. Occasionally these malicious scoundrels through their guile and persuasiveness mislead even the most well-intentioned and highest officials. A case in point is Haman, son of Hammedatha, a Macedonian without a drop of Persian blood or goodness in him, who was not only treated as a guest but was even addressed in public as 'our father' and was ranked second only to the king himself. In his arrogance, Haman schemed to rob us of both kingdom and life. He tried to destroy not only Mordecai, benefactor of the king, and Queen Esther, but their people as well. Then he would have had the hegemony pass from the Persians to the Macedonians! We now know that the Jews maligned and consigned to destruction by Haman are not criminals but are governed by the most just laws and are sons of the most high and living God who has always directed the fortunes of our empire. Therefore, ignore the royal decree sent by Haman, for he as well as his family are now hanging from Susa's gates! Post copies of this dispatch in every public place. Also, allow the Jews to follow their own customs—and support them on Adar 12. (The omnipotent God had determined that day to be a joyful one for his chosen people, not a day of destruction; moreover, henceforward that day shall be celebrated by you and by those Persians sympathetic to them.) Any city or province not acting in accordance with the present edict shall be so devastated by fire and spear that it will be forever avoided by both man and beast!"

8. Add F 1–10 (=Vg 10:4–13). This Add, which immediately follows the conclusion (10:3) of the MT, hearkens back to the scene with which the Greek version began. In these verses, the Greek version draws to conclusion with Mordecai realizing that all this had been God's doing. In his earlier dream, the "river" symbolized Esther; the "two dragons" were he and Haman; and the "nations" represented the heathen world who would have annihilated the nation of Israel. The Lord himself had saved his people and done all these things. God had made two lots, one for his people and the second for all the other nations; and at the appointed time of trial he acquitted Israel, his inheritance. Therefore, all Israel should joyfully celebrate Adar 14 and 15 for all time.

9. Add F 11 (=Vg 11:1). This additional verse is a colophon, which literally reads: "In the fourth year of the reign of Ptolemy and Cleopatra, Dositheus, who said he was a priest and a Levite, and his son Ptolemy brought the above book of Purim, which they said was authentic and had been translated by Lysimachus, son of Ptolemy, a member of the Jerusalem community."

The preceding summary has been unusually detailed for three reasons: (1) to provide data enabling us to see how the Adds are frequently inconsistent with or even contradictory to the canonical sections of Esther; (2) to underscore the explicitly religious character of the Adds; and (3) to show how the Adds help to alter dramatically the character and "purpose" (i.e., effect) of the Greek version of Esther. Each of these matters will be treated in detail at some point below.

B. Canonicity of Esther and Its Adds

In the Hebrew version of Esther, the Persian king is mentioned 190 times in 167 verses; but the God of Israel not once. Nor are there mentioned in the MT such distinctive practices and concepts as prayer, *kašrût,* election, law, Jerusalem, temple, or divine intervention (in fact, fasting is the only religious

practice mentioned [Esth 4:16 and 9:31]). These glaring omissions undoubtedly contributed to the difficulties the book had in gaining canonicity among both Jews and Christians. For as late as the 4th century A.D. some Jews were still denying the book canonical status, as were a number of Eastern Church Fathers as late as the 9th century (for further details, see ESTHER, BOOK OF).

Just as the canonicity of the Hebrew version of Esther had long been debated by both Jews and Christians, so the canonical status of the Adds has also been a matter of dispute. With respect to the Adds, Esther's questionable canonical status was both their cause and an effect: on the one hand, the book's contested canonical status made it possible for editors to tamper with the text by creating the Adds; and on the other hand, the introduction of explicitly religious Adds improved the book's odds of gaining canonicity, at least among some of its critics.

Although Jerome had removed the Adds from their logical positions in the LXX and had relegated them to the end of his Latin translation, further negative judgment on the Adds *per se* was not raised for the next thousand years.

Then in the 16th century, during the period of the Protestant and Roman Catholic Reformations, Protestants, following Luther's lead, looked upon the Adds as apocryphal while Roman Catholics called them "deuterocanonical." Speaking of his church's doctrinal position concerning the Adds, the Roman Catholic biblical scholar Soubigou (1952: 581–82, 597) maintained that, while a Roman Catholic scholar must accept as doctrinally true *the inspiration* of the Adds, he need not subscribe to the view that they were an original part of the Esther story, the distinction here being that the provenance and original language of the Adds are matters for literary and linguistic analysis, not doctrinal pronouncement.

C. Secondary Character of the Adds

There can be no doubt that the Adds are properly called "additions," for both the internal and external evidence confirm this. As for the external evidence, none of the standard translations regularly based on the Hebrew text has them, i.e., neither the Talmud, Targums, nor the Syriac has these particular Adds. Nor are these Adds found in Aquila, Theodotion, or Symmachus, these being 2d century A.D. Greek translations based upon the current Heb text (Roberts 1951: 120–27). The so-called "ancient" Heb version of Adds A and C in *Sefer Josippon* is actually a product of the Middle Ages and is based upon the LXX (Moore 1977: 154).

By contrast, those ancient versions universally recognized as being based upon the LXX (i.e., the OL, Coptic [i.e., Sahidic], the Ethiopic) *do* have these Adds. The Latin Vulgate, which Jerome (340?–420) based upon the Hebrew, also has these Adds; but in a note after Esth 10:3 of his Latin translation Jerome said that these Adds were not in the current Hebrew text.

Earlier, Origen (185?–?254) had reported in *Epistle to Africanus* 3 that neither the royal edicts by Haman and Mordecai (Adds B and E) nor the prayers of Mordecai and Esther (Add C) appeared in the Hebrew text of his day. Whether Adds A, D, and F did exist at that time is unknown; after all, to conclude that A and F did exist because they were not expressly mentioned as being absent is an argument based on silence.

1. Inconsistencies. The intrusive or secondary character of these Adds is also attested by their inconsistencies with the MT. Admittedly, some of the inconsistencies are relatively unimportant.

While in A 1 *et passim* the king is named Artaxerxes, his name in the MT is *ʾḥšwrwš* (i.e., Xerxes). In A 2, Mordecai is described as "a prominent man who served in the king's court"; yet not until 8:2 of the MT can he be so described, albeit he must have had some prior standing to have been identified in 2:21 of the MT as an official (literally, "one who sat at the King's Gate"), unless, as some scholars argue, A 2's characterization of him as one "who served in the king's court" represents an inner-Greek corruption (i.e., Gk *pulē,* "gate," was early misread as Greek *aulē,* "court").

Haman is identified in A 17 as a "Bougaion," which is evidently a term of reproach (Moore 1977: 178), while in 3:1 and 9:24 of the MT he is called an "Agagite." The description of him as a "Macedonian" in E 10 is also a term of reproach, the claim of E 14 notwithstanding (i.e., that Haman had intended to deliver the kingdom into the hands of the Macedonians).

The king's laudatory characterization of himself and his glowing description of Haman in B 2–3 and 6 cannot be considered inconsistent with what is found in the MT. After all, the edict was composed by Haman, who would naturally have spoken favorably about the king; and as Soubigou noted, "The eulogy of Haman was by Haman" (1952: 680).

Esther's concern for the temple and altar at Jerusalem (C 20), her abhorrence at being married to a gentile (C 26), her loathing of all things worldly and courtly (C 25–27), her strict observance of dietary laws (C 28) are not even hinted at in the MT. If anything, one would infer from 2:9 of the MT that at Susa Esther did not observe *kašrût.* The mention in D 2 and 7 of two maids accompanying Esther finds no counterpart in the MT.

Whether the date of Mordecai's dream (i.e., the 2d year of Artaxerxes' reign) contradicts 1:1 of the MT depends upon two things: (1) whether Haman's discovery of the plot by Gabatha and Tharra happened the day after the dream or at some later date; and (2) whether their plot is the same as the plot of Bigtan and Teresh, which, according to the MT, occurred in the 7th year of the king. Fuller (1888: 373) regarded them as separate plots; but the A-Text (see below), Josephus, and the OL report only one.

2. Contradictions. It is, however, the contradictions between the apocryphal and the canonical sections of Esther that prove that the Adds are interpolations. According to Add A 1 and 11–16, Mordecai discovered the plot against the king in Artaxerxes' 2d year (7th year in 2:1 of the MT); he himself informed the king of the plot (in 2:22 of the MT, Esther did so in his name); and Mordecai was immediately rewarded (cf. 6:1–11 of the MT, where Haman was not rewarded until the king's 12th year [3:7]). According to A 17, Haman's hostility toward Mordecai was based upon the latter's informing on the two conspirators against the king; but in the MT it was because Mordecai had refused to bow down to Haman and because Mordecai was a Jew while Haman was an Amalekite (Esth 3:1, 5–6).

What in the MT had been essentially a plot involving court rivalry (3:1–4), intrigue (3:8–9), and long-standing hostility between Jews and Amalekites (3:1, 10, 13; 5:13; 6:13) becomes, implicitly in Mordecai's dream and explicitly in the narrative, an antagonism between Israel and *all* the rest of the world. What was portrayed in the MT as a pogrom in the Persian Empire became in the Greek version a cosmic struggle between the Jews and everyone else.

While saying nothing in his prayer about Haman's ethnic background (i.e., that Haman was either a "Bougaion" [A 17], a "Macedonian" [E 107], or an Amalekite), Mordecai explained his defiance of Haman by maintaining that he could bow down to *any* mortal but reserved that honor exclusively for the Lord, an explanation which is in sharp variance with that in 3:2–6 of the MT.

In 5:1–2 of the MT the king received the unsummoned Queen Esther most cordially, and she displayed no outward signs of fear or anxiety; but in Add D the king was initially so infuriated at the sight of her (D 7a) that she lost her nerve and fainted (D 7b). Fortunately God miraculously changed the king's mood (D 8); but even though the king was very solicitous and reassured Esther of her safety (D 8–11), she had been so upset that she sagged with relief (D 16).

In E 10 it was Haman's intention to hand the Persian kingdom over to the Macedonians that prompted him to mislead the king and to try to destroy Mordecai and the Jews, not his personal rivalry with Mordecai or his ethnic hatred of the Jews.

In the MT, Haman was hanged on the gallows at his own home (Esth 7:9); a year later his ten sons were killed in Susa (9:6) and were exposed on the gallows the following day (9:13–14). But according to A 18, Haman and all his family were promptly executed and their bodies hanged on the gates of Susa at the time of his downfall.

Finally, Add F makes explicit what was implicit in Add A, namely, that the conflict was a universal and cosmic struggle between Jews and *all* the rest of the world (F 5–9).

While the account in the Hebrew is an intelligible and consistent whole, the contradictions and inconsistencies of the Adds clearly argue for their intrusive and secondary nature. Moreover, virtually all modern scholars agree that at least two of the Adds, B and E (see below), are not translations but original Greek compositions.

D. Greek Version/s of Esther

Before more is said about the Adds, a few words should be said about the Greek translations of Esther.

1. The B-Text. Apart from a few Hebraisms which are probably later "corrections" (Moore 1977: 162), the LXX (or B-Text) of Esther is a "literary" translation, in the sense that it has very few readings that remind its reader that it is a translation (but see Esth 3:7; 6:13; 8:9; and 9:28 of the LXX). Ironically, while the Greek text of Esther is noted for its Additions, in point of fact it has even more "omissions," there being scarcely a verse where the translator has not omitted a word, phrase, or clause of the Hebrew version (Moore 1965: 23–54). Totally uninterested in creating a mechanical one-for-one translation of the Hebrew, the Greek translator was evidently content to proceed verse by verse, rendering the sense of each verse but omitting repetitious material. (That his Hebrew text was much like the MT is highly probable but impossible to prove, the oldest Hebrew ms of Esther dating to no earlier than the 11th century A.D.)

2. Colophon to the B-Text The LXX of Esther is unique in the Jewish Bible for having its own authentic colophon (Bickermann 1944: 329–57), i.e., an inscription at the end of a ms telling about when, where, and by whom it was produced. While the latest possible date for the Gk translation of Esther is ca A.D. 93 (i.e., the date when the Gk version of Esther was paraphrased by Josephus in *Ant.*), the actual date is a century or two earlier. Assuming that the information in the colophon is correct (i.e., that Esther was translated in the 4th year of the reign of Ptolemy and Cleopatra), we can say that the probable date is either A.D. 114 (Fuerst 1972: 168; Moore 1977: 161, 150–52; *HJP²* 3/2, 719) or 77 B.C. (Bickermann 1944: 346–47; Nickelsburg 1981: 173; Collins 1983: 87).**3. The A-Text.** In 1883 Lagarde published what he called the lucianic recension (or A-text) of Esther. Whatever else this eclectic text was, it was certainly not the Lucianic recension of Esther. Rather, Lagarde's text represented a separate Greek translation of a Heb text which was quite different, at points, from both the MT and the Hebrew text presupposed by the LXX (so Moore 1967: 521–28; Cook 1969: 369–76; but see also Tov 1982). Important though the A-Text is for reconstructing the earliest form of the Esther story, it is of little value for the Additions, since as the Adds were borrowed from the B-Text (Clines 1984: 72–92). For further information on the Greek translations of Esther, see ESTHER, BOOK OF.

E. Original Languages of the Adds

All six Adds were supplied after the completion of the canonical book of Esther. The growing consensus (*HJP²*, 3/2, 718–19) is that Adds A, C,fi180 **3. The A-Text.** In 1883 Lagarde published what he called the Lucianic recension (or A-Text) of Esther. Whatever else this eclectic text was, it was certainly not the Lucianic recension of Esther. Rather, Lagarde's text represented a separate Greek translation of a Heb text which was quite different, at points, from both the MT and the Hebrew text presupposed by the LXX (so Moore 1967: 521–28; Cook 1969: 369–76; but see also Tov 1982). Important though the A-Text is for reconstructing the earliest form of the Esther story, it is of little value for the Additions, since as the Adds were borrowed from the B-Text (Clines 1984: 72–92). For further information on the Greek translations of Esther, see ESTHER, BOOK OF.

E. Original Languages of the Adds

All six Adds were supplied after the completion of the canonical book of Esther. The growing consensus (*HJP²*, 3/2, 718–19) is that Adds A, C, D, and F were originally composed in either Hebrew or Aramaic, and that they were added to the canonical Heb text prior to the latter's being translated into Greek, and that Adds B and E (the edicts dictated by Haman and Mordecai) were originally composed in Greek and were added sometime after the completion of the Greek translation.

1. Adds B and E. With the exception of Schildenberger (1941: 76), who argued that the royal edicts of Haman and Mordecai (Adds B and E) represent the actual edicts sent to Greek-speaking people in accordance with Esth 3:12 and 8:9, virtually all scholars regard Adds B and E as Greek in origin. Add B is so diffuse and rhetorical, so bombastic and convoluted in its literary style that anyone familiar with Greek and Hebrew literature can scarcely doubt that it is Greek in origin. Its literary style stands in sharp contrast to the simple, straightforward style of both the canonical sections and Adds A, C, D, and F. Add B is so reminiscent of Ptolemy Philopator's letter in *3 Macc.* 3:12–29 (see Motzo 1924: 272–90), the latter being Greek in origin (Emmett, *APOT* 1: 155–62), that Barucq (*Judith, Esther* JB, 84) maintained that Philapator's letter is a "Hellenistic imitation of Esther." But a case can be made for saying the

reverse, that Add E was inspired by *3 Macc.* (Moore 1977: 195–97; but see *HJP²* 3/2, 720, n. 336). Although the 1 and 2 Targums of Esther (i.e., Aramaic translations dating to no earlier than the 8th century A.D.) offer Aramaic texts of Haman's edict, there is no justification for seeing either the Greek or Aramaic version of Add B as being dependent upon the other (Moore 1977: 195; *HJP²* 3/2, 720). In any event, Add B is a cleverly constructed piece of propaganda, feeding as it does upon men's fear and greed, even though, in contrast to Esth 3:13 of the MT, there is no mention of the possibility of looting Jewish property.

If anything, the Greek of Add E is even more rhetorical and florid than Add B. While it is likely that both had the same author, it is unlikely that it was the same person who did the Greek translation of the Hebrew text (see below). The basic message of Add E (i.e., "allow the Jews to follow their own customs" [E 19]) would have been most appealing to Jews of the Diaspora.

2. Adds A, C, D, and F. That Adds A, C, D, and F were originally composed in a Semitic language was first proposed by Torrey (1944: 1–40), although as far back as 1890 Jacob (p. 257) had shown that another 50-word addition to Esth 4:17 in the OL presupposed a now lost Greek passage which, in turn, was based on either a Hebrew or Aramaic text (Moore 1977: 202). Unfortunately, Torrey offered only two readings to support his view of an Aramaic original for the Adds: (1) the B-Text's *charitōn meston* ("full of graciousness") in D 14 presupposed the Aram *mlʾ rʿtʾ*, since the A-Text (see below) has in the corresponding place *metron idrōtos*("a measure of sweat"), the *r* in the Aramaic script easily being confused with the *d;* and (2) the B-Text in C 7 has *en hyperēphania* ("out of arrogance") while the A-Text has *en peirasmō* ("in rivalry"), both renderings being legitimate translations of the same Aramaic word, *bʾithnassāʾah* (Torrey 1944: 8).

Other evidence of a Semitic *Vorlage* is, admittedly, of a much "softer" character. For example, Ehrlich (1955: 69–74) argues that Mordecai's dream in Add A seems to have biblical and Palestinian rather than Egyptian or Mesopotamian imagery, and had either a Hebrew or Aramaic *Vorlage,* the dream's typology as well as its Hebraisms reflecting a strong influence from Joseph's dream in Genesis 37. And, if one regards the colophon to Esther in F 11 as authentic, then, coming as it does *after* Mordecai's interpretation of his dream, it presupposes the inclusion of Add F, and hence of Add A, in the Hebrew text translated by Lysimachus, the LXX translator of the Hebrew text according to the colophon (Moore 1977: 244–52).

Most persuasive of all, however, are the findings of Martin (1975: 65–72). Using a statistical analysis of syntax developed earlier for distinguishing between translation-Greek and original-Greek, Martin (1974) concluded that Adds B and E were originally composed in Greek; Adds A, C, and D are translations of a Semitic *Vorlage;* and that Add F is either original Greek or a very free translation of a Semitic text.

F. Purpose/s of the Adds

It is virtually impossible to know the intent of the author/s of the Adds, although Nickelsburg (1981: 175) has argued that the Adds were made on analogy of *3 Maccabees* and were intended to substitute the feast of Purim for the festival commemorating the Jews' deliverance from death in the hippodrome. The purpose of the Adds may better be inferred from the effect they have on their readers, although this too can vary from reader to reader. At the very least, the Adds seem to accomplish one of two things: either they compensate for what some readers have called the "religious deficiencies" of the MT by supplying "the religious element that is so conspicuously absent from the Hebrew edition" (Paton, *Esther* ICC, 44–45); or, as more and more scholars are now suggesting, the Adds make explicit in the Greek Esther what is only implicit in the Hebrew version. That is, the Hebrew version of Esther *is* a religious, not a secular, story; God may not be mentioned in the Hebrew text and he may not be onstage with the spotlight focusing on him, but he is clearly in the wings, directing the story and its actors (Cohen 1974: 87–94; Loader 1978: 417–21; Berg 1979: 173–87). For a discussion of the reasons for the absence of religious elements in the Hebrew Esther, see ESTHER, BOOK OF.

In any event, God is quite evident in the Greek Esther, mostly in the Adds but occasionally even in the canonical sections. In the B-Text, he is mentioned in 2:20 ("to fear God and obey his commandments"); 4:8 ("to call upon the Lord"); 6:1 ("and the Lord drove the sleep from the king that night"); and 6:13 ("for God is with him"). In addition, the A-Text also mentions him in 4:14 ("but God shall be their help and

salvation"); 4:16 ("propose a service and earnestly beg God"); and 7:2 ("Esther was uneasy about speaking because the enemy was right in front of her, but God gave her the courage for the challenge").

Certainly the Adds provide the opportunity for their respective authors to express their own particular theological views. All the Adds, but especially A and F (i.e., the dream and its interpretation) emphasize God's providential care for his people Israel; Adds A and F, along with Add C, also express a strong anti-gentile attitude (e.g., A 6, C 26–28, and F 5, 8). But then Add C (i.e., the prayers of Mordecai and Esther) also attests to the efficacy of prayer, the concern for *kašrût* in food and marriage (C 26–28), and the importance of the cult and temple at Jerusalem (C 20). Add D, which is the real climax of the Greek Esther (Brownlee 1966: 161–85), describes the miraculous intervention of God on behalf of Queen Esther. That, together with the LXX's downplaying of the establishment of Purim in Esth 8:13–9:32 (Moore 1977: 241–43), shifts the emphasis in the LXX away from the establishment of the Purim festival to God's miraculous and saving acts (see D 8, 6:1; 7:2 of the A-Text; and F 1, 6, 9).

Even though God is not mentioned in Add B, its Greek author used the occasion for describing some of the causes and effects of anti-Semitism. Haman's edict represents a clever piece of propaganda which, feeding as it does on the fears and greed of men (B 4–6), also well illustrates the scapegoat mechanism. By contrast, in Add E, God is mentioned four times: E 4 ("the evil-hating justice of God"); E 16 ("[Jews] are sons of the living God"); E 17 ("an appropriate sentence which the omnipotent God promptly passed on him"); and E 21 ("For the omnipotent God has made this a day of joy for his chosen people").

The Adds have other effects beside making the story explicitly religious. The 16 verses of Add D, which describe Esther's unannounced audience with the king, are far more dramatic and detailed than the corresponding verses in the MT (Esth 5:1–2), and the same can be said for the edicts in Adds B and E in comparison to Esth 3:13 and 8:10–12 of the MT. Then too, whatever the intent of their respective authors, one of the effects of Adds B, D, and E is to "strengthen the trustworthiness" of the story (Bardtke 1973: 18), the logic here being that in antiquity many a naive reader would have concluded that " 'they' would not have written all this if it had not been true."

Recently, Clines (1984), taking the position that the author of the "Proto-Masoretic" story (pp. 115–38) edited out all of the religious elements in the "Pre-Masoretic" story (pp. 93–114), has argued, with some justice, that "the primary effect of the LXX expansions as a whole is … to *assimilate the book of Esther to a scriptural norm,* especially as found in Ezra, Nehemiah, and Daniel" (p. 169). But although Clines maintains that a "transformation of [the book's] canonical shape had the effect of affirming its canonical status" (p. 174), the simple fact is that the Esther story, *with the Adds* (i.e., the Greek version) as well as *without the Adds* (i.e., the MT), had difficulty in attaining canonical status.

The presence of the Adds in the Greek version may help to explain the change in the book's title. Whereas the Heb version is frequently referred to by Jews as the "Megillah" (=Heb for "scroll"), Christians, who from the beginning read the Esther story with the Adds (i.e., the LXX or Latin), called it "Esther." It is the Adds—especially Esther's prayer in C 12–30 and her obviously courageous performance in D 1–16—that increase her stature in the Greek vis-à-vis the Hebrew version, although even in the MT she plays a more dominant role vis-à-vis Mordecai than is generally recognized (Jones 1977: 171–81).

G. Dates of the Adds

It is reasonably certain that the Adds were not composed all at the same time or by the same person. The latest possible date for Adds B, C, D, and E is A.D. 93, because they were paraphrased by Josephus in *Ant.* (Whether Adds A and F existed then but were omitted by him because they were irrelevant to his theme [so *HJP²* 3/2, 719] or because he feared that their anti-gentile character might offend his gentile readers is unknown.) Actually, however, those Adds which were originally in Hebrew or Aramaic would have been translated into Greek by Lysimachus in either 114 or 77 B.C. In terms of the literary style and theology of the Adds, not to mention their anti-gentile spirit, there is little reason not to regard the Adds as dating to the 2d and/or 1st centuries B.C. Nor need every Add have been created all of a piece. For example, the fact that Josephus and the OL, both of which were based upon the Greek, lack A 12–17 and C 17–23 indicates that these particular sections were not present in the Greek text used by their translators. As for Adds B

and E (the edicts dictated by Haman and Mordecai), they would not have been composed until, at the very least, the appearance of the Greek translation of Esther. In any event, all six Adds *did* exist by the time of Origen (185?–?254).

H. Provenance and Authorship

Adds B and E (the edicts) were composed by the same person, their style and point of view of subject matter clearly indicating this (Schildenberger 1941: 20). But whoever their author was, he was certainly not Lysimachus of the colophon (but so Torrey 1944: 20); for one can scarcely imagine a stylist so enamored with producing the pseudoclassical style of Adds B and E being content, let alone able, to translate the rest of the book of Esther as simply and unpretentiously as Lysimachus had done (*HJP²* 3/2, 719). But while the distinctive Greek character of Adds B and E may argue for their having originated in some sophisticated Greek Jewish center such as Alexandria (or "in many parts of the Mediterranean diaspora" [*HJP²* 3/2, 720]), there is no reason to think that the remaining Adds had any other provenance than Palestine. Certainly the theological content of the Adds, not to mention the anti-gentile spirit of Adds A and F, is quite compatible with Palestinian Judaism as found in such books as Daniel, Judith, and the sectarian literature of the Dead Sea community at Qumran. Collins (1983: 88), with some justification, characterizes the Greek Esther as "Hasmonean propaganda."

I. Critical Editions

The Greek Esther is fortunate in being one of the very few texts appearing in both the Cambridge (OTG 3/1) and the Göttingen (Hanhart 1966) critical editions of the LXX. While English translations of the B-Text of Esther are easily found, the only translation of the entire A-Text in any language is in Clines (1984: 215–48). Jerome's Latin Vg also has a critical edition of itself (*Libri Hester et Job,* Rome, 1951). Unfortunately, there is no critical edition of the OL, Coptic, or the Ethiopic versions.

CAREY A. MOORE

ESTHER, BOOK OF. This OT book, which is part of the Writings (the third and final major section of the Hebrew Bible), takes its title from the name of its heroine, Esther (Heb ʾ*str*). Her name is of uncertain origin, it being derived either from the Akk *ištar* (Jensen 1892: 70), the Babylonian goddess of love, or the Persian *stara,* "star," or possibly a postulated Median **astra,* "myrtle" (Yahuda 1946: 174–78). The book is frequently referred to by Jews as *Megillat Esther,* "The Scroll of Esther." The LXX calls the book *Esthēr*; the Vg, *Hester.* The book claims to give the historical origins for Purim, a Jewish festival celebrated on the 14th and 15th of the month of Adar (i.e., the 12th month of the Babylonian calendar and corresponding to March-April).

A. Summary of Content

One day during a lavish stag party in the courtyard at Susa, Xerxes (=Ahasuerus), king of the Persian Empire, commanded Queen Vashti to put on her finest clothes and come there so that he might show her off to his guests. When she refused, the king was furious. On the advice of one of his seven princely advisers, Memucan, who regarded Vashti's conduct as a personal insult to the king as well as a general threat to the men of the realm whose wives might follow her haughty example, King Xerxes issued an edict on the spot: Vashti was hereby stripped of her rank; a successor was to be sought; and all women throughout the empire were to show their husbands proper respect. Like all royal edicts, this decree was irrevocable (chap. 1).

Soon afterward, King Xerxes launched an empire-wide search for a new queen. Among the bevy of beauties brought to his bed (but only after a year-long beauty treatment) was Esther (or Hadassah), daughter of Abihail, the niece and adopted daughter of Mordecai the Jew. A beautiful and shapely maiden, Esther was not only the favorite of Hegai, the eunuch in charge of the harem, but was also the most popular candidate in the palace. Not surprisingly, Xerxes chose her as his queen.

Some time after this, Mordecai learned of a palace plot to assassinate the king. He told Esther, who in turn informed the king in Mordecai's name, without, however, revealing her own Jewish identity. But though it was officially recorded in the daily record that Mordecai the Jew had saved the king's life, Mordecai went unrewarded at the time (chap. 2).

Later on, Mordecai refused to bow down to the king's new prime minister, Haman, son of Hammedatha. Once Haman was made aware of Mordecai's blatant disrespect for him, he decided to destroy not only Mordecai but all his people as well. To that end, and by simply identifying the Jews to Xerxes as "a certain people," Haman tried to persuade the king to approve a pogrom against them, insisting that they were a major obstacle to the realization of the king's plans for his empire. Moreover, the king was also persuaded by Haman's offer of 10,000 silver talents for permission to carry out his proposal, so Xerxes granted Haman permission to institute the pogrom. Not only did the king permit Haman himself to dictate the decree but he even let him issue it in the king's name and seal it with the royal signet. Thus an edict was sent throughout the empire, declaring that on the 13th day of the month of Adar all Jews—including women and children—were to be wiped out and all their possessions plundered (chap. 3).

As soon as Mordecai learned of the edict, he tore his clothes in an expression of grief and put on sackcloth and ashes as an act of mourning. Arriving at the King's Gate, Mordecai had Esther's trusted servant, Hathach, give her the full particulars, urging her to go to Xerxes and intercede for her people. At first Esther demurred, arguing that anyone who approached the king unsummoned could be executed on the spot and, to make matters worse, for the past month she had not been in the king's favor. But after Mordecai had pointed out that either way (in the pogrom or by approaching the king) she might be killed and that perhaps she had come to her present position for just such a purpose as saving her people, Esther relented and agreed to appear before the king. To increase her chances for success, she insisted that all the Jews in Susa, herself included, observe a strenuous three-day fast, after which she would appear before Xerxes, unsummoned but looking her regal best (chap. 4).

Three days later, when Esther approached the throne, the king received her most cordially and assured her that virtually any wish of hers would be granted. But instead of interceding for her people, Esther simply invited him, along with Haman, to attend a dinner for the three of them in her own quarters.

At the party Xerxes, who was in the mood to grant Esther any request and who said as much, was asked only one thing: that the three of them have dinner again the next day, at which time she would ask the king her favor.

Haman left the dinner elated, flattered by the special attention he had just received and enjoying the prospect of another such party the next day. But his joy quickly turned to rage when he saw Mordecai the Jew sitting at the King's Gate and acting as if nothing terrible had happened to him or his people—and still refusing to bow down to him! Haman kept his feelings under control until he got home, whereupon he boasted to his wife Zeresh and his friends about all his accomplishments and honors, including the queen's inviting him to intimate parties two days in a row. But none of that, he confided to them, really meant anything to him when he was reminded of that insufferable Mordecai. When they suggested that he build a gallows outside his home and ask the king for permission to hang Mordecai on it, the idea struck him as the most appropriate course of action. He ordered the gallows constructed and resolved to speak to the king about the matter the next morning (chap. 5).

That night, because Xerxes could not sleep, he had the daily record read aloud. When the entry containing Mordecai's discovery of the plot against the king was read, Xerxes realized that absolutely nothing had been done for Mordecai in appreciation. The king then asked Haman, who just happened to be in the outer court, exactly how a king should treat a man he especially wanted to honor. Haman, assuming that he was the intended recipient of the honor, advised that the honoree be given a royal robe and allowed to ride on the king's horse while one of the high-ranking officials went before him throughout the city, crying, "This is what is done for the man whom the king especially wants to honor." Haman was, of course, appalled to learn that Mordecai, whose death he had just come to request, was the intended recipient and that he, Haman, would be that high-ranking official doing the honors.

Later that day, after Haman had returned home and was seeking solace, he described to his wife and friends the whole wretched experience as well as the mortification he felt at leading Mordecai around through the city. They all cautioned Haman that, if Mordecai really was Jewish, then Haman would never get the better of him. The discussion was interrupted by the arrival of those sent to escort Haman to Esther's private party (chap. 6).

If Haman thought his defeats were behind him and only pleasures lay ahead, he was deadly wrong. During the party Xerxes asked for the third time in two days what Esther's request was, promising her that he would grant it. Realizing that it was now or never, Esther begged for her life and that of her people. Asked who her enemy was, she identified Haman as the one who had abused his power and betrayed the king's friendship. So surprised and incensed was the king that he bolted from the room, only to return a minute or two later to find Haman "touching" the queen, begging for his life. Haman was sentenced to death on the spot; and when one of the eunuchs told the king about the gallows Haman had constructed for Mordecai, the king ordered that Haman himself be hanged on it (chap. 7).

Haman's estate was given to Esther, who in turn presented it to Mordecai; the king further rewarded Mordecai by appointing him Haman's successor. Because Haman's edict instituting the pogrom against the Jews on the 13th of Adar could not be revoked, the king did the next best thing: he allowed Mordecai to dictate a new edict, issued in the king's name and sealed with the royal signet, granting the Jews the right to defend themselves on the 13th of Adar and encouraging everyone to support them. Mordecai had copies of this new edict sent throughout the empire, hoping that it would counteract the potential evil of Haman's edict. Although many pagans, including public officials, began siding with the Jews, and some of them became proselytes, not all the enemies of the Jews were deterred by it (chap. 8).

When the fateful day arrived, the enemies of the Jews were still so numerous that the Jews killed 500 men in Susa and 75,000 throughout the empire. However, they did no looting, in spite of the fact that they had permssion to do so. So it was that the next day, the 14th of Adar, Jews throughout the empire celebrated their victory with feasting and the exchange of gifts. But in Susa itself the enemies of the Jews were still so strong that Esther had to get further permission from the king for the Jews to fight there the next day (the 14th) and to expose the corpses of Haman's ten sons on the city walls. Fighting on the 14th, the Jews in Susa killed 300 more of the enemy and so celebrated their victory on the 15th, a day later than the rest of the Jews.

Later on, Mordecai wrote to all the Jews, commanding them to continue to observe Purim (the holiday being named after the *pûr*, or "lot," cast by Haman to determine the propitious day for the pogrom) on the 14th and 15th of Adar. They were to be regarded as days of salvation and deliverance, and they were to be observed with feasting and joy.

Still later, Esther, using her authority as queen to reinforce Mordecai's letter, urged all the Jews to observe forever both days of Purim (chap. 9). With Mordecai as Xerxes' prime minister, the Persian Empire prospered; Mordecai himself increased in power and influence throughout the empire and was held in great esteem by his own people (chap. 10).

B. Preliminary Assessment

As the summary above indicates, the plot is relatively simple and believable, its denouement sudden. The story, in the Hebrew at least, is most effectively told.

1. The Book's Purpose. As the story of Esther currently stands in the MT, its author was primarily concerned with telling a story which would provide the "historical" basis for the festival of Purim, *both* days of it (9:16–19, 20–22, 26–28, 31).

2. Contradictory Assessments. The establishment of Purim being the *raison d'être* of the book, the author's emphasis was more on plot and color than on personality or character. In fact, with the exception of Xerxes, who emerges as a hard-drinking, extravagant, and somewhat careless monarch with a nasty temper, all of the major characters seem rather two-dimensional. Neither Vashti nor Zeresh is a believable life-and-blood individual; they are merely tools the author uses to construct his story. Haman has no great stature or humanity, no redeeming qualities that enable the reader to identify with him or to pity him. The wisdom and goodness of Mordecai as well as the courage of Esther are asserted by the author more than

proven. Beautiful and brave, Esther in the Hebrew account, in contrast to the Greek version (see below), seems to be a Jewish nationalist whose Jewishness is more a fact of birth than of religious conviction (4:16–17 notwithstanding). To say all this, however, is in no way to deny that the story is well told, its great popularity among Jews down through the ages certainly being proof of that.

Nonetheless, the book has had its strong detractors almost from the time of its composition down to the present. In antiquity, a number of Jews and Christians contested its canonicity (see below). From the period of the Middle Ages, the pronouncement of Luther (*WA* 3: 302) stands out:

> I am so hostile to this book [2 Maccabees] and Esther that I could wish that they did not exist at all; for they judaize too greatly and have much pagan impropriety.

Twentieth-century scholars have also been quite critical of the book's moral tone. Paton, who has written the most detailed and comprehensive Esther commentary in English, concluded that "There is not one noble character in the book … Morally, Est. falls far below the general level of the OT, and even of the Apocrypha" (*Esther* ICC, 96). Other scholars have been almost as severe, claiming that Vashti, the deposed queen, was the only honorable person in the entire story. Scholar and rabbi Sandmel confessed that he "should not be grieved if the Book of Esther were somehow dropped out of Scripture" (1972: 44) while the Israeli Ben-Chorin actually advocated that Jews abandon both the book and its holiday, arguing that "Both festival and the book are unworthy of a people which is disposed to bring about its national and moral regeneration under prodigious sacrifice" (1938: 5). All this and much more has been said about a biblical book which the great Jewish scholar Maimonides (1135–1204) ranked as second only to the Pentateuch itself.

C. Canonicity

Both Jews and Christians have been contesting Esther's canonicity almost from the very beginning.

1. Among Jews. Evidently the book was not used by the Jewish Dead Sea community at Qumran (ca. 150 B.C.E.–68 C.E.), for no trace of it—alone of all the books of the Jewish canon—has been found there; nor was the festival of Purim a part of the Essene liturgical calendar. To be sure, Josephus (*AgAp* 1.38–41) said that the Jewish canon contained 22 books; but, unfortunately, he did not enumerate them. In any event, there is not a shred of evidence that the book of Esther was canonized by the Academy of Jabneh (i.e., Council of Jamnia) ca. 90 C.E. As Orlinsky (1974: 274) has noted, when the rabbis of the 2d century C.E. justified Purim as a day of eating and rejoicing, they cited as their authority *Megillat Taanit* (dating to the 1st century C.E.), not the book of Esther (8:15–17); only after the book had entered the canon did the rabbis cite it as an authority for observing Purim as a festival. While Zeitlin (1972) would date the book's canonization to the Academy of Ousha, ca. 140 C.E. (i.e., soon after the Bar Kokhba catastrophe) and Orlinsky (1974) not until around 200 C.E., it should be noted that as late as the 3d or possibly even the 4th century C.E. some rabbis still did not regard the book of Esther as "defiling the hands," i.e., canonical; for in the Babylonian Talmud (*Meg.* 7a) we read that

> Rab Judah said in the name of Samuel: (the scroll of) Esther does not make the hands unclean. Are we to infer from this that Samuel was of the opinion that Esther was not composed under the inspiration of the holy spirit? How can this be, seeing that Samuel has said that Esther was composed under the inspiration of the holy spirit?—It was composed to be recited (by heart), but not to be written.

Rabbi Samuel ben Judah and Rab Judah date to the 3d century C.E.; and we read in *Sanh.* 2 that

> Levi ben Samuel and Rabbi Huna ben Ḥiyya were repairing the mantles of the Scrolls of Rabbi Judah's College. On coming to the Scroll of Esther, they remarked, "O, this Scroll of Esther does not require a mantle." Thereupon he reproved them, "this too savours of irreverence."

Rabbis Levi and Huna belonged to either the 3d or the 4th century C.E. Whatever the reasons may have been for Jews in antiquity having reservations about Esther's canonicity, the simple fact is that they did.

2. Among Christians. At first, Christians were no more unanimous about the canonical status of Esther than were Jews, although on this particular issue the division was more along geopolitical lines: in the Western Church Esther was nearly always regarded as canonical while in the Eastern churches very often it was not, especially in the area of Anatolia and Syria. The book, for instance, was denied canonical status by Melito of Sardis (fl. ca. 167), Athanasius (295–373), Gregory of Nazianzus (329–390) in

Cappadocia, Theodore of Mopsuestia (350?–428) in Cilicia, and others. However, it was regarded as canonical by such Eastern Church Fathers as Origen (185?–254), Epiphanius (315–403), bishop of Constantia in Cyprus, Cyril of Jerusalem (d. 386), and John of Damascus (675–745). The book was also accepted as canonical by the Laodicene Canons (343–381), the Apostolic Canons (ca. 380), and the Synod of Trullo (692) at Constantinople. Thus, Amphilochius (d. 394), bishop of Iconium, said it best when he observed that Esther was "accepted only by some."

By contrast, Western Fathers and councils nearly always regarded Esther as canonical. Although Clement of Rome (30?–99) alluded to Judith and Esther as examples of brave and godly women (*1 Clem.* 55), that does not necessarily mean that he regarded the book itself as canonical; but the book was so regarded by Hilary (315–367), Ruffinus (345–410), Augustine (354–430), Innocent I (401–417), and others, as well as by the councils of Hippo in 393 and of Carthage in 397.

Even so, the book was not particularly popular among the Church Fathers, for even their casual references to it are quite rare. Interestingly enough, the three earliest Christian references to Esther are made in conjunction with Judith, the latter being a book which had never enjoyed canonical status among Jews (*1 Clem.* 55, Clem. *Str.* 4.19, and the *Constitutions of the Holy Apostles* [ca. 380]). A Christian commentary was not written on the whole book until Rhabanus Maurus' work in 836.

The question of the canonicity of the Greek Additions to Esther (i.e., the six extended passages consisting of 107 verses which have no counterpart in the Hebrew text) was not a matter of debate among Christians until the period of the Reformation in the 16th century. Ultimately, Protestants followed the lead of Luther and called the Additions "apocryphal"; with the result that, *if* the Additions were printed in a Protestant Bible, they were usually placed between the OT and NT. The Roman Catholic Church continued the millennium-long practice of not discriminating against the Additions, and as the result of the decrees of the Council of Trent in 1546, Roman Catholics called the Additions "deuterocanonical" and, after the practice of Jerome, printed them immediately after the canonical version of Esther.

D. Reasons for Ancient Opposition to the Book

Scholars disagree as to why so many Jews and Christians in antiquity rejected the book of Esther. Some argue that it was because of what the book lacked; others, because of what it contained.

1. Its "Deficiencies." Those critical of the book have often observed that its most conspicuous absence is any reference to God. Whereas the Persian king is referred to one way or another 190 times in 167 verses, the Lord God of Israel is not mentioned once. Apart from fasting (4:16 and 9:31), there is no mention of such basic OT themes and institutions as the law, dietary regulations, covenant, election, prayer, the temple, Jerusalem, sacrifice, and the like (however, all these features *are* explicitly mentioned in the Greek version of Esther, mostly in the deuterocanonical sections [see below]).

The absence of any mention of the temple or sacrifice is perhaps understandable; after all, since the Deuteronomic Reformation of 621 B.C.E. sacrifices could be performed only in the temple at Jerusalem, some 800 miles W of Susa. But to have absolutely no mention of the law, covenant, election, or *kašrût* (i.e., permitted or kosher foods) is rather curious. Most significant of all, given the life-threatening situation confronting both Esther (4:8, 11, 16) and her people (3:13–14), one would certainly have expected *some mention* of prayer.

On only one point do all scholars agree, namely, the absence of all these religious elements was no accident. But how can their absence be explained? Probably a distinction should be made between the absence of God's name and that of those ideas and practices so distinctive of biblical Judaism.

With respect to the absence of God's name in Esther, the crucial question is whether it has always been absent from the Hebrew version or was deliberately edited out later. While there can be no certainty on this matter, the likelihood is that God was explicitly mentioned in an earlier stage of the story (see below) and was subsequently edited out. Even in the MT's present form Esther is a religious book, in that certain religious concepts are presupposed, though not explicitly mentioned: the concept of Providence (4:14; 5:1–6), the efficacy of fasting (4:16) and, by implication, of prayer (4:16). In Esther, the God of the Jews is not seen or heard onstage but is surely standing in the wings, following the play and arranging the props for a successful resolution of the play.

A number of scholars have maintained that God's name as well as all the other overtly religious elements in Esther were absent from the Hebrew text because of the joyous, almost abandoned way in which some Jews celebrated Purim. The Mishnah, for instance, says that Jews celebrating Purim are to drink until they are unable to distinguish between "Blessed is Mordecai" and "Cursed is Haman" (*Meg.* 7b). Thus the joyous and carefree way in which Purim was to be celebrated required that distinctly religious elements not be present in the story, lest they be accidentally profaned by overly enthusiastic or inebriated Jews hearing the story read aloud.

While the Mishnaic ruling may be the reason for no mention of the Deity in the present form of the MT, it probably does not suffice to explain the omission of *all* the other religious elements as well. Talmon (1963: 426) may have offered a more persuasive explanation for the latter phenomenon, i.e., Esther is a "*historicized wisdom tale* … an enactment of standard 'Wisdom' motifs," and the characters in Esther are the typical stereotypes found in Wisdom Literature. Just as the usual elements of Jewish piety (e.g., the observance of dietary laws, belief in sacrifice and the covenant, and, most important of all, faith in the immanent God who answers personal prayers and who intervenes in Jewish history) are virtually ignored in such Wisdom books as Proverbs, Job, and Qoheleth, so these "religious" ideas and practices were ignored by the final author of the MT version.

Gordis (1981: 375) would explain the absence of any reference to God as well as of Judaic beliefs, practices, and concerns by his hypothesis that the book of Esther represents a heretofore unrecognized biblical genre, to wit:

> *A Jewish author undertook to write his book in the form of a chronicle of the Persian court, written by a gentile scribe.* A Jew of the eastern Diaspora … writes the book as if it were an excerpt from the official chronicles of "the kings of Media and Persia" (10:2).

Gordis' thirteen points supporting his thesis are sometimes strained and usually better and more easily explained by less dramatic hypotheses (Moore 1985: 167–68).

Berg (1979; 1980) has offered one such hypothesis. Agreeing with the view of Kaufmann *(KRI)* that the biblical *Weltanschauung* knows a dual causality behind events, Berg (1979: 178) maintains that

> The narrator believed in a hidden causality behind the surface of human history, both concealing and governing the order and significance of events … Because Yahweh's control of history is neither overt nor easily discerned in everyday events, the determination of the shape and dualism of history shifts to human beings. This understanding explains the narrator's emphasis upon individual responsibility for the successful outcome of events. It further provides the logic behind Mordecai's words to Esther in 4:13–14, where he calls upon her to save her people.

Working independently of Berg, Loader (1978: 417–21) arrived at similar conclusions. In his view, "The Book of Esther should be read as a story of God's intervention on behalf of his people, but also as a story of human wisdom and initiative. This is shown by the Exodus model and other religious suggestions … which are purposely veiled" (421). The theory of structural-developmental psychology is used by Miller (1980: 145–48) to justify Loader's view that Esther has different levels of meaning.

Last but not least, certain Judaic virtues are also almost totally absent from the book of Esther, especially virtues such as kindness, mercy, and forgiveness. Many students of Esther have remained largely unconvinced by scholarly efforts to soften or rationalize away such things as Esther's unwillingness to spare the life of Haman when he begged her (6:7), her requests both for an additional day to kill more of her enemies in Susa (9:13) and for permission to expose to public view the ten sons of Haman who had been killed the day before (9:13–14), and the storyteller's reporting with approval that "The Jews defeated all their enemies, slaughtering and annihilating them [500 in Susa and 75,000 elsewhere], and treating their enemies as they pleased" (9:5).

Certainly the most troubling passage is 8:11. Gordis (1976: 49–53) would see it not as representing permission for the Jews to do to others what others would do to them but as an actual quoting of Haman's original edict, i.e., "By these letters the king permitted the Jews in every city to gather and defend themselves, to destroy, kill, and wipe out every armed force of a people or a province attacking 'them, their children and their wives, with all their goods as booty.' " This ingenious interpretation is probably

not correct; for not only is the traditional interpretation in harmony with the "blood and guts" spirit of the rest of the book of Esther, but Gordis' interpretation does violence to the principle of peripety (Radday 1973; Fox 1983), i.e., the unexpected reversal of affairs, which is so much a part of the book's literary structure from 2:10 (Berg 1979: 110–11) on to the end of the book (cf. 2:10, 20 and 4:17; 3:1 and 10:3; 3:10 and 8:2a; 3:12 and 8:9–10a; 3:13 and 8:10b–12; and 3:14 and 8:13).

To be sure, there are a number of passages and scenes in the book which provide some "comic relief" (Jones 1977). While the humor is sometimes quite obvious (e.g., the king's absurd conduct and ridiculous edict in chap. 1), other times it is more subtle, being in the form of irony (e.g., contrast 1:17–19 and 5:1–2, 8; 6:11–12 and 3:2 and 8:1–2; 5:14 and 7:9–10). Jones has clearly seen all this, although he overstates his case by saying that, with the repetition in 9:12 of the reported fatalities in 9:6, "The effect is almost slapstick" (1977: 180).

In any event, while some of these troublesome passages reflecting a vengeful or vindictive spirit may not reflect reality (see below) but are merely the result of literary considerations, for many readers they still constitute a distasteful part of the book.

2. Its Questionable Contents. As noted above, Esther's many Jewish and Christian critics in antiquity may have been offended by the book's contents. Some, for instance, may have resented, as some of its modern readers certainly have (Anderson 1950: 32–37), the book's vengeful, bloodthirsty, and chauvinistic spirit, although, in this respect, Esther seems no worse than some other biblical books, notably Judges and Nahum. But the fact remains that in Esther intrigue, deceit, hatred, murder, and revenge abound, regardless of whether the spotlight is on Haman, Esther, or Mordecai. An even more damning indictment of the book may have been that its story was simply regarded as untrue (see below).

3. The Possible Pagan Origins of Purim. Esther's canonical status may have been opposed by those Jews and Christians who viewed the book as a defense for a Jewish festival which was actually pagan in origin. The festival's very name, Purim (9:26), which is a Hebraized form of the Babylonian *pûru*, meaning "lot," and secondarily, "fate" (Lewy 1939: 17–24), suggests a non-Jewish origin for the festival. However, most scholars regard 3:7 (where the *pûr*, "lot," is cast) as secondary and not an original part of the Esther story (Clines 1984: 53), although some scholars like Cohen (1974) regard it as quite central to the story. Certainly a pagan origin for Purim would also help to explain the "secular" way in which it was to be celebrated, i.e., with uninhibited and even inebriated behavior (cf. above *Meg.* 7b). Then too, a pagan origin for the festival would also help to explain the absence of various religious elements in the story.

Given the fact of the festival having a Babylonian name, we should not be surprised to learn that many scholars have looked in the direction of Babylon for the origin of the festival. In the 1890s Zimmern (1891) and Jensen (1892) equated Esther and Mordecai with the Babylonian deities Ishtar and Marduk, and Haman and Vashti with the Elamite gods Humman and Mashti. Since then, various Babylonian myths and festivals have been suggested as the prototype for Purim, including the Gilgamesh Epic, the *Enuma Elish*, the Tammuz-Ishtar myth, and the Zagmuk Feast (Paton *Esther* ICC, 87–94).

More recently, scholars have again looked in the direction of Persia for the festival's prototype, although as far back as 1887 Lagarde had suggested that Purim was a Jewish transformation of Farvardigan, the Zoroastrian Festival of the Dead, which was celebrated at the end of the Persian year.

Especially on the basis of his analysis of names and epithets in the Greek texts of Esther, Lewy (1939) suggested that the book of Esther had nothing at all to do with any plots against Jews but rather with dangers confronting Mardukians (i.e., Babylonian worshippers of Marduk at Susa) at the hands of worshippers of the god Mithra, possibly during the Persian festival of Farvardigan (celebrated at the end of the year, from the 11th to the 15th of Adar) in the days of Artaxerxes II (404–358 B.C.E.). Vashti's dethronement and Esther's subsequent elevation to queenship actually reflect the dethronement of the Elamite Mashti by the Babylonian goddess Ishtar. Lewy maintains that the Jews adopted both the Babylonized Farvardigan festival and some Babylonian legends associated with it.

The beginning of the Persian year has also been suggested as providing the pagan origins for Purim by Gaster (1950) and Ringgren (1956), who took certain phenomenological similarities between Purim and various Persian New Year festivals as the basis of their theories.

But even more recently scholars are again looking to Palestine for the origin of the festival. Lebram (1972), for instance, views the Esther-Mordecai story as being originally two separate and unrelated tales: (1) the older Persian Esther legend in which a Jewish girl is instrumental in saving her people, and (2) a more recent *Palestinian* narrative featuring Mordecai and Haman.

Herst (1973) also views the Esther story as being unhistorical and as having a Palestinian origin. Purim, Herst argues, is an adaptation of the Jewish holiday known as "the Day of Nicanor," a festival celebrating Judas Maccabee's defeat of the Syrian general Nicanor in 161 B.C.E. (cf. 1 Macc 7:26–49 and 2 Macc 14:12–15:36); John Hyrcanus I (135–104 B.C.E.) tried to replace the Day of Nicanor with another February-March festival called Purim, the latter a Babylonian-Persian saga involving Elamite and Babylonian deities. With Herst's mention of Babylonian and Elamite deities we have come full circle.

Although scholars have looked everywhere for the origins of Purim—Greece and Palestine (Paton *Esther* ICC, 77–84), Babylon, Persia, Elam, and the like—they have proven little about the origins of the festival, in part because of the inadequacies of our present sources but also because of the nature of holidays and festivals; that is, holidays are neither constant nor permanent in either form or content.

4. Its Lack of Historicity. A number of the scholars just mentioned reject the historicity of the Esther story. In fact, rare is the 20th-century scholar who accepts the story at face value, Hoschander (1923), Schildenberger (1941), and Barucq (*Judith, Esther* JB) being the most prominent exceptions who come to mind. At first glance, such a situation might be surprising, especially given the fact that there is nothing miraculous or supernatural in the Esther story that might "offend" the modern reader. On the face of it, the story seems true enough. Apart from the supposed irrevocability of the Persian law (1:19), which certainly seems inflexible and crippling to good government and which has no extrabiblical support (but see Dan 6:8, 9, 12, 15) and perhaps the battle fatalities of the enemy for the 13th of Adar (75,000 in 9:16), nothing in the story seems improbable, let alone unbelievable.

Moreover, much of what the ancient author says about the character of Xerxes/Ahasuerus, the only indisputably historical figure in the book, is compatible with what we know from other nonbiblical literary and archaeological sources. Also, the ancient author was aware of various actual practices and institutions of Persian government, including seven princely advisers to the king (1:14), the very efficient postal system of the Persian Empire (3:13; 8:10), the recording and rewarding of the king's "benefactors" (2:23; 6:8), as well as such Persian customs as the observance of "lucky days" (3:7), royal horses with crowns (6:8), and people eating while reclining on couches (6:8). Furthermore, the writer includes a number of Persian words in the text: *prtmym,* "nobles" (1:3); *bytn,* "kiosk" (1:5); *krps,* "cotton" (1:6); *dt,* "law" (1:8); *ktr,* "turban" (1:11); *ptšgn,* "decree" (1:20); *gnzym,* "treasury" (3:9); *ptsgn,* "copy" (3:14); and *ʾḥštrnym,* "royal horses" (8:10).

Then too, "Mordecai" was a name of several historical persons, including one Mardukâ, an accountant who was a member of an inspection tour from Susa as mentioned in an undated text coming probably from either the last years of Darius (522–486 B.C.E.) or the first years of Xerxes (Ungnad 1940–41: 244; 1942–43: 219). Pharshandatha, the name of one of Haman's sons (9:7), is also an authentic 5th-century B.C.E. name which occurs on a Persian cylinder seal in the Aramaic script as *Pršndt* (Millard 1977; 1982: 152). Even though none of the other names in the story has been definitely authenticated by extrabiblical sources, most of them seem to be Iranian in origin; certainly none of them is Greek.

But, taken together, the evidence outlined above provides, at best, only proof of the author's familiarity with Persian history, customs, vocabulary and names—all of which he could have become familiar with by reading such available Greek works as Herodotus' *History,* written during the second half of the 5th century B.C.E., or Berossus' *Babylonica* (ca. 270 B.C.E.). In other words, these Persian elements in Esther do not necessarily establish the essential historicity of the story itself, especially since there is evidence to the contrary.

It is, for example, improbable that a king would have given a lavish feast for leaders lasting 180 days (1:1–3), or that his queen would have disobeyed a royal command given in public (1:12), or that a royal edict would have been sent throughout the entire empire for the "man of the house" to be boss in his own home (1:22), or that non-Persians would have been appointed to the all-important post of prime minister (3:1; 8:2; 10:3), or that the royal edicts would have been sent out in every language of the empire rather than in Aramaic, the official language of the Achaemenid empire (1:22; 3:12; 8:9), or that royal permission would have been granted (a full year ahead of time!) for an entire people to be plundered and annihilated (3:8–15), or that a king would have sanctioned fighting within his own palace complex when neither side was a personal threat to himself (9:11–15).

More serious against the book's historicity is the fact that some of the statistics in Esther are incorrect: Persian satrapies numbered 20, not 127 (1:1); if Mordecai had been part of Nebuchadnezzar's deportation of 597 B.C.E. (so 2:6), then he and, especially, Esther would have been far too old to have accomplished everything attributed to them in the days of Xerxes (486–465 B.C.E.), i.e., some hundred years after the deportation. According to Herodotus, Amestris was queen between the 7th and 12th years of Xerxes (compare Esth 2:16 and 3:7 with Herodotus 3.84) and Persian queens had to come from one of the seven noble Persian families, a custom which would have automatically ruled out an insignificant Jewish woman.

While some of these "improbabilities" can be regarded as simply literary embellishment which can easily be dismissed without discrediting the essential historicity of the story, others cannot, notably the matters concerning the irrevocability of a royal edict, the appointment of two non-Persians as prime ministers, the name and "race" of Xerxes' queen, and on at least two occasions the abandonment of Aramaic as the official language of the Achaemenid empire. Although such anachronisms and errors of fact bother many informed modern readers, it is unknown whether they bothered ancient readers as well, and so could have constituted another strong objection to the book's inclusion in the Jewish canon. If the Purim festival was already suspected by some of them as being a pagan celebration in origin, then that fact would have created further misgivings as to the historicity of the Jewish account.

Archaeological studies (Oppenheim 1965; Albright 1974; Moore 1975; Millard 1977; 1982: 152; and Hallo 1983: 19–24), while shedding much valuable light on the background and setting of the book of Esther, have, unfortunately, done nothing to confirm the book's historicity. On the positive side, however, the splendid photographs and diagrams in Ghirshman (1964: 129–277) provide the interested reader with marvelous insights into the magnificent setting for the Esther story.

E. Genre

If the book of Esther is not a historical account, then what is it? As we have already seen, a variety of answers have been offered. Some scholars have regarded the book as the historicization of either a myth (Zimmern, Jensen, and Herst) or a Wisdom tale (Talmon), while others have described it as pure fiction (Gunkel, Pfeiffer), and still others as a conflation of several folk tales, parts of which may be historically true (Lewy, Ringgren, Bardtke, Dommershausen, and Lebram).

Cazelles (1961: 17–29) pointed out the phenomenon of "two-ness" (e.g., two banquets [1:3, 5]; two lists of 7 names [1:10, 14], the one list apparently being the reverse order of the other [Duchesne-Guillemin 1953: 105–8]; the "second house" [2:14]; the "second" contingent of virginal candidates [2:19]; Esther's two dinners [5:5; 7:1]; Haman's two discussions with Zeresh and his friends [5:14; 6:13]; and Esther's twice risking her life by appearing, unsummoned, before the king [5:2; 8:3]. Cazelles suggested that this two-ness was the result of the conflation of two texts: (1) a "liturgical" one, centering on Esther, the provinces, and non-Jews near the time of a new year, namely, a bacchanalian type of Persian *Sakaea* (Paton *Esther* ICC, 92–93); and (2) a "historical" text, centering on Mordecai, court intrigues, and a persecution of Susian Jews.

Instead of two stories, Bardtke (*Esther* KAT^2, 248–52) argued for the conflation of three separate and independent tales: (1) the Vashti story, possibly an apocryphal harem tale; (2) the story of Mordecai, with its court intrigues, jealousies, and persecution of Jews in Susa; and (3) the story of Esther, featuring a Jewish woman who, after becoming a favorite of a Persian king, saved her people from some persecution

or destruction. These three tales, as well as many others, were to be found, Bardtke hypothesized, in "a Jewish midrashic source" such as, perhaps, the *Annals of the Kings of Media and Persia* (Esth 10:2). In perfectly good faith and innocence, the author of Esther, maintained Bardtke, identified the "Esther" of the one story with the "Hadassah" (2:7) of the Mordecai story. Such an identification is certainly justified *if,* as Yahuda (1946: 174–78) has argued, our heroine's two names, *ʾstr* and *hdsh,* both mean "myrtle," *ʾstr* being a Hebrew transliteration of a Medic **astra,* "myrtle." On the basis of literary analysis of Esther, Dommershausen (1968: 15–16) also supported the ancient author's use of several sources.

The author of the book of Esther may not have mentioned the God of Israel but was clearly familiar with some biblical books that did. Scholars have seen Esther's style, content, or even its plot as having been strongly influenced by other biblical books.

Almost a hundred years ago Rosenthal (1895; 1897) established that certain phrases and details in the book of Esther had been influenced by the Joseph narrative (e.g., compare Gen 40:22 and Esth 1:3; Gen 39:10 and Esth 3:4; Gen 41:37 and Esth 1:21; Gen 41:35 and Esth 2:3; Gen 41:42 and Esth 3:10; 8:2). Esther's dependence on the Joseph narrative in terms of much larger, clearly discernible literary and thematic units *(Gattungsformular)* has been more recently argued by Gan (1961–62: 144–49) and, especially, by Meinhold (1976: 72–93). Taking a clue perhaps from Humphreys, who viewed the tales of Daniel (Daniel 1–6) and Esther as "expressing the possibility of a rewarding and creative life in a foreign court and in the same moment of the possibility of service and devoted loyalty to one's people and religious identity" (1973: 216), Meinhold viewed the Joseph and Esther stories as "diaspora novellas," which provided models for a general lifestyle, or mode of life, for Jews living in the pagan environment of the Diaspora. However, according to Meinhold, the differences between the Esther and Joseph narratives are more than just the result of the two stories having different settings of time and place (i.e., Egypt in the Second Intermediate Period versus the Achaemenid period of Persia): whereas God saved Joseph (Gen 39:2–5, 21–23; 41:16–43:51), Esther and the Jews saved themselves. Thus, the book of Esther has a secularized, intellectual outlook. Meinhold also maintains that the festival legend of Purim was not originally a part of the Esther story (for a fair and reasonable critique of Meinhold, see Berg [1979: 33–36]).

An entirely different tack has been taken by Gerleman (*Esther* BKAT), who wrote an entire commentary on Esther with the central thesis that Esther's plot, its characterizations, and its major as well as minor "details of fact" were deliberately patterned after the Exodus narrative:

> All the essential features of the Esther narrative are already there in Exodus 1–12: the foreign court, the mortal threat, the deliverance, the revenge, the triumph, and the establishment of a festival (p. 11).

According to Gerleman, because Moses was adopted (Exod 2:9) and had kept his racial identity a secret while in Pharaoh's house (Exod 2:6–10), had at first been unwilling to act on behalf of his people (Exod 3:11; 4:1, 10), and had to appear before Pharaoh several times (Exod 7:14–12:28) before the Egyptian enemies perished in great numbers (Exod 12:29–30; 14:27–28), only to find himself still later opposed by the Amalekites (Exod 17:8–16), so comparable things *had to happen* in the book of Esther. According to Gerleman, Esther is not a godless or profane book; rather, it represents a pronounced and conscious de-sacralization and de-theologizing of a salvation *(heilsgeschichtlich)* tradition (p. 23).

Although the Esther story may very well have been somewhat influenced by the Exodus story—in fact, what ancient Jewish writer could have completely escaped all conscious and unconscious influences of it—the Exodus influence seems neither controlling nor overriding (Berg 1979: 6–8). Andrews (1975: 25–28) seems to be one of the few scholars subscribing to Gerleman's thesis, and even he has some reservations.

F. Syntax, Style, and Structure

More important than the influences of other biblical books on the author of Esther was the author's own perceptions of what and how something should be said to make a more interesting story. Because he was not restricted to describing accurately an actual historical event, the author could give his imagination full rein, allowing literary and dramatic interests to determine his use of the sources and the shaping of the narrative.

Paton's judgment (*Esther* ICC, 62) that Esther's style is "awkward and laboured" is much too harsh. After all, the plot was cleverly constructed, with clear attention given to increasing the reader's interest and suspense. The author used to good effect such things as emphatic word order, direct address, and short, to-the-point sentences. Repetitiveness, which is one of the literary weaknesses of the book, is also one of its strengths; for the frequent occurrence of identical or synonymous words, phrases, and clauses increases the story's clarity and unity. Thus, parallel phrases and parenthetical expressions are not so much doublets or interpolations as the author's way of increasing the clarity of his story.

Striedl (1937) showed that Esther's syntactical features were characteristic of classical Hebrew, especially of such later books as Chronicles (there are many Persian words and Aramaic formations in Esther, but no Greek words). The word order of its sentences is more characteristic of Aramaic than of classical Hebrew, i.e., subject-verb-object, and the author's preference for the imperfect tense (160 times in 167 verses) may be an effort at archaizing (Striedl 1937: 74), but it also adds life and flow to the narrative (Dommershausen 1968: 138–43). To be sure, the Hebrew vocabulary of Esther is not at all rich or varied: in 167 verses of the book, *mlk* ("king/rule") occurs over 250 times; *ʿśh* ("to do/make") 87 times; *ntn* ("give") and *dbr* ("word/thing/to speak") some 40 times each; and *bwʾ* ("to come") 35 times. Nonetheless, the book's popularity down through the ages among Hebrew-reading Jews is eloquent testimony to its literary stature.

Whereas Striedl was evidently content to describe sentence structure, Dommershausen (1968) tried to show the specific literary functions and psychological effect of the syntax, emphasizing such poetic features as alliteration, assonance, parallelism, hendiadys, hyperbole, and chiastic constructions. Utilizing the analytical tools of *Formgeschichte*, Dommershausen also isolated much larger component parts or types (*Gattungen*) sometimes to quite good effect, as in his calling 1:10–22 "Wisdom Narrative" and 6:1–14 "Narrative with Wisdom Speech." In other instances, however, his assignment of a *Gattung* helps little: giving something a "label" does not always explain it.

While Esther's chiastic constructions and especially its "synthetic linear progressions" (i.e., the transformation of the same term from a negative to a positive meaning [e.g., *ʾbl* in 4:3 to that of 9:22, or of *pršt* in 4:7 to that of 10:2]) do serve to bind 9:20–10:3, the so-called "appendix of Esther," to all that precedes it (Jones 1978), there is no reason why a "later editor," one imbued with Esther 1–8, could not have written it (Clines 1984: 50–63). Clearly 9:29–32 is the product of just such a later editor (Loewenstamm 1971: 117–24).

A most penetrating rhetorical analysis of Esther has been made by Berg (1979) who, like Dommershausen, has been primarily concerned with analyzing the book's larger component parts. Berg has shown that Esther's dominant motifs of banquets, kingship, and obedience/disobedience create the book's themes, namely, the Theme of Power, the Theme of Loyalty to God and Israel, and the Themes of the Inviolability of the Jewish People and Reversal (pp. 3–121). Berg has, it would appear, successfully demonstrated that, *as the book of Esther currently stands,* feasting (and its auxiliary motif of fasting) is the primary motif of Esther and is found throughout the entire book: there are two separate banquets at the beginning of the story (1:5, 9), two in the middle (5:5; 7:1), and two at the end (9:17–18, 20–22); and fasting is enjoined upon the Jews, both early (4:16) and late (9:31). (This does not necessarily mean, however, that the Esther story was originally a festival legend, only that one of its later editors made it that way [see below].) Equally acute is Berg's view (1979: 106–13) that Esther's literary structure is ordered according to the principle of peripety, i.e., the unexpected reversal of affairs.

G. The "Original" Form of Esther

By combing various methods of analysis—text criticism, source criticism, redaction criticism, and literary criticism—Clines (1984) has offered, in the present writer's judgment, a most convincing case for the evolution of the "original" Esther and Mordecai stories to their present forms in the MT and LXX.

Building upon the seminal work of Torrey (1944) and many other scholars, Clines argues that the present book of Esther has evolved through five major stages. What were probably *two originally distinct and separate stories*—i.e., a court conflict/deliverance tale concerning a "Mordecai" and a success/deliverance tale concerning an "Esther"—(stage one) were successfully combined in *The Pre-*

Masoretic Story (stage two). It was also at this stage that another separate tale, the Vashti story (= Esther 1) was added. But although the God of Israel was mentioned at this stage of the narrative's evolution (i.e., in what corresponds to 4:14, 16; 6:11, 13; and 7:3 of MT), "The inclusion of the Mordecai story within the Esther story—or, we might prefer to say, the conception of an Esther story of national deliverance which also included the Mordecai story of personal deliverance and success—tended to emphasize all the more the role of the coincidental" (Clines 1984: 151). The text of this Pre-Masoretic story is best reflected in the Hebrew *Vorlage* of the Greek A-Text (see below), ending at 8:17 (=8:2 of MT) and excluding the six major Additions.

The Proto-Masoretic Story (stage three) introduced the concept of the irrevocability of Persian law (=1:19 and 8:8 of the MT), with all that that involved, and the discovery of the conspiracy of the two eunuchs (=2:21–23 of MT), with its ramifications. It was at this stage of the story's evolution that—for reasons that can only be speculated on—an editor removed the so-called "religious elements" from the story. Clines (pp. 153–54), dissatisfied with the various explanations offered by other scholars for the deletion of the religious elements, maintains that.

> It is not so much the absence of the name of God from the book as the presence in it of critical coincidences working for the good of the Jewish people that defines its theological position. I would identify two primary elements in the book's theological statement: (i) the providence of God is to be relied on to reverse the ill-fortunes of Israel; (ii) divine action and human initiatives are complementary and both indispensable for success or "salvation."

The Masoretic Story (stage four) took its shape by the addition of three distinct appendices: (1) *9:1–19,* which made the story more realistic and bloody and, at the same time, "demilitarized" it to the point where the significance of the Esther story lies in the joyous celebration to which it gave birth; (2) *9:20–32,* which linked the celebration of the story's events with the traditional festivals of the Jewish year (it was at this stage of the story's evolution that the name of the festival, Purim [9:26], occurred in the story for the first time); and (3) *10:1–3,* which moved "in a quite different direction from the liturgically and religious oriented letters of Mordecai and Esther. Here the issue that is addressed is the significance of the Esther story for Jewish life under foreign rule" (Clines 1984: 167). The fifth and final stage, *The Septuagint Story,* especially with its six Additions, "represents a more thorough and substantial reworking of the story than any [preceding] version" (p. 168); and its primary effect is "to *assimilate the book of Esther to a scriptural norm,* especially as found in Ezra, Nehemiah, and Daniel" (p. 169).

Owing to limitations of space, the preceding description of Clines' hypothesis is admittedly brief and oversimplified; but in the judgment of the present writer it has much to commend itself and, at the very least, is certainly headed in the right direction, especially because it takes seriously the evidence in the Greek A-Text and B-Text.

H. Date(s) for the Book's Composition

If Clines' analysis of the evolution of the book of Esther is essentially correct, then one can distinguish, at best, only two dates: (1) the book's *terminus a quo,* or earliest date; and (2) its *terminus ad quem,* or latest date.

The latest possible date for the book is 94 C.E., that being the date of *Jewish Antiquities,* in which Josephus paraphrased the LXX version, including Additions B, C, D, and E. However, if the colophon to Esther (i.e., F 11) is authentic and accurate, which is most likely the case (Moore *Daniel, Esther ... Additions* AB, 250–52), then the lowest date for the Greek translation of Esther is either 78 B.C.E. or, more likely, 114 B.C.E., either of which moves the date of the MT back into the 2d century B.C.E.

On the basis of the presence of "Elamite" names and the fact that in Esther the *apadana,* or reception hall, and the court were on the same tell rather than on separate ones, Stiehl (1956: 203–13) would pinpoint the composition date of the MT to between 165 and 140 B.C.E., this being the only time since the Achaemenid period when such a situation had existed. Needless to say, these "Elamite" names could just as easily have been part of the earlier Persian materials; moreover, Esther's topographical details concerning the king's palace are ultimately nondescript.

Most scholars would put the "final" form of the MT prior to the Maccabean period (167–135 B.C.E.), the latter being a time when antagonism toward gentiles ran high among Jews, a situation that does not exist in the MT of Esther. Berg (1979: 170) is certainly correct in saying that

> The scroll displays a generally positive attitude toward foreign masters. Its antagonism is directed specifically against those who seek to harm Jews, and this antagonism cannot be extended to include the Persian administration.

The total absence of Greek words in the MT strongly argues against a Hellenistic date for the "final" form of the MT, unless, as Berg suggests (1979: 170–71), the absence of Greek reflects the author's efforts at archaizing. Then too, the Hebrew of Esther has almost nothing in common with the 2d-century Hebrew at Qumran but is most like that of the Chronicler, which is now being dated to ca. 400 B.C.E. Thus, just as the Daniel stories (Daniel 1–6) probably go back to the 4th century B.C.E. while the visions (Daniel 7–12) date from the 2d century B.C.E., so the "first" edition of Esther probably goes back to the late 4th century B.C.E. (i.e., the late Persian period) while the "final" edition of the MT appeared in the early Hellenistic period. In any event, Esther's not unsympathetic attitude toward a gentile king suggests that it is older than the book of Daniel, which was written in a time when the Jewish people had a most negative attitude toward gentile kings.

Perhaps a word should be said here about putting Esther in the late Persian period. Haman's characterization of the Jewish people as being "scattered, yet unassimilated, among the peoples throughout the provinces of your kingdom" (3:8) certainly fits less well in the early or even the middle Persian period, although here one must keep ever in mind that this verse or other verses could actually be later materials inserted into older narrative. Nonetheless, a late Persian period for the "original" of the Esther story seems a reasonable estimate.

I. Ancient Versions

1. Greek Versions. The LXX, or B-Text, of Esther is strikingly different from the Hebrew text (i.e., the MT) in two ways. In the first place, there are six extended sections (107 verses) in the Gk text which have no counterpart in the MT. These Additions (Adds) differ from one another—as well as from the canonical sections of Esther—in length, purpose, content, and style. Add A describes Mordecai's dream (A 1–10) and his discovery of a plot against *Artaxerxes*, the king's name throughout the Gk version (A 11–17). Add B is the royal edict dictated by Haman, announcing the pogrom against the Jews (B 1–7). Add C contains the prayers of Mordecai (C 1–11) and Esther (C 12–30). Add D describes Esther's unannounced audience with Artaxerxes (D 1–16). Add E is the royal edict, designed and dictated by Mordecai to counteract the effects of Haman's edict (E 1–24). Add F provides the interpretation of Mordecai's dream (F 1–10) and the colophon to the Gk version (F 11).

The most striking addition in the Gk text, at least from a theological point of view, is of course specific reference to God. The word "God" or God's name occurs over 50 times in the Gk text, primarily in the deuterocanonical sections (but see 2:20; 4:8; 6:1, 13). The general effect of these various types of additions is to make the Gk version of Esther more explicitly religious than the Hebrew, this in spite of the fact that in the LXX the establishment of the festival of Purim is actually deemphasized. For further details on this and other matters relating to the Gk version, see ESTHER, ADDITIONS TO.

Second, there are many "omissions" in the canonical sections; in fact, there is scarcely a verse where the text does not omit a word, phrase, or clause of the MT. Evidently its Gk translator, disliking the frequent repetitions and redundancies of his Hebrew text, deliberately chose to omit many of them. Thus the Gk translator proceeded to translate verse by verse the content but not the exact wording of his Semitic text. Apart from a few Hebraisms which may very well be later "corrections" in the direction of the MT, the translation is literary, with very few places that are so labored or unclear as to remind its reader that it is a translation. The B-Text is thus free rather than literal, sometimes to the point of being quite paraphrastic.

There is another Gk text that should be mentioned here: the A-Text or, as it has been frequently called since the days of Lagarde (1883), the "Lucianic recension." While it is highly probable that the six Additions of the A-Text were borrowed from the B-Text (Clines 1984: 71–92), the relationship of the canonical sections of the A-Text to the B-Text has been much debated, with the majority, including Tov

(1982: 169–86), calling the canonical part of the A-Text a recension (i.e., a revision of the LXX), others regarding it as a separate and independent Gk translation of a different Semitic text (Torrey 1944; Moore 1967; *Daniel, Esther … Additions* AB; Cook 1969; Clines 1984: 71–92). For an English translation of all of the A-Text, see Clines 1984: 217–48.

2. Other Ancient Versions. For Esther, as for other books of the Bible, the OL, the Coptic (actually the Sahidic dialect), and the Ethiopic versions are translations of the LXX. By contrast, the Syriac and Jerome's Latin Vulgate are based on the Hebrew text and are quite faithful to it, although, given Jerome's claim to having translated his Hebrew text with great fidelity, the Vulgate is not nearly as close to the MT as one would have expected. Sometimes, in fact, Jerome's translation of the canonical sections is quite paraphrastic; and his translation of the Additions, which he held in lesser esteem because they were not present in his Hebrew text, is even more free.

Esther's two *targumim* (Aramaic translations dating no earlier than the 8th century C.E.) are faithful to the MT but also include so much haggadic material that 1 Targum is more than twice as long as the MT, and 2 Targum is twice as long as 1 Targum, with the end result that they tell us much about Talmudic and post-Talmud Judaism but little about Esther. Unfortunately, "critical" or scientific editions exist only for the Greek (*OTG* 3/1; Hanhart 1966) and the Latin (*Libri Hester et Job,* Rome 1951). The end result of all this is that the ancient versions are of far less help in establishing the "original" or even the "final" form of Esther than is the case for many other biblical books.

CAREY A. MOORE

ET-TWEIN (PLACE). See ABU ET-TWEIN, KHIRBET.

ETA. The fifth letter of the Greek alphabet.

ETAM (PERSON) [Heb *ʿêṭām* (עֵיטָם)]. One of the descendants of Judah (1 Chr 4:3). He is probably also to be associated with the Judean town of the same name (2 Chr 11:6). See ETAM (PLACE).

ETAM (PLACE) [Heb *ʿêṭām* (עֵיטָם)]. Two places in the Hebrew Bible.

1. Town in the N hill country of Judah, listed among the cities fortified by Rehoboam near the beginning of his reign (2 Chr 11:6). An examination of the list of cities fortified by Rehoboam (2 Chr 11:5–12) shows that they form a logical and fairly consistent defensive line on the W, S, and E frontiers of Rehoboam's domains, supplemented by additional fortresses at key road junctions (Aharoni *LBHG*, 290–94). This strongly suggests that the editor of Chronicles had access to some sort of official military document delineating the defenses of the kingdom of Judah. The LXX includes Etam in the list of Judean towns within the vicinity of Bethlehem which it inserts after Josh 15:59. Whether this inserted unit represents part of the original list accidentally deleted from the MT or whether it is a later editorial addition based on an independent tradition remains uncertain. Etam also appears as the name of a descendant of Judah in 1 Chr 4:3. The fact that several other nearby places appear in this genealogical summary under the guise of personal names (e.g. Tekoa and Bethlehem) suggests that in this context the name of a town is being used as a metaphor for the kinship ties of its founders. Josephus (*Ant* 18.3.2)

indicates that Etam was located approximately 8 Roman miles S of Jerusalem, near the aqueduct built by Pilate to supplement the water supply of Jerusalem. He also states (*Ant* 8.7.3) that Solomon often retreated to Etam when he wished to escape the hustle and bustle of his capital. The description of Etam as being located near Bethlehem, and its connection with the water supply of Jerusalem, has led most scholars to look for ancient Etam in the vicinity of modern Ain Atan, a powerful spring whose name may reflect that of the ancient town. The most suitable site in the vicinity is Khirbet el-Khokh, which stands on a ridge overlooking the spring (Aharoni *LBHG*, 301). It is located about 3.5 km SW of Bethlehem near the modern village of Artas in the vicinity of the traditional Pools of Solomon (M.R. 166121). This Judean town should not be confused with the Rock of Etam, retreat of Samson during his conflict with the Philistines (Judg 15:8–11).

2. Village occupied by the descendants of Simeon (1 Chr 4:32). It appears in the list of Simeonite villages included by the editor of 1 Chronicles in his treatment of various aspects of tribal genealogy (1 Chr 4:24–43). The differences between this list and that of Josh 19:1–9 seem to be merely editorial in nature, suggesting that both are derived from a single document describing the territory of Simeon sometime early in the period of the monarchy, presumably before Simeon was consolidated with the tribe of Judah (*1 Chronicles* AB, 25–31). The omission of Etam in Joshua 19 is most probably a simple scribal error. The location of this ancient settlement is unknown, although it presumably lay somewhere within the transition zone between S Judea and the N Negeb. As with its northern namesake, it should not be confused with the Rock of Etam mentioned in the book of Judges.

WADE R. KOTTER

ETAM, ROCK OF (PLACE) [Heb *sela‹ ʿêṭām* (סֶלַע עֵיטָם)]. A place to which Samson retired after smiting the Philistines, pursuant to their burning his wife and father-in-law (Judg 15:8). While he was staying in a cave at the Rock of Etam, men of Judah came to Samson in order to deliver him to their Philistine oppressors (Judg 15:11). While the site has not been identified with any certainty, ʿAraq Ismaʿin on the N slope of the Sorek Valley near Zorah (M.R. 148131) is the strongest candidate (Gold *IDB* 2: 153; Kallai *EncMiqr* 6: 187); it was most probably not near either of the two cities named ETAM.

CARL S. EHRLICH

ETH-KAZIN (PLACE) [Heb *ʿittâ qāṣîn* (עִתָּה קָצִין)]. Town on the E border of the territory of Zebulun, between Gath-hepher on the S and Rimmon on the N (Josh 19:13). The site of Eth-kazin, or, after the LXX, Ir-kazin (Gk *polis Katesem*)—"the citadel of the commander"—has not been identified.

RAPHAEL GREENBERG

ETHAM (PLACE) [Heb *›ētām* (אֵתָם)]. According to Exod 13:20 and Num 33:6–7 the first station on the Exodus route of the Israelites after leaving Succoth. Both citations are accompanied by the comment "on the edge of the wilderness." Num 33:8 mentions three days of wandering in the "desert of Etham." No further information is given concerning the topography. The contextual position of the toponym and its commentary have been associated by M. Noth (*Exodus* ATD, 86; *Numeri* ATD, 210f.) with the work of J (Exod 13:20) and later redactions (Num 33:6–8). It seems more probable, however, that a late Pentateuchal redactor should be responsible for all citations of Etham showing a rather limited insight into the topographical situation of the E Delta (Weimar 1985: 264f.).

Assuming a geographical entity, several attempts have been made to identify and localize the toponym. The literary comment seems to imply only a short distance to the Delta. So Noth argues for a localization within the water area N of *es-suwes* (Suez). Naville (1888: 28) proposed identifying the name with *jdm* in *Egyptian* texts, a toponym, however, which is identical with biblical Edom. The connection with the Egyptian word *ḫtm*, "fortress," which is originally Semitic, leads to some of the Egyptian E fortresses of which Sile (today El-Qantara) is the most important (cf. the well-known illustration on the N wall of the Great Hypostyl of Karnak temple; Papyrus Anastasi 1.27.2 (?); Anastasi 3.6.5; 6.20.1). Other fortresses

named *ḫtm* are mentioned in Papyrus Anastasi 1.27.4 (certainly identical with a station along the Way of Horus; cf. Fischer-Elfert 1986: 233), in Anastasi 6.55.60.61 (a fortress named after Merneptah at Tjeku; cf. Sukkoth), and in Anastasi 6.69 (possibly one of the fortified watering places between the Nile and the Red Sea; cf. Caminos 1954: 298). The main objection against this equation may be the phonetic difference between Egyptian *ḫ* and Heb *ʾalep* (cf. Cazelles 1955: 359). Another suggestion, discussed by Cazelles (1955: 359f.) is to combine Etham with "dwelling of the lion" as a name for a watering place along the Way of Horus: Etham being made up of the Sumerian ideogram É for "house," and *Tam* for the shortened form of the god's name Atum represented occasionally by a lion. This thesis remains problematic because Sumerian ideograms are not otherwise attested in biblical names. It seems better to take Etham as a toponym representing only a special variant of the well-known Pithom, which means "House of Atum," assuming *ʾētām* as the equivalent of a fuller writing of the god's name attested in the form *j3tm* of the 21st Dynasty (Görg 1990). Etham then should be a shortened form without the element *pr* as is the case with the toponym *raʿamsēs* (Rameses) in relation to its fuller Egyptian counterpart *Pr-Rmssw*, "House of Rameses." The meaning " (house of) Atum" and the identification with Pithom fit the well-founded literary assumption of late redactional information about Etham.

M. GÖRG

ETHAN (PERSON) [Heb *ʾêtān* (אֵיתָן)]. **1.** The son of Zerah, Judah's second son by his daughter-in-law Tamar (1 Chr 2:6; Gen 38:30). Ethan was the father of Azariah (1 Chr 2:8). In the MT, 1 Chr 2:8 reads: "The sons of Ethan"; however, only one name is mentioned.

2. A wise man whose wisdom was surpassed by Solomon's (1 Kgs 5:11—Eng4:31). Ethan is called the Ezrahite *(ʾezrāḥî)*, and he is associated with Heman, Calcol, and Darda, "the sons of Mahol." These three individuals also were wise men whom Solomon surpassed in wisdom. In 1 Chr 2:6 they are called the sons of Zerah. W. F. Albright (*ARI*, 122) believed that the word "Ezrahite" did not refer to a family name but to the pre-Israelite inhabitants of Canaan and that "the sons of Mahol" referred to a guild of temple musicians. This view seems to be confirmed by the superscription of Psalms 88 and 89 where Ethan and Heman are called "Ezrahite." The LXX renders the word "Ezrahite" in both psalms as "Israelites." These wise men were not Israelites, but because they were associated with the music in the temple they were given place in the levitical genealogies. Heman was included in the family of Kohath, Asaph in the family of Gershon, and Ethan in the family of Merari.

3. A Gershonite who was the son of Zimmah and the father of Adaiah (1 Chr 6:26–27—Eng6:41–42). Ethan was an ancestor of Asaph. Asaph was one of the leaders of the three groups of levitical singers who ministered before the ark of the Lord (1 Chr 15:16–17).

4. The son of Kishi, a Levite from the family of Merari (1 Chr 6:29—Eng6:44). In 1 Chr 15:17 the name of Ethan's father was Kushaiah. According to the Chronicler, when David organized the levitical singers and the musicians in the house of the Lord, they were organized into three groups led by Heman, a Kohathite, by Asaph, a Gershonite, and by Ethan, a Merarite (1 Chr 6:16–33—Eng6:31–48). In 1 Chr 16:41–42 and 25:1–3, Jeduthun replaced Ethan as one of the singers in the temple. This replacement has led Corney (*IDB* 2: 809) and many other scholars to identify Ethan with Jeduthun.

There seems to be a relationship among these four individuals. According to Cheyne (*EncBib*, 1411–12), during the reorganization of the guilds of singers in the postexilic community, three assumptions guided the thinking of the religious leaders of Israel: (1) that the founders of the guilds were Israelites, (2) that they were singers, and (3) that they were contemporaries of David. Thus the Chronicler made every

one of these three singers a contemporary of David by adding names to their genealogies and by making them Levites.
CLAUDE F. MARIOTTINI

ETHANIM [Heb *ʾêtānîm* (אֵיתָנִים)]. The seventh month of the Canaanite calendar, roughly corresponding to September and October.

ETHANUS (PERSON) [Lat *Ethanus*]. One of the five scribes whom Ezra was instructed to take with him when restoring the Scriptures (2 Esdr 14:24). Myers (*1 and 2 Esdras* AB) renders the scribe's name as Elkanah, following the Syriac, which reads *hlqnʾ*. See DABRIA for further discussion.
JIN HEE HAN

ETHBAAL (PERSON) [Heb *ʾetbaʿal* (אֶתְבַּעַל)]. King of Tyre, father of Jezebel who married Ahab, king of Israel (1 Kgs 16:31). After the kingdom of Tyre had grown to include the port city of Sidon, Sidon became a general name for the people of the area, hence the designation "king of the Sidonians" in the biblical text. Josephus, drawing his information from the historian Menander, states that Ithobalus, an alternate form of the name Ethbaal, was a priest of Astarte who gained the throne by assassinating Pheles, king of Tyre (*AgAp.* 1.18). He ruled for thirty-two years (887–856 B.C.) and is said to have built two cities: Botrys in Phoenicia and Auza in Libya (*Ant* 8.13.2). Under his rule Phoenician commercial activities were expanded. The effects of a year-long drought which occurred during his reign were also felt in Israel (cf. 1 Kings 17). (See Gray *Kings* OTL; Jones *1 Kings* NCBC.)

PAULINE A. VIVIANO

ETHER (PLACE) [Heb *ʿeter* (עֶתֶר)]. The name of two places in the Hebrew Bible.

1. Town situated in the Shephelah, or lowlands, of Judah (Josh 15:42), within the same district as Libnah and Mareshah. The only reference to this settlement occurs in the list of towns within the tribal allotment of Judah (Josh 15:21–62). It is commonly identified with Khirbet el-Ater (Aharoni *LBHG*, 376), located approximately 1.5 km W of Beit Jibrin (M.R. 138113).

2. Town situated in the transition zone between S Judea and the N Negeb. The only reference to this settlement occurs in the list of towns within the tribal allotment of Simeon (Josh 19:7). It is omitted from the parallel list of Simeonite towns in 1 Chr 4:28–32, as well as the more remotely related list of S Judean towns in Josh 15:26–32. The differences between the lists in Joshua 19 and 1 Chronicles are mostly scribal in nature, suggesting that they stem from a single document describing the territory of Simeon sometime early in the period of the monarchy, presumably before Simeon was consolidated with the tribe of Judah (Myers *1 Chronicles* AB, 25–31). The differences between these lists and that of Joshua 15 are more difficult to explain unless they reflect the political and demographic adjustments made necessary by the consolidation process (Boling and Wright *Joshua* AB, 436–37). The location of the ancient settlement is uncertain, although the ancient name may be reflected at Khirbet Attir (Boling and Wright *Joshua* AB, 438), located approximately 13 km N of Beer-sheba. It is possible that Athach in 1 Sam 30:30 is a faulty reading for Ether, with the *reš* at the end of the word being mistaken for a final *kap*.
WADE R. KOTTER

ETHICS. This entry consists of two articles, one covering ethics in the OT and one covering ethics in the NT.

OLD TESTAMENT

The corpus of ethics of the OT is found in the Pentateuch (=Heb *Torah*). The Hebrew term *tôrâ* originally meant "teaching," "instruction," and "direction" and not "law" as it is translated into English. Torah refers to both the teaching and the content of God's revelation to humanity. What is revealed is a whole way of life lived in accordance with the will of God, not just observance of a set of laws largely of

a ritual character. Thus the statutes, precepts, and ordinances in the Torah were intended to act as guidelines on how the Israelites could mold their lives in their ritual, cultic, social, moral, and economic practices to be in conformity with the will of God. Because these statutes and ordinances were strictly enforced, the term *tôrâ* assumed the erroneous meaning "law." The Israelites believed that God created the world with a divine purpose and that he disclosed his will when he elected them and made a covenant with them at Sinai. As their Lord, judge, and king (Isa 33:32), they believed that God demanded that humans strictly obey his divine laws which were summarized in the Decalogue (Heb *haddĕbārîm*). Moreover, they were to teach the statutes, precepts, and ordinances to their children not by word of mouth but by exemplary observance (Deut 6:1–4).

Several factors influenced the Israelites to arrive at this monotheistic moral position. Firstly, they regarded Yahweh as the Creator of the heavens and the earth (Gen 1:1; Exod 19:4–5; Ps 8; Isa 43:5). The Priestly account of creation unequivocally states that when God created the universe, followed by the creatures and humankind, it was good (Gen 1:1–2:4a). According to the Yahwist's version, evil came because of humankind's refusal to regulate life according to the commandment of the Creator (Gen 2:4a–27). Underlying the doing of the will of God is the doctrine of divine retribution based on the inviolable principle of *mišpāṭ*, "justice" (Miller 1982: 134). Divine retribution is the means by which God, the holy one of Israel, rewards people according to their just deserts. Thus God punishes people who transgress his commandments and also rewards those who obey them.

A. God, the Universal Judge

The Israelites based their moral law on the premise that God, the judge of all the earth, Heb *šôpēṭ kōl hā*ʿ*āreṣ* (Gen 18:25; Judg 11:27), was their king (Isa 33:32). To the Israelites, religion, worship, and praxis were inseparable from their cultural behavior. Life was lived according to religious prescriptions. Because of the persistence of evil, God chose (Heb *yd*ʿ) Abraham in order that he might charge (Heb *yĕṣawweh*) his children and subsequent generations to observe the way of the Lord (Heb *derek Yahweh,* Gen 18:19). The way of the Lord refers to the quality of life which the Israelites must live and which reflects God's justice and righteousness (Heb *mišpāṭ ûṣĕdāqâ*). If Abraham and his household followed the way of the Lord, then Yahweh would fulfill the promise which he had made earlier (Gen 12:2; 15:1). The belief in divine retribution is quite discernible in the J narratives (e.g., Gen 2:16–17). The dialogue between God and Abraham on the fate of Sodom and Gomorrah (Gen 18:16–33) is elucidated by the principle of divine retribution. The extent of the cry (Heb *ṣa*ʿ*ăqāh*) coming from Sodom and Gomorrah was so great that the Yahwist depicts God personally going to investigate the cities' wickedness in order that he might mete out an appropriate punishment (Gen 18:21). Yahweh as king was also regarded as the guardian of justice because it was he who determined what was good and evil (Gen 3:5, 22). In accordance with his justice (Heb *mišpāṭ*), God could neither do wrong nor violate his role as the guardian of justice by treating the righteous and the wicked alike (Gen 18:25; cf. Num 16:22). The dialogue on Sodom is meant to underscore the fact that God would not miscarry justice on account of the righteous few living in the midst of the wicked majority should he decide to burn the city (Gen 18:32). At any rate, at no place in the dialogue is it implied that the righteous, by their righteousness, would save the wicked in spite of their wickedness (Ezek 14:14, 20). The narrative does not show us how Yahweh would have meted out retribution to Sodom had there been as few as ten righteous citizens living in the midst of the wicked (Gen 18:32). The fact that Yahweh destroyed Sodom is indicative of the fact that there was no righteous person among the city dwellers. It should not be overlooked that Lot with his household was a sojourner (Heb *gēr*) in Sodom (Gen 13:12b–13). According to the Torah, sojourners enjoyed limited civil rights which did not accord them full citizenship status of the land or city in which they lived (Speiser *Genesis* AB, 90, 139). This law must have been shared by the people of the ANE, judging by the Sodomites' surprise that Lot, who had come to their city to sojourn, should then try to act like a judge to them (Gen 19:9). This same reason demonstrates how Yahweh practiced justice by removing the sojourners, namely, Lot and his household, before annihilating the city with a conflagration (Gen 19:24–29; cf. Num 16:26–33).

An examination of the OT and of extrabiblical literature confirms that humankind regarded the deity as the source and guardian of justice. The juxtaposition of the merciful God, the Creator of the universe, by whose covenant Israel became the chosen nation, with the Israelites' endless cycles of sin and rebellion, elucidates the ethics of the OT (2 Kgs 17:15; Jer 6:19). The belief in the universal God, the Creator, was used by Deutero-Isaiah to rekindle the exiles' waning faith in Yahweh. He stressed that God, the holy one of Israel, was also their king and Creator (Isa 43:15). Against this affirmation Deutero-Isaiah went on to demonstrate to the dispirited Israelites that the God who led their ancestors during the Exodus from Egypt would lead them from the Babylonian captivity back to Zion (Isa 43:5–7). Several psalms also show how, whenever the Israelites were confronting life's predicaments, they cried to God for help, basing their wavering faith on the superiority and mercies of their God, the Creator of the world (Pss 8:1–8; 24:1–6; 42:2; 33:6–9; 89:11–12a; 100:3; 136:69).

B. Universalism of Ethics

It follows that, since God was the Creator of the universe, his divine rule should be regarded as universal. God's laws and statutes were therefore relevant to Israel as well as to people of other nations (cf. Lev 20:23). Amos was the first classical prophet to proclaim God's oracles against the people of Israel and the pagan nations which surrounded them (Amos 1:2–2:16). He shocked the Israelites by telling them that they were like the Ethiopians (Amos 9:7a). In the same way that God had brought the Israelites

from the land of Egypt, he had also brought the Philistines from Caphtor and the Syrians from Kir (Amos 9:7b).

1. Universalism of Moral Law. It was the underlying belief in the universalism of God, the Creator, which influenced the Israelites to believe that God had decreed a universal moral law which all the nations of the world were expected to obey (Wright 1950: 52). It was because of their disregard of that law that God was forced to destroy Sodom and Gomorrah. Because God was the universal judge, (Heb *šôpēṭ kōl hā*ʾ*āreṣ* (Gen 18:25), he could use the Assyrians as his agents to mete out punishment to the Israelites (Isa 10:5–6). But because the Assyrians were also wicked, God would, later on, punish them for their iniquities (Isa 10:12). In this light, God could address Cyrus as his anointed (Heb *mĕšiaḥ*), "whose right hand I have grasped, to subdue nations …" (Isa 45:1). Understanding ethics of the OT against the backdrop of the universal sovereignty of God helps to highlight the impact of the covenant which Yahweh made with Israel. God had chosen Israel for a special mission: to be a light to the nations (Isa 49:6), that is, to show them the way of the Lord.

2. God's Universal Justice. The idea of regarding the deity as the source of justice is not unique to Israel. An examination of Mesopotamian and Egyptian texts yields some evidence which indicates that justice issued from the deity. Speiser correctly observed that the correlation between merit and fate was not a question which the Yahwist was the first to broach (*Genesis* AB, 35). Commenting on Gen 18:25, he pointed out that the basic issue was only one aspect of the theme of the suffering just, which Mesopotamian literature wrestled with as early as the Old Babylonian period. That ethical norms were expected even in a civilization where Yahweh was not worshipped is evidenced by the Mesopotamian gods Kittum, "right," "justice," "jurisprudence," and Mēšarum, "fairness," "equity" (Ringgren 1947: 47–55). These deities were the personification of ethical abstract concepts of justice and equity. The Babylonians regarded Shamash as the ultimate god of justice. A bilingual hymn in both Sumerian and Akkadian (Meek, *BA* 6: 1ff.) reads as follows:

> O Shamash, when you come forth from the shining heavens,
> May Right stand at your right side,
> May Righteousness stand at your left side.

The Egyptians also presumed that bliss in the land came only after the goddess *m3*ʿ*t* (=Maat, "truth," "righteousness," "right") had successfully repressed all the wicked people and the evil which they caused. The absence of evil and wickedness would create a state of peace and joy for the righteous. A eulogy of the Egyptian king Merneptah (*ANET*, 378) reads:

> All ye righteous: Come that ye may see
> Right [*maat*] has driven out lying,
> Evildoers have fallen (upon) their faces,
> The water stands and is not dried up,
> The Nile lifts up, days are long
> Nights have hours … The gods are satisfied … *in* laughter and wonder.

These two poems are a sample of several ANE texts which demonstrate that the people of other nations regarded as pagans were, in general, reflecting on the theme of evil and justice, regardless of their religion or the time in which they lived. Various literatures of the ANE exhibit a critical attitude toward the way justice was being executed by the nobles or by the kings and also by the gods (ANET, 438–41). The main difference between these ethical teachings and those found in the Bible lies in Israel's emphasis on the holiness of God and the covenant which he graciously made with human beings.

C. Covenant and Ethics

1. The Treaty Formula in the ANE. It was common practice among the nations of the ANE to make covenants with each other. The covenants in the form of treaties were of two types: (1) the parity treaty was made between monarchs of equal status who therefore exchanged mutual stipulations; whereas (2) the suzerainty treaty was graciously offered by a superior monarch to an inferior. See COVENANT. In the latter treaty, the superior king, as suzerain, stipulated his conditions to his vassal, the inferior ruler and his nation. In return for their loyalty and tribute, the suzerain would protect his vassal against enemy

attack. However, should the vassal breach the stipulations of the covenant, then the suzerain would withdraw his military protection and might also punish the rebelling vassal by an invasion.

2. The Sinaitic Covenant and OT Ethics. The Hittite treaty formula illuminates the covenants which God made with Noah (Gen 9:8–17), with Abraham (Gen 15:1–21), with Israel at Sinai (Exod 20:20–23), and with David (2 Sam 7:1–16). Although the Sinaitic covenant is formulated according to the suzerainty treaty, there are fundamental differences. In the covenant between Yahweh and Israel, Yahweh graciously and without obligation made a covenant with the Israelites, freely adopting them as his own people (Exod 19:4–5). The Covenant Code (Exod 20:22–23:33) which God commanded the Israelites to observe specified two types of relationships. The vertical relationship required that the Israelites remain faithful to God and obey his law (Exod 20:3). The horizontal relationship was intended to promote peace among the Israelites by eliminating causes of friction among them. Just as in the Hittite suzerain-vassal treaty, the nations in a covenant relationship with the suzerain were forbidden to engage in hostilities against one another, similarly the people of Israel were prohibited by the covenant stipulations from being unjust to one another (Amos 2:6–16). The same stipulations applied to the neighboring nations such as Edom (Amos 1:11–15), Moab (Amos 2:1–3), and Tyre (Amos 1:9–10), who were covenanted with Israel during the reign of David. The worship of God would be rendered worthless if the Israelites failed to live in harmony with one another (Amos 5:21–24). They were expected to show justice to the powerless: the poor, widows, orphans, slaves, and the resident aliens (Deut 24:19–22; Job 29:12–20). Although Yahweh as Creator was not obligated in any way to make a covenant with Israel, once he made it he was bound by it in the same way the Hittite suzerain kings were bound by the covenants they made with their vassals.

It is significant that all covenants are based on the principle of retribution. In a Hittite suzerainty treaty, fulfillment of the stipulations was rewarded by a defense alliance of the parties concerned. Serious consequences followed a breach of the covenant stipulations. Similarly, Yahweh would bless the Israelites if they observed the laws, statutes, and precepts summarized in the Decalogue (Exod 20:1–17). But if the Israelites transgressed the law God would punish them (Josh 24:19–20).

Loyalty to God is by Israel's own free choice and not made by Yahweh's compulsion (Josh 24:14–15; 1 Kgs 18:21–24). The rationale for choosing Yahweh is based on the fact that he is the God who acts in history and who has shown by his choice of Israel, as well as by his promises and blessings to the patriarchs of Israel, that his might is unequaled by any other deity. His might was demonstrated by his victory over Pharaoh and by his leading the Israelites from Egyptian bondage to freedom in Canaan (Deut 6:22–25; cf. 11:3–12). The Israelites could therefore trust God because it is he alone who can perform great signs and wonders (Deut 4:34): the other gods are nothing (Isa 41:29; 44:9). God would continue to protect the people of Israel if only they remained loyal to him (Lev 20:22). It should be realized that keeping the covenant was of great benefit to the Israelites and was not in any way beneficial to God. This is what makes God's covenant with Israel unique in the ANE. The fact that these laws were useful for harmonious relationships among the Israelites themselves explains why, when giving the commandments (Heb *haddĕbārîm;* Exod 20:1–17), God did not have to justify the reason for the decrees. The exclusive worship of Yahweh was a unitive factor among the tribes of Israel and his decrees promoted harmony (Heb *šālôm*) among the people.

3. The Deuteronomistic Formula of Retribution. According to the Deuteronomist, God's blessings and curses were thought to relate directly to Israel's obedience and disobedience to the law as stipulated in the covenant (Deut 28:1). God administers justice in historical events. The books of Joshua, Judges, Samuel, and Kings were reformulated to illustrate how God administered justice to Israel and to the nations in historical events. It is God alone who directs and controls the course of history (Wright 1950: 49). It is significant that the same formula is implied in the Sumerian Job in which a wealthy man, who considered himself righteous and wise, attributed his good fortune to be consequent upon the fear of the gods. The OT Job "repudiated not only a simplistic Deuteronomistic view of the historical process in which the mighty acts of God are transparent and history's theme is a simple one of blessing or curse, the way of life or the way of death" (*CHME,* 344). The lesson to be learned from Job's ordeal is that it is not always clear to humans how God administers justice. The most important thing that humans can do, in

sickness or in health, or in facing any of life's predicaments, is to pray for the experience of God's sustaining presence and for a lucid vision of his majesty (Job 42:5–6).

D. The Mighty Acts of God

God's absolute claim for the Israelites' loyalty was not based solely on the covenant which he had made with them. It was because the mighty acts which he had performed for the Israelites testified to his sovereignty compared to that of the other gods of the surrounding nations which were idols and not gods (1 Kgs 18:24–30, 39; cf. John 14:11). To the Israelites there was no God like Yahweh, who was transcendent and looked far down upon the heavens and the earth (Ps 113:4–9). It was because the Lord wrought some great works during the process of Israel's redemption from Egypt, followed by God's leadership through the wilderness as well as the conquest of the Canaanite nations, that he had convincingly proved himself to be no match to the idol gods (Isa 44:6–17; cf. Ps 111:6). The redeeming acts of the God who made a covenant with Israel were later embellished with mythical motifs. Israel's crossing of the Reed Sea (Heb *yam sûp,* Exod 15:1–18) became the central event in Israel's history because the event was now associated with the cultic festival of the spring New Year (*CHME,* 123). Being the God who revealed himself through historical events, unusual events convinced the Israelites that indeed God was the Lord: for example, the victories of the Persian king Cyrus which led to Israel's liberation from Babylon (Isa 45:1–8; 47:1–4).

1. Mythicization of God's Acts. A close examination of Exod 15:1–18 highlights the significance of the Exodus in the history and religion of Israel. The poem opens with a vivid description of the combat between Yahweh, the Divine Warrior, and his enemies, the Egyptians, who were self-assured of victory (Exod 15:9). This historical event of the Exodus was later mythicized. God's might at the Reed Sea was later seen as God's splitting (Heb *bqʿ*) of the inimical sea which was threatening the entire nation of Israel (Neh 9:11). God was no longer seen as dividing the sea by natural forces but, like Marduk, who split Tiamat in the *Enuma elish* to ensure the survival of the gods, God also split the sea to ensure the survival of the Israelites. To assure them that their God was always the same in spite of the vicissitudes of their political fortunes, mythic elements were added to their cultus (Job 41:1; Ps 74:14). This process assured the Israelites of Yahweh's consistent might throughout all generations. To reinforce the Israelites' faith in Yahweh, the only God, all mythical victories were deliberately attributed to him (Isa 27:1). Whenever the Israelites faced any form of oppression or predicament, they appealed to God, who had demonstrated his unsurpassed might diachronically by stunning victories over mythical and terrible dragons (Isa 51:9–11).

2. Futility of Idols. Israel was often driven through fear to worship idol gods. Yahweh's injunction, "Fear not" (Isa 44:2), was based on the mighty acts of God, the first and the last (Isa 44:6). The creation and worship of idols which could neither speak nor hear was therefore a foolish act on the part of Israel (1 Kgs 18:26–29). Idols were nothing (Heb *tōhû*) and they profited nothing (Isa 40:18–20). To be convinced, the Israelites were called upon to compare Yahweh with the gods of the other nations and then make up their minds as to which deity was supported by tangible evidence of his might and was worthy of their allegiance (Isa 44:7–9).

E. OT Ethics Based on the God Who Acts

According to the Yahwist, God was distinguished from the gods of the other nations in that he was not an idol which had no voice and made no sound (1 Kgs 18:26b; 29b). Israel's God was adored for his unique achievements such as the creation of the world and his redemption of Israel, which was announced in advance (Exod 3:19–22; cf. Isa 44:7). Unlike the lifeless idol gods of the other nations, God revealed himself through historical events because it was he who set history in motion by the creation of the universe and by calling Abraham, Israel's first patriarch, and by promising him and his progeny the land of Canaan (Gen 12:1; 15:1–2). This firm belief in the God whose acts influenced the Israelites to regard him as their king (Isa 33:22) and *judge* (Heb *šôpēṭ*) (Gen 18:25; Judg 11:27), and to be bound by the covenant which they had accepted freely (Exod 19:8; cf. Josh 24:22). The Israelites thus chose to follow Yahweh and promised to observe his law to earn his blessings in this world. But accepting the law also meant that God would punish them for transgressing the law. Israel's ethical norms were therefore

believed to issue from the holy God, the Creator and Lord of the universe, who created the world with a divine purpose.

F. God's Holiness

The Israelites regarded God as holy (Isa 41:4; 43:14). This means that they recognized him as the purest and highest standard of holiness and justice. This is evidenced by the use of the word "holy" (Heb *qādôš*) and its derivatives over 600 times. With reference to humans, the word "holy" refers to a perfect moral standard. Because they were his covenanted people, the Israelites were therefore required to be holy. The divine injunction was "… be holy because I the Lord your God am holy" (Lev 19:2; cf. Matt 5:48). It is this exhortation which clarifies the rationale behind the whole so-called Holiness Code (Leviticus 17–26). The Israelites would be holy like God if they were righteous and just. Emphasis in the worship of God is laid on actions and not words. By contrast, the gods of the other nations, for example, the goddess Maat of Egypt as well as the gods Kittum and Mēšarum of Mesopotamia, were hypostases of ethical concepts. They were idols and not God. These and many other gods were believed to be motivated by appeasement and by outward show of piety. OT ethics, on the other hand, aimed at changing the heart, that is, the motives of the Israelites, by teaching them to observe the covenant law. Consequently, God was not going to accept or bless those who rendered sacrifices, performed acts of worship, or brought gifts unless their intentions and attitudes conformed to his holiness (Gen 4:5–7; Amos 5:21–24; cf. Matt 5:24). In 1 Sam 16:7, it is clearly stated, and this was repeated by the classical prophets, that what God required of the Israelites was a broken spirit, a broken and contrite heart (Ps 51:17). An outward show of piety would never be accepted as a substitute for holiness (Isa 1:11–18; Jer 7:21–23; Hos 6:6; Mic 6:6–8).

G. OT Ethics and Sexual Conduct

NW Semitic religious practices regarded the divine love-making as a solemn act. It therefore behooved the Canaanites to imitate the gods Baal and Asherah by practicing temple prostitution in order to maintain the seasonal cycle. Yahweh, who is asexual, prescribed Israel's worship, which was clearly not to be associated with temple prostitution. In Deut 23:17 sacred prostitution was unequivocally denied a place in Israel's worship. In the worship of Israel, cultic prostitution was regarded in the same way as sexual promiscuity with harlots (Heb *zûnôt*). Not only was that wrong in itself, but even the money earned through acts of prostitution would not be acceptable as payment for a vow to the Lord (Deut 23:18). Prostitution, in general, was punishable by death. So also were a series of other types of promiscuous and incestuous sexual acts. While the women were severely punished for promiscuity, it seems as though men were condoned for being lured by lewd women (Gen 38:12–26; Joshua 2). However, prostitution was shunned and this is why the classical prophets referred to Israel's apostasy as harlotry (Hosea 1–3; Ezekiel 16; 23).

1. Sex with Animals. The Israelites were admonished not to engage in sex with animals (Exod 22:19; Lev 20:16; Deut 27:21). The question regarding this wayward sexual behavior is not to be judged by modern moral and legal standards, which consider a sexual offense to be one that involves sex with an unconsenting partner or that hurts someone in the process. In the religion of Israel, the criterion for deciding the sinfulness of these sexual acts was whether they were in accordance with the holiness of God. To discourage the proliferation of such promiscuous acts, the parties involved were to be stoned in order to purge Israel of such evil and its memory. Stoning the animal, obviously an unconsenting victim, was meant to underscore the gravity of the punishment and to deter potential sexual sinners from committing such a shameful offense. Sin committed in a corporate community, like that of Israel, was regarded as infectious. This explains why people contaminated with sin were to be eliminated from society only by stoning or shooting (Exod 19:13).

2. Sanctity of Marital Sex. The Priestly account in Gen 1:26–27 affirms that God created humankind, male and female, in his own image. God blessed sexuality as a means by which humankind could multiply and fill the earth (Gen 1:28). Unlike animals, marriage among humans was a sacred rite. The Yahwist presents the man whom God created as being lonely in the Garden of Eden in spite of the presence of animals of all kinds (Gen 1:18–20). It was for this reason that God formed a woman and presented her to the man, who exclaimed in joyful amazement: "Bone of my bone and flesh of my flesh

…" (Gen 2:23). The two became one flesh again in marriage. This explains why extramarital sex or sex with animals was regarded as being against the holy law of God and was severely punished.

3. Sanctity of Family. The religion of Israel regarded the family as sacred, having been ordained by God at the creation of the world. Regulations were instituted in the name of God to maintain the sanctity and stability of the family. Sexual relations which would cruelly hurt the feelings of a member of the family were punishable by death. In Lev 20:10, the man caught committing adultery with a neighbor's wife would be put to death. The woman who acted as an accomplice to the crime would also be put to death (Deut 22:22). Incest with one's father's wife was prohibited under penalty of death because it violated the very foundation of the family (Lev 20:11). Similarly, sexual intercourse with a daughter-in-law was prohibited (Lev 20:12). The same law prohibited incestuous acts with a sister regardless of whether she was the daughter of the father by another wife or the daughter of the mother by another man prior to the parents' present marriage (Lev 20:17). It can be assumed that prohibition against sexual relations with a woman during her menstrual period was originally made for hygienic reasons (Lev 20:18) and also to observe the sacredness of blood (Lev 17:12–14). At any rate, all the sexual laws were intended to prevent incidents which would create family feuds and would lead up to the disintegration of the family unit.

H. Law Concerning Aliens

There were two types of aliens in Israel: the sojourner and the prisoner of war. Both of them were protected under the Torah.

1. A Sojourner. The OT does not clearly tell how a person became a sojourner (Heb *gēr*). Economic and political reasons could force one to leave one's land of birth to be a resident alien in another country (Ruth 1:1). In search of pasture for his animals, Lot and his household became sojourners in Sodom (Gen 13:11; cf. 19:9). To avoid famine in Canaan, the Israelites became sojourners in Egypt (Gen 46:2–7). A sojourner, according to the Torah, had some citizenship rights, though they were limited. Sojourners were protected by law and had recourse to the seat of judgment (Deut 1:16). The law reminded the Israelites to protect the rights of the sojourner in their midst because they were always to remember that they too had been sojourners in Egypt (Exod 22:21; cf. Deut 10:18–19; 24:17–22). By his compassion God redeemed the Israelites who were being oppressed while sojourning in Egypt. Similarly, the Israelites were required to show compassion toward sojourners. At all events, Yahweh, the Creator of the heavens and the earth, would always intervene on the side of the disadvantaged in the event of a miscarriage of justice by those in authority (Deut 24:15b; Ps 82:1–8).

2. Religious Status of a Sojourner. While sojourners were dwelling among the Israelites, they were expected to observe all the ritual laws and cultic practices of the Israelites. Some laws to be observed related to sexual behavior (Lev 18:26) and to strict observance of the sabbath rest (Exod 20:10; Deut 5:14). The sojourner was to offer an acceptable sacrifice at the door of the tent of meeting in exactly the same way as the Israelites (Lev 17:8–9). Just like the Israelites, the sojourner was forbidden to eat a beast or bird with its blood (Lev 17:12–14), which Yahweh had forbidden. If the sojourners were allowed to practice their own religious customs, they would influence the Israelites to practice pagan worship (cf. 1 Kgs 11:1–4).

3. Legal Protection of a Sojourner. Because sojourner did not have full citizenship rights, they were prone to exploitation by unscrupulous and usurious people. The sojourners were therefore at the risk of losing whatever little they had, a situation which would end in their selling themselves to the rich Israelites in order to earn a living (Lev 25:45). Otherwise nothing limited a stranger from amassing property to the point where he could even acquire an Israelite (Lev 25:47). When sojourners were few in number, it was easy to control them and to monitor their movements. The problem confronting the Israelites was what to do with a whole nation defeated in battle.

4. Law of the Ban *(ḥerem).* The fear of being impacted by pagan religious practices forced the Israelites to observe strictly the law of the ban. This law was attributed to God, who was believed to be directly leading the Israelites in holy war against the Canaanite nations, which did not observe the holy law of God. For this reason all those conquered in battle were to be killed and all their property destroyed

(Josh 7:7, 10–13; 1 Sam 15:3). For reasons of security and religion, the Israelites practiced the ban in order to curtail the number of strangers living grudgingly in their midst. Concerning a distant nation, the Israelites could offer peace terms which could lead to coexistence. If a nation refused the terms and waged war, the Israelites would besiege that nation and after conquering it kill all the males; the women and the movable property would be taken as booty (Deut 20:10–15). This exception to the law of the *ḥerem* was necessary for reasons of security and economy. If a distant nation accepted the Israelites' peace terms, its population would immediately become Israelites' laborers (Deut 20:11). By the nation's intransigent behavior, it had exhibited that it was a potential danger to Israel's security. Military operations against such a nation benefited the Israelites in that they would possess all the fruit trees, women, and livestock (Deut 20:19). This military leniency was not extended to the Canaanites, Perizzites, Hittites, Jebusites, Hivites, or Amorites for religious reasons. Conducting their well-organized religious practices in the midst of the Israelites, these nations would be a serious threat to Yahwism (Deut 20:16–18). To preserve the purity of Yahwism, the Israelites interpreted the law of the *ḥerem* as a divine command to annihilate these nations. They were not to save anything that breathed among the Canaanites (Deut 20:16; cf. Josh 10:40; 11:11). A close examination of the process of the conquest of Canaan reveals that this narrative reflects Deuteronomistic exaggeration to underscore the benefits of obeying the commandments of Yahweh. The Israelites regarded other nations and their idol gods as enemies of Yahweh. For this reason the Israelites were not shocked by the callous cruelty they exhibited by killing men and women, young and old, ox and sheep, camel and ass (1 Sam 15:3; Josh 11:40). The goal was to preserve the exclusive purity of the worship of Yahweh.

I. Ethics and the King's Justice
